PREFACE.

THE rapid growth of our country, which within a few years has definitely taken its place as one of the great powers of the earth, and is now universally recognized as such, presents every year a new and interesting chapter of history; and the most gratifying feature of it is the fact that so little of it is war history and so much is industrial and intellectual development. The American citizen who wishes to make himself familiar with these successive chapters, and realize to what a great republic he belongs, must read something that sums up, in a clear and concise form, the results of the various forces whose workings are seen only in a fragmentary way through the daily press.

To learn what our country accomplished in the year just closed, one should first read the article "United States," then look over the article "Congress," reading such portions as to him are most significant; then a careful reading of the "Financial Review" will enlighten him as to the great business movements, with their causes and consequences. Then, if he is inclined to ask "What is the use of all this wealth?" let him run through the article "Gifts and Bequests," and learn to what noble uses tens of millions of American dollars are devoted every year. The articles on the "Farmers' Congress" and the "National Grange," together with the paragraphs on the agricultural colleges in the State articles, will show what is done for the advancement of the business of agriculture. And a special article this year on "Ship-Building" gives much hope of the revival of that important industry, which has been almost a lost art with us for forty years. The progress in jurisprudence is shown in the passages recording decisions in the Supreme Court of the United States and in those of the several States. The growth of religious life, and the efforts to spread the Gospel in missionary fields, may be seen in the articles on the various religious denominations, which are full of significant facts and statistics.

For the year's movement in the progressive sciences, the reader may consult the articles "Astronomy," "Chemistry," "Medicine," "Metallurgy," "Physics," and "Physiology," all of which are subdivided and subheaded, so that any specific subject may be turned to at once. If he is interested in the work of the artists, he will find their record for the year under the title of "Fine Arts."

In the domain of invention and experiment, the most interesting results are set forth, with illustrations, in the articles "Aerial Navigation," "Submarine Boats," and "Wireless Telegraphy." To know what has been accomplished in exploration, the reader should turn to the articles "Archeology" and "Geographical Progress." The former has some very curious illustrations.

There is always something problematical and interesting in a country that has recently been the seat of war, and few readers will fail to be interested in the account of present conditions in Cuba, South Africa, and the Philippines. Of the agencies that make for peace among the nations, are the Bureau of American Republics, the International Conference, the Sanitary Conference, and the various international

treaties, all of which are duly recorded. The troublesome question of the Alaska boundary is on the way to a peaceful and satisfactory solution, as may be seen by a glance at the article "Alaska." The great cables that underlie the oceans and connect continent with continent, and with the isles of the sea, serve still further to prevent international misunderstandings and bring about speedy agreements. This volume contains an article on the projected American cable across the Pacific, and one on the completion of British cable connection all round the world, illustrated with a map. Still another agency of peace and good-fellowship is the international exposition. We present an account of that which closed recently in Charleston, beautifully illustrated, and a forecast of the Louisiana-Purchase Exposition.

The Carnegie Institution, just founded, which is the largest single transaction for advancement of education this year, is described; and the reader who wishes to trace the whole story of education in our country can do so by turning to the article "Libraries" and the various articles on the States.

Narratives of the great misfortunes of the year may be read under "Earthquakes and Volcanic Eruptions" and "Strike of the Coal-Miners."

The Canadian articles have been carefully prepared by an eminent Canadian author, and one of them, "Manitoba," includes the strange story of the Doukhobors.

The list of eminent persons, in various professions, who passed away in the year, and whose careers are recorded in the pages devoted to "Obituaries," is large. In our country it includes the actors Neil Bryant, Annie Clarke, Harry Eytinge, Ada Gray, Daniel H. Harkins, Edwin Knowles, Sol Smith Russell, William Henry West, and Eliza Young, with the musicians Camilla Urso and George William Warren; the artists Albert Bierstadt, Thomas Nast, and Lily Martin Spencer; the authors Charles Kendall Adams, Elbridge S. Brooks, Junius Henri Browne, William Allen Butler, Mary Hartwell Catherwood, Edward Eggleston, Thomas Dunn English, Paul Leicester Ford, Alfred Hudson Guernsey, Bret Harte, Frank Norris, Thomas E. Osmon, and Francis Richard Stockton; the clergymen Michael Augustine Corrigan and Eugene Augustus Hoffman; the educators John Henry Barrows, Thomas Gallaudet, Alice Freeman Palmer, and Henry A. P. Torrey; the journalists Edwin Lawrence Godkin and George Hughes Hepworth; the jurists Noah Davis, David Ayres Depue, Horace Gray, and George Hoadly; the naval officers James Edward Jouett, Lewis A. Kimberly, William Thomas Sampson, and Thomas Oliver Selfridge; the physicians William Tod Helmuth and James Patterson Kimball; the scientists Alpheus Hyatt, Henry Morton, John Wesley Powell, and Ogden Nicholas Rood; the soldiers Wade Hampton, Francis J. Herron, Franz Sigel, and David Sloane Stanley; and the statesman Thomas Brackett Reed. The death losses of foreign countries included the artists Benjamin Constant, Thomas Sidney Cooper, Jules Dalou, and James Tissot; the authors Philip James Bailey, Aubrey De Vere, Alice Durand, Samuel Rawson Gardiner, Annie Hector, and Émile Zola; the clergymen Newman Hall, Joseph Parker, and Archbishop Temple; the scientists Frederick A. Abel, Alfred Cornu, Pierre Filhol, John Hall Gladstone, and Rudolph Virchow; the soldiers Christian Botha, Mariano Escobedo, and Lucas Meyer; the statesmen Marquis of Dufferin, Earl of Kimberley, Liu-Kun-Yi, Prince Münster, Lord Pauncefoot, and Koloman Tisza; Emil Holub, the explorer; Fred Krupp, the industrialist; George Rawlinson, the Orientalist; and Cecil Rhodes, the politician and promoter.

The volume is illustrated somewhat more fully than usual, and it closes with a topical index.

CONTRIBUTORS.

Among the Contributors to this Volume of the Annual Cyclopædia are the following:

Oscar Fay Adams,

Author of A Dictionary of American Authors, etc.

BAILEY, PHILIP JAMES,
BROOKS, ELBRIDGE STREETER,
DE VERE, AUBREY THOMAS,
DUFFERIN AND AVA, Marquis of,
GARDINER, SAMUEL RAWSON,
HECTOR, ANNE,
TEMPLE, FREDERICK,
THOMPSON, HUGH MILLER,
and other articles.

Milton E. Ailes,

Assistant Secretary of the Treasury.

THE ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, an empire in eastern Africa, known also as Ethiopia. The ruler, whose title is Negus Negusti, meaning King of Kings, is Menelek II, born in 1842, originally King of Shoa, who established himself on the throne, with the aid of arms furnished by the Italians, after his predecessor, Johannes II, had been slain in a battle with the dervishes of the Egyptian Mahdi. Menelek signed on May 2, 1889, the treaty of Ucciali under which Italy laid claim to a protectorate over the whole of Abyssinia, which claim was abandoned after the defeat of an Italian army at Adowa, and in the convention of Adis Abeba, signed Oct. 26, 1896, the independence of Abyssinia was recognized by Italy, and Abyssinia recognized as Italian territory the country north of the Mareb, Belesa, and Muna rivers and a strip of coast 180 miles broad in front of the Abyssinian tableland. The Government of Abyssinia is feudal, each *ras*, or governor, ruling his province and having his separate military force. The regular army, consisting of these contingents, numbers about 150,000 men, all of whom should be mounted, and many of whom now carry, instead of spear and shield, the Gras rifles surrendered by the Italians or imported magazine rifles. At Adis Abeba, his capital, the Negus Menelek has 7 batteries of field-artillery and revolving cannons which were captured at Adowa. The area of Abyssinia is estimated at 150,000 square miles, the population at 3,500,000. The people rear cattle, sheep, and goats and cultivate barley, dhurra, wheat, hops, and tobacco for their own consumption. Hides and skins, civet, coffee from wild shrubs, gum, wax, ivory from the Wallega and Galla countries, and some gold are exported. Iron is mined by the natives and forged into knives, axes, and spears. American cotton cloth is the largest article of import. The imports at Harar in 1900 were estimated at 3,822,650 and exports at 2,691,000 Maria Theresa dollars. The French have constructed a railroad from the port of Jiboutil to Harar, 186 miles. Harar is a town of about 30,000 inhabitants, mostly Mohammedan, situated on an exceedingly fertile plateau. The railroad is destined to draw all the trade of eastern Abyssinia to Jiboutil, depriving the British port of Zeila of the share it now has and taking away much of the trade of Aden. Before the railroad was finished an international syndicate, composed in part of English capitalists, obtained a large interest in its affairs. The French Government, jealous of foreign influence, determined to keep the control of the line in French hands and prevent the construction of a branch line to Zeila, as proposed by the British members

of the syndicate. Accordingly an arrangement was made on Feb. 6, 1902, whereby the colony of Jiboutil, with the approval of the French Government, agreed to guarantee interest on the company's capital to the amount of 500,000 francs per annum. To enable the colony to carry out this agreement the French Chamber voted to grant to Jiboutil an annual subvention of 200,000 francs for fifty years.

Eventually the French railroad will be built through to Adis Abeba, the Abyssinian capital. Jiboutil will be made a first-class naval station. Harar products sent over the railroad to Jiboutil are exempted from all duties excepting the tithe, which is levied on all crops. British concessionaires have obtained from Menelek the right to work gold-mines on the banks of the Baro river. The telegraph to connect Adis Abeba with Massowah was begun in the summer of 1902. In June Ras Makonen, the nephew of the Negus and his principal general, went to England with Col. Harrington, the British diplomatic representative in Abyssinia, and M. Ilg, Menelek's Swiss minister, to represent the Negus at the coronation of King Edward VII. Subsequently he paid a visit to the French capital. About the same time the Abyssinian metropolitan, Abuna Mateos, went to St. Petersburg to emphasize the connection between the Abyssinian and the Greek Orthodox Churches, and later to Constantinople to secure the recognition by the Sultan of the Abyssinian Church as an independent body. The adherents of the Abyssinian Church at Jerusalem have hitherto come under the Armenian Patriarch, since the Coptic creed is nearly allied to the Gregorian. In their claim for ecclesiastical independence they have been supported by Russia.

ADVENTISTS. I. Advent Christians.—

The Advent Christian Association and General Conference of America in 1900 adopted a Declaration or Concise Statement of its Fundamental Principles, in which, after expressing its belief in God, Jesus Christ, and the Holy Spirit as held by the orthodox churches generally, it set forth its distinctive doctrine of "conditional immortality" to the effect that man, created for immortality, had forfeited this birthright by sin, in consequence of which death had passed upon all the world; and that men could become partakers of the divine nature and live forever only through faith in Jesus Christ; that death is a condition of unconsciousness to all, which will remain unchanged until the resurrection at Christ's second coming, when the righteous will receive everlasting life and the wicked will be punished with complete extinction; and that salvation is free to all who in this life and age will

accept the conditions imposed of turning from sin, repentance, faith in Christ, and a life of consecration—"thus excluding all hope of a future probation or of universal salvation." Belief in the visible and personal second coming of Christ to the earth, his reign here forever, and the renewal of the earth to be forever free from sin and death is further expressed. Christ, the approximate time of his coming being indicated in Bible prophecy, is believed to be near, and the proclamation of this truth to be the great duty of the hour. The statistics of the denomination have not been systematically compiled. A committee was appointed in 1900 to prepare an annual of denominational statistics. It secured returns from 32 out of the 60 conferences, and some local and scattered items in addition, and has published as the summary of the condition of these bodies the following totals: Number of ordained ministers, 716; of licensed ministers, 112; of churches, 646, with 23,500 members; of Sunday-schools, 341, with 11,870 enrolled members. Four publishing societies—the Advent Christian Publishing Society, Boston, Mass.; the Western Advent Christian Publishing Society, Mendota, Ill.; the Pacific Advent Christian Publication and Mission Society, Oakland, Cal.; and the Southern Advent Christian Publication Society, Lamar, S. C.—issue each a weekly religious newspaper, and a monthly periodical is published at Worcester, Mass., and quarterlies at Boston, Mass., and Sunday-school periodicals and helps as well as a considerable number of denominational books are published at the house in Boston.

The American Advent Mission Society was organized in 1865, primarily to labor among the freedmen in the South, but now includes foreign and domestic departments. In the foreign field it supports in whole or in part 8 laborers, with 15 native workers, and several free laborers at Nanking, Wuhu, and Han Shan Hsien, and several substations in China and in India, where a publishing house has been established at Bangalore, with a selling and lending library. Literature is printed at this establishment in 7 languages, and is distributed by agents in 15 centers "and other places." The work of the society in England has been of late years largely self-supporting. Portuguese missions are maintained in the Cape Verde Islands and in Taunton, Mass. Mission schools are sustained at Nanking and Wuhu, China, and Egmore and Renigunta, India. The society is also aiding 10 or more workers in the home field, besides assisting several conferences in their mission work. The home missions are largely in charge of the Western and Southern Home Mission Boards. A Church Extension fund is operated in connection with this society. The Advent Christian Helper's Union, organized in 1894, is a woman's society auxiliary to the mission society in its foreign work. The Woman's Home and Foreign Mission Society, organized in 1897, works through the mission societies, churches, etc., in home missions, but carries on foreign mission work on its own account, principally in India, where it supports several schools, 3 orphanages, 3 missionaries, and about 20 workers. It publishes the All Nations Monthly, Rockland, Me. The young people are organized into the Young People's Society of Loyal Workers, consisting of the general Eastern and the general Western societies, which have together 116 local societies with about 5,000 members. The educational institutions are Mendota College, Mendota, Ill., founded in 1893, for both sexes, with 4 departments and 6 courses of study, and

the Boston Bible School, established in 1897, and incorporated in 1902. The Loyal Workers' Institute is a course of reading to be pursued at home.

II. Life and Advent Union.—The distinctive doctrines of this branch of the Adventists include the extinction of the wicked at death and the resurrection of the just to everlasting life. It holds a general conference in each year, 4 camp-meetings—in Maine, Connecticut, and Virginia—and quarterly conferences in some places. The Life and Advent Mission Society and the Young People's Life and Advent Mission Society are organizations for carrying on home mission work exclusively. A considerable number of books, with the Herald of Life, the newspaper organ of the denomination, are issued from the publishing house at Springfield, Mass. Fifty-one ministers are registered on the rolls of the General Council, with about 24 churches; and there are other ministers whose names have not been enrolled. The number of members is not given in the reports of the body, but is estimated to be about 3,800.

III. Seventh-day Adventists.—At the Seventh-day Adventist General Conference of 1901 a new constitution was adopted and important changes were made in the organization of the Church. Among the more considerable of these changes was the grouping of the State conferences into union conferences, each representing a definite district or number of States, to take over a part of the work of the General Conference, and among which many of the functions and duties hitherto performed by it and its liabilities and assets were to be distributed according to their local relations and strength. Six of these union conferences were constituted in the United States, one in Canada, one in Europe, and one in Australasia. This change was accompanied with a readjustment of the affairs of the General Conference Association, the legal arm of the General Conference. Steps were taken late in 1901 to apportion the liabilities of this association to the union conferences according to the institutions within their borders and their ability to pay. The plan adopted contemplated the creation of a legal corporation within the territory of each union conference for the transaction of legal business and the transfer to such corporations by the General Conference Association of whatever institutions and church property it was holding in the several districts, with the assumption by them of the corresponding liabilities, in such a way that the General Conference Association should be relieved of a large share of its financial obligations and they should be assumed by those union conference organizations within whose borders the assets are located, whether in the form of church buildings, school properties, or otherwise. This arrangement was accepted by most of the union conferences. The General Conference Committee was likewise reorganized to meet the new conditions in February, 1892, with such recastings as seemed called for of the Mission Board, the trustees of the Foreign Mission Board (constituting the legal corporation), the educational department, the religious liberty department, the Sabbath-school department, the General Conference Association, the Auditing Committee, committees on German and on Scandinavian work in North America, and transportation agencies.

The European General Conference was organized July 23, 1901, and embraces two union conferences—the German and the Scandinavian—together with the British and Central European

Conferences and the Oriental mission field. Each of the union conferences includes three duly organized local conferences, besides unorganized mission territory. At last reports 60 ministers and about 100 other workers were employed within its territory, with about 7,500 Sabbath keepers, from whom a tithe of nearly \$50,000 a year was received. A missionary training-school, a health institute, a food factory, and an industrial school are located at Friedensburg, Germany, where the conference was held; a health institute has been established in Denmark; and publishing houses are sustained in Norway and Sweden.

The summary of the statistics of the Church in all parts of the world for the year ending Dec. 31, 1901, includes footings from the union and State and local conferences and missions as follow: Atlantic Union (9 conferences and missions), 8,430 members; Canadian Union (4 conferences, etc.), 1,093 members; Southern Union (8 conferences, etc.), 2,500 members; Lake Union (5 conferences, etc.), and the church at Battle Creek, Mich.), 19,689 members; Northwestern Union (5 conferences, etc.), 11,791 members; Southwestern Union (6 conferences, etc.), 10,144 members; Pacific Union (9 conferences, etc.), 9,884 members; German Union, 3,818 members; Scandinavian Union, 2,059 members; British Union, 992 members; Central European Union, 492 members; Oriental missions, 236 members; Australasian Union Conference (7 state conferences or missions), 2,533 members; and the conferences or missions in Mexico, the West Indies, Central and South America, India, Japan, China, South Africa, and the islands of the sea, of which 25 are enumerated, 4,537 members; total, 78,188 members, showing an increase of 2,429 from the previous year. Other footings of the table are: Whole number of laborers (553 ministers, 340 licentiates, 611 missionary licentiates), 1,591; of churches, 2,011, with 89,356 members; of companies, 356, with 5,239 members; of isolated Sabbath keepers, 3,593; amount of tithes, \$578,628, showing an increase for the year in this item of \$68,369. The Seventh-day Adventists have several publishing houses in the United States, including the one at Battle Creek, Mich.; other publishing houses in America, Europe, and Australia, issuing periodicals and books in several languages; a large sanitarium at Battle Creek, Mich., and other sanitariums in the United States and other countries; and a number of educational institutions in America and abroad.

IV. The Church of God.—This branch is the result of a separation from the Seventh-Day Adventist Church, which took place about 1865, on account of differences respecting certain points of doctrine and practise. The number of members is estimated at about 6,000. It has a sanitarium (controlled by a stock company) at White Cloud, Minn., and an orphan asylum at Renwood Park, Iowa. The meetings are mostly held in schoolhouses, so that the value of church property is estimated to be not more than \$2,000; while the cost of the sanitarium was about \$20,000. The General Conference was incorporated in 1899, and usually meets at Stanberry, Mo., where the denominational publishing house is situated, and where 3 periodicals and large editions of tracts are published. At the eighteenth annual Conference, held at Stanberry, Mo., in November, 1901, the treasurer reported receipts of \$2,865 and expenditures of \$2,900. Resolutions were adopted expressing belief "in the personal coming of Christ, the absolute mortality of man, his death and resurrection, Christ's future kingdom on earth and the perpetuity of God's

moral law, the Ten Commandments, including the fourth, which requires the observance of the seventh day of the week as the holy Sabbath of the Lord," as the truths which distinguish the denomination as a people, and directing that these subjects be made paramount in all the denominational publications and preaching. Another resolution declared that the purposes of the General Conference include works of benevolence and charity.

V. The Churches of God in Christ Jesus (or Age-to-Come Adventists as they are popularly known) are a group of churches that look for the final restitution of all things which God hath spoken and the actual establishment of the kingdom of God on the earth with Christ as king; and for the literal resurrection of the dead, with immortality to the righteous and the final destruction of the wicked. In the absence of officially published statistics, it is estimated that they have 182 organizations worshiping in their own buildings and nearly as many in other rooms, with Sunday-schools maintained wherever there is an organization, and about 5,000 members. The business is transacted by the State or district conferences.

AERIAL NAVIGATION. All the recent comparatively successful attempts at navigating the air have been by means of the development and improvement of dirigible balloons; little has been done to carry forward the splendid experiments of Maxim and Langley in mechanical flight (see *Annual Cyclopædia* for 1897, p. 4). The idea of a spindle-shaped balloon, sustaining passengers and machinery, and impelled by a wheel composed of vanes or fans of canvas at one or both of its extremities, is not new, and such an invention was mentioned in a letter written by Francis Hopkinson to Benjamin Franklin as early as May 24, 1784. Rufus Porter exhibited models of such a machine in New York and Washington in 1835-'40 which flew rapidly and were capable of sustaining themselves for a considerable length of time; but his large machine, its balloon 160 feet long and 16 feet in diameter, was a failure. He used steam as his motive power.

Giffard, Tissandier, Renard.—The first successful dirigible balloon was that of Henri Giffard, which was built in 1852, and used as a propelling power a high-pressure 3-horse-power steam-engine with a small boiler, together weighing about 500 pounds, actuating a screw with plane blades. His balloon was spindle-shaped, 3.66 diameters (144 feet) in length, and attained a maximum speed of 6.7 miles an hour. Twenty years later M. Depuy de Lôme employed man-power in the impulsion of a balloon 118 feet long and capable of carrying 10 or 15 men, 7 of whom furnished the power, and attained a speed of something more than 6 miles an hour. M. Gaston Tissandier adopted the electric storage-battery, coupled with a dynamo-electric machine, as a source of power. He constructed for the exhibition of 1881 a model, 11 feet long and 4 feet in diameter, filled with hydrogen, and drove it at the rate of about 10 feet per second (about 7 miles an hour), as a maximum. With his brother, M. Albert Tissandier, he built another, 91 feet long and 29 feet in diameter, fitted with a Siemens dynamo, driving a screw nearly 10 feet in diameter, and supplied with a current from an accumulator of their own invention weighing about 400 pounds. This machine, carrying the two inventors, made at various times from 7 to 9 miles an hour for an hour or two together. Messrs. Renard and Krebs, experimenting, like their rivals, in Paris, also constructed a some-

what similar machine, 165 feet long and 27½ feet in diameter, impelled by a battery invented by M. Renard, a dynamo, and a screw 7 feet in diameter. This apparatus at various times in 1884 went from 12 to 15 miles per hour. The motor gave out about 5 horse-power, and the machine was able to take any course desired in a calm, and even to contend against a light breeze. This balloon made a number of voyages, occasionally to distant points, sometimes returning to its point of departure. Its car and impelling machinery constituted one of the most interesting of the exhibits of the French Government at the Paris Exposition of 1889.

Count Zeppelin.—New interest was awakened in the summer of 1900 by the successful ascents made by Count Zeppelin at Lake Constance. He employed in these experiments an immense balloon, consisting of 17 cylindrical gas-bags confined in a cylindrical case with conical ends, 420 feet long and 39 feet in diameter. Beneath this was suspended a frame supporting 2 aluminum cars 20 feet in length, one forward and one aft,

ele, making noticeable headway and remaining in perfect control against a 7-mile wind. After completing its evolutions it alighted gracefully and gently to the surface of the lake where its balloon shed was placed.

Santos-Dumont.—In 1901 much attention was called to the experiments of M. Alberto Santos-Dumont, a young Brazilian resident in Paris; especially when on Oct. 19 he succeeded in winning the prize of 100,000 francs offered by M. Henri Deutsche, one of the members of the Aero Club, in April, 1900, to the navigable balloon that, starting from the Aero Club Park, at St. Cloud, should steer around the Eiffel Tower and return to the point of departure in less than half an hour. Even before his arrival in Paris in 1897 Santos-Dumont had experimented with aeronautics, and on July 4, 1898, made a successful ascent from the Jardin d'Acclimation in the smallest spherical balloon that at that time ever had been made, 18 feet in diameter. At the same time he was constructing his first dirigible balloon, the Santos-Dumont No. 1. This

was in the form of a cylinder with conical terminations, 80 feet long and about 6 feet in diameter. The suspended basket carried a 3½-horse-power gasoline motor operating a screw propeller. The ascent of this balloon, from the Jardin d'Acclimation, Sept. 20, 1898, almost resulted in disaster. It rose to the height of 1,200 feet, showed itself to be absolutely dirigible, and delighted the spectators with its marvelous evolutions. Suddenly it was seen to collapse and the wreckage with the aeronaut came tumbling to the earth. The air-pump supplying the small interior air-balloon, designed to keep the outer envelope always swelled out, had proved insufficient, and under the weight the whole thing folded upon itself. Fortunately the mass of wreckage acted as a parachute, and M. Santos escaped

THE SANTOS-DUMONT NO. 6 CROSSING THE PORT OF MONACO.

connected by speaking-tubes, for the crew and machinery. Two rudders, one forward and one aft, served to steer the craft, which was driven forward or backward by 4-bladed screw propellers 3½ feet in diameter, 2 geared to each motor. The power was furnished by 2 16-horse-power Daimler benzine engines, weighing 715 pounds each, and 1 placed in each car. The ship was made to travel in a horizontal or an inclined plane by means of a weight sliding along a cable beneath and parallel to the longest axis of the balloon shell. When it was desired to ascend the forward end of the balloon was thrown upward by sliding the weight aft; when a descent was to be made it was thrown downward by sliding the weight forward. When the weight was at the exact center the ship was in equilibrium and maintained a horizontal course. The first ascent was made July 2, 1900, with 5 persons in the cars. After rising 1,300 feet the ship traveled 3½ miles in seventeen minutes in a prescribed direction, and was then forced to descend on account of an accident to one of the rudders. On Oct. 17 the ship remained in the air for an hour at an average height of nearly 2,000 feet; it traveled the 6-mile circumference of a cir-

unhurt. No. 2, built after the same plan, but much larger, and launched May 11, 1899, showed the same defects, and after an unsuccessful trial was abandoned, and work immediately begun on No. 3, which embodied many innovations. The inner air-balloon was dispensed with, although he has used it in No. 4 and the later models. It was cigar-shaped, 66 feet long and 11½ feet in greatest diameter. There was no netting about the silk tissue, but a strong belt was sewn into the lower part of the balloon on either side to which short pieces of wood were attached. From them was suspended the so-called "keel," a long bamboo pole which supported the basket and other apparatus. A 4½-horse-power petroleum motor worked a 5-foot propeller giving 2,500 revolutions a minute. A rudder of bamboo and silk with an area of about 25 square feet was used to guide the ship. At each end of the balloon was fastened 50 pounds of ballast controlled by guys. When the aeronaut wished to rise he let out the stern guy, and 50 pounds of ballast fell astern, throwing the bow end of the balloon upward at an angle of 25 or 30 degrees. To descend it was only necessary to let out the bow weight and draw in the stern weight. On Nov. 13, 1899, as-

cending from Vaugirard he sailed to the Champs de Mars, and, after circling the Eiffel Tower several times, laid a straight course for Auteuil, and thence to the maneuver grounds at Bagatelle, where he safely landed. In No. 4 he improved on No. 3 by making his balloon less clumsy, 95 feet long and 9 feet in diameter, and by dispensing with the suspended basket. The 7-horse-power motor and the other mechanism was fastened directly to the keel, a long framework of bamboo strengthened by wires, and the inventor managed the machine from a bicycle seat fastened to the keel. The machine was completed in August, 1900, and made numerous short ascents during the Paris Exposition of 1900, notably on Sept. 19, in the Bois de Boulogne, in the presence of the International Aeronautic Congress. Balloon No. 5 was made by inserting into No. 4 a cylindrical piece sufficient to make its total length 109 feet. A 60-foot keel, framed of pine and piano-wire, supported a 16-horse-power motor with its appendages and a basket car for the aeronaut. With it, July 12, 1901, ascending from the Aero Club Park, he crossed the Seine to the Longchamps race-track, took the air-ship ten times around the track, and then sailed to the Trocadero, and after a slight delay, caused by an accident to the rudder, went round Eiffel Tower, back to Longchamps, and thence across the Seine to Aero Park. The following day was set for an attempt for the Deutsche prize. The start took place in the presence of the club members at nineteen minutes to seven in the morning. The Eiffel Tower was doubled at five minutes to seven, but a strong current of air caught the ship shortly after the turn, driving it toward Longchamps, where he landed in the gardens of Baron Rothschild. On Aug. 18 he made another attempt, but this time his balloon collapsed and the whole structure with its operator fell to the roof of the Trocadero Hotel. His new machine, No. 6, ellipsoidal in form and carrying a 20-horse-power motor, was built upon practically the same lines, and on Oct. 19, 1901, succeeded in capturing the coveted prize. The trip from St. Cloud to the tower was made in nine minutes, and the return trip, against the wind, in twenty minutes and thirty seconds. M. Deutsche's 100,000 francs were generously distributed by the victor among the poor of Paris and all the assistants who had contributed to his success. Soon after his success in Paris he was summoned to Monte Carlo by the Prince of Monaco, there to attempt the crossing of the Mediterranean Sea. He made a successful ascent on Jan. 23, 1902, taking with him his friend M. Aimé, and sailing about the bay and proceeding more than a mile seaward. On Feb. 14, while making his fifth trip across the bay the guide-rope caught in the screw. With the intention of freeing the entangled tackle, M. Santos threw his balloon into a perpendicular position, whereupon the petroleum began to escape from his motor. The aeronaut, fearing an explosion, pulled the emergency rope, tearing a great rent in the silk envelope, and the gas rapidly escaped, causing the balloon to descend into the sea. A steam-launch belonging to the Prince of Monaco's yacht picked up M. Santos with all possible speed; and the disabled balloon, which did not sink, was taken in tow and conveyed to land. This balloon, No. 6, with some slight alterations, was brought to the United States in July, 1902, and was used at Brighton Beach by Mr. Edward C. Boice in his ascent on Sept. 30, 1902.

Stanley Spencer.—On the afternoon of Sept. 19, 1902, ascending from the Crystal Palace in

London, Mr. Stanley Spencer steered a navigable balloon of his own invention over Dulwich, Herne Hill, Clapham Junction, Victoria Bridge, and the southwest of London to Ealing, and finally to Harrow—in all, a distance of about 30 miles, or about three times the longest distance

MR. SPENCER ABOVE THE CRYSTAL PALACE GROUNDS.

ever attained by Santos-Dumont. While in the neighborhood of Herne Hill, Mr. Spencer caused the air-ship to perform numerous evolutions—darting downward, as though falling to the earth; suddenly arresting the descent, and again rising. At Ealing, which was reached at five o'clock, an hour after the start, similar maneuvers were gone through over the principal thoroughfares. The course was then altered to north-east, and a safe landing was effected near Harrow. The machine was at all times under perfect control, and at the end of the trip alighted so lightly "that a child might have been under it without being hurt." This ship, built by the Messrs. Spencer, differs very radically in some respects from the Santos-Dumont type, and is de-

scribed as follows in a current number of the *Illustrated London News*: "The main point of difference lies in the wooden screw, constructed on the Hiram Maxim system, which is fixed in front of the body of the machine and pulls or sucks it forward through the air, instead of propelling it from the rear, as in the Brazilian's air-ship. The framework is entirely of bamboos, lashed and bolted to one another, and, with the exception, of course, of the motor and steering-board, there is practically no metal on the whole machine. The result of this is shown by the scales. The total weight, with everything fixed, is under 300 pounds, the frame accounting for 125 pounds of this. The car is novel, inasmuch as the place of the usual basketwork is taken by bamboo cross-bars and netting. The framework—which is 45 feet long—is in 3 parts, for convenience in transit. The driving-power is furnished by a Simms petroleum motor of 35 horse-power. The gas-bag is 75 feet in length, and is not covered with netting, it being found difficult to enclose properly a balloon of elongated shape. When the aeronauts—the vessel will carry two light-weights—desire to descend, air is pumped into the envelope from a hand machine in the car as the gas is allowed to escape, in order that the balloon may always remain taut. Automatic valves release gas should the pressure become too great. The envelope has received three coats of special varnish, one outside and two in. By this means it is believed that the fabric itself will be undamaged by either the gas within or the air without." On Oct. 20 Mr. Spencer made another successful trip of 26 miles, ascending at Blackpool, Lancashire, and descending near Preston. A strong breeze was blowing when he ascended. When he reached a height of about 1,000 feet he made several evolutions against the wind, and finally sailed away in the direction the wind was blowing.

Severo and De Bradsy.—Aside from many minor accidents to balloonists and some deaths in various parts of the world, two shocking accidents mark the year's experiments in Paris. Señor Augusto Severo, a member of the Brazilian Congress and an enthusiastic aeronaut, made an ascension May 12, 1902, from the aerodrome at Vaugirard in his huge ship *La Paix*, in the presence of his family and a large party of friends. All seemed to go well, the air-ship turned toward Issy, whence the party were to follow in automobiles to witness the descent. Fifteen minutes later, at an altitude of 1,500 feet above the Avenue du Maine, opposite the Rue de la Gaité, the balloon suddenly turned, was enveloped in a flash of flame, followed by a terrific explosion, and Severo and his machinist Sachet, who had ascended with him, were dashed with the car to the earth and instantly killed. The explosion was probably caused by the ignition of escaping hydrogen gas from the balloon at one of the motors, but the exact cause never will be known. In general appearance *La Paix* resembled the ships of Santos-Dumont. The gas-bag, 98½ feet long and 40 feet in diameter, had a capacity of 70,000 cubic feet. The frame of the car was of steel tubing and bamboo and carried two petroleum motors, one of 16 horse-power at the bow and one of 24 horse-power at the stern, of the Buchet type. There were 6 screw propellers, one at the stern of the balloon, another at the stem, and a third at the stern of the car, two others working laterally at the right and left and steering the ship, the latter having no helm in the ordinary sense of the word, and a sixth screw designed to aid in ascent or descent,

as might be required. The mechanical parts were carried very little below the lower surface of the gas-holder, and the motor at the stern was very near the automatic valve designed to let off the excess of hydrogen as the envelope expanded through the rarefaction.

On Oct. 13 Baron de Bradsy Laboun and his assistant, M. Morin, were killed at St. Cloud through the breaking of the wires that held the suspended car and motors to the gas-holder. The de Bradsy ship was cylindrical with conical terminations, 100 feet long and 20 feet in diameter at the thickest part. A light wooden framework running around the balloon supported on steel wires a frame 70 feet long of steel tubes. It carried a car 16 feet long, suspended 10 feet below the envelope of the balloon, which guarded it against risk of fire from the 16-horse-power petroleum motor. The frame weighed 300 pounds. The air-ship was propelled by a screw 12 feet in diameter, and had a vertical screw placed beneath the car to aid in ascending and to keep the ship afloat, as it was built to displace exactly with the aeronauts its own weight of air. The rudder had a surface of 5 square yards. A notable feature was a sail apparatus consisting of wings made of light canvas, 36 feet long and 5 feet wide, fixed to the right and left of the envelope, giving it the appearance of an enormous aeroplane and intended to enable the air-ship to sail about or descend slowly in case the motor stopped. M. Emmanuel Aimé, the expert, in describing the ascent and the cause of the accident, of which M. de Bradsy had been forewarned, writes as follows: "As the air-ship advanced slowly, at an altitude of 200 meters, turning round and round as it went, sometimes advancing, sometimes moving backward, swinging to port and to starboard, in spite of the rudder, of which M. Morin held the tiller, and, in spite of its propelling screw, which was under the direction of M. de Bradsy, it was only too easy for the spectators to perceive that it was drifting at the mercy of the wind. In reality, though the air-ship obeyed neither rudder nor propelling screw, it obeyed only too well the disastrous action of the ascensional screw, the perturbing influence of which would have sufficed to paralyze the effect of both the propelling screw and the rudder, even if the motor had been strong enough to resist the light breeze from the southwest. The ascensional screw turned vertically under the car at a rate of 500 revolutions per minute and made the air-ship swing round at a rate of about one turn per minute. Under these circumstances the propelling screw and rudder were powerless. What was necessary was a second vertical screw, turning in a contrary direction to the first, to neutralize the tendency to rotation. M. Bradsy, however, had to give up the idea of making these changes on account of the extra weight it would have entailed. In spite of the recent augmentation of volume of the balloon, its lifting power was still too feeble to allow of any addition to the motor. The ascensional screw provided another, and still more disastrous effect, which did not escape the attention of those versed in aeronautics. From the Place de l'Opéra it was plainly visible that under the influence of this screw the axis of the balloon, obliged to turn by the resistance of the air, ceased to be parallel to the axis of the car, and that, in consequence, the steel wires which fastened the car to the balloon underwent a tension which tested their solidity." It was this strain that finally tore the wires from their fastenings and caused the fatal termination of the ascension.

Stevens, Lebaudy, and Others.—Other experiments have been made in 1902 by Leo Stevens with a ship that he has christened *The Pegasus*. This has a gas-bag, cylindrical with conical ends, 22 feet in diameter and 86 feet long, with an inside air-bag 20 feet long. The framework suspended 12 feet below is 28 feet long and weighs with the naphtha motors 350 pounds. The propeller, consisting of 2 blades $7\frac{1}{2}$ feet long, is placed at the forward end of the ship. On either side of the gas-holder is what is called an aeroplane parachute 35 feet long, which is supposed to open out in descending and steady the ship.

Several private trials have been made of an air-ship built at Bonnières, near Nantes, by Pierre and Paul Lebaudy and an engineer named Julliot. On Nov. 13, 1902, it is said to have made a speed of 25 miles an hour against a light wind and to have answered its helm readily and promptly. The following details of its construction have been given to the press:

"The Lebaudy balloon is similar in appearance to, but twice the size of, those of M. Santos-Dumont. It is $64\frac{1}{2}$ yards long and 12 yards in diameter. The car is $5\frac{1}{2}$ yards long and can hold 3 persons. The propeller is driven by a motor of 40 horse-power."

The only ascents of dirigible balloons so far made in America were those of Leo Stevens's *Pegasus* and the Santos-Dumont No. 6 at Manhattan and Brighton Beaches, New York, respectively on the afternoon of Sept. 30, 1902. Mr. Edward C. Boice, in the Santos-Dumont, after rising gracefully to a height of 800 feet circled the Brighton Beach Hotel and then took a straight course for Sheepshead Bay, directly against an 8-mile breeze. He had complete control of his machine, and for about 3 miles kept a comparatively horizontal course, when a gust of wind blew a suspended rope against the propeller, with which it became entangled, and he was forced to descend. Mr. Stevens was less successful. His ship had previously made two unsuccessful attempts at flight, and was still unruly. After some evolutions he sailed $\frac{3}{4}$ of a mile in the direction of Coney Island. He lost the handle-bar with which he controlled the propeller and made a hasty descent, landing with his machine on the cross-bar of a telegraph-pole.

The managers of the Louisiana Purchase Exposition, to be held in St. Louis, Mo., in 1904, have offered a grand prize of \$100,000 and \$50,000 in minor prizes for competition in air-ship motors, air-ship races, kites, and gliding-machines, and have announced the following as the official rules for the contests: Speed is to be the sole condition for winning the grand prize. The successful aeronaut must sail his craft over the 10-mile course at least three times, at an average speed of not less than 20 miles an hour. Smaller prizes are offered for the next four fastest airships in this contest, though the speed must be at least 10 miles an hour to obtain any award. Time consumed in starting and landing again in the prescribed lines without serious injury to navigator or apparatus will be counted in computing speed. No allowance will be made for deviations from the course or for wind. A prize is offered for the flying-machine, not carrying an operator, that makes the quickest straightaway flight of a mile and return. Other prizes are offered for the best gliding-machines carrying an operator. Four prizes of \$5,000 each are offered for these contests, open to air-ships, flying-machines, balloons, or any other aerial craft, carrying at least one person, all starts to be made

from the exposition grounds: For the greatest altitude attained; for the longest time in air; for landing nearest the Washington Monument, Washington, D. C.; for the longest distance traveled in any direction in one night. M. Santos-Dumont, Sir Hiram Maxim, and many less-known inventors have expressed their intention of entering the contests.

The ordinary spherical balloon has been used with good effect by the armies both of the European countries and of the United States for scouting and signaling, and several interesting attempts have been made to navigate the air by merely utilizing the prevailing air currents. Notable among these was the fatal attempt of Andrée, in 1896, to drift over the north pole. Major Hirschauer of the Balloon Battalion at the camp of Châlons, France, during a heavy fog on Oct. 22, 1901, observed that the direction of the wind for 330 feet above the surface of the earth was northeast. Above this he found a layer, extending nearly to 3,300 feet elevation, in which the wind was from the south, and above this again the clouds were moving from the northwest. These facts induced him to order Lieut. le Comte to make a trial trip. At ten o'clock Lieut. le Comte made the ascent, moving at first in the direction of Epernay, west-southwest from the Châlons camp, thence toward Reims—that is, utilizing the south wind, and back to camp on the northwest wind. At three o'clock he came in sight of camp and maneuvered the balloon by means of the drag ropes so as to reach the center of the camp ground, where he was lowered by the same detachment that assisted him in his ascent. Lieut. le Comte thus solved the same problem as Santos-Dumont, only at far greater distances, by utilizing favorable wind currents without a motor, and finally, by means of drag ropes, showing that even the spherical balloon, under favorable guidance, can reach predetermined places. In October, 1901, a Prussian officer, accompanied by two assistants, made a similar ascent. He ascended from the Tempelhof field, near Berlin, in foggy weather and little wind, and passed over the Stern hunting-lodge (near Drewitz), Potsdam, Döberitz (north of Potsdam), and back to the Tempelhof field. The filled balloon was left overnight in the balloon shed, and next day was again used by the same men, under similar meteorological conditions, the route being over Teltow, Potsdam, Lehnin (13 miles west of Potsdam), Döberitz and back to Teltow, where a landing was effected. Here on two successive days, with a change in the wind, practically the same course was covered, with one balloon filling, the balloon remaining in service for forty-one hours in all. On July 27, 1902, Capt. Eric Unge of the engineer corps of the Swedish army traveled more than 540 miles in a balloon in fourteen hours and a half, descending near Novgorod, Russia. On Sept. 19, while attempting, in the presence of King Oscar, at Stockholm, to cross the Baltic to Germany and the south of Europe, his balloon exploded, and he and his companion fell more than 2 miles. The wrecked balloon acted as a parachute and both escaped unhurt. On Sept. 22, 1902, Count de la Vaulx, accompanied by M. Castillon de Saint-Victor, M. Laignier, of the French navy, M. Hervé, the engineer whose patent "deviator" plays so prominent a part in the experiments, and Duhanot, the mechanic, started from the aerodrome at Palavas-les-Flots, near Montpellier, in his balloon *Méditerranéen II*, in a second attempt to cross the Mediterranean. The balloon, which was provisioned for several days, was escorted by the tor-

pedo-destroyer *Épée*, and was attached to a floating buoy or "deviator," which kept it at a uniform height of 100 feet above the water and, to a certain extent, made it possible to regulate the direction of the flight. Some 200 pigeons were used to keep up communication with the shore. At ten o'clock on the morning of Sept. 22 the balloon was sighted by the captain of an Italian vessel 25 miles southeast of Palavas. Eventually, however, a contrary wind caused the attempt to be abandoned, and the balloon was brought to earth at Marseilles, between Cette and Agde.

At the meeting of the French Academy of Medicine held in Paris in August, 1902, Dr. Naugier asserted that he had made experiments demonstrating that a balloon ascension acts on the human system as a powerful tonic, causing such a multiplication of the red corpuscles of the blood that the condition persists for many days after an ascension. He further stated that five such excursions, each of two hours' duration, would be more beneficial to an anemic or a consumptive than a sojourn of three months in the mountains, and that he should request the municipal council to provide a large balloon, capable of taking into the upper air daily 50 patients or children who are too poor to afford a change of climate.

AFGHANISTAN, a monarchy in central Asia, lying between Russian Turkestan and British India. The reigning Ameer is Habibullah Khan, born in 1872, who succeeded his father, Abdurrahman Khan, on Oct. 1, 1901. The area of the country is estimated at 215,400 square miles, the population at 4,000,000. The revenue is uncertain and fluctuating. Although the rule of Abdurrahman was more energetic and systematic than that of his predecessors, the *hakims*, or governors, and other officials practise extortion and speculation. The cultivators pay to the Government from a tenth to a third of the produce, according to the amount of irrigation. The Indian Government grants to the Ameer an annual subsidy of Rx 180,000. Abdurrahman formed a regular army on European models, consisting of 37,000 infantry, 7,000 cavalry, and 360 guns. In the arsenal at Kabul are manufactured magazine rifles, cartridges, and breech-loading cannons. Wheat, barley, and legumes are winter crops, and rice, millet, and corn are grown in summer. The land is cultivated by the owners or by tenants who pay rent in money or in kind or who hold it on the *métayer* system. Agricultural laborers are freemen who work for hire, or serfs. Asafetida is gathered in great quantities and exported to India. Castor-oil and madder are also exported, and preserved fruits, which are consumed largely in the country, as well as fresh fruits, in which Afghanistan abounds, including apples, pears, almonds, peaches, quinces, grapes, figs, plums, apricots, pomegranates, cherries, and mulberries. Silks, sheepskin coats, fabrics of camel's hair and cashmere, rugs, and rosaries are manufactured. The trade with Bokhara and Russian territories is growing, while that with India and with Persia shows no increase. Exports from India to Kabul in 1901 were valued at Rx 299,051, and imports into India from Kabul at Rx 187,550. The exports from British India to Candahar were Rx 214,316, and imports from Candahar into India Rx 353,281. The imports from India consist of cottons, indigo, sugar, and China tea. The exports from Afghanistan to India are fruits and nuts, wool, silk, hides, spices, grain, ghi, asafetida and other drugs, vegetables, tobacco,

cattle, and horses. The trade with Bokhara is about 4,000,000 rubles each way.

The internal peace of Afghanistan was threatened by a complication of intrigues in the months preceding the ceremonious installation of the Ameer Habibullah, on March 20, 1902. Mohammed Ismail, son of Ishak Khan, who contested the throne with Abdurrahman, was suspected of designs on Afghan Turkestan in co-operation with other exiles in Russian territory. Habibullah's cordiality toward the Haddah Mullah, whose influence nearly embroiled Afghanistan and India on the occasion of the frontier troubles in 1897, was one of the manifestations of a desire to conciliate the fanatical element and put forth prominently the spiritual attributes of Afghan sovereignty. Bibi Halima, the widow of the late Ameer and mother of Mohammed Umar Khan, was dissatisfied because Habibullah did not consult her in political affairs, as he was enjoined to do in his father's will. The new Ameer's younger brother, Nasrullah Khan, was at variance with him also. Mutinies occurred among troops that had not been paid. The Ameer appointed a council to assist him in the administration of the country. The coronation took place without serious disturbance. The Hadda Mullah went to Kabul, where a new code of laws to be promulgated by the Ameer was submitted to him for revision. The Ameer gave permission for political refugees to return to Kabul, but withdrew it in deference to the opinion of Umar Khan, Nasrullah Khan, and others. The Ameer's Council of State was composed of leading members of the various tribes. Another step in the direction of organized government was the appointment of a person learned in Afghan customs and Moslem law to assist each of the provincial governors in the administration of civil and criminal justice. Cases of importance are referred to the Ameer and the Council of State at Kabul. The soldiers received their pay, which was in arrears since the death of the late Ameer. A plan for the reform and reorganization of the army was adopted. The pay of men in active service was raised, and at the same time the strength of the regular army was increased. Two points on routes leading from India into eastern Afghanistan were fortified and permanent garrisons were stationed there.

ALABAMA. (See under UNITED STATES.)

ALASKA. (See under UNITED STATES.)

ANGLICAN CHURCHES. **Statistics.**—The statement of the voluntary offerings of the Church of England for the year ending Easter, 1901, reported for the Church of England Year-Book shows that the contributions for general purposes and for parochial purposes exceeded those of the preceding year by about £7,000, and reached a total of £7,728,134. The preceding year had shown an increase of £300,000; but reference was made in the statement to circumstances that might have justified the expectation of some falling off. An increase of £48,000 in the contributions for the maintenance of primary schools was perhaps the most noteworthy item, and was in fact six times the total increase for the year; so that on the whole there had been some falling off in other items. The contribution to foreign missions was £824,038; the local contributions to the support of the clergy had been £828,684; and £168,797 had been raised by the central and diocesan societies for the assistance of the clergy at home, £609,689 had been contributed for general home missions, £505,040 for philanthropic work, and £1,170,390 for elementary education. As a whole, the gifts for

parochial purposes were about two and a half times the size of those for general purposes—or £5,542,394, as against £2,235,741. Other contributions to general charities from Church sources, of which the tables in the Year-Book take no notice, were, it is represented in the Church Times, well maintained. No account is made in the tables either of contributions, such as those to the Bible Society, the London City Mission, etc., in which non-conformists cooperate. Of the various items in the budget, gain was shown in 7 and loss in 12.

The income of the Bishop of London's fund (to provide for the spiritual needs of the poorer parts) for the past year had amounted to £28,795, against £26,744 in the preceding twelve months. The bishop at the annual meeting in behalf of the fund named £50,000 a year as the sum required for the carrying out of the work undertaken by it.

The annual report of the Church Pastoral Aid Society for 1902 shows that during the year grants had been made in the total amount of £60,494 for 750 curates, 154 lay assistants, and 102 women workers in 695 parishes, containing an aggregate population of 6,086,367. The amount of contributions called forth locally had steadily risen, except in a single year, during the past ten years from £36,368 in 1893 to £53,785 in 1902. The committee had been able to extend the work of the society in two directions during the year, namely, in the application of a gift of £10,000 for the relief of impoverished clergy, partly, according to the donor's wishes, in augmenting poor benefices reasonably secured in evangelical patronage, and partly in relieving more immediate needs; and by the institution of an effort to train for the ministry men who appear to have all the needful qualifications except sufficient means. In the former branch of activity, by the help of local benefactions and aid from the ecclesiastical commissioners, increased endowment would be provided for 20 or 30 parishes. The balance of an educational fund formed in connection with the society's forward movement of 1894-'98 had been applied to training men at Cambridge who had gained an insight into parochial work while preparing for a degree at the university and for holy orders.

Church Missionary Society.—The annual meeting of the Church Missionary Society was held in London, May 6, Sir John Kennaway, Bart., M. P., presiding. The year's receipts for general purposes had been £327,000, an increase of £13,500. While legacies and interest were less than in the previous year, there had been an increase of about £20,000 from voluntary contributions. Expenditures had been reduced by £6,000, and had really been £15,000 less than the estimate; and the deficit of £27,000 was less than had been feared. The society's work could not be done on the present scale, without an increase of £50,000 a year in income, after making up the deficit. The Church in Japan had adopted a revision of its constitution, and had before it a revised translation of the Thirty-nine Articles; and its clergy and laymen sat in synod and voted with the English bishops and clergy. Native clergy preponderated in the synod of Ceylon, which was about to elect its own bishop, under the constitution granted in 1886—a power to be exercised for the first time by any modern Church body in which natives predominate. The Church in Uganda numbered 30,000 members, supported 27 pastors and 2,400 teachers and elders, put up its own church buildings, and sent its own missionaries into foreign parts. In New Zealand and

Canada, the society's work among the Maoris and red Indians was being transferred to the colonial churches. Some of the most interesting cases among the 9,586 adult and 11,007 juvenile baptisms of the past year were the first four converts in the Eskimo mission at Cumberland Sound and the first pygmy from the great African forest. The following declaration of the position of the society was embodied in the report: "The Church Missionary Society has its own distinct principles—the principles of the apostolic age of the English Reformation, of the evangelical revival—and on those principles it stands, and intends by the grace of God to stand. It maintains, and will maintain, its just independence—not independence of the Church or of its constituted authorities, but the reasonable independence of a body of loyal Churchmen banded together for the preaching of Christ in the world. At the same time, it declines to be turned aside by groundless and unworthy suspicions from the ancient practice of friendly intercourse with other societies, whether within the Church of England or within the wider range of Protestant Christendom; and it rejoices to see what its founders would have rejoiced to see—but died without the sight—the Church of England as a body, and its episcopate in particular, fostering the missionary enterprise."

The following approximate statistics of the missions for 1901-'02 were presented to the meeting: Number of stations, 558; of European missionaries, 1,305, including 421 ordained clergy, 146 laymen, and 738 women missionaries; of native clergy, 374; of native lay teachers, 7,927; of native Christian adherents, including catechumens, 290,225; of native communicants, 85,553; of baptisms, 20,617; of schools, 2,522, with 103,137 pupils; of hospital beds, 1,713; of in-patients, 13,871; of visits to out-patients, 786,642. Among the missionaries were 64 qualified doctors, 14 of whom were women.

The Centenary Volume of the society, published during the year, contains a history of its rise and progress together with particulars of its various missions. While from 1799 to 1815 the society received no attention from the bishops, its list of vice-presidents in 1899 included the names of 126 bishops. Thirty-seven of its missionaries, 3 of them Africans, were made bishops during the one hundred years. Bishop Hadfield, who went out in 1839, was the senior bishop on the list, and the sixth in order of consecration. Before 1841 the society sent out only 16 university men as missionaries. Since then 384 graduates had gone out, making the whole number 400. The development of the publications of the society and their currency was shown in the fact that while in 1849 they cost £2,500 a year, and returned only £150, the corresponding periodicals now cost £5,000 a year, and returned nearly the whole sum. During its first year the society received £2,461; during the last twelve years of its century (1887 to 1899) it met a total expenditure of £3,342,000. The missionaries who had served the society numbered 1,602 men, 584 women, and 623 native clergy. The first 7 missionaries, up to 1809, were German Lutherans. The first record of woman missionaries was in 1820. Of every pound sterling received 16s. 6d. were expended on the actual missions, 7d. for disabled missionaries, 8d. for the training of missionaries, and 2s. 3d. for home charges. The corresponding expenditure for home charges during the first half century was 2s. 11d.

Society for the Propagation of the Gospel.—The receipts for 1901 of the Society for the

Propagation of the Gospel in Foreign Parts aggregated £206,799, being £28,402 more than were received in 1900. The whole of the sum subscribed to the Bicentenary fund, £84,027, would be available for mission purposes, owing to the able financing of the money as it had come to hand. The sums had been temporarily invested or placed on deposit at once, and the entire expenses of the fund would have been met by the ensuing July out of the dividends. The number of ordained missionaries, including 11 bishops, on the society's list, was 753; of whom 251 were in Asia, 199 in Africa, 46 in Australia and the Pacific, 166 in North America, 54 in the West Indies and Central and South America, and 37 chaplains in Europe. Of these, 127 were natives laboring in Asia and 55 in Africa; and there were also in the various missions about 3,000 lay teachers, 3,200 students in the society's colleges, and 40,000 children in the mission schools in Asia and Africa. It was represented in the general introduction to the report that the bicentenary commemoration had drawn many people to help the society who had not hitherto done so.

A special meeting of the Standing Committee of the society was held March 21, to consider a request from the General Synod of the Episcopal Church in Ireland that it forbid the connection of any of its agents with party organizations, "as required even by its own rules." The reference in this last clause is to instructions issued in 1706, which are bound up with the report of each year's work. The Standing Committee responded to this request in the words of a minute adopted in 1900, that the society had no power over the opinions or convictions of the missionaries whom it maintained; that it did not select the clergy whom it employed, and so long as they held the license of their respective bishops, the society was bound not to remove them. "The only alternative would be that the society should assume a spiritual jurisdiction, to which it can justify no claim. The instructions given at the very foundation of the society to the missionaries to which the resolution of the synod refers represent the conviction of the society as to the ideal which all Christian people should aim at. The Standing Committee assure the synod that in its work both at home and abroad the society knows nothing of party distinctions. They sincerely hope that it may enable the friends of the society in Ireland to convince the Church that the Society for the Propagation of the Gospel is not a party society. But the Standing Committee assure the synod that they will be most careful to bring under the notice of missionaries placed on the list the instructions of the year 1706."

The Women's Mission Association for the Promotion of Female Education among the Heathen, in connection with the Society for the Propagation of the Gospel, had received £11,583, showing an increase of £911. The balances had risen from £4,904 to £5,673. A steadily growing demand for missionaries, and especially for qualified teachers, was observed in India. A large increase of work was expected in the dioceses of Bombay and Madras. In Burma the standard of education was rising and the demand for it increasing. The association also appealed for offers of service to meet the needs of Japan, South Africa, and Madagascar.

The Melanesian Mission.—The work of the Melanesian Mission had been carried on at the time of its anniversary meeting in November, 1901, for fifty years with steady and growing success, with the aid of sailing and steam vessels

plying from island to island. The general fund for the past year had been the highest on record, and the subscriptions to the fund for the provision of a more suitable vessel, which was greatly needed, had reached £13,000, a sum which was, however, not at all adequate. It was shown that in the fifty years of its operation the mission had worked a complete revolution in the region. When Bishop Selwyn began his work Melanesia was entirely heathen, whereas there were now 12,000 baptized Christians in the islands.

Voluntary Societies.—The object of the National Protestant Church Union is defined in its annual report for 1902 as being "to promote the principles of the Reformation as set forth in the Prayer-Book and Articles of the Church of England." The president is Mr. W. D. Cruddas; Prebendary Webb-Peploe is the chairman; and among the vice-presidents are the Bishop of Durham, the Bishop of Sodor and Man, and Bishops Perowne, Ingham, Marsden, and Royston. The work of the union is largely educational in its character, and as a part of it a steady growth in the number of lectures and general meetings is recorded as having taken place during the year. The intention of the council is announced to publish a History of the Church of England, by the Rev. Charles Hole, and a reissue of Dr. Vogan's True Doctrine of the Eucharist; and a Manual of Christian Doctrine is in hand. A number of recent appointments by his Majesty's Government are cited as showing that the increased activity among Protestant Churchmen has not been without effect in the selection of men for ecclesiastical preferment.

At a meeting of the union held Dec. 3, 1901, a resolution was adopted expressing the opinion that in view of the continuance in the Church of practices and doctrines which are both illegal and contrary to the spirit of the Reformation, "further legislation is urgently required in order to secure a reasonable conformity to the law of the Church and the realm."

An address issued by the Church Association in July, in answer to an appeal in behalf of the ritualists, bore the heading, "Now that the war is over, the Protestant question must come first." Representing that the union had already a political organization in 225 out of 443 English constituencies, with 6,000 enrolling agents, it asked for 1,000 more volunteers to gather the names of those who were determined to put Protestantism before party and prevent the complete "capture of the Church of England" by the "disloyal and Romanizing clergy."

The forty-third annual meeting of the English Church Union was held in London in June, the occasion being preceded by special communion services held in the morning in 1,232 churches throughout the kingdom. In his presidential address Lord Halifax said that the battle begun by Mr. Keble had been won; that the substantial of Catholic doctrine and ritual and the essential liberties of the Church were secure; and the question now to be faced was that of the general relation of national churches to the Church universal, which rested on the wider question of what was the ultimate authority in matters of belief. The act of supremacy was responsible for an Erastian view which had produced a great deal of mischief—largely so for the conception of the Church of England as an independent self-governing body with no obligations to the rest of Christendom. The Church Union had been accused of disloyalty for ignoring Anglican tradition; but if there was any Anglican

tradition which went to make the eucharist an occasional and exceptional service, it was not to be followed. Loyal English Churchmen were bound not to forego celebration because there might happen to be none to communicate with the priest. They should rejoice at the desire for a greater unity now showing itself on all sides. As one step toward union the adoption of a single catechism by the non-conformist bodies was to be welcomed, and similar hopes were encouraged by signs among the members of the Established Church of Scotland. The Church of England was but two provinces of the Western Church, isolated, unhappily, by circumstances for which it was by no means solely responsible, but whose members could not consistently relieve themselves of the obligations which the part owed to the whole. If the authorities of the Church would but acknowledge that the act of uniformity was dead and buried, and take on their own initiative such steps as the Church required, they would be far wiser than if they waited till Parliament was willing by a definite act to sanction their action. The number of enrolled associates of the union was now 12,493, 2,137 new members and associates having joined during the past year. Of these, 77 were clergymen. Three American bishops had become members. Satisfaction was expressed in the annual report with the result of the Fulham Conference, "which can hardly fail to remove existing misconceptions as to the exercise of the sacrament of penance and to promote the cause of peace."

At the annual meeting of the Church Reform League, June 10, the Bishop of Worcester presided and spoke of the manner in which he had been impressed by his experiences as a bishop with the importance of the movement which the league sought to promote. At every point, he said, the same necessity of constitutionalizing the Church was met. There was a clear need that in the Church of England there should be less arbitrary power in the hands of individuals. The required change could not, however, be carried out unless each order—the bishops, the beneficed clergy, and the laity—realized that they must concede some limitation of their powers. By due recognition of the authority of the bishops, clergy, and laity they would be brought to the ideal of episcopal government in those ages of the Church to which they constantly professed to recall themselves. Resolutions were passed in favor of the passage of the convocations of the clergy bill without delay, and commending the work of the league to the generous support of Church people throughout the country.

The report of the Home Reunion Society, presented at its annual meeting, July 8, set forth that the question of the intercommunion with non-Episcopal bodies, advocated by Canon Hensen, had for the time hindered direct advances toward reunion, and that a further hindrance to the society's work had been "the unfortunate political spirit in which leading dissenters had misrepresented the real attitude of Churchmen in supporting the Government education bill." Lord Nelson, moving the adoption of the report, expressed the hope that when the education bill had passed, the animosity which had been aroused in connection with it would pass away. He thought it would be a good thing if committees of Churchmen and dissenters could be formed to discuss the four bases of intercommunion suggested at the last meeting of the Lambeth Conference. The Bishop of Truro, presiding, thought that when the educational controversy was over and the bill had passed, non-conformists would

feel that they had raised a flag which was without a staff and had shown unnecessary heat. One thing that came out very sharply from the contest was that Churchmen had stood up boldly for parents' rights to choose the religious education of their children. If they threw over their apostolic succession, the speaker thought, they would weaken the Church of England very much indeed, and make it less easy for their non-conformist friends to unite with them. What they had to do was not to overthrow the apostolic succession, but to make it a greater reality. The council of the society was considering how it could carry out the resolutions passed at the last Lambeth Conference with reference to discussions between Churchmen and dissenters.

The Society of the Sacred Mission, of which the purpose is to promote the increase of candidates for the ministry and aid in their efficient training, "offers a free and thorough education and maintenance during training to all who will give themselves up wholly to the service of God and his Church, in holy orders or lay work, in foreign missions or at home." At its annual meeting in November, 1901, it had about 40 candidates and 12 actually accepted.

The Liberation Society.—At the annual meeting of the Council of the Society for the Liberation of Religion from the Patronage and Control of the State, May 7, the treasurer reported that the receipts for the year had been £4,613, and the expenditures £4,522. The report of the secretary mentioned as evidences of an awakening interest in the country such facts as an increase in the number of meetings and lectures, and the preaching, at the instance of the Manchester and district branch of the society, of liberation sermons by 300 non-conformist ministers in the northwestern district. The action of the society with reference to the tithe rent-charge and the education bill was reviewed. The chairman, Principal Hutton, of Paisley, said in his address that they were not proposing terms with the state Church. They had been passing through a crisis in which new questions had divided them, but they knew their principles well, and had still the permanent moral forces which fought for them. They must hold that the abolition of state churchism was one of the greatest of political reforms, and was not to be taken up or laid down at party or personal convenience. Let them have done with attempts to reform the establishment. Gratification was expressed by resolution at the debate and division in Parliament of Welsh disestablishment. Another resolution called on Free Churchmen and educationists to oppose the education bill as one which would destroy direct popular control over schools wholly supported by the people, and would strengthen sectarianism in teaching and management.

At a breakfast given by the Liberation Society, April 15, Mr. W. S. Caine, M. P., presiding, the education bill was discussed by Mr. Caine, the Hon. James Bryce, Mr. H. J. Wilson, M. P., Mr. Ford Maddison, Mr. J. Compton Rickett, M. P., Mr. Lyulph Stanley, Mr. Herbert Roberts, M. P., Dr. Townsend, president of the National Council of Evangelical Free Churches, and Mr. Carvell Williams, all of whom condemned the measure severely.

Death of John Kensit.—The public protests during church services against presumed ritualistic excesses, instituted by John Kensit, were continued by him and the "Wycliffite preachers" at various times and occasions. John Alfred Kensit, son of Mr. Kensit, was summoned to

Liverpool in September on a charge of holding antiritualistic meetings calculated to cause a breach of the peace. Refusing to find sureties and give bonds to keep the peace, he was sentenced to imprisonment for three months. The incident caused much excitement among the antiritualists. Mr. Kensit, senior, sent petitions for his son's release to the Home Secretary and other members of the Government. He asserted that the most serious offense proved against his son was that he had read a sentence from the Prayer-Book characterizing masses as "blasphemous fables and dangerous deceits." In a memorial to the Home Secretary the Council of the Church Association characterized the imprisonment as a grave scandal and a menace to liberty of speech. In answer to a memorial signed by 100,000 persons, the Home Secretary said that the case was one in which he could not interfere. The Baptist Union, by resolution, asked for an investigation into the case, in which it affirmed there was reason to believe that there had been a grave miscarriage of justice. Mr. Kensit went to Liverpool to visit his son in prison, and a demonstration was made in Birkenhead against the Wycliffite preachers, in which he was hit upon the head with a chisel. Pneumonia supervened, from which he died, Oct. 8. His son was afterward released by order of the Home Secretary, when he declared that he would take his father's place at the head of the movement he had organized. Steps have been taken to erect a memorial to Mr. Kensit as a "defender of Protestant truth."

Convocation of Canterbury.—The Convocation of Canterbury met in its first group of sessions for the year on Jan. 28. In the upper house the appointment was advised of a joint committee to consider the best methods of approaching the Jews resident in the kingdom, and whether any special spiritual provision should be made for Jewish Christians during the first years of their conversion. A resolution of the lower house protesting against a proposal to legalize marriage with a deceased wife's sister was adopted, with a request that the archbishop and bishops use all means at their disposal to prevent any measure with that object from becoming law. The subject of preparing a special prayer in regard to the supply of candidates for holy orders was referred to the joint committee on special prayers and services. In the lower house the subject of the procedure of the confirmation of bishops was discussed. The following resolutions on the subject of ecclesiastical dilapidations were adopted: "1. That in the interest of the Church of England, and with a view to relieving the distress arising from the diminished income of the clergy at the present time, a general insurance fund to deal with dilapidations ought to be established. 2. That each incumbent who is liable should be required to contribute an annual payment to this fund upon some suitable basis. 3. That it is desirable that this annual payment should include a small sum to be lodged in the name of the incumbent as a guarantee fund against damage accruing through neglect or waste, to be returned with interest, if not required, to the incumbent at the termination of his incumbency." The resolutions further advised that the central management of the proposed insurance fund be placed in the hands of the ecclesiastical commissioners; and that diocesan, archidiaconal, or parochial repair funds be established to assist the clergy, in case of necessity, in raising the contributions levied upon them. The opinion of the house was expressed

that in any rearrangement of the position of voluntary schools, it was desirable that public aid given to them should be applicable to their general maintenance, without any allocation of funds to the support of secular as distinguished from religious instruction. The archbishop and bishops were requested to take steps for the provision of a prayer for the supply of candidates for ordination.

In the House of Laymen the discussion on the subject of the lay franchise was continued from a previous group of sessions, and a resolution relative to the initial lay franchise was adopted, "that an equal number of parochial representatives of every ecclesiastical parish or district attached to an old or new parish church in the diocese (including the district remaining ecclesiastically attached to the old parish church of an ancient parish church which had been ecclesiastically subdivided) shall be elected by such of the persons of full age, resident in the ecclesiastical parish or district, as declare themselves in writing to be members of the Church of England and of no other religious body, and are not legally and actually excluded from communion, and are of the male sex." Other resolutions relate to the details of the scheme, the election of representatives to the diocesan council, etc. In view of differences of opinion between this house and the House of Laymen of the Convocation of York with reference to the initial lay franchise, a joint session of the two houses was asked for. The "Convocations of the Clergy" bill, in the form in which it had been read a third time in the House of Lords, was approved, with the expression of a desire for its speedy enactment into a law.

At the meeting of Convocation May 1 both houses discussed the education bill and passed resolutions giving a general approval to it. Approval was given in the lower house in detail to the arrangements made at the confirmation of the Bishop-elect of Worcester, which, it was represented, were on the lines suggested in the second report of the Committees of Church and State on the Confirmation of Bishops. The resolutions appended to the report of the joint Committee on the Position of the Laity were discussed, without action being taken. These resolutions declare that it is desirable that a national council should be formed fully representing the clergy and laity of the Church of England; that the definition of the powers to be entrusted to the council in reference to legislation, of the qualifications of electors, and of the method of electing and summoning its members should be determined by a joint meeting of the members of the two convocations with the provincial houses of laymen, with a view to its receiving statutory authority; that this council should consist of 3 houses, the first that of bishops, the second that of representatives of the clergy, whether official or elected, and the third of elected communicant laymen; that the acceptance of the three houses, sitting together or separately, should be necessary in order to constitute an act of the body; and that nothing in the resolutions was intended to interfere with the position of the convocations as provincial synods of the clergy. The report stated that the committee had come to the conclusion that the study of the apostolic and primitive constitution of the Church as it is set forth in Holy Scripture and in the history and writings of the first three centuries showed clearly the coordinate action of clergy and laity as integral parts of the whole body of Christ, and it was added: "It appears to us that the creation of

a representative assembly in which clergy and laity should be coordinated under episcopal authority would be a wise reversion, not only to old Anglican tradition, but to those primitive Church principles which our national Church always desires to follow. We observe that such a course has been universally adopted by the sister and daughter churches of the Anglican communion. We observe also that the Established Church of Scotland, in which a powerful General Assembly, consisting of clergy and laity, has existed from the first years of the Reformation, shows that such an arrangement is perfectly compatible with establishment. Such an assembly in this country, working, as it must necessarily do, in harmony with the Crown and with Parliament, would, in our opinion, do much to promote that effective service to, and representation of, the religious life of the nation which it is the object of establishment to secure. Such an assembly would not stand alone. It would lead to the development of local organizations in our parishes and dioceses which would subserve the general object of making all members of the Church more conscious of their rights and responsibilities." The resolutions of the Committee on Clerical Poverty and Clerical Charities were adopted. They assert the importance of obtaining very general support for the Queen Victoria Clergy fund and the diocesan funds affiliated with it, and the desirability of introducing the custom of Easter offerings and collections for the benefit of the clergy into every parish; declare that no scheme for assisting the poverty of the clergy can be satisfactory that does not make provision for a considerable diminution in the number of poorly endowed benefices where the area and population are also small; advise the institution of diocesan boards of clergy and laity to promote the union of small benefices in suitable cases; and make other recommendations of measures intended to remedy the evils of clerical distress. A resolution was passed in the House of Laymen deprecating the tendency to pervert Sunday into a day of pleasure-seeking and trade.

At the session of the Convocation in July the upper house discussed the report of the Committee on Clerical Poverty. This report embodied the opinion that legislative action was necessary, and offered some recommendations, among which were those for the institution of sustentation funds and for unions of benefices. In the lower house the discussion upon the position of the laity in the councils of the Church was resumed. Resolutions were adopted urging Parliament to pass "an enabling act empowering the two convocations to reform themselves and to sit together"; that "it is desirable that a national council shall be formed fully representing the clergy and laity of the Church of England"; and "that it is desirable, without traversing in any way the historic position and rights of convocation, that a representative assembly of laymen, duly elected, and possessing statutory authority, shall be formed in each of the two provinces, and so associated with the convocations that in either province the archbishop shall summon the House of Laymen to consult and debate with the houses of Convocation, and that the two archbishops, acting together, shall, as occasion requires, gather all the houses of the provinces for a joint session as a national Church council." In the House of Laymen the powers and constitution of the contemplated national council and the education bill were subjects of discussion.

Convocation of York.—At a meeting of the House of Laymen of the Convocation of York, April 3, the resolution adopted in 1901 proposing that the lay franchise should be open to all rate-payers was reconsidered and receded from. This step was intended to bring the action of the house into harmony with that of the House of Laymen of the Convocation of Canterbury. The house further expressed its cordial approval of the Government education bill, but urged the elimination of the permission clauses. Another resolution expressed general satisfaction with the licensing bill of Mr. Ritchie, without binding the house to agreement in every detail.

The houses of the Convocation of York met April 30 and May 1. Resolutions were passed giving general approval to the education bill. A resolution of the lower house having reference to the distress among the clergy suggested the institution in every diocese of an annual Clergy Sunday, on which collections should be made in aid of the various clerical charities, and recommending the stimulation and encouragement of local effort to make the net income of every benefited clergyman not less than £200. Another resolution affirmed the positive duty of the Church to impress upon all Churchmen the perpetual obligation "to do their utmost, by prayer, word, and example, to promote the cause of peace by implanting the great principles of justice, charity, and mutual respect throughout the world"; and further expressing a strong sense of the responsibility which will rest upon the Church in this regard toward the various races of South Africa at the close of the present war.

Joint Meeting of the Two Convocations.—A joint meeting of the two convocations, including both Houses of Laymen, was held in the Church House, Westminster, in July. The subject of the lay franchise was discussed at length and the opinions of the body were expressed by resolution; "that the electors should be of full age and have been baptized and confirmed, and should declare in writing that they are *bona fide* members of the Church of England"; and that the representatives elected by them should in addition to these qualifications be communicants.

Report on the Position of the Laity.—The report of the Joint Committee of Convocation on the Position of the Laity sketches historically the share of the laity in the councils of the Church, showing that their importance in ecclesiastical councils began to diminish after the Council of Nicæa until under the mediæval papacy it was almost eliminated. In the East the emperor embodied, at least in theory, the functions of the laity, in the West the Pope absorbed these with those of the episcopate, though in remoter regions, such, for instance, as England before the Conquest, the share of the laity still remained great. The Conquest introduced a change, separating the clergy from the laity, and the Reformation did nothing to restore to laymen that direct share in ecclesiastical matters which had once been theirs. The supremacy of the king was gradually transferred to Parliament, always an imperfect substitute, and most imperfect now that Parliament has ceased to consist wholly of Churchmen. Recent political changes have impaired the parochial organization of the Church and deprived the laity of the influence in the parish which they had in the middle ages, and in some degree retained after the Reformation. The present position, then, is a disorganization not far removed from chaos. "The time has come for the creation of a repre-

sentative assembly which shall be coordinated under episcopal authority. This would be a wise reversion not only to old Anglican tradition, but to those primitive Church principles which our national Church always desires to follow."

The committee therefore present as their first resolution "that it is desirable that a national council should be formed, fully representing the clergy and laity of the Church of England."

The Case of Bishop Gore.—The Rev. Charles A. Gore, D. D., Canon of Westminster, was elected by the dean and chapter of the diocese, on the nomination of the Crown, Bishop of Worcester. Prior to the confirmation of the election, as directed under the new procedure adopted for such cases, 10 protests were filed from societies and individuals, alleging that Dr. Gore's views on inspiration and the sacraments were such as to disqualify him for the office of bishop in the Church of England. The objections stated were based, in part, on the fact of Dr. Gore's having participated in the preparation of the book *Lux Mundi*, and having used language therein calculated to shake the faith of believers; on his having taught the doctrine of a material presence in the sacrament; and on his having taken part in the founding of the Monastic Celibate Society. On the occasion of the procedure for confirmation of the election at the Church House, Jan. 22, on the calling of opponents by direction of the vicar-general, Mr. John Kensit offering to enter a protest, the vicar-general said that he could take claims to appear only in the order of their presentation. He then read a list of the objectors who had given written notice. They were the Church Association, the Liverpool Laymen's League, the Imperial Protestant League, the Protestant Alliance, the Protestant Reformation Society, Mr. John Kensit, the Protestant Truth Society, and four individuals. Other persons who expressed a desire to speak were told that they had failed to give previous notice. The bishop-elect, through his attorney, expressed readiness to answer to any charge which was legitimately made and relevant, subject to the decision of the vicar-general, but he wished to make it plain that he, for his part, was not urging that the court had no jurisdiction. The vicar-general explained that all the written objections had raised questions of doctrine, which under no circumstances could be entertained at confirmation; therefore none of the objectors would be heard, but he wished to add that any objector who could have established a right to appear, in accordance with the terms of the citation, would have been heard. Mr. Kensit and others attempted to protest against this decision, but the vicar-general refused to hear them. The proceedings then continued. The vicar-general read the decree of confirmation and the bishop-elect subscribed to the declaration and took the oath of office. On Jan. 24, the objectors applied to the King's Bench Division of the High Court of Justice for a mandamus against the Primate and the vicar-general, directing them to hear the objections. The Lord Chief Justice and Mr. Justice Darling, while declining to express an opinion as to the result in the case, decided to grant a rule *nisi* for a mandamus. The matter appeared to them one that should be discussed; and a further hearing was appointed. The consecration of the bishop-elect had been appointed to take place at Westminster Abbey on the following Saturday (Jan. 25), and the Archbishop of Canterbury had decided to proceed with it, under the Statute of Præmunire

and the act of Henry VIII, prescribing penalties for failure to proceed with "speed and celerity" in the consecration of a bishop. The bishop-elect, however, on legal advice, declined to present himself for consecration pending the decision of the judges. In the argument on the application for a mandamus in the Court of King's Bench, Feb. 3, the Attorney-General undertook to show that the confirmation was a mere form, and was intended to be so; and that it might be dispensed with altogether, and had been. In fact, the elections by the cathedral chapters had been pronounced in an Irish statute of Elizabeth "colors, shadows, and pretenses of election, serving to no purpose, and seeming also derogatory and prejudicial to the King's prerogative royal." The statute had been repealed, but the fact had not; and the Attorney-General insisted that beyond the points of the validity of the election and the identity of the person elected, no objection of any kind could be entertained. It was urged on the side of the opponents of confirmation that even if it were shown that the vicar-general's court did not deal with contentious business, it would still be his duty, when the case became contentious, to refer it to the archbishop. If the court refused to grant the mandamus in this case there would be no discretion in anybody to refuse to confirm and consecrate the royal nominee if he could answer the questions in the ordination service. He might even become a member in some other church, and still the archbishop would have no choice. The decision of the court was read by Lord-Chief-Justice Alverstone, Feb. 10, denying the application. The view was sustained that the public citation of objectors to the confirmation of a bishop is not a real proceeding. It was shown, in substance, that never since the statute of Henry VIII had there been any "practise" of hearing objections to the appointment of bishops on the ground of doctrine, and that for two hundred years before that date no such normal practise existed as the objectors contended for. The court, however, expressly guarded itself against deciding that no objection could be raised which the archbishop or vicar-general could decline to entertain. Thus, it could not be held that an objection involving a question of identity, as that the wrong man was put forward as the bishop elected, or one that involved a question of the genuineness of the documents produced should be considered. Thus it might be a good ground of objection that the bishop-elect had done something since his election that he should not have done. An appeal was possible from the decision of the court to the Court of Appeal, and ultimately to the House of Lords, but the Council of the Church Association, after consideration, decided not to make it. The consecration of Dr. Gore as Bishop of Worcester took place Feb. 22, and his enthronement Feb. 24.

The Second Fulham Conferences.—An account was given in the Annual Cyclopædia for 1900, page 25, of a meeting designated familiarly as a "Round Table Conference," which was called by the Bishop of London, Dr. Creighton, at the suggestion of the London Diocesan Conference, of representative men of both of the great parties into which the Church is divided, which met at Fulham Palace in October, 1900, and discussed the subject of The Doctrine of the Holy Communion and its Expression in Ritual. The suggestion of holding a second conference of the same kind was made by the London Diocesan Conference in 1901 to Bishop Ingram of London, and the conference was called to meet at Ful-

ham, Dec. 30 and 31, 1901, and Jan. 1, 1902. The subject presented to the consideration of the second conference was that of Confession and Absolution; and in his letter of invitation the bishop suggested that there be four sessions, at which the discussion might proceed on the following lines: 1. The meaning of our Lord's words (in St. John xx, 22, 23; St. Matthew xviii, 13), and their use in the ordinal as affecting the conception of the priesthood. 2. The practise of the Church (a) in primitive times; (b) in the middle ages. 3. The meaning of the Anglican formularies and the limits of doctrine and practise which they allow. 4. Practical considerations—(a) the treatment of penitents; (b) the special training of the minister. The members of the conference were selected by the bishop, according to his own declaration, "with the greatest care, in order that all schools of thought in the Church should be adequately represented." They included Lord Halifax, as the representative of extreme High Churchmanship; Mr. R. M. Benson; Principal V. S. S. Coles, of the Pusey House at Oxford; Professor Moberly, of Christ Church, representing the "Oxford High-Church school"; Canon Body, Dr. Mason, and Professor Swete, holding an independent position; Dr. Childe; Principal T. W. Drury, of Ridley Hall; Dr. Gee, Principal of Bishop's College, Ripon; Chancellor P. V. Smith and the Rev. Dr. Wace; Canon Lyttleton; and Dr. Strong, Dean of Christ Church. The Rev. Dr. Wace, who was also chairman of the first Fulham Conference, was chosen chairman of the present one, and he prepared the report, which was published under the authority of the bishop. The general results of the conference are comprehensively stated in the summary of conclusions verbally communicated by the chairman to the bishop at the close of the last session as they are given by the bishop in the introduction to the volume embodying the report as follows:

"On the bishop entering, the chairman reported to his lordship the general results of the conference. He stated that a practical agreement had been reached on some important points, but that grave divergence remained on others. With respect to the first subject proposed to the conference, the members were agreed that our Lord's words in St. John's gospel, 'Whosoever sins ye remit, they are remitted unto them, and whosoever sins ye retain they are retained,' are not to be regarded as addressed only to the apostles or the clergy, but as a commission to the whole Church, and as conveying a summary of the message with which it is charged. It is, therefore, for the Church as a whole to discharge the commission, which she does by the ministration of God's Word and sacraments, and by godly discipline. But the members of the conference are agreed that the discipline of private confession and absolution can not be shown to have existed for some centuries after the foundation of the Church. It grew, in fact, out of the gradual disuse, perhaps about the fifth century, of the 'godly discipline' of public penance, referred to in our communion service as existing in the primitive Church. In view of the meaning which the conference agreed was to be assigned to the words of our Lord in St. John, the formula of ordination in our ordinal could not be regarded as in itself inculcating the duty of private confession and absolution. It was agreed that our other formularies permitted such confession and absolution in certain circumstances, but the conference were not agreed as to the extent to which they encouraged it. On the

practical question there was a deep divergence of opinion in the conference, some members holding that the practise of confession and absolution ought to be encouraged, as of great value for the spiritual and moral life of men and women, while others were deeply convinced that its general encouragement was most undesirable, that it should be treated as entirely exceptional, and that the highest form of Christian life and faith would dispense with it and discourage it."

Incense and Reservation in the Diocese of London.—The Bishop of London explained his policy in regard to incense and the reservation of the sacrament in an address to his diocesan conference in May. On taking up his work he had addressed a letter to 40 churches the ritual of which had been open to question, and had received ready answers from all, showing how long incense had been used in them (from five to forty years), and affirming that in all of them the laity were in cordial agreement with the clergy. He next wrote to 39 churches the usages of which seemed counter to the Lambeth opinion. He recognized the claim to special consideration, saying that he had hoped to be able to define uniform limits within which, in exceptional cases, these usages might be permitted, but had found it impossible. He said also that he did not propose to take any active measures against the continuance of a modified use of incense and manner of reservation, such as had already been agreed upon in private conversation, but as bishop he would not be present at any service when incense was ceremonially used, nor would he visit any church in which the limits privately agreed upon were transgressed. He thought the true policy was not to disturb existing arrangements. There were now only 6 churches which he could not visit officially because the sacrament was reserved in the open church and there was ceremonial use of incense on Sunday. All the others had conformed to his wishes entirely. A working method had been attained on this difficult question, and he intended to pursue the same policy during the coming year.

The Church Congress.—The Church Congress met at Northampton, Oct. 7. The regular meeting was preceded by a meeting for young women, which was addressed by the Archdeacon of Manchester, the president of the Girls' Friendly Society, and others. The Bishop of Peterborough being still laid up under the effects of an accident, the Bishop of Leicester presided and delivered the opening address. In the discussion of the first subject, Home Reunion, Bishop Boyd Carpenter, of Ripon, considering the three suggested methods of surrender of all the other churches to one confederation, and reorganization as all impracticable, pleaded as the only remaining alternative for cooperation between the churches for their common end. Prof. Collins affirmed that reunion could come only on the basis of the apostolical succession. Canon Hensley Henson, whose sermons on Communion and Cooperation with Nonconformists and addresses on the same subject, had attracted much attention and excited comment, maintained that in order to secure anything like practical reunion the non-episcopal churches must be frankly acknowledged. Earl Nelson defended episcopacy as a historic heirloom to be handed down to the children of the Church as a sacred trust. The Bishops of Perth (Australia) and Victoria (Hong-Kong) and others showed how reunion had been practically secured in the colonies and on the mission field through interdenominational recog-

nition. Other subjects treated in the papers read and the discussions were The Duty of Public Worship, its Ideal, and the Adequacy of the Prayer-Book Services; The Miracles and the Supernatural Character of the Gospels (as to which Prof. Swete spoke upon the Miraculous Conception, the Incarnation, and the Resurrection, and Prof. Sanday sought for a definition of a miracle); The Sermon on the Mount in its Application to Modern Life; The Maintenance of Religion in the Home under the Changed Conditions of Modern Life; The Position and Responsibility of the Clergy and Laity in Relation to Modern Criticism and its Influence on Theology, both as Students and as Teachers; Religious Work among Sailors; The Direction of Individuals in Spiritual Matters (in which the subject of confession was brought up); The Observance of Sunday (at a women's meeting); Grievances arising out of the Exercise of Patronage, the Alteration of the Mode of Conducting Services by the Incumbent, and the Continuance in Office of an Inefficient Incumbent; The Church and Working Men; Prayer, its Obligations, its Conditions, and its Results; The Duty of the Church in regard to Education, in the discussion of which the Bishop of Hereford advocated the establishment of equitable and friendly relations with nonconformists, and insisted as fundamental principles in any scheme that fair dealing as between citizens of different denominations required an efficient school within reach of each child, managed by a committee of which the members were publicly appointed or by the religious denomination to which the parents belong; that the expenditure of public money be under public control; and that small schools be not needlessly multiplied, that being contrary to efficiency and economy; and laid down a scheme conforming to those principles. The Bishop of Coventry defended the attitude of the Church in opposing undenominational management of the schools, and was followed by other speakers to a like effect. Earl Spencer criticized the provisions of the Government's education bill, which did not give genuine public control over the expenditure of public money, and laid emphasis on the strong feeling which prevailed in the country upon the subject. The Causes and Remedies for the Diminution of the Supply of Candidates for Holy Orders from Oxford and Cambridge were the subject of papers by the rector of Exeter College, Canon Hicks of Manchester, the Rev. Canon Foakes-Jackson, and Canon W. Johnstone. The subject of Church reform was considered in papers on (a) the lay franchise, qualifications of electors and elected; (b) Houses of Laymen—their constitution and work; and (c) reformed Convocation and a national synod.

The Irish Synod.—The financial reports made at the meeting of the synod of the Episcopal Church in Ireland showed that a considerable decrease had taken place in the revenue of the Church from voluntary sources. A diminished income was feared from mortgages and land, but the dioceses were now in much better position to meet such reductions. They had already entered into possession of the profits of commutations to the extent of £800,000, with £900,000 more to accrue in a not distant future.

In respect to the question of a Roman Catholic university, the Primate observed that Ireland was not large enough for two really great institutions of this kind; but why might there not be two, or perhaps three, constituent colleges in what might deserve to be called a university of Ireland?

In the synod, the duty of the Church in relation to religious instruction in primary and intermediate schools, and to the general conduct of the state system of primary education, was discussed. The archbishop and bishops were requested to enter into communication with the Board of Trinity College with reference to the position of the Church of Ireland toward the divinity school.

A declaration by the archbishop and bishops was issued to the synod reminding members of the Church of the increasing misuse of the term Catholic to describe those only who acknowledge the supremacy of the Pope. The matter was declared to be "not a mere question of words or names. . . . If we now surrender our title of membership in the Catholic Church we give up an important point in that faith which was once for all delivered to the saints."

The General Synod of Canada.—The General Synod of the Church of England in Canada met in Montreal, Sept. 3. The Primate, Archbishop Machray, being ill, Archbishop Bond, of Montreal presided. Canon Matheson, of Winnipeg, was elected prolocutor of the lower house. The business regarded as of most importance was the passage of a canon organizing the mission work of the Church under a board for the whole Dominion. The Ecclesiastical Synod of the Province of Canada had decided at its session in September, 1901, to merge its Mission Board into that of the General Synod if it would take over the responsibilities of the provincial board. The organization of the General Board was effected, and the Rev. N. L. Tucker, of Vancouver, British Columbia, was appointed its general secretary. A canon was passed by the House of Bishops absolutely barring any divorced person from remarriage during the lifetime of a former partner, but was defeated by the adverse vote of the laity in the lower house, although the clergy of that house were overwhelmingly in favor of it. Triennial meetings of the synod were decided upon, with double the former diocesan representation, making the largest representation of any diocese eight of each order. A resolution was introduced asking for the appointment of a committee to consider the question of a change of the name of the church—the name Church of England in Canada being considered by the movers not sufficiently descriptive. After some discussion, the consideration of the question was postponed. Committees were appointed to prepare drafts of extra prayers and services required by the conditions of the Church in Canada, to be submitted to the next meeting of the synod for adoption as an appendix to the Prayer-Book. No alteration in the body of the Prayer-Book was contemplated. Authority was given permitting the optional use of the Revised Version of the Bible at the services of the Church. A minute was adopted, to be brought before all the synods and convocations of churches in the communion, with a view to the discussion of it in the Pan-Anglican Conference in 1907, contemplating the extension of the diaconate and the making of it a permanent order. In the bishop's pastoral as read to the conference all the members were called upon to increase their interest in missions, in the sanctity of the Lord's Day, in the study of the Bible, in family worship, and in Sunday-schools.

The Synod in Japan.—The seventh General Synod of the "Holy Catholic Church in Japan" (the Nippon Sei Kokwai) was held in Kioto, April 10 to 15. A course of procedure introduced by the English and American bishops for the election of a Japanese bishop was almost

unanimously adopted. Resolutions were passed providing for a board of trustees, to be composed of the 6 bishops now in Japan and 6 Japanese, chosen by the synod, to raise and hold a fund for the endowment of the native episcopacy. The sum of 1,800 yen (about \$900) was pledged within the synod by Japanese lay delegates for this purpose. It was decided that the twentieth anniversary of the organization of the Nippon Sei Kokwai, occurring in 1907, should be commemorated by a special endeavor to raise a large amount for this fund.

The Church in the Far East.—The Lord Chief Justice presided over a meeting called to promote more systematic and extended mission work in the far East, May 6. The meeting had been called by the Associations in Aid of the Church of England Missions in North China, Korea, and South Tokio, Japan. Mrs. Isabella Bishop, who had traveled extensively in the far Eastern countries, spoke, from the results of her own observations, emphasizing the claims of those regions on the Church of England. At present that Church was taking an unworthily small share in the mission work there, except in the districts where the Church Missionary Society was working. The destruction of the old faiths in Japan by the contact with Western civilization, resulting in the growth of a race of agnostics, was a serious matter to face, especially in view of the recently formed alliance between England and Japan. The Archbishop of Canterbury dwelt on the vast responsibility that lay on the English Church, owing to the action of England in reference to China and Japan. A subscription was received toward the formation of a second bishopric in North China.

The "Ethiopian" Church.—A number of native churches which had been organized in South Africa under the auspices of a bishop of the African Methodist Episcopal Church, having become dissatisfied with that connection, withdrew during the year 1900, and applied, as the Ethiopian Church, to be received into communion with the Anglican Church. The Bishop of Grahamstown commissioned the Rev. Alfred Kettle, known as "Father Alfred," of the Community of St. Cuthbert, to visit the different centers of this Church and prepare the members for reception into the Anglican Church and for confirmation. He died in November, 1900, but it then had been shown that the people would be better instructed by persons who had been their own ministers. In May, 1901, 14 of these ministers came to Queens-town to receive instruction under Father Fuller, of the Cowley Brotherhood. Ten of the students were confirmed in November, 1901; 2 had been previously confirmed, and 2 had withdrawn. The 12 confirmed students early in 1902 began the work of preparing their brethren for confirmation, each of them being given a provisional catechist's certificate.

The West Indian Church Mission to West Africa has been maintained by Cadrington College, Barbados, since 1855, and is manned entirely by men of color, partly by natives and partly by men sent out from the West Indies, who have been trained at Cadrington College. At a meeting held in London in its behalf, Bishop Ingram, late of Sierra Leone, gave an account of its work on the Rio Pango, and of the interest taken in it by the people of the West Indies.

ARCHEOLOGY. United States.—A professorship for the study of American antiquities, with an annuity of 6,000 francs for its maintenance, has been founded in the College of France by the Duke of Loubat.

Evidences are discovered in increasing number of the former existence of a dense population considerably advanced in civilization in Arizona. They are found in the ruins of large buildings and of cities, some of which are estimated to have had 100,000 inhabitants, and in the remains of irrigation works. Traces of large irrigation canals are described as being numerous in certain districts. One 32 miles north of Phoenix, supplied from the Rio Verde, passes for nearly 4 miles through an artificial gorge cut to the depth of 100 feet in the rock; it then divides into 4 branches, 1 of which is more than 40 miles long, and all together would measure 120 miles in length. This system supplied a region of about 1,600 square miles. These and other similar works are said to have been constructed with great engineering skill. The remains of the walls of one of the cities, called Los Muertos, may be traced for many miles; and an immense quantity of burned bone dust is one of the remarkable features of the site. The ruins supposed to be of another large city, on the other side of Salt river, cover an area of 28 miles by 12; and the remains of the structures, of stone and mortar, are frequently marked by the holes in which the timbers were inserted. Marks have been found of volcanic eruptions and of other changes that have occurred since these cities were inhabited and the irrigation canals were constructed, and the period is supposed to have long preceded that of the cliff-dwellers.

Dr. Henry M. Baum, president of the Records of the Past Society, of Washington, D. C., has affirmed that during a two months' tour among the ruins of the cliff-dwellers he hardly averaged 10 miles in any one of the cliff-dwelling districts without coming across some of their habitations, and that he saw enough dwellings to accommodate 2,000,000 people. He expresses himself convinced that the cliff-dwellers and the mesa and valley dwellers were all of a contemporaneous civilization which dates earlier than the heavy lava overflow in the southwest. "The pottery, stone implements, and skulls found in these three classes of ruins are all the same. It is quite evident that the vast civilization of the entire country was extinguished by a flow of lava," of which the evidences are abundant throughout the entire region.

In the exploration of 20 mounds along the shores of Perdido, Pensacola, and Choctawhatchee Bays and Santa Rosa Sound, on the northwest coast of Florida, Mr. Clarence B. Moore observed a new form of burial in which a skull alone or a skull with a few bones is laid beneath an inverted vessel of earthenware. A similar method of interment was practised in Georgia, where the remains were cremated. The decoration of the purely aboriginal earthenware recovered from the mounds and cemeteries is largely symbolical, and its make shows a mixture of styles, including some features of the ware of the middle Mississippi region and of that of Georgia and the Carolinas.

Parts of the skeleton of a man found at Lansing, Kan., in March, 1902, while digging out a tunnel, were the subject of a discussion at the meeting of the American Congress of Americanists in October. The bones, which were 20 feet below the surface, were believed by some anthropologists who had examined them to be of extreme antiquity. On the other hand, a statement had been published that they were the remains of a convict who had been buried near the end of an old mining-shaft. In a paper by Prof. S. W. Williston, of Chicago, this statement

was pronounced absurd, and it was maintained that the bones were marked by incrustations of the hardness betokening antiquity, and that the character of the surrounding deposits pointed in the same direction. The author believed that the discovery was genuine and the bones were those of a Pleistocene man, and argued that they had been covered at one time by an accumulation of at least 35 feet of river loess. In a paper by Dr. Ales Hrdlika, who had examined the skeleton, the bones were described as quite hard and porous, not sufficiently chalky to mark a black-board, fully preserving their structure, and showing no traces of fossilization. Considered anthropologically, all the parts of the skeleton, and the skull in particular, approached closely in every character of importance the average skeleton of the present Middle States Indian.

Mexico.—Early in the year a most important and interesting discovery was made in the heart of the Mexican capital. It consisted of the unearthing of the remains of an Aztec temple and many idols, only two squares from the great central plaza, or what is called the Zocolo. The temple proved to be the Aztec house of many gods, located several years ago on a map projected by the Mexican archeologist Señor Batres, representing the ancient city of Tenochtitlan, or Mexico, as it existed when first seen by the Spaniards in 1519. This map shows the city as an island intersected with canals running nearly at right angles, corresponding to the present streets of the city. After great research Señor Batres succeeded in locating to his own satisfaction the public buildings, palaces, and temples of the Montezumas on this map, in each case giving his authority for so doing. The great temple, or *teocalli*, on the top of the pyramid of which the Mexicans sacrificed their thousands of victims to the war-god, is shown nearly in the center of the island city representing Tenochtitlan, the site of which at the present day is occupied by the great cathedral and plaza. Back of the great temple Batres located a much smaller one, which he said was called Coateocalli, meaning in the language of the Aztecs "the house of many gods." He gave as his authority for the existence of this temple, Father Duran, who wrote that the palace of the Acevedos was built upon its site. No known record was left of the existence of this palace; but Batres found, by searching the municipal archives, a reference to an ordinance regarding the supply of water, under date of Oct. 27, 1710, in which reference was made to the property owned by the Acevedos family on the corner of Relox and Cordobanes Streets, and consequently he there located his temple of the many gods. As the corner was occupied by a fine old building, it was not supposed that any trace of the old temple could be found, even if Batres were correct in his location of it.

Last winter the work of renovating, or practically rebuilding, the edifice occupying the corner was undertaken for the purpose of furnishing suitable quarters for the offices of the Department of Justice. Capt. Diaz, son of President Diaz, had charge of the work, and it is due chiefly to him that the discoveries were made. While his workmen were leveling the *patio*, or central courtyard of the edifice, preparatory to putting down a new pavement, they came in contact with some solid stone work, which proved to be a flight of stone steps leading down below the surface. Diaz, appearing just in time, ordered the men to open a trench parallel with the steps, cautioning them to use their tools carefully. The trench was opened the entire

length of the *patio*, and at the farther end, scarcely 2 feet below what had been the surface of the *patio*, the men came upon what appeared to be a round, smooth rock, which might have been taken for an ordinary boulder. This rock proved to be a sculptured monolith weighing several tons, representing a tiger recumbent, or an ocelot ready to spring. Further excavating brought to light another great rock sculptured to represent a serpent's head, which corresponds with two others previously discovered, and which it is said formed the corner pieces of the wall that surrounded the great *teocalli*, within which dwelt 7,000 Aztec priests.

After these two huge monoliths were removed from the trench, the excavating was continued till the base of the steps was reached, 13 feet below the level of the present city, where they rested on a solid foundation which, being the base of the temple, is without question the level of the former city. This proves that the present city of Mexico is 13 feet above the city of the Aztecs that was destroyed by the Spaniards.

Near the foot of the temple many small objects were found, such as idols, remains of idols, incense gum, spear-heads, and ornaments, as if they had been thrown down from the temple and left there by the Spanish iconoclasts. These were all carefully cleaned and preserved for the study of Señor Batres, after which they will be

THE OCELOT, OR TIGER.

placed in the National Museum of Mexico. The stumps of two trees that evidently had grown from crevices in the stones near the foot of the temple show that the temple must have been allowed to remain in ruins after its destruction several years, otherwise the trees would not have grown there. Then came the final covering up of the temple with the trees, and the building of the edifice above at its present level.

The weight of the tiger that was found is 4 tons, and it measures 2 meters 30 centimeters long, 1 meter 5 centimeters wide, and 94 centimeters in height. Its mouth is open, showing huge teeth and a part of its tongue. Its great round eyes add to its ferocious look. It is well modeled, with its tail properly coiled round it on one side, as the animal is often seen in nature. On each side of the head and neck is a mane resembling somewhat the pendant part of the head-dress on the Egyptian Sphinx. On its under side are vestiges of paint, showing that the animal was originally painted with red and yellow in spots, to carry out the imitation of the American tiger more perfectly. Cut in its back is a cylindrical cavity about 18 inches in diameter and 5 inches deep. The sides and bottom of this cavity are sculptured with representations of Aztec figures or warriors.

The serpent's head represents the reptile with its mouth open and its upper lip rolled up over

its forehead, disclosing the upper jaw with great husks projecting down over the under lip. It is said that there were four of these heads, one in each corner of the great wall around the *teocalli*, and the design corresponds to similar heads graven on the Aztec calendar stone. On the under surface of the heads Señor Batres thinks he has deciphered a hieroglyph which he calls *tres acatl*, the date of the foundation of the great *teocalli*.

Among the other relics unearthed was a curious little idol cut out of a piece of volcanic rock, about 10 inches in height. The workmanship is rather crude, but decidedly interesting, representing a head with scarcely any body, intended evidently to be in a sitting posture with folded arms across the chest. The incense gum which was found resembled pieces of bone, but upon being carefully cleaned of the earth in which it had been buried all these centuries, it burned upon the application of a lighted match and gave off the proper perfume. Several large stones are sculptured to represent skulls or death's-heads. They were fashioned with long wedge-shaped projections at the back, evidently for the purpose of holding them in place in some wall or edifice, the decorative part of which they formed. The work was rather rudely done, and a coat of white paint, still preserved on some of them, added to their horrible aspect. An extremely interesting relic was part of a foot of a colossal statue in baked clay. The piece showed the toes perfectly modeled, with the edge of the sandal beneath and the knots of the thongs holding it over the instep of the foot, as worn at the present day by the Mexican Indians. Other smaller pieces of this statue were found, such as a piece of the knee showing a bit of the ornamented dress; and in handling them one could easily imagine the great war-chief in full regalia as he

IDOL.

of Mexico because the Spaniards did not rebuild upon the foundations of the city they destroyed with the material at hand after the destruction, as would be supposed, but brought material from elsewhere and built upon the ruins. Cortez compared the city, as he first saw it with its canals and little islands, with Venice. When he retook the city after he had been driven out the destruction took place. It may be that the Spaniards had no intention of rebuilding the city after the heroic defense made by the Aztecs, in which they left their countless dead and dying strewn about to breed pestilence in the air. The great temples and massive palaces were destroyed by the victors, after which Cortez withdrew to Coyocan on the mainland. Later he built his palace at Cuernavaca, which still exists, and while his lieutenants were subjugating the surrounding districts he devoted much time to tilling portions of the land granted him, where it is said he planted the first sugar-cane brought to the American continent.

The evidence is to the effect that the ruined city of Tenochtitlan was abandoned to the survivors of its terrible conquest, who stalked about mid the ruins, eking out an existence the best way they could for many years before the reconstruction was begun. This is shown by the stumps of the two trees unearthed at the base of the temple. The Franciscans built a little mission church where the cathedral is to-day, and it is known that the cathedral was not begun on this site till a century later.

In the year Prof. Marshall H. Saville, of the American Museum of Natural History, completed the four years of explorations in Southern Mexico planned by the museum, the funds for which were supplied by the Duke of Loubat. The first two seasons of these years were spent in explorations among the famous ruins of Mitla, where Mr. Saville made important discoveries and surveys. The last two seasons' work were devoted to explorations in the State of Oaxaca. Early in the year Prof. Saville went to Mexico City, where he fitted out this last expedition, assisted by the Government archeologist, Señor Batres, an arrangement having been made with the Mexican Government by which Prof. Saville is allowed to retain a certain number of his finds. The expedition fixed its headquarters at Oaxaca, which is near the extensive remains of Xoxocotlan and Cuilapam, centers of culture of the ancient Zapotecs, a powerful Indian tribe who had developed a high state of civilization, but differing in many important respects from that of the Aztecs of the valley of Mexico, and the Mayas of Yucatan. Three months were spent in making the excavations and studies, during which huge burial mounds were opened, disclosing the tombs of the ancient inhabitants. The tombs were found in a good state of preservation, some with sculptured lintels and doors closed with huge stone slabs, and long drains for the purpose of drawing off water that might accumulate in them. Within were found noteworthy objects of great archaeological value, which afford a vivid glimpse of the culture of the ancient and little known people.

Not far from the places where Prof. Saville carried on his explorations is a range of hills on which, at an elevation of about 7,000 feet above the sea, are the remains of a great fortified city whose builders are lost to history, to which the name of Monte Alban has been given. It is thought that this may have been the capital of the old Zapotecan Empire. The entire section of the country about is thickly dotted with

STONE HEADS FROM EXCAVATION IN MEXICO.

guarded the portals of the temple when set upon by the Spaniards and hurled down the steps to the bottom to lie there crushed and broken with the rest of the ruin.

The old city of Tenochtitlan was at such a distance (13 feet) below the level of the present city

mounds indicating that at one time the country was densely populated by an industrious people. The mounds vary in height from 6 to 75 feet, some of them being in the form of a pyramid, while others are rectangular, and a few circular. Many have been plowed over, and thus their original outlines are destroyed. Statues appear buried in many places, and the plows too have wrought havoc and destruction among many of them.

A peculiar feature of the tombs were the cemented floors, in some instances these being one above the other, and indications of a structure on top of the whole. In some of them a flight of stone steps led upward to the platform or floor above. The tombs were of stone neatly dressed, covered with stucco, which had been painted red. The lintels over the entrances consisted of a stone slab, the outer part also painted red. Above the lintel were stucco decorations, sculptures, and hieroglyphics, and sometimes funeral urns of terra-cotta were found. One of which Prof. Saville found in front of a tomb in a large mound in the excavations of the ruins at Cuilapam, and was allowed to bring away. It was in pieces, which have been carefully put together, and it is now in the Museum of Natural History, New York. In one of the explorations made by carrying a trench through the entire mound a tomb was found with the characteristic cemented floors and adobe construction of the other mounds, with a door sealed with large stone slabs. The façade of the front wall was in the form of a frame in which were five terra-cotta funeral urns. One in the center had a death's-head on each side of it, made of stucco. The inside of the tomb was covered with food vessels, incense burners, and the remains of skeletons. Niches in each side of the walls also contained human remains. All the bones and skulls were painted red. There were several detached heads on the floor, which had been cut off. The walls of the chamber had been covered with plaster, but in the lapse of the time since they were built, probably on account of earthquakes, too, the greater part had fallen off. The plaster had been decorated with paintings in various colors, which had not altogether lost their brightness, although only traces remained. Over these bright-colored decorations a thin coat of stucco had been laid, upon which in black outlines was painted a series of human figures in the costume of the ancient people. One of the most important features in this and many of the other tombs was the hieroglyphic inscriptions found on the stone door lintel and wall chambers in form of writing entirely different from any heretofore found in Mexico, and the first ever found in Zapotecan territory.

At Cuilapam, 7 miles southwest of Oaxaca, 7 large chambers and a like number of small stone graves were uncovered. The excavations of the mounds were especially striking on account of the jadeite ornaments and other votive offerings found. They embraced beautifully carved breast ornaments, necklaces, beads, earrings, miniature idols, and various symbolic figures. Also fragments of mosaic work were found, the most interesting of which are two small circular mirrors made of bits of highly polished hematite cemented to thin disks of pottery. A significant point brought out by these discoveries is the fact that they fully confirm the writings of the old Spanish historians who have described the strange and elaborate burial customs of the Zapotecs, and also that the great underground tombs were used as ossuaries, or places reserved

only for the deposit of the bones of the dead, and not for burial. After a certain lapse of time when the flesh had decayed, the bones and heads were painted red, and with elaborate ceremony they were placed in the tombs with food and incense. One problem is definitely settled as to the character of the mounds; the rectangular ones were found to be burial-places and contained the most important tombs, but the pyramidal ones were temple structures.

While Prof. Saville was carrying on his excavations and explorations among the ruins of Xoxocotlan and Cuilapam, Señor Batres went to the ruins on Monte Alban. These have been known to exist many years and have been visited by American and foreign scientists, but Señor Batres through his government position was able to make many new and most important discoveries. Monte Alban rises to a height of about 1,200 feet above the valley of Oaxaca where the other remains are found. Its sides and top have been cultivated by the natives for years. A great central courtyard embracing many acres between quadrangular mounds, which, besides containing temples, may have served for defense, is used as

FUNERAL URN FROM MONTE ALBAN RUINS, MEXICO.

a corn-field. The mounds were arranged in a systematic order around this great court, and Señor Batres spent much time superintending the work of clearing the mounds of the brush and trees that covered them, employing many Indians from the surrounding towns. At the base of a great mound where excavations had been previously made by other explorers, including Prof. Saville, he rescued sculptured images the existence of which was known at three of the corners, and by their location discovered one at the fourth corner at the base. An important discovery was made in one of four pyramidal mounds, the remains of which stand in a row down the middle of the great courtyard, which is now turned into an Indian corn-field. The first object encountered was a sculptured, rectangular column of porphyry, 4 meters in height, 60 centimeters across the face, and 40 centimeters across the sides. On the face of this monolith

is an elaborate figure with a death's-head, evidently the portrait in bas-relief of a dead monarch. On one side are figures supposed to be two priests, with several rows of hieroglyphs, and on the other side a single priest with more hieroglyphs. The back is covered with hieroglyphs. But the greatest discovery was the finding of a pot of jade objects in the mound. The jade resembles Burmese jade, and has never yet been found on this continent, while the jar containing the jade is of evident Maya origin. Pieces of similar jade have been found in other parts of Mexico, and they have been regarded by many as evidence of the former communication of the aboriginal races of Mexico with the Chinese, but scientists still believe that jade may yet be found in its native state somewhere in Mexico. The specimens found at Monte Alban are beautiful in color, elaborately carved, and highly polished. One piece is about as large as the palm of the hand, of a rich deep blue, graven to represent a human face, said to resemble that of a Chinaman.

During the work of clearing and in some minor excavating, many great slabs of stone with carvings in bas-relief were found. Some represented men, some animals, and some were covered with hieroglyphs. The slabs usually covered the tombs, and one represents the figure of a monarch or prince, apparently wearing a royal head-dress, sitting on some high place with the sign of speech extending from the mouth, with a row of hieroglyphs following. The stone is 3 meters in height and 2 meters in width.

It is the opinion of Señor Batres that the ruined city was the sacred city of the people who built it. The area cleared is 3 kilometers in length by half a kilometer in width, and mounds of less importance cover the surrounding mountains, but these have not yet been touched. Those so far uncovered appear to be the bases of the great structures that surmounted them, and the remains of these structures or temples have been found on some of them. Excavations and explorations of these remarkable ruins are to be continued during the season of 1903.

South America.—The remains of the Calchaqui, a South American Indian race with characteristics much like those of the Northern Pueblo Indians, who were exterminated by the Spanish in the seventeenth century, have been the object of exploration by Dr. Juan B. Ambrosetti. Their monuments are found over a territory in the Argentine Republic stretching 900 miles from north to south, and about 200 miles from east to west. Their houses, constructed like those the remains of which are found in Colorado and Arizona, were built both in the valleys and on the mountains to a great height. Several of their villages have been explored by Dr. Ambrosetti, who has recovered from them a large number of articles of various kinds in stone, copper, bronze, turquoise, gold, and silver.

England.—The excavations at Silchester on the site of a large Romano-British city which has been identified with the Calliva or Calleva Atrebatum of the Antonine itineraries have been carried on continuously, by the aid of the Silchester Excavation Fund, since 1890. The area of 100 acres, enclosed by the remains of the Roman wall, nearly 2 miles in circumference, has been explored steadily and systematically till only a fractional part remains, and the foundations of the houses and public buildings have been traced more and more fully and with more precision from year to year. The new information gained each year has been most largely in

extension and addition to that already obtained, and the work has been little marked by sensational novelties of discovery. An area of 6 acres in the northern half of the town was examined in 1901. One of the houses had been enlarged after it was built to nearly double its former size, and presented two features that were specially remarked upon. One was the foundation of an almost perfectly circular room, and the other was the evidence that the house was half-timbered. Wattle work and plaster had been combined, and large pieces showed the ruts in the plaster formerly traversed by the osiers or small branches which held its substance together. The work resembled that which has been found in neighboring houses, and has perhaps been traditionally followed from the days of the city's prosperity to the present. This half timber-work—familiar in such medieval cities as Brunswick and Hildesheim—seems to have been widely prevalent; and remains have been found of Germano-Roman work—clay filling in a half-timber construction—on the Danube which presents a likeness to what has been found at Silchester. In a long room in one of the houses were a number of large jars fitting into holes in the flooring. In this room were also masses of bones of fowls, pheasants, and other birds. It is not easy to conjecture the height of these houses. The walls were about 18 inches thick and mostly of flint and rubble, and being of such material can not have been very lofty.

The recent architectural discoveries at Stonehenge were described in a paper on that subject read to the members of the Royal Institute, Jan. 20, by Mr. Detmar Blow, who with Dr. Gowland superintended the excavations which were made in October, 1901, for Sir E. Antrobus, owner of the estate. The author pointed out that the great monolith called the leaning stone was the largest in England, Cleopatra's Needle excepted. It was one of the pillars of the highest trilithon, and stood behind the altar-stone, near which it leaned at an angle of 65 degrees. Half-way up it had a fracture one-half across it, and the weight of stone above that fracture was a dangerous strain upon it. It had now been brought to a vertical position. One Roman coin and one George III penny were found quite near the surface. Numerous chippings of the sarsen and bluestone of which Stonehenge was built were discovered. The flints found were used for the softer sarsen and bluestones, and the hand-hammers and mauls for rough dressing. From this the deduction had been made that the building belonged to the Paleolithic period. All authorities agreed that it was the work of a highly civilized people. The construction was one of a stone development, and the surface of the stone was finished much like that of granite. The design of the pillars was, in Mr. Blow's opinion, evolved from the shapes of the flint instruments used by the workman, to which his hand had grown accustomed. Each pillar had a bold entasis in its elevation, and in its plan foreshadowed the column. With the aid of illustrations the author described the method by which the leaning stone had been raised in the work of restoration and the sifting process by which the implements, etc., had been recovered. Stonehenge had generally been supposed to be of the bronze age till these implements were discovered, and this was believed to be the only occasion on which the implements were found actually next to the stone building where they were used. In the discussion of the paper, Sir Norman Lockyer remarked that the conclusion was justified from

the evidence obtained that the sarsen stones were erected in the Paleolithic times—that was to say, before the age of bronze or, at all events, before bronze had been used for any ordinary kind of work in that part of England. Before the excavations were begun Mr. F. C. Penrose and he had been occupying themselves with Stonehenge from a slightly different point of view. They had been very anxious to determine its age, and it had been found much easier to get certain astronomical data from Stonehenge, owing to its position, than from other ancient monuments. A number of astronomical data presented by the speaker supported the conclusion that Stonehenge was a solar temple and was used for observation in the height of summer. From their observations he and Mr. Penrose came to the conclusion that the avenue which was associated with the sarsen stones was laid down about the year 1680 B.C. Such temples as Stonehenge were erected in the very first blush of civilization, in order that the people should be able to fix the time for performing agricultural operations. It seemed certain that we had in Stonehenge a temple for determining the length of the year by observing the rising of the sun on its longest day; while in other parts of England there were temples for observing the sun not on June 21, but early in May and early in August.

A STATUETTE, ACTUAL SIZE.

In the course of excavations for a new road in Enfield, England, a layer of dark soil from 2 to 6 feet in breadth was come upon, in which many fragments of pottery and jewelry were embedded. Several coins were also found of the periods of Trajan, Claudius, Alectus, and Constantine. About a half-mile from this spot a statuette was found lying upon the ground. The dark color of the stratum in which the principal relics were found is supposed to have been due to burning.

Three papers relating to underground structures, chambers, and dwellings were read at the Belfast meeting of the British Association. Some "souterrains" existing in the northeast corner of Ireland were described by Mr. William J. Fennell as being very numerous, and were regarded as showing the primeval architecture of the country. A souterrain might be defined as a subterranean place of refuge, and, in that sense only, a dwelling. The entrance was either naturally difficult of approach or cunningly hid, and the interior was generally long, low, narrow, and winding, and beset with frequent barriers locally known as "difficulties," through which only one person could pass at a time, and then only by creeping. Nothing was found in them to indicate that they had been used for burial. They were not burrows, but vaulted chambers connected by passages, well defended, and built of dry masonry walls and roofs, and afterward covered up by earth, and eventually hidden by vegetation. The exterior covering was always very thin. The construction was invariably of rough unhewn stones from the neighborhood, and the roof was

formed by the overhanging of one stone on another. The barriers were formed of walls, rising from the foot almost to the roof, then a space of 12 or more inches to the next wall, which descended from the ceiling to within 15 inches of the floor. They led in some cases to a long, low tunnel 16 or 18 inches high, with a similar barrier at the other end. No two souterrains were alike in plan; some were straight, or almost so, with chambers branching off. Some were extremely short, while others were considerably more than 100 feet long. One example was mentioned of a two-story building, entered from the field level to the upper floor, and from that to the lower one.

Three subterranean chambers cut in a bed of Thanet sand were described by Mr. George Clinch as having been discovered during the excavations for a sewer at Waddon, near Croydon. They were partly filled with fallen sand, but in each chamber a compact floor was found about 15 feet below the surface. The chambers were of beehive shape, about 7 feet high and 12 feet or less in diameter. Each had its independent entrance opening on the south-southeast side, but no other mode of access. Flint chips and fragments of pottery and of Romano-British pottery were found in them. They were distinguished by various characteristics from other British subterranean structures, and on the Continent of Europe the most similar chambers were those at Palmella, Portugal, which Cartailhac had ascribed to sepulchral purposes in the latter part of the polished-stone age. Similar chambers had been noticed in Brittany and elsewhere, and the subterranean beehive trunks at Mycenæ were identical in plan, though different in dimensions and material. Southeast and east of Waddon were many hut circles which had been attributed to the Neolithic age. They had marks of entrance on the east and southeast side, and exhibited general resemblance in dimensions and plan with the Waddon chambers. The Waddon discovery was therefore of some importance as evidence for the size, shape, and plan of prehistoric dwellings, the vaulted roofs cut in hard sand reproducing in general form the interlaced boughs, benders, and wickerwork of the ordinary surface hut, and the lateral passage the doorway of the Neolithic dwelling. The same idea of interment within a house survived during the bronze age.

In the third paper certain primitive underground habitations were described by Mr. David MacRitchie as typical of a class of structures apparently existing at one time throughout the British Isles, though the greater part of the specimens now remaining were found in Ireland and Scotland. The occurrence in two of these dwellings of a number of dressed stones with Roman ornamentation which had been used in their construction indicated that they must have been built after the arrival of the Romans in Britain. Their use as places of human abode was obvious, because they contained domestic utensils, such as hand-mills and personal ornaments, as well as the broken bones of animals used by man as food. In a few instances they had a fireplace, but this was exceptional, as they were so well protected from the cold that an oil-lamp would suffice to keep them comfortable. From their characteristics, therefore, they quite justified the name of "earth-house," which was given to them in the Norse sagas and also in living popular speech. They varied considerably in appearance, but most of them had their roofs about a foot or two below the surface of the

ground; entrance was gained from above by one or more downward-slanting passages. They were built of rough, undressed, un-mortared stone, the walls gradually converging until they met in a "cyclopean" or "false" arch, completed by a large flagstone laid across. In some cases their very dimensions suggested the traditional belief that they were built for a dwarfish race; but Prof. Boyd Dawkins, in the discussion, answered that their size had no direct relation to the size of the people, as it was necessary that they should be restricted in size to place difficulty in the way of the enemy.

During the demolition of the old Bluecoat School, in Newgate Street, London (the Christ's Hospital of Lamb's essay), pieces of the Roman wall, the existence of which was well known, were laid bare. The wall ran along the west end of the Gray Friars' Cloister, and was about 10 feet high. The masonry, which consisted of six courses, was in excellent preservation. Close by formerly stood an archway, known as the New Gate, which spanned a narrow lane where a broad and level thoroughfare now runs. The New Gate was the fifth of the great gates of London, and was so called, as Stow records, from its having been "latlier built than the rest."

France.—While etchings executed with much spirit upon bone and ivory by the West European cave-dwellers of the later Paleolithic age have been well known for many years, the first discovery of engravings and pictographs on the sides of caverns was announced by M. E. Rivière in 1895. An account of another discovery of similar engravings was published in the *Comptes Rendus* of the French Academy of Sciences for Dec. 9, 1901, by MM. Capitan and Breuil. It embraced 109 figures of the Magdalenian epoch engraved on the vertical walls of the cave of Combarelles near Eyzies in the Dordogne for 100 meters on each side of the passage. They begin about 15 or 20 centimeters from the ground, and reach to an average height of 1.50 meter, often extending to the roof, which is from 1 to 2 meters in height. The figures are for the most part deeply engraved in the rocks, but in some of the designs are merely scratched; and they are often covered by layers of stalagmite, which is sometimes thick enough to obliterate them. In some cases the cuttings have been reinforced, and occasionally replaced, by black pigment. In some instances the surface of the rock has been scraped away around the contour of the figure, particularly of the head, so as to throw it into slight relief. The style of the engravings agrees completely with that of the etchings on bone and antler of the Magdalenian stations, and is such as to make it seem certain that they were drawn by men familiar with the living animals. The animals pictured are represented separately, intermingled, or in groups. Among them are horses of two distinct types. One type is marked by a massive head with a convex nose, a mane short and stiff or long and flowing, and a tail similar to that of ordinary horses. Evidences that some of these horses were domesticated appears in the representation of halters upon them or of cords round the muzzle, and a covering of some sort seems to have been thrown over the backs of two of them. Horses of the other type are of more elegant shape, with small heads, slender legs, short and erect manes, and tails starting low down and bare except for a terminal tuft of long hair. Representations of the ox-tribe are less frequent. Three of the figures appear to be bison, one is like domestic cattle, and a third kind suggests

certain African antelopes. The difference between the reindeer, of which there are two figures, and the wild deer of Europe, of which there are three, is clearly marked. The mammoth is represented by 14 drawings. Some are entirely covered with hair; others have less hair, it being shown on the under side of the body, on the head, and occasionally around the mouth. The tusks are always strongly secured, and the feet are very distinctly drawn. The details of the form of the ears are indicated in two of the figures. The only approach to the representation of a human face is a kind of irregular circle within which two eyes are indicated and marks are made for the nose and mouth. Among the simple signs described by the authors as occurring with the engravings are three roof-like designs somewhat complicated, a double contoured lozenge in the body of a horse, some marks resembling the letter M, semicircles, etc., and a group of small cups. Comparisons are made between some of these designs and those found in the Mas d'Azil cave. The author's paper is only a preliminary one.

Sketches and paintings upon the walls of prehistoric caves in the Dordogne have been the subject of several communications to the French Academy of Sciences. Messrs. Capitan and Breuil gave accounts, June 23, of the paintings on the wall of the cave of Font de Gaume. The pictures comprised 80 figures painted in red ochre and manganese black, 49 of which are bison. They are all engraved and painted; and in the case of some of them the surface of the rock has also been scraped. Many of the designs were found covered with a thick layer of stalagmite. The original of the figure of a running bison reproduced in connection with an article on the subject by Mr. A. C. Haddon (*Nature*, Sept. 4, 1902) is 1 meter (or 39½ inches) long and 60 centimeters (or 25½ inches) high. It is entirely painted in a brown color with a red tint on the forehead. These are the first frescoes recorded in France, the engraved designs published by M. Émile Rivière in 1895 from the cave of La Mouthe being rarely colored, and then only partly so. An analysis of the coloring matters employed by the paleolithic painters, made by M. Henri Moissan, shows that they are ochres composed of oxides of iron and manganese in varied proportions. In a paper presented to the Academy July 28, M. Émile Rivière marked the distinction between the true frescoes described by MM. Capitan and Breuil, and the pictures he had discovered in the cave of La Mouthe in the Dordogne. The sketches at La Mouthe are nearly all engravings of greater or less depth, or shallow markings made by scraping and scratching the rock. Traces of paint were found on two of the figures. One of them represents a ruminant, in which the contour of the hind limbs is colored a blackish red brown, especially at the level of the joints and hoofs, and the left flank is marked with ten spots of the same color, in a line from the shoulder to the upper part of the thigh. The other design is a kind of hut, the form of which is designated by a scraping of the rock rather than by an engraved contour line. The color has been laid on upon a part of the scratches in bands nearly parallel and alternately clear and dark, and is much less deep than in the figure of the ruminant. This is said by Mr. Haddon to be the only known drawing of a habitation of primitive man. Without saying whether he regards these drawings as of the same age with the paintings of the Font de Gaume, M. Rivière believes that they are certainly Paleo-

lithic, Magdalenian, and of the Quaternary geological period. The prehistoric artist who figured them, say M. Rivière and Mr. Haddon, was the contemporary of the reindeer and of the mammoth whose portraits he depicted.

Among the latest and most recent finds of remains of prehistoric man are two skeletons—those of a young man and an older woman—unearthed in the excavations carried on by the Prince of Monaco in the Cave of Grimaldi, near Mentone. They are believed by Dr. Verneau, of Paris, to be paleolithic. The skeletons lay side by side, the woman's body being doubled up, while the young man's head was concealed in a mass of ashes. The skulls are of the dolichocephalic or long-headed type.

Scandinavia.—A runic inscription copied from off a stone which was found in 1817 near Ringerike, Norway, has been deciphered by Prof. Sophus Bugge, and found to relate to America. The stone was lost a few years after it was found, as also was a drawing made of it; but a copy of the drawing from which Prof. Bugge has made his version was preserved in the mu-

A YOUNG MAN'S SKULL (PREHISTORIC), DISCOVERED AT MENTONE.

seum at Bergen. Apparently only a part of the inscription has been recovered, of which Prof. Bugge's version, translated, reads: "They came out (from the ocean) and across great stretches, and needing clothes to dry themselves and food, away toward Vinland and on the ice in the uninhabited region. Evil can take away joy, so that one dies early." The inscription is interpreted as the epitaph for a young Norwegian from Ringerike, who had been wrecked with his companions, and after wandering over the ice had finally died near the coast of Vinland. The character of the ruins indicates that the epitaph was cut between 1010 and 1050—that is, within half a century of the discovery of the Western Continent by the Northmen. It is therefore the earliest document known to us containing a reference to America.

Rome.—On April 2, Signor Boni, director of excavations in the Forum, discovered a prehistoric tomb, believed to date approximately from the eighth century B. C., containing an urn, or dolium, of black ware full of calcined bones; several reticulated egg-shaped vases, a bowl, and a cup with horned handles like those found in the *terramana* of the bronze age. The tomb was situated in the bed-clay, about 12 feet below the level of the Sacred Way opposite the Regia, and close by the Temple of Antoninus and Faustina. The discovery is believed by Signor Boni to illustrate his theory that the founders of Rome were buried under a part of the Forum, and that their

remains, when found, would prove to have been cremated, according to the custom of the ancient Aryans. A resemblance of the reticulated vases

MASKS RECENTLY DISCOVERED IN THE QUIRINAL, ROME.

of the tomb to netted gourds, and the likeness of the funeral urn to a conical hut roof are taken as evidences of date from a primitive period. The tomb is the most ancient of a series of links in the chain of Roman history as illustrated by an almost continuous series discovered by Prof. Boni within the precincts of the Forum down to the eighth century A. D.—constituted of the cippus under the Black Stone, the Rostra, the ritual pits, the massive republican drains far surpassing the Cloaca Maxima, the underground gallery for scene-shifting, the Lacus and the Fons Juturnæ, the Sacred Way (Via Sacra), the Heroon of Cæsar, the Regia, the house of the Vestals, the Basilica Æmilia, the Church of Santa Maria Antiqua, and others relics of less importance, but fitting well into the succession.

While excavating a tunnel under the Quirinal to afford a passage between two quarters of the city, a large chamber lined with sculptured marble, of the period of the decline, was discovered. Among the carvings were panels illustrating the cult of Bacchus. In one of these panels are the heads of a faun and a bacchante, and of a bearded man of the type of Dionysos, with a basket of fruit beneath the figures. In another is a similar group, with a burning altar shaped like a wheat-sheaf in the place of the basket. A thyrsus, the Bacchic symbol (a rod of fennel topped with a pine-cone and bound with a fillet), forms an accessory. Below the female head is a lyre. A third group is a variation, on the same theme; and a fourth, a more vigorous composi-

A MARBLE BAS-RELIEF, RECENTLY DISCOVERED IN POMPEII.

tion, shows a bacchante and a Silenus, with a set of Pan's pipes as a decorative accessory.

Among the later discoveries of objects of art at Pompeii are a bronze support for a revolving

table, which, notwithstanding the gracefulness of its design, exhibits in its violation of natural characteristics unmistakable marks of decadence, and a bas-relief which seems to represent a rustic offering to Alma Venus, the nourisher.

Greece.—According to the twentieth Annual Report of the American School of Classical Studies at Athens, the results of the explorations of 1901 in the Grotto of Pan, Apollo, and the Nymphs, at Vari, in Southern Attica, greatly surprised scholars with finds a few inches under the soil, where it was supposed careful examinations had been made. The finds include 7 reliefs, in 50 fragments, of which 6 were of the typical order of Pan, Hermes, and the Nymphs, with the Achelous head in one corner; 3 dozen terra-cotta figurines, mostly broken, including archaic busts, piping Pans, masks, a turtle, and a frog; about 140 coins, of which those that have been cleaned are of Roman or Christian times; inscriptions on stones and vases; hundreds of lamps, Greek, Roman, and Christian; many vases, mostly "red figured," and many prothesis amphoræ and small lecythi and aryballi. The Argive excavations, on which \$13,000 in all have been expended, have been put in charge of a Greek guard.

The operations of the American School of Classical Studies in Corinth were pursued from the beginning of March to June 14, this being, according to the account of Director Rufus B. Richardson, the longest season of work yet carried on. The work of the previous year, while it had revealed nothing of great importance, had brought to light a considerable number of Latin and Greek inscriptions of the Roman city, two statue bases inscribed with the name of Lysippus, and a number of proto-Corinthian bases, mostly in fragments, and a line of vaulted chambers on the south side of the temple hill, with remains of a stylobate of a porch thrown out in front of them. The temple foundations were cleared of all the earth covering them; and in the last three days of work the stumps of two Doric columns, resting on a stylobate, were found. These were made the point of beginning for the work of 1902. They proved to belong to the front line of a Greek portico, or stoa, running east and west behind some vaulted rooms which had been excavated in 1901. It was older than the chambers, having belonged to the Greek city, while they belonged to the Roman city. The portico was more than 100 meters long, and wide enough to give room for an interior line of Ionic columns. At its back the rock of the temple hill was cut away to make room for it. Mr. Richardson thinks that it may have been already destroyed when the Roman vaulted chambers were built in front of it, for the interval between the front of the stoa and the back line of the chambers was very narrow. Stumps of the Doric columns remain, with one occasionally lacking, all along the line, and enough of their capitals and entablature to allow of a restoration of the whole on paper. Of the Ionic columns the chief remains were the bases and capitals. A trench was made back of the portico as far as it was cleared, following the slope of the bed-rock up to the temple. The chambers were also cleared, and found to be 18 in number; and another Greek stoa, larger than the former one, was found, but much more broken up. Much higher up the hill, back of the Greek stoa, was the stylobate of a late Roman or Byzantine stoa. "Porch above porch," says Mr. Richardson in his account of the excavations published in the New York Evening Post, "must have given this side of the temple

hill a fine aspect from Pirene and the Lechæum road. The whole area between this upper stoa and the back of the vaulted chambers was filled up to make a broad area for circulation of the populace." Among the single finds in this part of the exploration were old Corinthian and proto-Corinthian pottery in abundance, with whole vases in proto-Corinthian style; terra-cotta figurines, some of them extremely archaic, though finely wrought; additional parts of colossal figures that had been found two years before; a fine head of an Amazon from a high relief in Pentelic marble; a woman's gold ring with a stone containing a legend in raised letters; an archaic gem with a horse engraved upon it; several ancient Greek inscriptions, one of them at least as old as the sixth century B. C., and in the local Greek alphabet; 200 terra-cotta lamps with representations and inscriptions on them, of dates ranging from the sixth century B. C. to the fifth century A. D., and numerous other articles. In the explorations of the ancient city, following indications furnished by Pausanias, the excavators found the theater in the first year (1896), Pirene in the second, the agora and the fountain of Glauke, and identified the temple of Apollo in the third year; and they were now having to do with structures which he knew nothing of, but which "were already underground at the time of his visit." A trench made during the past season in the theater opened up a confusing number of walls, which are believed to have belonged to two stage buildings, the Greek and the Roman. A great number of marble fragments, mostly architectural, were found in the trench, pieces seeming to belong to a large medallion containing a head of Medusa in high relief, and a marble head of a youth, "which is not only the best head found at Corinth, but is a real prize, and would be an ornament to any museum."

Part I of Investigations at Assos by the Archeological Institute of America, published by a committee of the institute and edited by Francis H. Bacon, contains the introduction maps, history of Assos; account of the expedition plans, photographs, and drawings of the agora, stoa, and Boulenterion, with inscriptions and bases from the agora. The second and third parts are to appear together, and the fourth and fifth parts will complete the work.

The excavations begun in 1879 by Dörpfeld and Milchöfer on the site of the great temple of Athene at Tegea in Arcadia are now being continued by the French school at Athens under the direction of Dr. Mendel, and with considerable results. Fragments have come to light of the sculptured boar hunt described by Pausanias in his itinerary, who names Scopas, of Paros, as the artist. The torso of a woman with a short chiton is assumed by Dr. Mendel to have belonged to the Atalanta; a head very much damaged is a remnant of the Hercules, and a part of one of the hounds has been discovered. A beautiful head, excellently preserved, is attributed to the statue of Hygeia, which according to Pausanias was next to that of Athene. A few small bronzes similar to those found in the German excavations in Olympia and the American in the Heræum of Argos have also been unearthed.

The Annual Report of the Society for the Promotion of Hellenic Studies mentions the continued excavations of Mr. Arthur Evans on the site of Knossos in Crete; interesting discoveries made by Mr. Hogarth at Kato Bakro; the undertaking by the British school at Athens of the exploration of a promising Mycænic site at Pa-

laekastro, near Sitia, in eastern Crete; the establishment of a British school at Rome on the same lines as the school at Athens; satisfactory progress on the facsimile of the Codex Venetus of Aristophanes, which was practically complete, and on the publication of the report of the important excavations undertaken by the British school at Athens on the site of Phylakopi in the island of Melos; and work done in the library.

The extensive excavations which the French Government has been making in Delphi since 1892 are reported to be approaching completion. The most important work done recently has been the laying bare of the Pythian stadium. It is nearly 178 meters in length and from 25 to 28 meters wide. The course had to be excavated on the very sides of Mount Parnassus, at a cost of which the accounts are still extant. It has been found that at the starting-place small depressions were cut out, where those who participated in the races stood till the signal was given. Starting-places for 18 runners were provided. An inscription, supposed to be of the fifth century B. C., directs that "No wine shall be brought into the temple of Eudromos (the god of the racers); but if it nevertheless be, then he for whom it is brought shall appease the god with a sacrifice, and pay five drachmas, of which the informer shall receive one-half."

A special organization has been formed in Berlin for the excavations at Miletus. Funds have been secured for buying the whole peninsula on which the city stood. The newly acquired territory includes all the western half of the old city, together with portions of the necropolis, the "sacred way" that led up to the temple of Apollo, the entire hill on which the theater was situated, the harbor, at the entrance of which two colossal lions of marble have been found, the recently uncovered market-place, some large public halls, and some fine Roman fountains.

Several entirely unknown poems from the fifth book of Sappho have been discovered by Dr. Schubart, of the Egyptian section of the Royal Museum of Berlin, in papyri recently added to the collection there. The manuscript dates from the sixth or seventh century. Of the poems which have been deciphered, one describes the author comforting a departing pupil, and another is addressed to a former pupil who had removed to Lydia. Some new metrical combinations appear in the poems.

The Grecian Government has been presented by Konstantin Karapanos, the discoverer and explorer of Dodona, in Epirus, with the articles found there, including bronze statues, bronze reliefs, inscriptions, temple utensils, and records of questions put to the oracle. The collection derives heightened interest from the fact that the temple and oracle of Dodona flourished from early times down to Roman days.

Crete.—In a short account of his excavations in Crete given at the annual meeting of the Society for the Promotion of Hellenic Studies (Hellenic Society), Mr. Arthur Evans said that there were four distinct lines of walls of the palace of Minos. He described the various chambers and frescoes and the complicated system of underground communication. A considerable number of very interesting frescoes—of the same school as those of Milos and Phylakopi—were also discovered. Many bits of naturalistic foliage and lilies were found, and scattered portions of sculpture of the previous year's discovery had been successfully pieced together. Specimens of marvelous beauty had come to light of early Minoan pottery—seal impressions of a primitive

style, some with cryptographic inscriptions; clay tablets with the linear script, developed from a pictorial prototype and not derived from the earlier types hitherto known. The economic history of those ancient days was to some extent disclosed by a series of accounts. The excavations allowed an approximate reconstruction of a Minoan street, some of the houses being, it might be said, of a surprisingly modern character, and displaying a highly advanced civic development. The height of the houses enabled one to realize the description of the island as "hundred-citied Crete," and pointed to a congested population. The statuary was remarkable, and bronze wire was used for hair.

In the more detailed accounts of his work, Mr. Evans refers to the results of the previous season's excavations as having included the uncovering of the eastern wing of the palace of Knossos, which seems to have been mainly reserved for state and religious functions, business, and storage, a great central court, and beyond it to the east a part of what seemed to be the royal residential quarter. At the close of the last season's work a staircase had come to light here leading down by a triple flight to a hall with double tiers of colonnades, and beyond it a larger columnar hall or megaron. On the upper level north of these ran a corridor beneath which another corresponding passage of lofty dimensions had now been cleared out, originally lit by a large window opening on the light-well of the larger hall. The clearance of this was marked by the discovery of a very extensive deposit of inscribed clay tablets, larger than any collection previously discovered, which included about 100 perfect documents dealing with palace accounts. A large portion of these tablets dealt with percentages, and made it evident that the decimal system was in use. Thus 3 of these tablets, of which facsimiles were exhibited to the Oxford Philological Society, each bore 3 or 4 numbers, the sum of which (though the numbers themselves varied) was 100. With these were several large clay impressions of what is supposed to have been a royal signet ring, exhibiting a goddess and her attendants, of which a counterfeit matrix had been found the year before in another building. The spacious chamber bordering on this corridor, which has been named, from the frequent occurrence of these figures on its walls, "The Hall of the Double Axes," had at its eastern end a double portico facing both south and east. A doorway in its southern wall led to a finely paved turning passage, beyond which has been uncovered another chamber, flanked on two sides by a high stylobate, which also served as a base for seats between the original pillars, for which light was obtained on one side from a portico, and on the other from an area with a rear wall stepping back above. From the west side of this room access was had through an opening in the balustrade to a small bath chamber, lined with gypsum slabs, of the painted frieze of which the spirals and rosettes still partly adhered to the walls. Remains of a painted terra-cotta bath were found near, and remains of the wall-paintings of the room and the portico beyond, but in a fallen condition. An "aquarium" of fish was very naturalistically rendered, with parts of two dolphins and many smaller fry, some of them complete. A counterpart to this discovery is suggested in the fresco showing flying-fish found by the British school in the prehistoric settlement of Melos. In these pictures, since the different hues of blue had to be mainly reserved for the fish, the sea-water

was indicated by azure wreaths and coils of dotted spray on a white ground. In the figure of the upper part of an elegant lady in a yellow jacket and light chemise, the flying tresses and outstretched arm suggest violent action. Another fresco fragment shows a more rude female figure in the act of springing from above and seizing the horns of a galloping bull. With the remains of a series of scenes exhibiting female toreadors found toward the close of the previous season's excavations it was possible to reconstitute a complete panel of one of these fresco designs. "The whole is a *tour de force* of ancient circus shows. A Mycenæan cowboy is seen turning a somersault over the back of a charging bull, to whose horns in front clings a girl in boy's costume, while another girl performing behind, with outstretched hands, seems to wait to catch her as she is tossed over the monster's back. The fallen body of a man beneath another bull brings out the grimmer side of these Minoan sports." A private staircase opening from the north wall of the newly discovered hall leads up by a double flight to upper rooms, which are on the general level of the great central court and of the originally discovered buildings on its west side. They are, however, isolated by the intervention between them and the great central court of a large room to which they have apparently no means of access. A passage opening on the west side of the hall leads to what appears to have been the most secluded part of the residential quarter of the palace. Here were rooms on the levels of the halls of the Colonnades and of the Double Axes. At one point in these apartments were the remains of what appeared to be a wooden staircase, the upper part of which was choked with broken seal impressions. One of these impressions, "only a fragment," bears part of the impress of a Babylonian cylinder, "thus supplying direct proof of correspondence with the East." Mr. Evans remarks especially upon the elaborate drainage system of this quarter of the palace: "The well-paved floors are underlaid by quite a network of stone channels, in places crossing each other at different levels, and roomy enough to allow a man to crawl along them. A succession of stone shafts leads down to these from the upper story, in one case apparently connected with a latrine, of which a curious and in some respects very modern example also occurs on the ground floor. In another part of the palace sections of a terra-cotta drain-pipe have been found of a most advanced form, provided with stop-ridges." In another quarter south of this group of chambers were smaller rooms, in which parts of two boards of inscribed tablets were found. One of these contained lists of persons indicated by the man-sign, the other referred to the armory, the exhibits, besides the linear characters of the inscriptions, outlining figures of swords. The pottery of this and the adjoining region gave some new illustrations of the prehistoric writing of Crete. Another magazine contained vases in the earliest palace style, some of which were painted with very naturalistic lilies. In an adjoining chamber was a kind of domestic shrine, which is thus described: "On a small dais, beside a tripod of offerings, and with a miniature votive ax of steatite before her, rose a painted terra-cotta figure of a goddess, pillar-shaped below according to the old religious tradition, and with a dove on her head, while in front of her stood a male votary holding out another dove. That a goddess was associated with the palace cult of the double ax further appears from a gem on which a female

divinity is seen bearing this symbolic weapon in her hand." In the basements of one of the eastern terraces and below the level of the later palace were found remains of another magnificent construction which was still earlier than the structure called Minoan. In it were vases of the Kamares class, some with lily designs in white, a miniature vase of gold and porcelain, and a miniature pillar-shrine of painted terra-cotta with doves perched on the roof. In another basement, not far away from this one, and at a slightly lower level, was found a mosaic of small porcelain plaques, which seems, as described by Mr. Evans, to have represented "scenes disposed in various zones, recalling the subjects of Achilles's shield—the walls and houses of a city, a vine and other trees, warriors with bows, spears, and throwing sticks, besiegers and defenders, and various animals. But the most surprising part of all is the houses of which the city is composed. Fragmentary as are their remains, it has been possible to reconstitute about a score of these. The varying character of the structure—stone, timber, and plastered rubble—is accurately reproduced, and the walls, towers, gateways (a whole street of a Minoan city) rises before us much as it originally stood. But, what is even more surprising than the fact that the elevations of these prehistoric structures should thus be recovered to us intact from the gulfs of time, is the altogether modern character of some of their features. Here are three stories (some of the semi-detached kind showing contiguous doorways) with windows of 4 panes, or double windows of 3 panes each, which seem to show that the inmates of the houses had actually some substitute for glass." The part of the eastern side of the great parallelogram in which the halls of the Colonnades and the Double Axes are situated showed that it was a building of 3 stories. The limits of the palace on the eastern slope of the hill are said by Mr. Evans to have extended themselves beyond all anticipation, but much denudation has taken place. Among the finds are remains of a large architectural fresco with realistic imitation of veined marble, and stone jars more capacious than any previously brought to light. A stone spout jutting out from a neighboring wall and connected by a conduit with an oil-press above, explained their purpose and the manner in which they were filled. Farther down were massive lines of supporting walls, forming here the outer eastern boundary of the palace.

In the small but well preserved Mycenæan settlement excavated by Miss Boyd at Gourniá, sacrificial vases, bronze saws, and other implements, and ante-Mycenæan fetishes and idols have been brought to light; and through the excellent preservation of some of the buildings a sensible addition has been made to our knowledge of Mycenæan domestic architecture.

The excavations of the Italian Archeological Mission at Phæstos, under the direction of Prof. Halbherr, have been practically completed, after three seasons of work. The architectural lines of the palace here are described as being "incomparably more striking" than those of Knossos. The pavement of the agora is traversed by some curious slightly raised diagonal lines, and the agora terminates on the north in a broad series of stone steps. To the west is another imposing flight of stone steps leading up through a portico to a great hall measuring 27.70 by 13.75 meters—surpassing in dimensions any Mycenæan apartment yet discovered. Its structure is like that of the Hall of the Double Axes at Knossos;

but in the center is a great stone pier which apparently served no structural purpose. The other apartments show a fundamental similarity of plan with that of Knossos. The central court or quadrangle is peculiarly imposing. Both Knossos and Phæstos seem to have been inhabited from the remotest prehistoric times; but after both were burned in the Mycenaean age, Phæstos was in time resettled.

Another Mycenaean palace has been discovered by Prof. Halbherr at Hagia Triada, a few miles west of Phæstos. It stands on a hilltop overlooking the plain through which the river Lethæus flows to the sea. The excavations, only begun, have yielded results full of promise. Among them are more tablets with pre-Hellenic inscriptions, two frescoes, one of a wood scene and the other of a sumptuously arrayed Mycenaean lady, and a vase decorated with 26 figures in relief of a procession of a band of warriors headed by their chief.

At Palæocastro, at the extreme east of the island, Mr. R. C. Bosanquet has discovered two cemeteries of the Kamares epoch, in which a mode of sepulture now commonly prevailing in the Levant (packing the bones, cleansed by previous interment, in chambers) is shown to have been in vogue before the Mycenaean age, some Mycenaean tombs, and Mycenaean mansions, one of which is of a type intermediate between the ordinary dwelling and the great palaces.

The belief is maintained by Mr. Evans that in Crete the double ax was, in part, at least, associated with a divinity known to the Greeks as the Cretan Zeus, which in its original character was essentially a sun or light god. It was in itself an object of worship as the dactyliform of the divinity with which it was associated. On a Mycenaean gem from east Crete, found by Mr. Hogarth, votaries are actually seen in the act of adoration before it. The fresh discoveries, moreover, confirmed the view that though a male divinity was also represented, at times in warrior guise on the signets and seal impressions of the palace, the most prominent place was taken by a goddess who from her lion-guardians might be regarded as a prototype of the Latin Rhea, Cybele, though in other aspects of her personality she seems to approach the Cretan Aphrodite or Ariadne. Evidences of the cult of the double ax were also remarked in the palace shrine described by Mr. Evans. The whole result of the excavations at Knossos, Mr. Evans said, had been to bring out in a remarkable way the underlying element of truth in ancient tradition. In his account given at the meeting of the British Association Mr. Evans spoke of clay cups having been found with ink inscriptions, "a new departure in the prehistoric script." He also described some modern features in the mosaic representation of a Minoan street; and ivory figures of youths, as displaying naturalistic details not found again in such work till the age of the Italian Renaissance. Below the Mycenaean palace had been found remains appertaining to what seemed to have been an earlier royal dwelling going back into the third millennium B.C., in which were beautifully painted vases, some of eggshell-like fabric, and some embossed in imitation of metal-work. The Neolithic stratum underlying the whole site was productive of more stone implements, pottery, and primitive images of clay, marble, and shell, perhaps the tridacna, and pointing to a prehistoric intercourse with the Indian Ocean.

In an account of his excavations in the Dictæan cave, given before the Anthropological In-

stitute, May 27, Mr. D. G. Hogarth expressed the belief that the cave was undoubtedly the one that was the seat of the legendary birth of Zeus. It stood near a lake bed which had a subterranean outlet. The cave was exceedingly rich in remains, but little evidence existed in it of Mycenaean or pre-Mycenaean times, nearly all the remains being subsequent to the Mycenaean period. The skulls found were clearly of sacrificed animals. The honors of Dictæ had been largely usurped by the cave of Ida, but Dictæ showed a variety of ancient objects of the stone age—symbolical axes of fractional size, and others—a massive Mycenaean wall, and a few specimens of Hellenic and Roman work. Mr. Hogarth said he had excavated another settlement at the end of the Dictæan cave, the little wasted settlement of Zachro. In two caves he had found human bones, and what seemed to be cists like those of the Ægean islands of the prehistoric period. In one cave he had lighted on five burials. One cist burial was untouched, and included a new kind of pottery more regular than the Neolithic pottery. The vases tended to show the existence of a native pottery lineally following the Neolithic period. In connection with an address by Mr. Evans, a lecture was given by Prof. Boyd Dawkins on the Animal Remains of the Cave, dealing with the geological aspects which led to inferences of its high antiquity. Among the skulls discovered was one of an ox to which the author found no exact parallel. He had therefore felt disposed to classify it as a member of a distinct species, to which he gave the name of *Bos Creticus*. Another skull, in some respects varying from all existing specimens, he inferred to be that of a domestic boar. The preservation of these skulls, apparently for ornamental purposes, was a singular note of modernity in prehistoric times. Prof. Dawkins could not state the precise or approximate date of any of the specimens sent him by Mr. Hogarth. Describing the human skulls, he said that the teeth were wonderfully small, and some of them decayed, and these and other circumstances led to the inference that they belonged to a highly developed civilization. Decayed teeth were, unhappily, a mark of an advanced culture. The skulls found in Crete seemed to correspond with the oldest skulls of Attica and Asia Minor. The people interred in this case were, the author thought, cognate with the Iberian race, long-headed, probably of small stature, dark-haired, non-Aryan, and stretching back to the Neolithic age. Prof. Petrie noted correspondences from Egypt, as in the hanging of skulls as ornaments, with what had been said of Crete.

Bosnia.—Very fruitful excavations have been made among the remains of prehistoric lake-dwellings on the River Save, near Dolina, northern Bosnia. Four dwelling-houses built on piles have been laid bare and the burial-place belonging to the settlement has been examined. In it were found a number of bronzes and urns. Among the articles recovered are objects of pottery, utensils of staghorn, weapons of bronze and iron, ornaments of bronze, silver, gold, and amber, seeds and bones. It has been possible, by the aid of these houses, to determine the architectural construction of the pile-dwellings with a hitherto unusual accuracy. A boat 5 meters long was found lying 9 meters below the platform of a pile-dwelling. The pile-dwellings of Dolina are assigned to two different periods, of dates included in the first millennium before Christ.

Palestine and Syria.—The first report of the new American school in Palestine, Novem-

ber, 1901, describes the establishment of the institution, and the beginning of excavations at Sidon, under the first director, Prof. C. C. Torrey, of Yale. A Greek necropolis was explored, and yielded results of importance. At Jerusalem students of the school will have free access to several valuable libraries, including the Greek Patriarchal Library, with a great store of manuscripts, the Dominican Library, and the Franciscan, Augustinian, and Latin Patriarchate libraries. The Roman Catholics were doing much in Jerusalem to encourage archeological and linguistic studies. Three museums had lately been opened, one of them by the Turkish Government, containing the finds of Dr. Bliss in his excavations for the Palestine Exploration Fund.

Excavation was actively pursued in Palestine and the East in 1902, under English and German auspices. The operations included work begun by the English Palestine Exploration Fund, under Mr. McAllister, at Abu Shushah, which has been identified by M. Clermont-Ganneau as the site of the Biblical Gezer, near Rambleh, on the edge of the plain of Sharon; explorations by Austrians at Ta'anuk, the Biblical Taanach, on the southwestern edge of the plain of Esdraelon; excavations to be begun by Germans at the ancient Megiddo; the exploration and restoration by Germans of the great temple of Jupiter Heliopolitanus at Baalbek, and the neighboring smaller temples, which has been going on for two years and will require a year longer; excavation by the same expedition of some smaller but interesting ruins in the Lebanon, on the edge of the Bekaa, in the same general region. The same expedition was also exploring the ruins of Palmyra, Gerash, Amman, and other comparatively little known sites east of the Jordan, for the purpose of a more thorough study and comparison of Syrian and Roman architecture and antiquities. The Germans have also been excavating at Miletus, at Pergamos, and at Babylon, and contemplate the excavation of a little known Babylonian ruin mound, apparently of great antiquity, south of Nippur, between the Tigris and the Euphrates.

At the annual general meeting of the Palestine Exploration Fund, June 17, Major-Gen. Sir Charles Wilson delivered an address on The Recent and Proposed Excavations of the Fund. The work of the past year, he said, had been mainly the excavation of grounds in the Valley of Judah, and had thrown light on many ancient sites. The excavations revealed remains of pre-Israelitish times from 1700 B. C., and the successive periods down to Byzantine times. Painted ware and Mycenaean pottery were found in this region, and specimens of early Greek ware as well as Assyrian and Babylonian objects. The chief site was probably to be identified with Gath. Remains were also found of a town which had been abandoned in prehistoric times; and relics of subsequent periods were discovered there. Statues were found of Demeter and Berenice, and pottery and other fragments of the third and fourth centuries B. C., which had been imported into Palestine. Two inscriptions in Greek characters were discovered, one of them divided into 7 columns, and a translation from Hebrew into Greek, the Greek characters of which were read from right to left. Many tablets were commemorative of important events, as of birth or marriage; and these were symbolical references. Few of the caves examined by Mr. McAllister seemed to be earlier than the Seleucid period. Some of them contained remains of a population distinct from that of the towns.

The pottery began with the pre-Israelite or Amorite period, and furnished specimens similar to those discovered by Prof. Petrie in Egypt. The painted pottery or sherds presented Mycenaean features, though they were not supposed to be Mycenaean work. In the Jewish period the Phoenician and Mycenaean influences seemed to have disappeared. The names of the potters—all of a tribal character—were found on many of the pieces of Jewish pottery. After the Jewish period a distinct growth of beauty in form and design is shown. Few completed statues of later times were found; but some of these were of fine workmanship and form. One of the great caves had been used as a columbarium after its original purpose had been abandoned.

Under the auspices of the Vienna Academy of Sciences, Dr. Sellin, professor in the Evangelical Theological Seminary in Vienna, began excavations in March, 1902, in a mound near the village of Tanaak, one day's journey from Jaffa, and three days from Jerusalem. His report relates the discovery of four castles or fortresses. In the middle were the ruins of an Arabian castle. On the east was a castle of the period of King Solomon, on the northwest a castle of a late Israelite period, while on the west was found a castle of pre-Israelite or Canaanite date. All the castles had been plundered before they were destroyed, so that no valuables were found, but objects of stone and clay and weapons were recovered by the aid of which the dates of the various buildings were approximately fixed. The

A HITTITE INSCRIPTION HITHERTO UNKNOWN TO SCHOLARS.

Canaanite castle, the oldest of the number, was built of unhewn blocks of stone, which showed no marks of the chisel. Inside of it lay fragments of images, such as are mentioned in the Bible, and also a number of small ornaments made of stone and earthenware, mostly representing beetles, scarabs, and other insects, and bearing inscriptions. There were, too, some rude weapons. The second building in date had suffered considerably, but enough remained to show that it belongs to the class called Solomon castles. In both buildings, idols, vessels, and other objects appertaining to religious rites were found, such as a sacrificial pillar of stone, with an opening for libations, a stone altar, and an earthenware altar in the form of a throne, adorned with cherubim and lions. The cherubim, of which these are the only existing representations of that date, appear as human heads with the bodies of lions, and wings. The late Israelitish castle appears to have been a fortress only. The Arabian castle displays more architectural skill than the other. Vessels and lamps were

found in it, and inscriptions of a religious character. Human remains buried with vessels bearing inscriptions were found beneath the ruins of all the castles. A cemetery for children seems to have existed close to the Solomon castle. Prof. Sellin attaches most importance to the excavation of this Canaanitish castle.

A stone, belonging to a gentleman residing in Syria, and bearing Hittite inscriptions, has only recently been first made known to Europeans. An illustration of the inscriptions is given in the figure on page 29.

Babylonia.—The German Oriental Society reports of the results of the latest expedition sent out by it to the East the discovery of 400 inscribed clay slabs in the center of the ruins of Babylon. Two of these have been deciphered—one comprising a large part of a Babylonian compendium, or dictionary, of the cuneiform characters; the second tablet contains a litany which was chanted by the singers of the temple of Esagila on the return of the god Marduk to his sanctuary.

The discovery of a square courtyard surrounded by walls in the south quarter of the city of Babylon is reported by Dr. Kaltenay. The southernmost wall is described as being remarkable for its architecture and its elegance. It is faced with glazed tiles, ornamented with flowers and tracery. When the tiles that had fallen to the ground were replaced, a beautiful design was revealed. Bricks composed of enamels and glass-raised work, which were apparently part of a mosaic pavement, were found in the courtyard, together with coins, fragments of inscriptions on stone, and a broad slab bearing a picture of the Babylonian idea of hell. From the great elegance of this courtyard Dr. Kaltenay believes that it was a part of the palace of Nebuchadnezzar. A building about 60 feet wide and 160 feet long is supposed by the discoverer to have been the throne room of Nebuchadnezzar. Exactly opposite the door is the niche in which the royal throne stood. On both sides and on the northern front of the hall were richly colored ornaments in good preservation. No inscriptions of special significance are mentioned.

Egypt.—Besides the review of the work of the society, the report of the Egypt Exploration Fund for 1901 gives a conspectus of the work done by other scholars and explorers and those of other nationalities. Among these is the discovery at Elephantine or Assouan, reported by Prof. Sayce, of an Aramaic papyrus, with two ostraka, relating to loans of money contracted by Jews settled in that district during the Persian epoch. The Aramaic texts are said to contain some fresh words and to throw light on Biblical Aramaic. The discovery by Mr. Evans at Knossos, in Crete, of an alabaster lid inscribed with the name of the Hyksos King Khyan, coupled with the occurrence of the same name on a lion of Bagdad now in the British Museum, seems to show that that ruler was a personage of great importance. The monuments of no other Pharaoh have so wide a range. Some examples of a curious kind of lamp, discovered in two places, have been placed in the Cairo Museum. It consists of a small bowl pegged into a saucer, and provided with an extinguisher. It was fed by scented fat, which was burned by means of a wick. A Berlin papyrus, published by a German professor, contains a Hesiodic fragment about the wooing of Helen, of whose suitors Ulysses is said to have been one.

The work of Prof. Petrie in Egypt in the sea-

son of 1901-'02 extended over every historical period, and its most important result was the connection of the prehistoric with the historic period. On the site of an early town was discovered an unbroken stratified series of deposits ranging over four or five centuries of the earliest kingdom. It has been calculated that the deposits of the town dwellers increased at the rate of 20 inches to each century, and thus, by a process of leveling, the relative ages of the pottery, flints, and other objects were estimated. Further comparison with the final prehistoric stages and with the remains from the royal tombs established a continuity between the known and the hitherto unknown or undefined. It seems to have been made clear that the great settlement at Abydos began with the founding of the kingdom there, and the large tombs of the first dynasty show a continuance of the type of prehistoric burials. Much sculpture was found in the ruins of the Temple of Osiris of the sixth, eleventh, twelfth, eighteenth, nineteenth, and twenty-sixth dynasties, but of the twelfth much had to be left until the next season, and in particular a tomb which is pronounced to be the largest in Egypt awaits a complete clearance. Two gigantic sarcophagi of granite have been seen within it. The researches of Dr. Grenfell and Dr. A. S. Hunt in the Fayoum, under the auspices, like those of Prof. Petrie, of the Egypt Exploration Fund, were pursued more with reference to the Græco-Roman period, mainly in searching for papyri in the Ptolemaic cemeteries. Many Greek and denotic papyri were obtained, partly from early Ptolemaic mummies and partly from the mummies of crocodiles of a rather later period. These have yet to be prepared and examined. Another work of exploration was prosecuted on the account of the Egypt Research Fund, at the site of the Temple of the Kings (Seti I) by Mr. A. St. G. Caulfield, while Mr. L. Chrystie copied the sculptures.

The second part of the collection of the Amherst papyri, edited by Messrs. B. P. Grenfell and A. S. Hunt and published by the Oxford University Press, has to do with classical fragments, documents of the Ptolemaic, Roman, and Byzantine periods, and theological fragments, chiefly from the "Shepherd" of Hermes. Among the fragments are fifteen broken lines of an unknown tragedy; a commentary by Aristarchus on the first book of Herodotus, preserving a short quotation from the *Ποιήματα* of Sophocles; a papyrus of the fourth century, A. D., containing three fables of Babrius in Latin; and miscellaneous documents supplementing our information about the administration of Egypt. In these are found notices of conflicts between the Egyptians and the Greek settlers under the later Ptolemies, in which the Egyptians complain that they are overreached by the Greeks in the apportionment of lands, and, revolting, destroy title deeds. Evidences are also afforded of the exactness of the enforcement of law and the collection of the taxes. The prominent position of women in business and the prevalence of the custom of marriage of brother and sister, among Greeks as well as Egyptians, are amply illustrated in these documents.

In illustration of the thoroughness with which investigation of prehistoric relics is now carried on may be cited the method by which P. J. Petrie has established a succession of remains of pottery. Having to deal in his latest season's work with a site which contained, in successive layers, the remains, easily distinguished, of successive kings of the first Egyptian dynasty, and

below these the remains of several continuous prehistoric periods, he devised a plan of classifying the whole mass by a card catalogue. He then tabulated his results, and obtained a sort of chronological scheme by means of which the development in the fashioning of pots may be followed from a period far anterior to Menes through successive prehistoric strata into the continuous line of kings of the first dynasty.

A description and translation are published by Jules Nicole, of Geneva, in the *Archiv für Papyruskunde* of a fragment of a papyrus on which are written questions and answers concerning surgical operations, showing how surgical examinations were conducted in Egypt eighteen centuries ago. Its contents, so far as they have been preserved, indicate that a fair knowledge of anatomy existed; and the subject is treated from very like a modern point of view. The questions are such as might be properly asked in a medical school of the present day. Another article by Prof. Otto Gradenwitz, of Königsberg, cites two documents from the Berlin papyri, giving evidence that banks existed in Egypt, and issued and accepted checks and bills of exchange. The form of these drafts is more complicated than present forms; but "they amounted simply to orders to pay a certain sum of money to a certain person clearly specified and to charge the same to the account of the undersigned."

Carthagina.—The excavations made during the past twenty-five years on the site of ancient Carthage by Father A. L. Delattre have restored most of the outline of the city, and furnished much light upon its life and antiquities. The work has consisted largely of exploration of tombs, of which more than 1,100 of the oldest period, between the sixth and eighth centuries B. C., have been excavated. The finds illustrate the political and business relations of Carthage at that period, and the prevalence of Egyptian and Phœnician influences in earlier, of Greek and Roman in later times. They include armlets, rings, chains, and coins, in gold, silver, bronze, glass, terra-cotta, etc. The specimens have been deposited in a special museum established by the White Mission Brotherhood of Northern Africa. A full account of the discoveries, by Albert Mayr, was published in the *Beilage* of the *Allgemeine Zeitung*, No. 130.

Africa.—Results of six years' systematic explorations among the prehistoric remains between the Zambesi and Limpopo rivers, South Africa, are given in the book of R. A. Hall and W. G. Neal, entitled *The Ancient Ruins of Rhodesia*. Nearly 200 ruins were investigated by the authors and Mr. George Johnson, under grants from the chartered company. More than 500 temples, citadels, enclosures, chains of forts, gold workings, and terraced slopes are reported from various districts covering a total area of at least 115,000 square miles, not one-tenth part of which has as yet been thoroughly explored. Structures are found among these ruins of earlier and of later dates, and the authors have classified them under four categories, of which the periods range from 1000 or possibly 2000 B. C. down to the advent of the Mohammedan Arabs and the Portuguese. The buildings of the first period, as at the Great Zimbabwe, are marked by great solidity and superior workmanship. The massive walls of dry masonry rest upon the bed-rock, and are often 15 or 17 feet thick at the base. They are skilfully built, and are ornamented with various decorative patterns. These are ascribed to the South Arabian Himyarites by Theodore Bent, Dr. Schachter, and Mr. A. H. Keane. The structures

of the second period are less substantial than these, and are inferior to them in other respects, and are assigned to the Phœnicians. They are built upon the other monuments or constitute extensions to them, and also occur by themselves in the districts farther removed from the eastern coast. One class of structures are recognized as slave pits. Extensive terraced slopes in the Inyanze and Mount Fura districts resemble those of the Yemen uplands. Other finds are represented in quartz crushers, gold-smelting works, gold crucibles showing gold in the flux, and massive gold objects, beads, bangles, plates, wire, pegs, nails, ferules, etc., which have characteristics of the monuments of the first period. "All the branches of the goldsmith's art were practised by them," the authors say, "including gold wire-drawing, beating gold into thin sheets, plating iron and bronze with gold, and burnishing." The conditions all go to indicate that the South Arabian Himyarite occupation of this region was a settled one.

A brief general account of Christian antiquities in the Soudan awaiting exploration has been published by Mr. John Ward, F. S. A. The site of Soba, on the Blue Nile, contains the ruins of several Christian temples. It was visited by Col. Stanton, governor of Khartoum, who began preparations for having the ruins cleared and photographed. At Naga, 80 miles north of Soba, are extensive ruins, including 5 temples of Roman architecture with avenues of figures of paschal lambs leading up to them. Hieroglyphic inscriptions were found, and the composite capitals at both places bore the figure of the cross. The natives say that similar ruins are spread all over the country. Sculptured rocks and temples are to be found 80 miles east of Khartoum, and temples are said to be known as far away as Darfur.

Central Asia.—A number of manuscripts said to have been found in Chinese Turkestan, in the desert north of a caravan route between Gūma and Khotān, which were offered to the attention of archeologists several years ago, have been a subject of investigation by M. A. Stein, and have been found by him to be fraudulent. Mr. Stein, who is engaged in archeological explorations in Chinese Turkestan, met the alleged discoverer of the manuscripts—Islām Akhūm—and obtained a confession of the fraud from him. Mr. Stein made many, and some important, discoveries, particularly in the Dandān Ūlig ruins and in the remains on the Niya river. Some Chinese manuscripts of the eighth century found at Dandān Ūlig are of interest as being descriptive of the social conditions existing at that period. One of them is a bond given in exchange for a loan of money, and another is a document of a similar kind relating to grain. In both cases the lender is a Buddhist priest, and the terms of the loan are very strict. At the Niya ruins Mr. Stein found wooden tablets bearing Kharoshthi writing, which is assigned to the time of the Khurshana or Indo-Scythian kings of the first two centuries of the Christian era.

ARGENTINE REPUBLIC. a federal republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 30 members, 2 from each province and 2 from the federal district, and a House of Representatives, numbering 86, 1 to every 20,000 inhabitants. One-third of the Senators and one-half of the Representatives are replaced every two years. The President and Vice-President are elected by direct popular vote for six years. The President of the republic, inaugurated on Oct. 12, 1898, is Gen.

Julio A. Roca. The Vice-President is Norberto Quirno Costa. The Cabinet at the beginning of 1902 was composed as follows: Minister of the Interior, Joaquín González; Minister of Foreign Affairs, Dr. Amancio Alcorta; Minister of Finance, M. Avellaneda; Minister of Justice and Public Worship, Dr. J. Serú; Minister of War, Col. Pablo Riccheri; Minister of Marine, Capt. O. Betheder; Minister of Agriculture, Dr. W. Escalante; Minister of Public Works, Dr. Emilio Civit.

Area and Population.—The area of the republic is 1,113,849 square miles, that of the 14 provinces being 622,969 square miles and that of the territories 490,880 square miles. The total population was estimated on Dec. 31, 1900, at 4,794,149, being 7.4 to the square mile, and on Dec. 1, 1901, the increase for the year was estimated at 100,000. There were about 50,000 Argentinians living or traveling in foreign countries. The number of Indians was about 30,000. The number of marriages registered in 1900 was 28,103; of births, 173,719; of deaths, 88,656; excess of births, 85,063. The number of immigrants arriving by sea in 1900 was 105,902, comprising 52,143 Italians, 20,383 Spaniards, 3,160 French, 2,119 Russians, 2,024 Austrians and Hungarians, 1,583 Syrians, 760 Germans, 431 British, 355 Swiss, and 205 Portuguese. The total immigration since 1856 was 2,670,293. In 1901 the number of arrivals was 160,000 and of departures 112,000. Buenos Ayres, the capital, had on July 1, 1901, a population of 836,395. The next largest city is Rosario, with 112,461 inhabitants, and after it La Plata, which has about 61,000, and Tucumán, with 50,000 inhabitants. Education is free, secular, and compulsory. There were 3,055 public and 1,076 private primary schools in 1899, with 13,103 teachers and 326,752 scholars; 16 Government lycéums, with 450 teachers and 4,103 scholars; and 2 national and 3 provincial universities, with over 3,000 students.

Finances.—The revenue of the National Government in 1900 was \$36,632,346 in gold and \$63,962,000 in paper, and the expenditure was \$23,819,979 in gold and \$94,271,310 in paper. Under the conversion law of 1899 paper dollars are redeemable in gold at 44 per cent. of their par value. The revenue for 1901 was estimated at \$37,991,000 in gold and \$62,300,000 in paper, and expenditure at \$26,025,175 in gold and \$92,466,005 in paper. The actual receipts were \$38,244,638 in gold and \$62,341,306 in paper, and the expenditures were \$23,835,857 in gold and \$91,160,227 in paper. For 1902 the estimated receipts were \$40,013,347 in gold and \$64,290,000 in paper. The revenues collected in gold are \$30,000,000 from import duties, \$2,800,000 from export duties, \$2,765,000 from port and navigation dues, \$460,000 from consular dues and fines, and \$3,937,747 from debt services. The expenditures for 1902 were reckoned at \$32,438,189 in gold and \$96,198,813 in paper. The estimates under the several heads were \$2,566,380 in paper for Congress, \$13,941,222 in paper for the Interior Department, \$309,381 in gold and \$1,165,720 in paper for foreign affairs and worship, \$7,671,102 in paper for the Ministry of Finance, \$23,984,124 in gold and \$12,093,810 in paper for the public debt, \$12,066,164 in paper for justice and education, \$15,875,000 in paper for the Ministry of War, \$12,188 in gold and \$10,050,584 in paper for the Ministry of Marine, \$3,301,360 in paper for the Ministry of Agriculture, \$300,000 in gold and \$10,669,100 in paper for public works, \$5,498,371 in paper for pensions, and \$7,832,496 in gold and \$1,300,000 in paper for extraordinary purposes.

The foreign debts on July 1, 1901, amounted to £86,984,201 sterling, consisting of £45,453,744 of national loans outstanding, £31,384,147 of provincial loans and other debts assumed by the Federal Government, and £10,146,310 of cedulas. The funded internal debts on Jan. 1, 1901, amounted to \$17,937,500 in gold and \$93,463,983 payable in paper. On April 1, 1902, the external debts amounted to \$386,451,295 in gold and the consolidated internal debt to \$89,610,983 in paper and \$17,863,000 in gold. The municipal indebtedness is \$24,596,422 in gold. The paper money in circulation on Jan. 1, 1901, amounted to \$291,004,259. The mint up to Dec. 31, 1897, had coined \$31,716,545 of gold, \$2,805,840 of silver, \$2,748,375 of nickel, and \$82,704 of copper coins.

The Army.—The standing army consists of 1,340 officers and 7,297 men. The war strength of the regular army is about 30,000 of all ranks. There are 471,912 men enrolled in the National Guard, of whom the younger members receive two months of military instruction. A law authorizing compulsory military service was passed by Congress in 1901.

The Navy.—The Argentine naval force consists of the new coast-defense armor-clads the *Libertad* and *Independencia*, of 2,336 tons, having a speed of 14½ knots, 8 inches of armor, and a battery of 2 10-inch breech-loaders and 4 4.7-inch quick-firing guns; the old coast-guards *Andes* and *Plata*; the central-battery ship *Almirante Brown*, of 4,267 tons, having 9 inches of side armor and carrying 10 5.9-inch and 6 4.7-inch quick frasers; the *Garibaldi*, of 6,840 tons, and *Pueyrredon*, of 6,882 tons, carrying 2 10-inch rifles and 10 6-inch and 6 4.7-inch quick frasers, and the *San Martín* and *Gen. Belgrano*, of 6,882 tons, the former armed with 4 8-inch, 10 6-inch, and 4 4.7-inch quick frasers, the latter with 2 10-inch rifles and 14 6-inch and 2 3-inch quick frasers, all 4 cruisers having 6 inches of armor and a nominal speed of 20 knots, built originally for the Italian Government; the 9 de Julio, 25 de Maio, and Buenos Ayres, strongly armed and swift second-class cruisers built in England; 5 converted cruisers of 3,403 to 4,218 tons, purchased from Italian and Spanish steamship companies; the English-built destroyers *Corrientes*, *Misiones*, and *Entre Rios*, which at their trials exceeded the contract speed of 26 knots, and the one built to replace the *Santa Fé*, which was lost; and 12 first-class and 10 second-class torpedo-boats.

Commerce and Production.—There are over 15,000,000 acres in cultivation, yet that is only 6 per cent. of the available land. Wheat in 1901 covered 8,449,372 acres, on which 2,871,440 tons were grown; the yield of flax from 1,518,380 acres was 390,000 tons; and the corn-crop was in the neighborhood of 2,000,000 tons. The wool-clip of 1902 was valued at \$40,000,000, the wheat-crop at \$120,000,000, the corn-crop at \$100,000,000. The quantity of sugar produced in 1889 was 103,112 tons, four-fifths of it in Tucumán province. Alfalfa is grown extensively for feeding stock. There were 89,000 acres of vineyards in 1900. The number of cattle in 1900 was estimated at 28,000,000; of sheep, 110,000,000. There were 329,400 cattle slaughtered in 1900. The wool-clip of 1901 was 250,000 tons. Coal and petroleum are found, and some gold is mined on the slope of the Andes, the output of 1900 having been 2,112 ounces. The existence of foot-and-mouth disease in Argentina put an end to the exportation of live stock to Great Britain. In May, 1902, the disease was officially declared to be exterminated, and negotiations were begun

for the reopening of British ports to Argentine cattle.

The value in gold of the imports in 1900 was \$113,485,000, and of exports \$154,600,000. Imports of live animals were \$364,271; alimentary substances, \$10,453,326; beverages, \$7,277,851; textile fabrics and clothing, \$37,597,847; mineral and other oils, \$4,194,342; chemical products, \$3,760,594; dyes and colors, \$865,727; lumber and wood manufactures, \$7,040,854; paper, \$2,926,206; leather and manufactures thereof, \$1,244,764; iron and steel and their manufactures, \$19,054,051; other metals and manufactures thereof, \$3,343,172; earthenware, china, and glass, \$8,893,370; tobacco, \$3,147,161; other articles, \$3,321,533. The exports of animals and animal products were valued at \$71,253,886; of agricultural products, \$77,426,356; of forest products, \$3,508,915; of mineral products, \$262,222; of products of the chase, \$990,594; of other products, \$1,158,439. There were \$38,609,571 of duties collected from \$96,502,452 of the imports and \$56,169,377 of the exports. The exports of wool were 101,113 tons; of sheepskins, 37,593 tons; of wheat, 1,929,676 tons; of corn, 713,248 tons; of beef and mutton, 99,220 tons. The imports of specie were \$7,209,555, and exports \$3,480,840. The commerce was distributed among the principal countries as follows:

COUNTRIES.	Imports.	Exports.
Great Britain.....	\$38,682,755	\$23,890,685
Germany.....	16,635,615	20,070,135
France.....	10,897,870	19,007,960
Belgium.....	8,490,880	17,380,885
United States.....	13,498,530	6,882,765
Italy.....	14,924,495	4,304,155
Brazil.....	3,741,880	6,185,505

Navigation.—The number of vessels entered at Argentine ports during 1900 was 12,917, of 6,193,783 tons. At Buenos Ayres 1,257 vessels, of 2,110,306 tons, arrived from overseas. The merchant fleet of the republic in 1900 comprised 155 sailing vessels, of 39,798 tons, and 101 steamers, of 40,794 tons.

Railroads, Posts, and Telegraphs.—There were 10,595 miles of railroad in operation in 1900, capitalized at \$526,616,661 in gold. The gross earnings in 1898 were \$41,394,169; expenses, \$19,117,118. The number of passengers carried in 1900 was 17,898,961; tons of freight, 12,719,297.

The length of telegraph lines in 1900 was 27,584, with 58,656 miles of wire. The postal traffic in 1899 was 242,016,000 pieces of mail-matter; postal receipts, \$17,492,398; postal and telegraph expenses, \$30,732,670.

Political Affairs.—The old controversy between the Argentine Republic and Chile which several times they have threatened to settle with arms, regarding the limits of their territories in Patagonia, was at last by mutual agreement submitted to the arbitration of Great Britain. The agreement was concluded on Sept. 22, 1898, and the British Government appointed the boundary commissioners, but before they could begin their task differences arose as to the basis of arbitration and each government sought to impose conditions. To improve their respective cases Argentina promoted emigration into parts of the territory in controversy and in other parts Chile constructed roads, though both had agreed to preserve the *status quo*. Negotiations were carried on for a long time and at several stages suspended. After the last breach Chile made fresh proposals, which were amended by the Argentine Republic, and in this shape were accepted

by Chile. The convention was signed by the plenipotentiaries on Dec. 25, 1901; but even after that the Argentine Republic declined to adhere to a provision in the protocol requiring each contestant to withdraw all police from the disputed territory. The chief points of the protocol were: (1) Chile renounced the contention that the existence of artificial roads in Ultima Esperanza, one of the regions in dispute, was a proof of continued occupation; (2) the Argentine Republic and Chile both agreed to retire their police from the disputed district; (3) the disputed district would, pending arbitration, be guarded in such way as the Argentine Republic and Chile should mutually agree; (4) difficulties arising in the course of negotiations for such agreement should be referred for immediate decision to the British arbitrators. The Argentine Government consented to withdraw its police from Ultima Esperanza on receiving an assurance from Valparaiso safeguarding the rights that Chile was believed to have infringed. The act submitting the whole matter to British arbitration was finally signed at Buenos Ayres on Jan. 6, 1902. The dispute as to the ownership of Patagonia first arose in 1843 when Chile established the seaport of Punta Arenas on Magellan Straits and laid claim to the whole interior. The Argentine Republic protested against the presence of the Chileans at Punta Arenas and asserted a right to all Patagonia. The controversy remained open till 1856, when a treaty was signed by which both parties agreed to accept the boundaries by which the Spanish rulers divided the provinces when their rule ceased in 1810. Such official Spanish delimitation could not be found; but there were old maps in which Patagonia was marked as Chilean territory, and accordingly Chile asserted a claim to the entire country. The Argentine Republic did not recognize this claim, but took no steps to establish its own alleged rights until Chile became involved in a war with Peru and Bolivia, when as the price of non-intervention the Argentine Government exacted from Chile a treaty dividing Patagonia. The line of division was stated to be the line running along the highest peaks of the Andes, which divide the watershed. The highest peaks are near the western coast; the main range of the Cordilleras which for the most part forms the water-parting, runs through the middle of Patagonia. The treaty of 1881 was loosely drafted without the advice of geographical experts and without knowledge of the provisions to be included for the strict definition of international boundaries. The Chileans construed it as giving to Chile the main western watershed, and drew the line at the principal divide of the waters. The Argentines took the crest of the great chain of the Andes that was thrown up in a later geological period as the boundary, and assigned to Chile only the steep Pacific slope. Col. Sir Thomas Hungerford Holdich, one of the appointed commissioners, went to South America soon after the protocol was signed to explore with a staff of assistants the territories in question. The boundary post at San Francisco south of the Puno de Atacama, the district which United States Minister Buchanan awarded to the Argentine Republic, had to be fixed by the British commissioners as well as the frontier in Patagonia, where the districts of Lake Lacar and the Argentine settlement of 16 de Octubre needed special examination, and also the Ultima Esperanza and the territory between Lake Nahuel Huapi and 52° of south latitude. The basins of these Patagonian lakes are claimed by

both parties. The development of the disputed regions as far as it has proceeded has been accomplished thus far mainly by Argentinians, to whom the country is more accessible than to the dwellers beyond the impassable Andes, and who have been stimulated by political motives to substantiate by actual possession their claim to the valleys of the Pacific watershed, into 7 of which, out of 9 principal ones, they have gradually intruded since 1881. While the dispute as to the conditions of arbitration and the basis of the respective claims was still acute the two governments resumed the belligerent preparations which have created financial embarrassment on both sides for many years. In 1900 an understanding was reached between President Roca and President Errazuriz of Chile not to increase further the military and naval powers of their respective countries. This private agreement ended when President Errazuriz went out of office, and was not renewed with President Riesco. The rivalry of the two nationalities for future influence and empire prompts each one to a struggle for military and naval primacy in South America and for political prestige. This struggle is not likely to end when the burning question of the boundary is settled, yet when that phase of it is past it will be unlikely that either country will go beyond its definite and distinct sphere to seek a cause of war. Chile having purchased 2 torpedo-boat destroyers and ordered an armored cruiser in the United States, the Argentine Government decided in the beginning of April to order 2 new war-ships in Italian yards, to cost \$5,000,000 in gold apiece, which should be defrayed out of the general revenue in two years. This decision was in accordance with the avowed policy of the Government to maintain a marked naval superiority over Chile, which on its part adopted the policy of keeping its naval armament equal, but not superior, to that of Argentina, so that in case of arbitration involving disarmament or limitation of armaments the arbitrator would find that Chile had pursued a purely defensive policy. Such a competition involved a naval extension that could be checked only by the bankruptcy of one Government or the other. The mediation of the British representatives was offered to bring about an arrangement preventing additional construction and dividing the war-vessels that were being built equally between the two countries. Except upon the sea the danger of a collision between the war forces of the two republics is remote unless neighboring countries are involved, because the great Andean chain forms an effective obstacle against a direct military invasion from either side. The total expenditure for naval construction incurred by the Argentine Government amounted to \$30,000,000 in currency, which it was proposed to distribute over three years in equal portions. To meet this extraordinary demand a part of the money was to be obtained from the National Bank, which was in liquidation, and the remainder to be raised by contributions from lotteries, a duty on real-estate transactions, and some increases in internal taxes. At the time when the two additional armored cruisers were ordered there were 2 already building in Italy, to be ready for sea in September, 1903. The total cost of the 4 cruisers is close upon \$25,000,000 in gold, and they entail heavy annual disbursements for maintenance. Chile endeavored to exact from the Argentine Government as a condition to the limitation of armaments a declaration that it would in no event intervene in affairs on the Pacific coast. By giving moral support to the contentions of Peru

and Bolivia in their disputes with Chile regarding the restoration of their lost provinces Argentina has to some extent undermined Chilean influence in those countries, where Argentina will not grant to her rival a free hand that would make Chile the dominant political power in South America. Political primacy and domination of the continent is the prize for which the rival powers may wager a conflict that would permanently humble and weaken the loser and result in the destruction of one navy or the other, the payment of a heavy money indemnity, the annexation of the whole of Patagonia by the victorious power, and in the event of Argentinian success the restoration to Peru and Bolivia of the ports and nitrate fields seized by Chile in 1879-'82.

The Argentine Government refused to give a pledge to maintain absolute neutrality in existing and future questions on the Pacific coast, but gave an assurance that it had no wish to intervene in affairs on the Pacific, provided Chile fulfils her treaty obligations toward Peru and Bolivia. The Minister of Foreign Affairs died suddenly on May 5, and Valentin Virasoro was appointed in his place. Congress was opened on May 8. The Minister of Finance expected the ordinary revenue to be sufficient to cover expenditure and further reduce the floating debt. Additional taxation affected articles of luxury, not those of prime necessity, and unless extraordinary expenditure occurred it would not be enforced. Regulations were issued requiring statements to be made to consuls regarding the country of origin and the cost of manufacture of goods shipped to Argentina, but on complaint of merchants that these were vexatious they were recalled. Both the Argentine Republic and Chile had made preparations of such warlike character that an outbreak of hostilities might occur after the award of the arbitration tribunal. The Peruvian question might be the cause, but in any event the work of the boundary commission would have gone for naught. Therefore the British representatives conveyed a hint that unless means were adopted to preserve peace his Britannic Majesty would withdraw from the dispute. A treaty was drawn up the preamble of which contained declarations of the Argentine minister to Chile and of the Chilean Minister of Foreign Affairs which were accepted by the Chilean Government as a pledge not to disturb its possession of the Peruvian and Bolivian territories occupied by Chile, but to leave the question of their final disposition to be settled with Peru and Bolivia without intervention, and by the Argentine Government were accepted as a promise on the part of Chile not to seek further territorial aggrandizement. A protocol constituting King Edward of England general arbitrator, one for the cancellation of existing orders for ships and for the equalization of armaments within twelve months, and one recognizing the principle of non-interference with the existing boundaries of the neighboring republics, Chile to retain all rights conferred by treaties, were signed on May 27 at Santiago, and on May 28 a treaty of general arbitration in case of future difficulties was signed, also a protocol for the limitation of naval armaments and one for the demarcation of the frontier after the award of the arbitration tribunal by a technical commission to be appointed by the arbitrator. The first article of the treaty of general arbitration declares that the high contracting parties bind themselves to submit to arbitration every difficulty or question of whatever nature that may arise between them, pro-

vided such questions do not affect the precepts of the respective constitutions of the two countries, and that they can not be solved through direct negotiations. The exception of questions affecting the constitutions of the republics may be made to cover almost any question in which national ambition or animosity finds a cause of war. This is, however, a necessary legal restriction of arbitration when adopted by constitutional governments, although a similar clause delayed for several years the ratification of the treaty of arbitration between the Argentine Republic and Italy. The British Government has been particularly interested in the preservation of peace between the Argentine Republic and Chile on account of the amount of British capital staked in both countries. In the Argentine Republic, aside from Government securities, there are nearly £123,000,000 of foreign money invested, about 75 per cent. of it English, and in Chile the proportion of British capital is larger. The agreements were approved by the Senates of the two republics without much discussion, but in both Houses of Representatives there was cavil and obstruction, but not enough opposition to prevent their acceptance after a further interchange of notes in which Chile agreed to the limitation of armaments on receiving a distinct assurance that the Argentine policy was one of absolute neutrality in questions on the Pacific coast. The period for ratification elapsing, it was prolonged by a protocol signed on July 24. On July 31 the Argentine Chamber approved the agreements without modification, and on Aug. 12 they passed the Chilean Chamber.

Besides high taxation, necessitated by the warlike preparations that have been carried on intermittently for ten years, the failure of civil and criminal justice in Argentina operated to deter enterprise and depress the economic situation. President Roca, in his message to Congress, said that the standard of the judiciary had degenerated through a quarter of a century without any determination being shown on the part of the Legislature to mitigate this crying evil. The system of indirect taxation by which the bulk of the revenue is raised bears most heavily on the poorer classes. Thousands of immigrants have left again when they found how difficult it is to make a living. Land taxation is of the highest description, and a result of this condition is that great blocks of fertile land lie unimproved and uncultivated. A transitory cause of economic depression in 1902 was the failure of the harvest in 3 great provinces. Notwithstanding the agreement with Chile to restrict armaments, the budget called for a national expenditure of \$77,000,000, reckoned in gold, besides \$25,000,000 of provincial expenditures and the municipal charges. The grain harvest in Argentina is always uncertain. In 1900 the wheat exports were 2,000,000 tons, in 1901 only 1,000,000 tons, and in 1902 they dropped to 600,000 tons. Minor causes which aggravated the economic crisis were the closure of British ports to Argentine sheep and cattle, overproduction of sugar in Tucuman, and an excessive crop of grapes in Mendoza and San Juan. Quarantine restrictions between the Argentine Republic and Brazil also tended to hinder trade. The revenue fell off until the Government was confronted with a shortage of \$7,500,000. In framing the budget for 1903 the Government made a retrenchment of \$16,500,000 on the finance bill for 1902 and reduced taxation by \$2,900,000 in gold and \$1,500,000 in currency. In order to meet unforeseen expenditure the National Bank, which owes the Government \$50,-

000,000, placed \$5,000,000 of its bonds in the hands of the Government.

ARKANSAS. (See under UNITED STATES.)

ASTRONOMICAL PROGRESS IN 1902.

The astronomical discoveries of the past year (from October to October) have in some respects surpassed those of any of its predecessors, characterized by great activity, especially in the departments of variable stars and spectroscopic binaries.

In looking over the year's work, one is confronted with the fact that, though astronomy is the oldest of the sciences, it is still in the experimental stage, and probably will be for centuries. The impressive fact must constantly be borne in mind by the reader that he is standing face to face with numbers, magnitudes, velocities, and distances which no stretch of thought can comprehend. All countries that possess the means for astronomical research made gratifying progress during the year, and this is emphatically true of the United States.

Daylight Astronomy.—This is exemplified only in observing the Sun, about which astronomers know but little. When his disk is observed with a telescope of contracted aperture, the eye protected against his terribly penetrating heat and light by colored glass and other devices, it presents a mosaic of pores, spots, faculae, and corona; and when his disk is completely covered by the Moon during a total eclipse the chromosphere, prominences, streamers, and Bailey's beads, all of which bid defiance to investigation. We are no wiser than were the ancients as to the cause of these phenomena. All we know is that he rotates on his axis in about twenty-six days, and has also a motion of translation, but whether tangential or orbital is unknown. This progressive motion was immediately inferred when his rotation was known. This supposition has been confirmed by both telescope and spectroscope. In our age the direction is toward the constellation Hercules, but the center around which the Sun and planets and satellites are revolving is unknown. This motion is about fifteen miles a second—sufficient, it would seem, after the lapse of a few centuries to produce a perceptible change in the appearance of stars and constellations. The point toward which we are now moving is called the solar apex. A strenuous effort is being made by several astronomers, especially at the Lick Observatory, to locate with all attainable exactness the direction of this motion. The D. O. Mills expedition to Chile, South America, with a new reflecting telescope and other appliances made especially for the work by John A. Brashear, has arrived at Valparaiso, and will be located there for three years, to work in conjunction with the astronomers at the Lick Observatory. Before shipment the instruments were subjected to the most rigid comparison tests with those left in the observatory. The two parties will work on two different sets of stars, one north, the other south, which latter can not be seen at the Lick Observatory. Spectroscopic and other observations will be made on several bright stars in both hemispheres during the three years. As before said, the design of the expedition is to ascertain the exact direction of our celestial highway, including the entire solar system and periodic comets, its rate of motion, and, if that is orbital, where the mighty center is, and whether a single Sun or a cluster of Suns, and the periodic time.

The three most trustworthy determinations of the present solar apex are as follow: New-

comb, right ascension $18^h 28^m$, declination north 35° , or near Alpha Lyra. Kapteyn, right ascension $18^h 16^m + 20^\circ$, or in Hercules. Campbell $18^h 28^m + 20^\circ$; velocity 12.4 miles a second.

To elucidate the spectroscopic process by which it is hoped the direction of the Sun's motion may be determined the following facts must be borne in mind. If a star is not moving toward or from the solar system, or we toward or from the star, the spectral lines of hydrogen, sodium, iron, etc., will occupy precisely the same positions that are experimentally observed in the chemist's laboratory. If the lines in the spectrum of the star occupy positions slightly toward the red end of the spectrum, that star is either moving from the Earth or the Earth from the star, or both from each other. On the other hand, if all the lines are moved slightly toward the violet, that star is either moving toward the Earth or the Earth toward the star, or both toward each other. If the lines from all the stars in a certain region of the sky are moved toward the violet, it furnishes strong evidence that the Sun with his family of planets is moving in that direction, or that all the stars in the region are moving in our direction—an improbable supposition.

If the spectral lines from stars in a certain direction are moved toward the violet the theory demands that the lines from stars in the opposite direction shall be displaced toward the red.

The Zodiacal Light.—The cause of this strange light is one of the most inexplicable mysteries of the heavens. It is very doubtful if its cause will ever be discovered. It is gratifying, however, to announce that it is beginning to attract the attention it deserves. For its investigation no instrument, unless it be the spectroscope, can be used. Though the area of the light is large, it is too faint for telescopic observation, and the hope that the spectroscope can deal intelligently with it is almost a forlorn one. So faint is it that the light from the planets Venus and Jupiter are sufficient to obliterate it. It is also too faint to attract popular attention, but none the less necessary to be investigated. It is a broad beam of light, seen in the west above the place where the Sun has set as soon as twilight is ended, and in the morning sky before dawn appears. It is conical, 25 degrees broad at the horizon, and extends often to near the zenith, where it narrows to a blunt point. Some observers think they have seen it extend from horizon to horizon. In some countries it is seen only during the 3 spring and autumnal months, in the west in spring, and in the east in autumn. This, if true, is an important fact as associated with the meteoric-ring hypothesis. At the Lowe Observatory, in southern California, 3,500 feet above tide-water, it is visible the year round in the west; but, owing to obstruction by the San Gabriel mountains, it is never seen in the east except from the top of Mount Lowe, one of its highest peaks.

Several plausible theories have been advanced to explain the cause of this light, but in the writer's opinion they are not worth recording.

The writer is of the opinion that the zodiacal light is due to the reflection of sunlight from the cast-off tails of comets. No comet gathers its tail to itself; a part is left behind, and the process has been going on since the creation. This hypothesis demands that the cometic ring extend far beyond the earth, if not to Neptune's orbit, its eccentricity being very great.

The Gegenschein is another mysterious light, in several respects more so than the zodiacal

light, with which it seems to be associated. Prof. Barnard has made it a systematic study for fifteen years. It is a circular light, always exactly opposite the Sun, therefore on the meridian at midnight. He has traced what he calls the zodiacal band, extending from it to the evening and morning zodiacal cones, 3 or 4 degrees broad, and it can be seen, except where it crosses the Milky Way, in June and December. The writer never saw it in New York, but in California was surprised at its brilliance.

Mercury.—The exact diameter of Mercury has always been considered beyond the limits of accurate measurement. Recently, from a long series of micrometer determinations with the 26-inch telescope at the Naval Observatory, Prof. T. J. J. See has deduced a mean diameter of $5.8993''$, with a probable error of only $0.0080''$. There was no appearance of an atmosphere or evidence of any markings on his disk. This gives the diameter of the planet about 3,000 miles.

Jupiter.—Prof. See has recently completed a series of daylight observations to determine more reliable values of Jupiter's diameter with the same telescope. They were made when he was at the distance of 5.20 (the Earth's distance from the Sun being 1) with the following result: Equatorial diameter $37.646''$, polar $35.222''$, corresponding to 88,151 and 82,475 miles respectively. Since last report Prof. See has subjected Saturn and his rings to a long series of micrometrical measurements with the following results: Equatorial by night, $76.598''$; by daylight, $74.172''$. External diameter of outer ring, $171.948''$. External diameter of dusky ring, $111,969$ miles respectively.

Bolides.—Since the last report several of these strange celestial visitors have suddenly appeared and as suddenly vanished—where from and where gone is a fathomless mystery. They are also called fire-balls and meteors. That they are identical with the fall of meteoric stones is generally conceded; but that they are even remotely connected with what are called shooting stars is in the highest degree improbable. During the great star showers of Nov. 13, 1833, and the 14th in 1866 not a bolide was seen, though countless millions of the microscopic meteors were seen over a large portion of the earth. No shooting star ever has been known to reach the Earth. The writer well remembers the celebrated one of 1860. In Niagara County, New York, he rose to give a lecture, when instantly the room was lighted to the brilliance of a sunny day, and the light disappeared as quickly as a flash of lightning. It was first seen in Colorado in broad daylight, and last seen over the Atlantic Ocean. Whether it ever reached the Earth is not known. Its velocity was from 12 to 15 miles a second.

The object in calling the reader's attention to this subject is to describe the appearances of 3, among several others, on as many different dates which have appeared in the past twelve months. On Dec. 16, 1901, a remarkably bright one was seen in England, in the constellation of Perseus. It moved north almost at a right angle to the ecliptic, and disappeared beneath the polestar. On Nov. 13, 1901, one was visible over a large portion of England. Its path remained visible a short time when a dotted streak of light appeared, finally assuming a faint nebulous cloud. The most remarkable of the three passed over New South Wales at $9^h 35^m$ on the evening of Jan. 7, 1902, visible over a region 300 miles in length. It first appeared in the con-

stellation Octans. Allen B. Cobham received statistics from 25 stations. Mathematical computation revealed the fact that along its visible path its average height was about 50 miles, and its velocity 33 miles a second. A few minutes after it disappeared a loud report like distant thunder was heard at all the stations which shook buildings. At some places a double report was heard.

Meteoritic Stones.—That bodies when they fall to the Earth, which they sometimes do, are identical with meteoric stones is conceded. They are of all sizes and shapes from that of a marble to 100 tons. Recently Prof. Henry A. Ward, of Chicago, who is an authority on the subject, visited Mexico to inspect a stone that was reputed to have fallen from the sky. He found

THE GREAT METEORITE IN MEXICO.

it to be a very remarkable one. (See illustration.) They never fall perpendicularly, and when they are large they plow a long, deep channel. He hoped to be able to remove it to Chicago, but found it to be impossible. He estimated it to weigh 50 tons. As it is far from a railroad or shipping port, it will probably never be moved. It is partly hidden in a long deep channel that it dug.

Meteorites are of two kinds—iron and stone. If a stone is seen covered with a rough, jet-black crust, with many depressions of all sizes and depths, it is a meteorite. The hollows are gouged out in passing through the air, producing the sparks that are seen during its visibility.

Star Showers.—On the mornings of Nov. 12, 1799, Nov. 13, 1833, and Nov. 14, 1866, the world was treated to magnificent star showers. The intervals between them (thirty-three years and one day) furnished a strong suspicion that they would again recur on Nov. 15, 1899, but at that date no meteors appeared, or no more than are usually seen about Nov. 14. This shower can be traced back nearly one thousand years. The sun appears to be surrounded with a meteoric ring of what are called, before consumed in our atmosphere, meteoroids, and while visible, undergoing combustion, meteors and shooting stars. The earth in its annual path around the Sun passes through the ring every year about Nov. 14, and produces a slight display. The ring, supposed to be composed of the ejected tails of millions of comets, appears to be unequally dense, one place in it being exceedingly dense, through which the Earth passed in 1799, 1833, and 1866, but not as was expected in 1899.

The ring completes a revolution round the Sun in about thirty-three years and a quarter, thus causing the Earth to pass through it every year in a new place, and once in about thirty-three years through the dense place. The shower in 1833 surpassed all its predecessors.

Prof. W. H. Pickering says that the observation of the Leonids, as the shower is called, appears to indicate that the 33.25 year period must be abandoned, on the ground that since 1698 the length of the period has been thirty-four years. Remembering that brilliant displays were seen in 902, 1002, 1202, and 1602, it seems possible that it will yet return in November, 1902, but unfortunately there will be a full moon. If it does appear it will be just one thousand years since it was first recorded in history.

Another notable shower of meteors occurs every year on Aug. 10 whose elements agree with those of Swift's comet of 1862, having a period of one hundred and twenty-three years. A fine display was seen in Europe on Aug. 10, 1902. They are called Perseids, because they appear to radiate from the constellation Perseus.

Distances of the Stars.—The grandest and most difficult problem man ever attempted to solve is to ascertain the distance of a few of the brighter stars. The problem has not yet been solved with the desired accuracy. One element of doubt is the Sun's distance from the Earth, which has engaged the attention of astronomers for at least three thousand years. The process resorted to is briefly as follows: The velocity of light is assumed to be 186,325 miles a second, as a year contains 31,556,926 seconds, the product of these two numbers will give the number of miles corresponding to a "light year." A star having a parallax of 1" is distant 3.26 light years. The parallaxes of the stars, however, are, with perhaps a single exception, much less, and the less this is the greater its distance. If the light year of a star having a parallax of 1" be divided by the assumed parallax of any other star the result gives the distance in light years. Suppose the parallax of the star to be 0.5", then $\frac{3.26}{0.5} = 6.52$ years—that is, the light has been more than six years in reaching us, moving at a velocity equal to seven times round the Earth in one second. The nearest known star is Alpha Centauri, whose parallax is not quite 1". It is distant about $3\frac{1}{2}$ light years. All this, however, depends on the correctness of the computation of the parallax, an assumption seldom if ever trustworthy. The following list comprises the best determination:

STARS.	Parallax.	Light years.
Dog-star	0.38"	8 $\frac{1}{2}$
Procyon	0.27	12
Groombridge, 1830	0.14	23 $\frac{1}{2}$
Alpha Lyrae	0.12	27
Aldebaran	0.10	32
Capella	0.10	32
Pole-star	0.07	47
Arcturus	0.02	160

Proper Motion.—In common parlance the stars are called fixed stars; but, strictly speaking, there is not a fixed star in the universe. Every one is attracted and swayed by the others and in all directions. Their apparent motion, though very rapid in miles, is, from their great distance, exceedingly slow. The proper motions of several thousand have been determined with great exactness, both in right ascension and declination, and catalogued. Proper motion is not applied to motion of stars in the line of sight, as they appear absolutely stationary.

It would be natural to suppose that the brighter stars were the nearer and their proper motions the greater, but this seems not to be the case, or at least it often fails. The most rapid proper motion in the sky is that of two stars invisible to the naked eye. Groombridge 1830, a star of the sixth magnitude, has long been called the runaway star. It has a proper motion amounting to 7" a year, which would carry it around the sky in one hundred and eighty-five thousand years. Its velocity is thought to be 200 miles a second. The latest and most rapid known is that of an eighth-magnitude star in the southern sky. Its proper motion is 8" a year, or sufficient to carry it across a space apparently hidden by the diameter of the moon in two hundred and fifty years, or, in miles, round the earth in eighty-three seconds. The latest record of Groombridge 1830 is from the Lick Observatory Bulletin, No. 4, which gives the proper motion of the star as 7.05" a year, which with Newcomb's adopted parallax of 0.14", would denote a velocity perpendicular to the line of sight of 150 miles a second. The Bulletin gives the radial velocity (in line of sight) as 59 miles a second. The above-mentioned parallax of the star gives its distance as 23½ light years. The same Bulletin confirms the variability of Delta Orionis in the line of sight, discovered by M. Deslandres at Meudon. The results from three photographs are +3 kilometers a second, +51, and -69. A large variation has been discovered in the radial velocity of Omicron Persei. The range of variation in this star and in Eta Orionis are the largest yet discovered among spectroscopic binaries with one dark component. The well-known Algol variable Delta Libræ exhibits a considerable variation in the line of sight, proving that it is a double star, which never has been seen with a component. Ten spectrographs of the dog-star were obtained between December, 1901, and March, 1902, which give for the epoch 1902.06 a radial velocity of -6.57 kilometers a second. This value, combined with others previously made, gives its parallax as 0.21", making his distance in light years nearly twice as great as was formerly supposed.

Binary Stars.—Recently 300 binary systems have been discovered. This work is still progressing, and many astronomers are engaged in it. The sky is covered with them, but they were never suspected until the invention of the spectroscope and the application of photography.

Binary stars are divided into three classes: 1. Telescopic, where both components are visible. 2. Spectroscopic, where only one is seen, the other being too close to be visible in any telescope, but both being bright and each giving a spectrum. 3. This class of binary stars, unlike those of No. 2, give but one spectrum, one component being incapable of giving a spectrum. Stars of No. 1 type are both seen with the telescope to revolve round each other, but always in a plane perpendicular, or nearly so, to the line of sight. The spectral lines of the approaching star will all be slightly moved toward the violet end of the spectrum, and those from the receding star toward the red, thus causing the lines of hydrogen, sodium, helium, iron, etc., from each star to be periodically single, broad, and double, and *vice versa*. When there is no to-and-fro motion the lines are single. The behavior of stars of the third class is quite unlike those of No. 2. If the star gives but a single spectrum, it is either a single star or a binary with one component dark. If it is single its spectral lines will never move

or be double, but if it is a binary the lines will be seen to vibrate periodically toward the red and the violet. The dark sun revolving round the bright one periodically sways the bright one to and fro by its attraction.

If the reader will turn back a few lines and re-read what is said about the radial motions of Delta Orionis, Omicron Persei, Eta Orionis, and Delta Libræ, he will be able to comprehend how the periodic motions of stars to and from the Earth is ascertained. The following is a list of a few recently discovered stars moving in the line of sight:

Alpha Auriga.....	104 days.	
Omicron Leonis.....	14.50 "	
Kappa Pegasi.....	6 "	Dark companion.
Zeta Geminorum.....	5.88 "	
Delta Cephei.....	5.37 "	Variable.
Alpha Virginis.....	4.01 "	Dark companion.
Beta Scorpii.....	4 "	
Alpha Ursæ Minoris.....	3.95 "	Pole-star.
Alpha 1 Geminorum.....	2.93 "	Fainter component of Castor, triple sun. 1,600 years = Castor.
Alpha 2 Geminorum.....	
Delta Orionis.....	1.92 "	
Mu Scorpii.....	1.46 "	Two bright stars.
Alpha 1 Scorpii.....	34 h. 42 m. 30 s.	
Iota Pegasi.....	1 day.	Next to shortest known.
Y Lyræ.....	12 h. 3 m. 52 s.	Shortest known.

The discovery of radial motion in the trinary system of the pole-star excites the admiration of all who are able to appreciate its significance. Prof. W. W. Campbell, director of Lick Observatory, has, from observation secured since 1899, shown that the velocity of the center of mass of the binary has varied from -11.8 kilometers a second in 1899 to about -13.5 kilometers a second at the present time. It varied from -18.0 a second in 1896 to -11.8 a second in 1899. A reversal has therefore taken place. The period of the binary system 3^d 23^h 14.3^m deduced in 1899 satisfies recent observations.

The pole-star has a companion visible through small telescopes, and was formerly considered a telescopic binary. Lately the spectroscope has determined the faint telescopic component to be a spectroscopic binary with a period of about fifteen years.

Much interest attaches to Mizar, which is a telescopic binary and a spectroscopic trinary. It is the middle star in the handle of the Great Dipper. From observations made in March and April, 1901, Vogel has deduced the relative motion in the line of sight. It is the brighter component that is a spectroscopic double. Its spectroscopic duplicity was discovered by Prof. E. C. Pickering. Prof. Campbell estimates that one star in every five or six is a spectroscopic binary, yet up to the present time not more than 40 are known.

Five Algol stars—viz., V Puppis, X Carinæ, RR Centauri, Beta Lyræ, and U Pegasi—revolve with their components in contact.

Nebulæ.—Since Sir William Herschel's day many thousand nebulae have been discovered. They are now searched for by photography, which by long exposure reveals what no visual telescope can. At the Paris Observatory 23 new ones have recently been discovered, and many at the Cape Observatory and at the Arequipa station of Harvard College Observatory in Peru, and a great many have been discovered that escaped the eye of Sir John Herschel and others. One of those discovered at the Cape was by one hour's exposure depicted on a photograph plate. In fact, it is a double, consisting of two spindle-shaped nebulae side by side, but touching each other in one place only. This was previously discovered at Arequipa.

Dr. Hartmann, in a Berlin astronomical publication of Feb. 27, 1902, describes experiments made with the Potsdam photographic refractor, with two different spectroscopes, one having a flint-glass prism of 60° and 3 of 63°. The exposures were from 90^m to 270^m. The velocity of the nebula, General Catalogue, 4390, was first determined from measurements of the line H β and H γ , which were very satisfactory. Their motions in the line of sight were:

G. C. 4390 =	- 10.5 kilometers a second.
" 4373 =	- 63.8 "
New " 7027 =	+ 4.9 "

The great nebula in Orion has been subjected to a similar spectrographic analysis, and the result indicates a motion in the line of sight by using the H β line, amounting to + 6, + 41, and + 28 kilometers a second. The results of measures made by three experts are, as might be expected, somewhat discordant, because of the faintness of the lines.

Double Stars.—During the past one hundred years the search for double stars, the investigation of their motions, and determinations of their period if binaries have constituted an important division of sidereal research. In the past thirty years 4,000 double stars have been discovered, all by a few astronomers. In 1902 several hundred new ones were found. Nearly 12,000 double stars are now known.

If two stars are found by the telescope to be excessively close to each other, in which after several years no motion of revolution is observed, the pair is called an optically double one. If motion of revolution is detected, it is called a binary. A few trinary systems are known, of which the pole-star is an example. Prof. Hussey, of the Lick Observatory, has discovered that Burnham's double star 168 is a trinary, one component being an exceedingly close double, the distance being less than 0.4". The companion is a spectroscopic double which yields to no telescope. The telescope sees two, the spectroscope deals with three. The following short list includes a few of the most interesting telescopic binaries, of which about 400 are known:

Name.	Period of Rotation.
Burnham 883	5.5 years. Shortest known.
Kappa Pegasi	11½ "
Delta Equelei	11½ "
82 Ceti	16 "
Zeta Herculis	40 "
Procyon	40 "
Sirius, dog-star	58.8 "
Xi Ursæ Majoris	61 "
Alpha Centauri	81 "
70 Ophiuchi	94 "
Gamma Virginis	200 "
Gamma Leonis	400 "
Castor	1,000 "
Zeta Aquarius	1,500 "

The vast difference between the periods of the first and last will not escape notice. To separate many of the double stars eyepieces magnifying from 1,000 to 5,000 diameters are used. Prof. Hussey, examining some well-known double stars, found 5 of them triple, 4 as close as 0.6", and one only 0.3", the closest telescopic binaries yet discovered.

A large variation is shown in motion in line of sight of Omicron Persei. Its range of variation and that of Eta Orionis are the largest yet discovered among spectroscopic binaries that have a dark component. The well-known Algol variable Delta Libræ also exhibits considerable variation in radial velocity. Ten spectrographs of Sirius were obtained between December, 1901, and March, 1902, which give for the epoch

1902.06 a velocity in line of sight of - 6.87 kilometers a second. This result, combined with that obtained by Vogel and Scheiner, - 15.6, for the epoch of 1890.09, gives a parallax of 0.21" for the system. Gill's value from heliometer measures is 0.37". The following are moving the most rapidly:

TOWARD THE EARTH.		FROM THE EARTH.	
Name.	Miles in a second.	Name.	Miles in a second.
Arcturus	55	Dog-star	20
Alpha Lyræ	40	Castor	25
Alpha Cygni	50	Alpha Orionis	15
Beta Gemini	60	Beta Orionis	22
Alpha Ursæ Majoris	60	Gamma Leonis	25

Comets.—There was a dearth of comets in 1902, contrasting strangely with the number (10) seen a few years ago. *Comet (a)* was discovered by Prof. Brooks at Smith Observatory, Geneva, N. Y., April 14, in the constellation Pegasus, and in the same telescopic field as was that of Feb. 23, 1883, also discovered by him. The direction and rate of motion were such that it was constantly in the Sun's twilight. The few observations made indicated that it was moving in a parabolic orbit, and therefore visited us for the first and last time. *Comet (b)* was discovered on July 22 by John Grigg, of New Zealand, but, from places too roughly given and long delay by mail, it was not seen elsewhere. *Comet (c)* was discovered by Prof. C. D. Perrine at the Lick Observatory on Sept. 1. It was very faint, about 4' in diameter with a tail 30' in length. Its discovery place was right ascension 3^h 17^m 49^s, declination north 34° 38' 47", or in the constellation Perseus.

A finding ephemeris of Swift's comet 1895 II is published, and astronomers are searching for it by both photography and telescope, with but little prospect of success, its position relative to the Sun and Earth being unfavorable for visibility. It occasionally makes the nearest approach to Jupiter of any of the periodicities. When this event next occurs its orbit will be greatly changed, perhaps to a very long period, or even to a parabola. Mr. Schulhof estimates the uncertainty of the time of perihelion passage at only three days.

Among the comets that have returned to perihelion unobserved is Finlay's of 1886, an especially interesting one from its supposed connection with Loxell's comet. E. Swift's comet, having a period of 5.855 years, has also returned without detection, much to the disappointment of astronomers, as there is some reason for supposing it to be identical with Di Vico's lost comet. One of Barnard's comets is also in the same category, having escaped detection at two apparitions.

Minor Planets.—The search for these bodies (called also asteroids and planetoids) is still prosecuted with vigor, resulting as heretofore in their rapid discovery, but more especially since the employment of photography. It is supposed that nearly all as bright as the tenth magnitude have been discovered. Their diameters in miles vary through wide limits. The mean diameter of the four largest—Ceres, Pallas, Juno, and Vesta—according to Prof. Barnard, is 285 miles. Ceres is the largest of the whole family, 477 miles. The smallest yet measured is No. 433, the celebrated Eros, 15 to 20 miles.

Minor planets are not searched for all over the sky, as are comets, but at certain declinations both north and south of the equator. The following have been discovered since the last report:

PROVISIONAL.		PROVISIONAL.	
Letters.	Numbers.	Letters.	Numbers. Names.
FK.....	458	GB.....	469
FM.....	459	GJ.....	470 = Kilia.
FN.....	460	GN.....	471
FR.....	461	GP.....	472 = Roma.
FQ.....	462	GC.....	473
FS.....	463	GD.....	474
FV.....	464	HN.....	475 = Oello.
FW.....	465	GQ.....	476 = Hedwig.
FX.....	466	GR.....	477
FY.....	467	GN.....	478
FZ.....	468	HJ.....	479

No. 448, Natalia, was discovered by the late Prof. Keeler in 1890, with a 3-foot reflector. It is the faintest of all the family, and is of the twentieth magnitude.

Nearly 30 others have provisional letters assigned to them, some of which, no doubt, will be found to be identical with some previously discovered. A few have been seen but once, so provisional numbers were withheld until further investigation. It is safe to assume that 500 of these little worlds have been discovered. The most distant of the minor planets is 279 Thule. The nearest is 433, Eros, which occasionally approaches nearer the Earth than any heavenly body except the Moon.

No. 475, Oello, has a southern declination of $61\frac{1}{2}^{\circ}$. Its daily orbital motion amounts to the enormous sum of $2,200''$, or did when in perihelion, and it is the nearest to the Sun of any of the family except Eros. It was found depicted on a photographic plate by Steward, at the Harvard College Observatory station at Arequipa, Peru.

Variable Stars.—The search for stars that vary in brightness is to most astronomers a pleasing pastime. The high interest attaching to their discovery and subsequent investigation into their periods and fluctuations in brightness have led many astronomers to devote their lives to the fascinating work. The number discovered since last report is so great and varied that amateurs have taken up the subject, as no expensive instruments are needed, and are assisting the astronomers in their further discovery and investigation.

Many explanatory theories have been advanced to account for their variation. There are three varieties: 1. Those that vary equally (though different for different stars) from maximum to minimum, and *vice versa*, varying as regularly as the changes of the Moon. This variety is called Algol variables. 2. Those that vary intermittently or fitfully without any regard to periodicity, sometimes to invisibility. 3. Temporary stars, which burst out in an instant, surpassing even Jupiter in brilliance, as did the recent outburst in Perseus, the brightest since the notable one of 1572.

Algol variables are reasonably accounted for by supposing they are periodically occulted by an opaque object, which partially eclipses them, and this accounts for all that is observed by the telescope and spectroscope.

The hypothesis meets with general acceptance among astronomers.

To explain the cause of the fitful variables and the sudden outbursts of the temporaries no theory worth recording has been promulgated.

The number of variables now known is more than 2,500, and further discoveries are being made at a rapid rate. One astronomer asserts that one star out of every five is a variable. The statement seems extravagant, but he doubtless included the minute spectroscopic variation of many, caused by their slight motion to and from the earth in the line of sight. In their discovery

and the investigation into the cause of their variation photography is doing good work, of which the following is one example among hundreds: Prof. E. C. Pickering, describing the discovery of a remarkable variable star, says, in Circular No. 65, it was found that a photograph on glass of the region in which Brooks's comet was discovered on April 14, 1902, had been taken at the Harvard Observatory on April 3. This was superposed on another taken on March 7, 1900, resulting in the discovery of a new variable of the Algol type in R. A. $21^{\text{h}} 55.2^{\text{m}}$, declination north $43^{\circ} 52'$. The true period of the new variable is about 31.304 days. It retains its full brightness for twenty-eight days, its photographic magnitude at maximum being 8.9. About a day before minimum it begins to diminish, attaining the magnitude 9.0 at 1.05^{d} before minimum, 9.5 at 0.94^{d} , 10.0 magnitude at 0.84^{d} , 10.5 at 0.71^{d} , 11.0 at 0.58^{d} , and 11.5 at 0.43^{d} . The time of increase is apparently the same as that of decrease. The light remains nearly constant for more than half a day, with the minimum magnitude 11.6. The period of the variable is more than three times that of any other yet discovered, and the duration of minimum (two days) is double that of S Cancri, the next in length. These results have been obtained from an examination of 388 plates, taken between 1888 and 1902.

Prof. Robert Innis, in his revision of the Cape catalogue, discovered 4 new variables, all, in one respect at least, very interesting. One designated 29, 1900, Appodis, varies from 8.6 magnitude to invisibility. Its period has not been ascertained, but the periods of the other three are from three hundred and sixty to four hundred days, and they diminish in brilliance to invisibility, suffering periodically a total eclipse.

Dr. Anderson, who makes the discovery of variables a special line of work, calls another new one 77, 1901, Herculis. Soon afterward A. Stanley Williams discovered one with the designation 78, 1901, Cygni. It is of the Algol type. Its normal brightness is tenth magnitude, but after $3^{\text{d}} 2^{\text{h}}$ it diminishes to the twelfth, at which it remains for fifty minutes. In $4^{\text{h}} 10^{\text{m}}$ it recovers its usual brightness.

Harvard College Observatory Circular No. 54 gives a list of 64 new variables, the greater part being southern stars discovered by the presence of bright hydrogen lines in their photographed spectra.

Mira Ceti is considered the most remarkable of all the variables. It was discovered to be a variable star more than three hundred years ago. When at its maximum brightness it shines as a second-magnitude star, but it dwindles down to the $9\frac{1}{2}$ magnitude. Recent investigation shows that it is not an Algol star. In the little globular cluster surrounding Omega Centauri 125 variables are visible, Omega itself being one of them, with a period of only six hours and twelve minutes. Another remarkable variable is Eta Argus, often invisible to the naked eye, but in 1838 and 1843 it surpassed in brightness every star in the sky except Sirius. The shortest known variable is U Pegasi = $4^{\text{h}} 29^{\text{m}} 8^{\text{s}}$, the longest is R Carinae = thirty-seven or thirty-eight years.

Stellar Photography.—Prof. E. C. Pickering has for many years been taking celestial photographs. He has a library of glass, so to speak, of more than 30,000 plates, all numbered, dated, their right ascensions, and declinations recorded, packed away in the order of right ascension, so that a plate of any locality in the sky can be found in a moment. In his fifty-sixth annual report for 1901 is the statement that the number of

photographs taken with the several telescopes and available for use amounts to 28,608. The annual production is about 5,000. In the examination of these plates Mrs. Fleming recently discovered two new variables, three stars having peculiar spectra, and the presence of bright lines of hydrogen in the spectrum of U Andromeda. By examination of the plates of the region of the new temporary star in Perseus it was ascertained that if the star existed two days before its sudden outburst it must have been fainter than the twelfth magnitude.

One of the marvels of celestial photography which transcends what we are accustomed to see in astronomy is the rapid formation of the nebulous ring surrounding the new temporary star Nova Persei. Assuming its parallax to be 0.5" and the radius of the ring as photographed at the Yerkes Observatory to be 6', it results that the radius must be 66,000,000,000 miles, and formed at the rate of 6,000 miles a second.

A Gift.—Prof. Pickering, director of Harvard Observatory, has received an anonymous gift of \$20,000 for the benefit of the observatory. As the donor has named no restrictions, the director proposes to use half of it in erecting a wing to accommodate the rapidly increasing stock of negatives and astronomical books. The building is to be fire-proof and of a size to hold the plates that will accumulate in many years.

Prizes.—The gold medal annually given by the Royal Astronomical Society of England has been bestowed on Prof. J. C. Kapteyn, of Holland, for his work connected with the Cape Catalogue, measurements of its celestial photographs and researches in stellar parallax. The Mrs. Jackson Gwilt bronze medal was awarded to Rev. Dr. Anderson for his discovery of the two Novæ Auriga and Persei and many ordinary variables. Each medalist will also receive a bronze medal from the Astronomical Society of the Pacific as heretofore, including Dr. W. R. Brooks and Prof. C. D. Perrine, who will each be the recipient of the latter medal.

AUSTRALIA, COMMONWEALTH OF, a federal union of the British colonies of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania, proclaimed at Sydney, New South Wales, Jan. 1, 1901, in accordance with the enabling act passed by the British Parliament on July 9, 1900, after New South Wales, Victoria, Queensland, South Australia, and Tasmania by a popular referendum had decided to federate. In August, 1900, Western Australia also decided to enter the union as an original state, for which provision was made in the act of confederation. The legislative power is vested in a Federal Parliament, consisting of a Senate of 36 members, 6 from each state, and a House of Representatives. The Senators are in each state elected for six years by popular vote on a single ticket, except in Queensland, which is divided into 2 districts. One-half of the Senate is renewed every three years, but in case of a deadlock between the Senate and the House of Representatives the Senate must be dissolved and an entire new Senate elected. The number of members in the first House of Representatives is 75, of whom New South Wales elected 26; Victoria, 23; Queensland, 9; South Australia, 7; Western Australia, 5; and Tasmania, 5. The legislative period for the House of Representatives is three years unless it is previously dissolved. The electors qualified in each state to vote for the popular branch of the state Legislature may vote for Senators and Representatives in the Federal Parliament, which

has power to enlarge, but none to restrict, the franchise so defined. To be elected a member of either house of Parliament, one must be a natural-born British subject or naturalized for five years, a qualified elector of his own state, and a resident in the Commonwealth for three years. The states reserve all legislative powers not specifically delegated in the Constitution to the Federal Parliament, which has power to legislate on commerce, railroads, shipping, light-houses, statistics, marriage and divorce, emigration and immigration, currency, banking, weights and measures, conciliation and arbitration in industrial disputes, and certain other matters. The executive authority vested in the King is exercised by a Governor-General on the advice of a Council of State. The Governor-General is the Earl of Hopetoun. The Council of Ministers appointed at the establishment of the Commonwealth was composed as follows: Prime Minister and Minister for External Affairs, E. Barton; Attorney-General, A. Deakin; Minister for Home Affairs, Sir W. J. Lyne; Treasurer, Sir George Turner; Minister of Trade and Commerce, C. C. Kingston; Minister of Defense, Sir John Forrest; Postmaster-General, J. G. Drake.

LORD TENNYSON,
GOVERNOR-GENERAL OF AUSTRALIA.

Area and Population.—The area of the states forming the commonwealth and their population, exclusive of aborigines, according to the census of 1901 are given in the following table:

ORIGINAL STATES.	Square miles.	Population.
New South Wales.....	310,367	1,352,297
Victoria.....	87,884	1,200,918
Queensland.....	668,497	496,596
South Australia.....	903,690	362,604
Western Australia.....	975,920	182,553
Tasmania.....	26,215	172,475
Total.....	2,972,578	3,767,443

The total population of New South Wales was 1,359,537, comprising 713,794 males and 645,743 females. This includes the aborigines, of whom there were 3,996 males and 3,244 females; total, 7,240. There were 9,750 Chinese and 1,151 half-castes. The number of Chinese arriving in 1900 was 75, while 379 departed. The immigration by sea in 1900 was 68,783, and the emigration 67,198, making the net immigration 1,585. Between 1891 and 1901 the increase of population was 227,303, the natural increase from excess of births over deaths being 226,752. The population of Victoria, according to the census of March 31, 1901, consisted of 603,903 males and 597,015 females. The annual rate of increase since 1891 was only 0.43 per cent., compared with 2.83 per cent. in the preceding decennium. The population is three times as thickly settled as in New South Wales, averaging nearly 14 persons to the square mile, and 56 of the population live in towns, Melbourne having 493,956 inhabitants; Ballarat, 46,410; Bendigo, or Sandhurst, 43,112; Geelong, 23,440; Warrnambool, 6,600; Castle-

maine, 7,990; and Stawell, 5,400. The number of immigrants who came by sea in 1900 was 82,157, comprising 53,559 males and 28,598 females. The emigration for the same year was 83,684. Since the opening of the Western Australian gold-fields there has been an excess of emigration, which was 14,547 in 1896, 6,454 in 1897, 3,789 in 1898, 1,563 in 1899, and 1,427 in 1900.

Queensland shows an annual growth in population in ten years of 2.78 per cent. The population on March 31, 1901, comprised 280,092 males and 223,174 females. There were 9,313 Chinese, including 530 females; 9,327 Polynesians, including 671 females; 939 East Indians and Cingalese, including 12 females; 1,557 males and 230 females of other colored races; and 3,862 male and 2,808 female aborigines, exclusive of those living in a migratory or savage condition. Of the three divisions of Queensland the southern contained 328,390, the central 63,919, and the northern 110,957 inhabitants. The number of immigrants in 1900 was 36,348, inclusive of 1,085 Chinese and 1,760 Pacific islanders; the number of emigrants was 35,433, inclusive of 807 Chinese and 996 Pacific islanders. Brisbane, the state capital, had 119,428 inhabitants on March 31, 1901, inclusive of suburbs. Charters Towers had 20,976; Rockhampton, 19,691; Townsville, 15,506; Ipswich, 15,246; Gympie, 14,431; Toowoomba, 14,087; Maryborough, 12,900.

The population of South Australia showed an increase for the ten years of 1.37 per cent. per annum. It was composed of 184,422 males and 178,182 females. In the northern territory there were 4,890 persons, most of them Chinese coolies, and only 436 of them females. The population of Adelaide, the capital, is about 160,691, inclusive of suburbs. The immigration by sea in 1900 was 31,094, and emigration 30,417.

The population of Western Australia consisted of 112,094 males and 70,459 females. Perth, the capital, contained 36,199 inhabitants; Fremantle, 20,359. The population continues to increase through immigration, mainly from the older colonies. In 1900 the number of immigrants was 24,921, and of emigrants 19,021, giving a net increase of 5,900.

The annual increase of population in Tasmania between 1891 and 1901 was 1.64 per cent. The population on March 31, 1901, consisted of 89,624 males and 82,851 females. Of the total population 136,629 were born in Tasmania, 12,526 in other parts of Australasia, 19,815 in Great Britain and Ireland, 773 in Germany, and 484 were Chinese. The number of immigrants in 1900 was 23,056. The recorded emigration was 22,574, but about 3,000 departures are believed to have been unreported. Hobart had 24,654 inhabitants in 1901; Launceston, 18,022.

The movements of population in the several states in 1900 was as follows:

STATES.	Marriages.	Births.	Deaths.	Excess of births.
New South Wales.....	9,996	87,146	15,118	22,028
Victoria.....	8,308	30,779	15,215	15,564
Queensland.....	3,371	14,801	5,747	9,054
South Australia.....	2,305	9,143	3,774	5,369
Western Australia.....		5,454	2,240	3,214
Tasmania.....	1,332	4,864	1,903	2,961

Federal Finances.—In the budget presented in the House of Representatives on Oct. 8, 1901, the revenue for the year ending March 31, 1902, was estimated at £10,339,750, and the expenditure at £9,339,743. The revenue from customs and excise was estimated at £8,009,000, of which £2,100,000 are collected on stimulants and

narcotics and the balance from import duties of three kinds—fixed, ad valorem, and composite. New South Wales was expected to pay £2,360,000 of the customs and excise duties; Victoria, £2,410,000; Queensland, £1,404,000; South Australia, £665,000; Western Australia, £800,000; and Tasmania, £370,000. The remainder of the revenue is derived from the postal and defense services, yielding £2,330,750. The expenditure on Commonwealth services was estimated at £3,024,106, leaving £6,315,637 to be returned to the states, which receive severally the following amounts: New South Wales, £1,922,491; Victoria, £1,902,303; Queensland, £961,131; South Australia, £570,524; Western Australia, £656,958; Tasmania, £302,230. The receipts of the Commonwealth for the year ending June 30, 1902, were £11,304,800, of which customs and excise yielded £8,908,300, postal receipts £2,378,700, and miscellaneous sources £17,800. The expenditures of the Federal Government were £3,931,300, leaving £7,373,500 to be distributed among the states.

Commerce and Production.—The value of the foreign trade of the several states in 1900 is shown in the following table:

STATES.	Imports.	Exports.
New South Wales.....	£27,561,071	£28,164,516
Victoria.....	18,801,811	17,422,552
Queensland.....	7,184,112	9,581,562
South Australia.....	8,034,552	8,029,157
Western Australia.....	5,962,178	6,852,054
Tasmania.....	2,073,657	2,610,617

The area cropped in New South Wales in 1901 was 1.18 per cent. of the total area of the state. Few farms exceed 500 acres. The number of holdings on March 31, 1901, was 69,439, covering 46,856,577 acres which the Government had alienated, and 128,034,958 acres occupied on pastoral leases. The state allows settlers to select land for £1 an acre to be paid in instalments upon to 640 acres in the eastern, and up to 2,560 acres in the central districts. The wheat-crop of 1901 was 16,173,771 bushels, from 1,530,609 acres; the corn-crop, 6,292,745 bushels, from 206,041 acres; the potato-crop, 84,505 bushels. There were 2,343,138 acres cultivated. The produce of tobacco was 1,905 hundredweight; of sugar, 199,118 tons, from 22,114 acres; of wine, 891,190 gallons, besides 11,170 gallons of brandy, from 8,441 acres of vineyards; of table fruits, 4,214 tons. There were 14,965 acres of orange orchards. The live stock in New South Wales on March 31, 1900, comprised 39,811,991 sheep, 1,983,116 cattle, 481,417 horses, and 256,577 hogs. Forests cover one-fourth of the state. The area of the timber reserves and state forests is 5,946,355 acres.

The gold production of New South Wales in 1901 was 270,724 ounces, value £921,282. The quantity of silver-lead ore and metal mined in 1900 was 438,838 tons, valued at £2,513,874. Of silver 774,203 ounces, of the value of £90,243, were produced. The value of copper produced was £425,301. The quantity of coal mined in 1900 was 5,507,497 tons, valued at £1,668,911; in 1901, 5,968,426 tons, valued at £2,178,929. The wool exports in 1900 were 221,265,084 pounds, valued at £8,342,612. The value of gold coin exported was £5,389,822; of coal, £1,273,034; of frozen and preserved meat, £829,757; of hides and skins, £756,528; of tallow, £454,505; of leather, £435,560. Of the total imports of New South Wales in 1900 the value of £9,923,117 came from Great Britain, £11,512,685 from Australasian colonies, £1,005,154 from other British possessions, £2,557,961 from the United States,

and £2,562,154 from other foreign countries. The imports by land amounted to £3,480,085, and exports to £5,849,139. Of the total exports, £18,873,488 were home products and £9,291,028 foreign products.

Of the total area of Victoria the Government has alienated 23,200,000 acres, leaving 6,300,000 immediately available for agricultural and 17,190,000 acres for pastoral purposes. The timber and water reserves, including state forests, have an extent of 4,892,000 acres; auriferous lands, 1,044,110 acres. The area under crops in 1901 was 3,925,000 acres, of which 2,017,000 acres yielded 17,847,000 bushels of wheat, 502,000 acres 678,000 tons of hay, 363,000 acres 9,582,000 bushels of oats, 59,000 acres 1,215,000 bushels of barley, and 38,000 acres 123,000 tons of potatoes. There were 226,000 acres of meadows, 30,000 acres of vineyards, and 57,000 acres of orchard and garden. The gold output in 1900 was 807,407 ounces, valued at £3,229,628, the number of miners employed being 29,035. In 1901 the gold production was 789,562 ounces. The import duties levied in Victoria average $1\frac{1}{2}$ per cent. Of the total value of imports in 1900 Great Britain furnished £7,055,028, Australasian colonies £6,769,200, India £465,367, Ceylon £173,392, Canada £56,789, other British possessions £238,911, and foreign countries £3,543,124, of which £1,461,880 came from the United States, £778,056 from Germany, £392,563 from Java and the Philippine Islands, £239,783 from Sweden and Norway, £207,783 from France, £198,631 from Belgium, £84,202 from China, and £180,226 from other countries. Of the total value of exports Great Britain took £6,363,685, Australasia £5,703,810, India £1,256,100, Ceylon £575,874, Canada £11,000, other British possessions £1,462,423, and foreign countries £2,060,649, of which £730,765 went to France, £328,763 to Germany, £203,245 to Belgium, £120,138 to the United States, £107,424 to China, £47,493 to Java and the Philippines, and £522,821 to other countries. The imports of wool in 1900 were £1,927,677 in value; of cotton goods, £1,044,523; of woollen goods, £707,458; of iron and steel, £935,768; of live stock, £897,904; of sugar, £696,942; of lumber, £569,173; of coal, £403,723; of silk goods, £375,258; of tea, £376,960; of oils, £310,178; of all other goods, £10,126,909. The exports of wool were £4,217,018 in value; of gold coin and bullion, £4,132,061; of butter, £1,489,935; of grain and flour, £1,489,935, the wheat export being £892,480; of live stock, £705,619; of frozen meat, £441,451; of hides, skins, and furs, £300,673; of leather and harness, £344,729; of clothing, £179,799; of tallow, £174,985; of sugar, £118,964; of tea, £148,729; of all other goods, £3,765,505. The quantity of wool exported, one-fifth coming from other parts of Australia, was 102,205,965 pounds.

In Queensland the Government still owns 411,928,560 acres, or 97 per cent. of the area of the state, having alienated 13,323,524 acres outright and 2,585,996 acres conditionally on the payment of instalments. Government lands can be purchased free from conditions of residence or improvement on the payment of 13s. 6d. an acre in 20 annual instalments, or, with such conditions, in homesteads of 160 acres for 2s. 6d. an acre, payable in 10 instalments. It is also possible to lease agricultural land for twenty years up to 1,280 acres with the privilege of purchase, the annual rent of $2\frac{1}{2}$ per cent. of the purchase price going toward the payment, and grazing farms of 20,000 acres or less can be leased for fourteen, twenty-one, or twenty-eight years, the smallest rent being $\frac{1}{4}$ d. an acre per annum. Half

the surface of the state is forest. Scrub lands can be leased for thirty years at $\frac{1}{4}$ d. an acre on condition that the squatter clear and fence his run. Squatters already occupy 225,000,000 acres of the public domain. The live stock in 1900 consisted of 456,788 horses, 4,078,191 cattle, 10,339,185 sheep, and 122,187 pigs. There were 2,456,647 bushels of corn harvested from 127,974 acres and 1,194,088 bushels of wheat from 79,304 acres. The area under sugar-cane was 108,535 acres, yielding 92,554 tons of raw sugar. The output of coal in 1900 was 497,132 tons, valued at £173,705. The production of gold was 963,189 ounces, value £2,871,709; of tin, 1,123 tons, value, £74,041; of copper, 384 tons, value £23,040; of silver, 112,990 ounces, value £12,712. Lead, bismuth, wolfram, manganese, molybdenite, and antimony are mined also, and opals and other precious stones. The importation of textiles and clothing in 1900 was £1,435,372; of metals and metal manufactures, £1,257,933. Of the total imports £3,100,706 came from Great Britain, £3,101,086 from Australasian colonies, £357,124 from the United States, £185,262 from British possessions outside of Australasia, and £439,934 from other countries. Of the exports £5,488,128 went to Australasian colonies, £3,271,656 to Great Britain, £453,598 to British possessions, £2,596 to the United States, and £365,604 to other countries.

The area of South Australia is 578,361,600 acres, and only 7,344,740 acres had become private property up to Jan. 1, 1901. Freeholds and leaseholds together amounted to 93,383,621 acres. There were 3,279,406 acres under crops in 1901, of which 1,913,247 acres produced 11,253,148 bushels of wheat. Orchards occupied 16,001 acres; vineyards, 20,158 acres. The quantity of wine made was 1,388,847 gallons, of which 476,646 gallons were exported. The live stock consisted in 1900 of 166,790 horses, 214,761 cattle, and 5,235,220 sheep, exclusive of the northern territory, where there were 12,562 horses, 257,667 cattle, and 48,027 sheep. The value of copper exported in 1900 was £371,920; of copper ore, £22,526. The total mineral product was valued at £431,289. The exports of wool were valued at £1,003,391; of wheat, £492,394; of wheat flour, £344,724. Of the total imports £4,174,369 in value came from Australasian colonies, £2,397,684 from Great Britain, £326,968 from other British countries, £406,461 from the United States, and £729,070 from other foreign countries. Of the total exports £3,917,143 went to Australasian colonies, £2,325,519 to Great Britain, £754,501 to other British countries, £1,953 to the United States, and £1,030,041 to other foreign countries.

Agriculture has made rapid progress in Western Australia, yet only 201,946 acres out of a total area of 624,500,000 acres were in cultivation in 1900. In 1901 there were 74,130 acres under wheat, 8,460 under barley and oats, and 104,104 acres in grass. The area alienated in 1900 was 48,957 acres, making altogether 6,619,284 acres in the hands of private owners. Grapes for wine and table were planted on 3,245 acres. The live stock in 1901 consisted of 68,231 horses, 338,665 cattle, and 2,431,861 sheep. There were 2,561 leases of gold-mines in 1900. The number of miners employed was 16,080. The gold output was 1,580,950 ounces, value £6,007,610. The production of copper was 249 tons and of concentrated copper ore, 846 tons, together valued at £33,937. From 103 tin-mines were obtained 670 tons of ore and 142 tons of ingots, total value £57,050. There are 71 coal-mines operated. The

value of gold exports, which reached £5,451,368 in 1899, was £3,799,124 in 1900. Other exports in 1900 were pearl shells of the value of £86,513; pearls, about £20,000; sandalwood, £39,038; timber, £458,461; wool, £270,718; skins, £54,109. Of the total imports £2,743,502 in value came from other Australasian colonies, £2,225,746 from Great Britain, £279,593 from other British possessions, £226,035 from the United States, and £487,302 from other countries; of the total exports £4,268,419 went to Great Britain, £1,125,338 to Australasian colonies, £1,214,756 to other British possessions, £175 to the United States, and £243,366 to other countries.

Of 16,778,000 acres, the area of Tasmania, 4,834,944 acres had up to Dec. 31, 1900, been sold or granted to agricultural settlers, leaving 11,943,056 acres still the property of the Crown, consisting mostly of forest and mineral lands. There were 19,422 persons engaged in agriculture and 1,881 in pastoral pursuits in 1901. The area leased as sheep-runs was 1,206,794 acres. The area under crops in 1901 was 224,352 acres; under grass, 306,180 acres. The yield of wheat, from 51,825 acres, was 110,421 bushels; of oats, from 45,073 acres, 1,406,913 bushels; of potatoes, from 23,068 acres, 93,862 tons; of hay, from 61,541 acres, 94,198 tons; of hops, from 624 acres, 696,679 pounds. One of the most important products is fruit, which was exported, fresh and preserved, to the amount of £279,988. The live stock in 1901 was 31,607 horses, 165,516 cattle, 1,638,956 sheep, and 68,291 pigs. There were 420 licenses on Jan. 1, 1901, for gold, 441 for tin, 29 for coal, 229 for silver, and 102 for copper mines.

The value of gold exported in 1900 was £207,162; of silver and silver ore, £252,080; of copper ore, £901,660; of tin, £270,998; of wool, £261,214; of timber and bark, £71,618; of hops, £19,870. The output of silver and copper ore was 446,436 tons, valued at £1,583,404. The duty levied on imports is on the average 22.44 per cent. The imports of textiles were £436,632 in value in 1900; of hardware, £131,128; of sugar, £114,499; of machinery, £112,044. Of the total value of imports £908,722 came from Victoria, £337,672 from New South Wales, £154,904 from other British possessions, £628,663 from Great Britain, and £43,696 from foreign countries; of the exports £688,600 went to Great Britain, £613,161 to New South Wales, £388,913 to Victoria, £109,088 to other British possessions, and £810,855 to foreign countries.

Irrigation.—The stock growers of Australia have been relegated in the older colonies to the semiarid regions, and part of these have been reclaimed for agriculture by irrigation. The colonial governments and private individuals have given attention to securing a water-supply by artificial means for animals, great numbers of which have perished in years of unusual drought. The water-supply has already been increased by artesian borings to such an extent that millions of sheep and cattle are thriving on lands where grazing was formerly impossible. In all Australia on Jan. 1, 1900, there were 1,639,127 horses, 9,678,422 cattle, and 72,624,735 sheep. By Jan. 1, 1901, the Government of New South Wales had completed the sinking of 82 wells, of which 56 flowed spontaneously, 18 required pumps, and 8 were failures. The daily supply of water from these wells is 32,700,000 gallons. It was necessary to drill 4,467 feet in the rainless district west of the mountains in northern New South Wales, at which depth the Dolgelly well gives 745,000 gallons a day. The Kennmare well, on the

arid northern plains, supplies 2,050,000 gallons from a depth of only 1,682 feet. The well at Pera, 1,262 feet deep, gives 300,000 gallons a day, and here and at Native Dog, Barrington, and Cunganion fine crops of lucerne, corn, tobacco, wheat, and sugar-cane have been grown experimentally by irrigation, as well as vegetables and pineapples and other fruits, proving that the soil of the waterless plains of Australia possesses every element of fertility except moisture and offers great prospects for agriculture through irrigation wells. On the desert route from Wanaaring to Milparinka 7 artesian wells now supply 2,300,000 gallons a day. Farther north borings have given satisfactory results. Besides the Government borings private individuals have sunk a great number of wells, yielding in the aggregate a supply of 45,000,000 gallons a day. In Victoria borings have not been generally so successful. Many proved dry, and in many wells that were struck the water was salty and worthless. Nevertheless, success has on the whole repaid the efforts in that state. A remarkable settlement at Mildura, on the river Murray, is peopled by 4,000 emigrants from the British Islands, who in thirteen years have invested over £1,000,000 in the cultivation of vineyards, orange groves, and fruit farms and are making large profits from raisins, currants, and other dried and fresh fruits. A railroad 100 miles in length will connect this community with the trunk line to Melbourne. Here irrigation is supplied not from wells, but from reservoirs in which the river water is stored. The Government of Victoria has proposed united action on the part of Victoria, New South Wales, and South Australia for conserving the waters of this river so as to afford adequate irrigation to the northern districts of Victoria and adjacent parts of the neighboring states.

On the plains of Queensland a great future for irrigation is promised. In the western districts water is easily obtained by boring. Up to June 30, 1900, the number of wells sunk was 839, of an average depth of 1,160 feet. The proportion of failures was large, especially in the Government borings, but in many of the wells the flow is exceedingly copious. At Winton, 430 miles from the coast, is a Government well of great depth. One not so deep at Charleville, 420 miles west of Brisbane, yields 3,000,000 gallons daily. The deepest bore, at Bemerah, is 5,045 feet, and 11 others exceed 4,000 feet. There are 151 wells the flow of which exceeds 750,000 gallons a day, and 60 of these give over 1,150,000 gallons. In South Australia the Government has made many attempts to reach water on the arid plains of the interior, but the hope of rendering the desert regions suitable for stock raising has been disappointed. Only 33 wells were found, most of them near the southern border of the desert. On the western frontier a well was sunk on the Nullarbor plains which yields a good supply, and in the remote north, at Kopperamana, a flow of 800,000 gallons a day was obtained at a depth of 3,280 feet. The Government of Western Australia has bored a series of wells on the route to the Coolgardie gold-field and toward the frontier of South Australia, and has extensive operations in progress for increasing the water-supply by this means. The yield of 16 wells is 4,806,000 gallons a day. The deepest bore is 2,000 feet at South Perth, yielding daily 1,120,000 gallons.

Drought has prevailed over the greater part of Australia for five years, more severely in the last three years, and most so in 1902, when it was partially broken in the autumn months.

Near the coast rains have fallen during all this period, but in the northwestern parts of New South Wales and the interior districts of other colonies there are great tracts rented to squatters who have not a single animal left of their flocks and herds. It is estimated that Australia has lost up to 1902 over 30,000,000 sheep from drought, and cattle and horses in proportion.

Navigation.—The number of vessels entered at the ports of New South Wales during 1900 was 3,626, of 4,094,088 tons, of which 3,248, of 3,487,968 tons, were British and 378, of 606,120 tons, were foreign. The total number cleared was 3,406, of 3,920,801 tons, of which 3,060, of 3,358,524 tons, were British and 346, of 562,277 tons, were foreign. The shipping registered in the state comprised 509 sailing vessels, of 57,982 tons, and 499 steamers, of 73,801 tons. During 1900 there were registered 31 new sailing vessels, of 4,289 tons, and 23 steamers, of 10,445 tons.

The number of vessels entered at Victorian ports in the course of 1900 was 2,101, of 2,929,389 tons, and there were cleared 2,134 vessels, of 2,944,192 tons. Of those entered 748, of 360,814 tons, were British, and 1,189, of 1,194,484 tons, colonial, and of the total number cleared 807, of 1,470,710 tons, were British and 1,159, of 1,093,892 tons, colonial.

The number of vessels entered at Queensland ports was 713, of 835,355 tons, of which 54, of 85,470 tons, were entered from British ports and 457, of 557,669 tons, from colonial ports; cleared, 716 vessels, of 819,662 tons, of which 45, of 116,993 tons, were cleared for British and 433, of 482,142 tons, for Australasian ports. The merchant shipping of Queensland consisted in 1900 of 155 sailing vessels, of 10,285 tons, and 93 steamers, of 10,798 tons.

At the ports of South Australia 1,010 vessels, of 1,780,383 tons, were entered and 1,003, of 1,772,253 tons, cleared during 1900. The shipping of this state comprised 216 sailing vessels, of 19,140 tons, and 107 steamers, of 26,945 tons.

There were 769 vessels, of 1,625,696 tons, entered and 747, of 1,606,332 tons, cleared, at Western Australian ports during 1900. The number of sailing vessels registered in Western Australia was 150, of 7,268 tons; of steamers, 29, of 5,249 tons.

At Tasmanian ports 741 vessels, of 618,963 tons, were entered and 743, of 613,955 tons, were cleared during 1900. The shipping registered in Tasmania consisted of 157 sailing vessels, of 8,983 tons, and 47 steamers, of 6,800 tons.

Railroads, Posts, and Telegraphs.—New South Wales on June 30, 1900, had 2,811 miles of Government railroads, built at a cost of £38,477,269. The gross earnings for the year were £3,163,572, and the operating expenses were £1,769,520, 55.93 per cent. of the gross earnings. There were 71 miles of Government tramways, which cost £1,769,520; gross earnings, £409,724; operating expenses, £341,127, being 83.26 per cent. of the gross earnings.

In Victoria the railroads, all of which belong to the Government, had a total length on July 1, 1900, of 3,218 miles, built at a cost of £39,496,247, which was raised by loans, except £2,803,740 provided out of revenue. The gross earnings in the fiscal year 1900 were £3,025,162, and the expenses were £1,902,540, being 62 per cent. of the receipts, leaving a profit of 2.86 per cent. on the capital expended and 3.06 on the borrowed capital, on which the mean rate of interest is 3.86 per cent. The total deficiency between interest and net earnings has from the beginning amounted to about £9,000,000. The num-

ber of passengers in 1900 was 49,332,899; tons of freight carried, 2,998,303.

On Jan. 1, 1901, the length of completed railroads in Queensland was 2,801 miles. The Government has expended in construction £19,526,370. The receipts in 1900 were £1,312,856, and operating expenses were £1,034,880. The total capital expenditure was £21,335,071.

South Australia had 1,883 miles of completed railroads on Jan. 1, 1900, of which 146 miles were in the northern territory. The net earnings average 3 per cent. on the capital. The projected transcontinental line from Adelaide to Port Darwin will have a length of 1,896 miles.

The railroads completed in Western Australia on July 1, 1901, had a total length of 1,978 miles, of which 623 miles belonged to companies.

The length of railroads completed in Tasmania up to Dec. 31, 1900, was 594 miles.

The New South Wales post-office in 1900 handled 78,129,384 letters, 1,473,410 postal cards, 51,500,920 newspapers, 13,846,737 packets, and 711,717 parcels, and issued 435,768 money-orders, for the aggregate amount of £1,541,535, and postal notes for £488,484.

The postal traffic of Queensland was 22,681,798 letters, 12,091,809 newspapers, 6,518,215 packets, and 284,154 parcels; revenue, £314,840.

The mails in South Australia carried 20,387,301 letters, 9,956,351 newspapers, and 1,386,624 parcels.

The number of letters forwarded through the post-office of Western Australia during 1900 was 13,162,358; newspapers, 6,992,278; packets, 3,449,779.

In Tasmania 10,590,454 letters, 6,636,880 newspapers, 317,411 postal cards, and 1,899,870 packets passed through the post-office in 1900; receipts, £84,539; expenses of postal and telegraph service, £99,864.

The length of telegraph-lines in New South Wales on Jan. 1, 1901, was 14,065 miles, with 41,494 miles of wire. The cost of construction was £1,132,626. The number of telegrams sent in 1900 was 3,219,907. Receipts were £518,401, and the net earnings were £174,895.

In Victoria there were 6,772 miles of telegraphs, with 15,533 miles of wire. The number of messages in 1900 was 1,906,506; net revenue, £110,353. There were 16,748 miles of telephone wires and 5,136 subscribers.

The length of telegraph-lines in Queensland on Dec. 31, 1900, was 10,221, with 19,308 miles of wire. The number of messages during 1900 was 1,231,155, not including 132,992 official messages and 194,136 foreign messages received; receipts were £104,441, and the postal and telegraph expenses were £370,175.

South Australia had 5,742 miles of telegraph and telephone lines on Jan. 1, 1901, with 17,543 miles of wire, including the line of 2,000 miles across the continent connecting Adelaide with the British Australian cable at Port Darwin. The Government derives a net profit from the telegraphs.

Western Australia had 6,052 miles of telegraph-line, with 8,872 miles of wire, on Jan. 1, 1901. The number of messages sent during 1900 was 1,167,197; net revenue, £75,014; expenses of posts and telegraphs, £248,877.

The telegraphs of Tasmania had a length of 2,090 miles, with 3,793 miles of wire, besides 438 miles of cable on Jan. 1, 1901. The number of despatches in 1900 was 255,793. There were 1,193 miles of telephone wire; receipts from telegraphs and telephones, £22,819.

The New Zealand section of the British Pacific

cable, the branching off at Norfolk island, was laid before the end of March, 1902, and a few days later the section from Norfolk island to Fiji was in place. From Fiji it was carried to Fanning island, near Hawaii, and there joined to the cable laid from West Coast inlet, British Columbia.

Defense.—The military forces of the 6 states forming the Commonwealth had a total strength on June 30, 1900, of 23,553 men, of whom 1,592 were paid, 14,291 partly paid, and 7,670 unpaid. New South Wales had in 1900 a regular force of 726 men, volunteer forces numbering 8,505, of whom 5,336 received some payment, and reservists and rifle clubs numbering 3,004 men. Victoria had a permanent force of 396 men, 3,404 militia, and 3,085 volunteers. In Queensland every able-bodied man is by law liable to military duty, and besides a regular force of 300 men there are about 2,500 militia who receive pay while undergoing drill, 1,200 volunteers to whom uniforms and arms are furnished, and 4,000 citizens organized in rifle clubs and provided with arms and ammunition by the state. South Australia has a defense force of 195 officers and 2,826 men, including reserves, besides which there are 1,017 members of rifle clubs and 353 armed police who may be called out for military service in an emergency. Western Australia has 5 battalions of rifles and 3 batteries of volunteer artillery, and 1 battery of permanent artillery stationed at Albany, the total force numbering 135 officers and 2,561 men. Tasmania has a volunteer defense force of 2,726 officers and men. Major-Gen. E. T. H. Hutton, commander of the military forces of the Commonwealth, reported to Sir John Forrest, Minister of Defense, that the total number of troops available was 29,571, consisting of 15,470 men in the garrison corps and a field force of 14,101 men with 60 guns. It was proposed to increase the latter to 28,748 men on the war footing, giving a total of 44,218, the field force to consist of 6 brigades of light horse and 3 brigades of infantry, with field-artillery and engineers in the latest approved proportion. The geographical position of Australia renders it less liable to attack than most parts of the British Empire, but Australian interests outside of Australia are peculiarly open to foreign interference.

It is impossible for an expedition from an enemy's base in Asia, Africa, or Europe to land in Australia unless the British navy has first been defeated. Nevertheless, it is important to guard against raids made for the purpose of extorting an indemnity, destroying commerce, or obtaining coal. Therefore the security of the naval bases must be insured, and arrangements are necessary to concentrate the available troops at any threatened point. Hence the early extension of the railroad into Western Australia is desirable. A military college for the training of officers, the development of rifle clubs, and the establishment of arsenals for the manufacture of arms and ammunition are recommended, and the sum of £500,000 is required to provide arms and complete the equipment of the field and garrison troops. The abolition of some of the militia and volunteer regiments and the absorption of their members into other corps, in conjunction with a heavy curtailment of the naval force, provided a way for a reduction in the military expenditure, as was promised to Parliament by the ministry. Proposals for military contributions toward the cost of imperial defense have not been well received in Australia. The suggestion that the states should contribute according to their population is regarded as a

species of taxation without representation. The financial limitations imposed by the Constitution preclude the Commonwealth from undertaking its full share of the defense of the Empire, but the Australians will equip themselves to defend their own shores.

The chief ports of Australia are fortified, and fortresses have been built at Thursday island and King George's Sound at the joint expense of the imperial and colonial governments. In the beginning of 1902 there were 12 vessels of the British royal navy stationed in Australasia, with headquarters at Sydney. Besides these there are the vessels built for Australasia under the Australasian naval force act of 1887, 5 cruisers of 2,575 tons and 2 torpedo gunboats of 735 tons, for which the Australasian colonies pay £35,000 a year as interest on the cost of construction and £91,000 for maintenance on condition that these vessels be not withdrawn in war time. But they have become obsolete, and other schemes are under discussion. The British Admiralty propose the abolition of the entire Australian fleet and the payment of an increased cash subsidy by Australia toward the cost of the imperial navy. In Australia opinion favors the formation of an Australian fleet that shall form part of the imperial navy and be under the commander-in-chief on the Australian station, a scheme recommended to the Commonwealth Parliament by Capt. Crosswell, naval commandant in Queensland.

The Commonwealth Parliament.—The Federal Parliament, as well as the parliaments of the principal states, was dominated to a great extent by the Labor party, which was represented by some of the ablest politicians and could control legislation, although it has not an actual majority.

The approval of Parliament was obtained for the principle of a fair day's wages for a fair day's work, a day of eight hours and a minimum wage, which was already fixed at 7s. a day in New South Wales, where the state Government undertook to give public employment to all laborers who could not obtain that rate from private employers. That Australia must be a white man's country was one of the prime demands upon the Commonwealth Parliament, because if Asiatics and other colored laborers are allowed to enter Australia in numbers they will soon demoralize the labor market. The Chinese were already effectually excluded by the enormous head-tax imposed by the state governments. Parliament was asked to exclude and expel Kanakas, Hindus, Japanese, and all others of alien race. The sugar growers of Queensland declared that their industry would perish if they were not allowed to employ Kanakas, who performed labor that white men could not be called upon to do, and who were kindly treated and able to save considerable sums out of their wages. The exclusion law against the Kanakas ordered the deportation of those already in Australia, disregarding the guarantees given to them and making no provision for getting them a living on their return to the islands from which they came. A law excluding Japanese was passed, although the conductors of the pearl-shell fisheries in Torres Straits threatened to remove their fleets to Dutch New Guinea and continue pearling with Japanese divers outside of the 3-mile limit. The Premier suspended the operation of the act, so far as it affects the pearl-shell fisheries, pending an inquiry. The earliest law against colored labor was one insisting that in carrying out contracts with the Government only white workers should be employed. This roused a protest from steam-

ship owners and a remonstrance from the Indian Government when applied to lascar sailors on mail-steamers. The emigration restriction act, which became law in the beginning of 1901, is so worded that it can be used to exclude any immigrants, white as well as colored, British-born as well as alien. No person shall be allowed to land in Australia who, when asked to do so by an officer—one specially appointed or any customs officer—fails to write out at dictation and sign a passage of 50 words in a European language dictated by the officer. The only exceptions are Australians returning from abroad, ambassadors, soldiers, and seamen in the British service, and crews of trading vessels during their stay in port. Any person found at large contrary to the provisions of the act may be fined £50 or imprisoned for six months. The act was enforced only against Hindus, Japanese, and other colored immigrants.

The principal subject of discussion in Parliament during the early months of 1902 was the tariff, which was intended by the Government to provide revenue in the first place, but to have a decided protectionist incidence. The free-traders in the House of Representatives were strong enough to abate the protective features, and the result was in most cases a compromise between the proposals of the Government and those of the Opposition. Thus the duty on Oregon timber used in mines was lowered from 1s. to 6d. per 1,000 feet, and that on boots and shoes was reduced one-half to 30 per cent. ad valorem. New Zealand timber was placed on the free list. An import duty of 14s. a gallon was placed on spirits alongside of excise duties of 11s. on domestic brandy and 12s. 6d. on domestic whisky and rum. Wines above 40 per cent. of alcoholic strength pay the same duty as imported spirits. Instead of 20 per cent. an import tax of 12½ per cent. was imposed on machinery. Imported cottons and linens were taxed only 5 per cent. of their value. Kerosene was made free, and the tea duties collected hitherto by the colonial governments were abolished, entailing heavy losses of revenue to some of the states. The protected manufacturers of Canada complained of the effects of Australian protection, and so did English manufacturers, but the Government made no attempt to discriminate in favor of parts of the empire, lest it should come into conflict with other nations. The Canadian provision was adopted for suspending duties in cases where they lead to the formation of trusts or combinations. After much discussion as to the policy and constitutionality of the measure it was decided that imports by the governments of the states should be dutiable. The Senate made amendments in over 100 duties, reducing the rates in all cases. The House of Representatives accepted half the amendments, the less important ones, and sent the bill back to the Senate, which abandoned some of its proposals, but repeated its request as to the others. This raised a constitutional question. The Federal Constitution empowers the Senate to ask the House of Representatives to make amendments in bills dealing with taxation. To press its requests after they had been considered was regarded by some as an assumption of coordinate powers with the House over money bills. The House of Representatives therefore, in agreeing to receive a second message from the Senate, made the reservation that it should be without prejudice as to its constitutional powers. In regard to the remaining items some minor concessions were made, and the tariff bill was finally passed by the Senate on Sept. 9.

An electoral bill was passed providing for woman suffrage. Proportional representation was rejected by the Senate. All colored aliens were disqualified.

The bill to establish a Federal High Court, consisting of the Chief Justice and four other judges, was not passed. The Senators examined various sites for the future Federal capital, but deferred the final selection in view of the immense cost of land and buildings involved. It was decided that in the mean time Parliament should sit alternately in Sydney and Melbourne. Lord Hopetoun requested an additional allowance to provide for the extra cost of keeping up residences in both capitals. Parliament voted £10,000 to recoup him for his expenses in entertaining the Duke of York, but rejected the Government bill to grant a supplementary allowance of £8,000 a year in addition to the annual salary of £10,000 pending the selection of a permanent capital. The postponement of this selection was considered a breach of the Constitution by the ministers, who intended to make the question the first business of the next session. Inasmuch as the salary of the Governor-General is fixed in the Constitution and can not be increased during the continuance in office of a Governor-General, such an allowance appeared to be unconstitutional. Besides, it is the present policy of the Australian governments to reduce expenses. The salaries of the state governors have been cut down, and the members of the state parliaments are to be reduced in number, especially in the legislative councils. Lord Hopetoun, who as Governor-General and when he was Governor of Victoria has spent more than his salary, sent in his resignation to the Colonial Secretary when Parliament declined to increase his pay, and it was accepted. Before he entered upon the Governor-Generalship the agent-general for New South Wales led him to expect that an extra allowance would be voted to enable him to reside in Sydney when Parliament was not sitting. Statesmen of some of the other colonies were in favor of such a dual residence, and the New South Wales Parliament passed a resolution that he should have an allowance of £10,000 in addition to his salary for the purpose. Hence Lord Hopetoun considered the action of the Commonwealth Parliament a breach of promises that had been held out and derogatory to the dignity of his office as representative of the sovereign. Before selecting his successor Mr. Chamberlain asked to have a provision made for the maintenance of Government houses in both Sydney and Melbourne, and Parliament agreed to allow the next Governor-General £5,500 per annum. Meanwhile Lord Tennyson was appointed acting Governor-General, and sworn in on July 17. After returning to England Lord Hopetoun was advanced in the peerage by having conferred upon him the title of Marquis of Linlithgow.

Subjects of legislation to be considered at the next session are a decimal coinage system based on the sovereign, a bill dealing with industrial disputes, and a banking law which would render unlikely a financial crisis such as that of 1893. Old-age pensions can not be dealt with by the Commonwealth Parliament at present. State property connected with the transferred services will be valued and the Commonwealth will become responsible to the individual states for a portion of the state indebtedness equivalent to the transferred property and interest at the rate of 3½ per cent. For public works the Federal as well as the state legislators made appropri-

tions exceeding the Government estimates, though some of the state premiers considered it the duty of the Government to provide employment in unfavorable times. A conference of state Premiers was held at Sydney in the middle of May. Mr. Barton went to England to take part in the conference of colonial ministers that was to be held in connection with the coronation. During his absence the Attorney-General acted as Premier of the Commonwealth. The Commonwealth Government prepared to take over the administration of British New Guinea. It is proposed that the northern territory of South Australia be transferred to the Federal Government, which shall complete the railroad from Adelaide to Port Darwin, selling land to pay the cost.

New South Wales.—The Legislative Council had 69 members in 1901, who are appointed for life. There are 125 members in the Legislative Assembly, who are elected in as many districts by the votes of all male British subjects of full age who have resided one year in the state and three months in the district. The Governor at the beginning of 1902 was Vice-Admiral Sir Harry Holdsworth Rawson, appointed Jan. 29, 1901. The Cabinet of Ministers at the beginning of 1902 was composed as follows: Premier, Colonial Secretary, and Minister of Railways, John See; Colonial Treasurer, Thomas Waddell; Attorney-General and Minister of Justice, Bernhard Ringrose Wise; Secretary for Lands, William Patrick Crick; Secretary for Public Works, Edward William Sullivan; Minister of Public Instruction and of Industry and Labor, John Perry; Secretary for Mines and Agriculture, John Kidd; Vice-President of the Executive Council, Francis Bathurst Sutton; without portfolios, James Hayes and Walter Bennett.

The net revenue of the Government for the year ending June 30, 1900, was £9,970,677, of which taxation produced £2,618,066, land revenue £2,116,076, Government services £4,992,521, and miscellaneous sources £244,014. Of the revenue from taxation the import and excise duties made £1,736,374, and the stamp-duties, land and income taxes, and licenses, £881,692. The net expenditures were £9,888,977, of which £2,102,794 were for railways and tramways, £722,110 for posts and telegraphs, £2,310,271 for interest on the public debt, £27 for immigration, £769,576 for instruction, and £3,984,199 for other public works and services. The public debt, four-fifths of which was incurred to build railroads, tramways, telegraphs, sewerage, water-works, and irrigation works, amounted on June 30, 1900, to £65,332,993, paying the average interest of 3.63 per cent., 2.93 per cent. being returned in the profits of the public works, which yielded 3.45 per cent. of their capital cost. Further loans amounting to £19,630,135 were authorized.

The State Assembly met on May 28. Social legislation had the first place in the ministerial program. A women's franchise bill was passed, and a bill for municipal reform. The question of reducing the Assembly to 94 members is to be submitted to a referendum. Parliament has instituted a compulsory arbitration court. The first sittings of the court were to be devoted to the establishment of a minimum rate of wages, the limitation of the hours of labor, and the regulation of child labor. The whole industrial system of the state has been brought under the act. Trade-unions, originally unlawful associations, inasmuch as they acted in restraint of trade, were legalized in New South Wales by the

act of 1881, which enables any 7 persons or more to form a trade-union and be registered as such, and confers on trade-unions the right to hold property and to sue, with liability to be sued. The industrial arbitration act of 1901 provides that any trade-union or association of trade-unions or any branch of a union shall be entitled to register as an industrial union of employees; and conversely that any person, association, or company employing on an average 50 employees per month is entitled to register as an industrial union of employers. Each industrial union on registration becomes a body corporate and has a common seal and perpetual succession. As soon as the act went into effect the trade-unions already in existence applied for registration with enthusiasm. The employers reluctantly and with hesitation also formed industrial unions—the pastoralists, the mine owners, merchants, manufacturers, and masters of the various trades. The provisions of the act placing the control of every business in the hands of a court made it a matter of necessity for employers to take steps to be represented in the court, which consists of a judge of the Supreme Court nominated by the Governor as president and 2 members appointed by the Governor from lists submitted respectively by a body of delegates from the trade-unions and a body of delegates from the industrial unions of employers. Organizing into unions is a voluntary act, yet if either employers or employed fail to nominate delegates the Governor may appoint on the tribunal such persons as he may see fit. When technical questions come before the court, the court may appoint 2 assessors representing employers and employed respectively. The court has power to hear and determine any industrial dispute or industrial matter or any application under the act brought before it by an industrial union. A person not a member of a union can come into court for the remedy of a grievance sustained through a decision of the tribunal, but an industrial dispute where one of the parties is not a member of an industrial union can only be referred to the court in the discretion of the registrar. Any person entitled to refer a dispute or to apply for an order of the court goes to the registrar, who summons all parties to attend. The court has full power to compel the attendance of witnesses, the production of books and papers, etc. The suspension of work by a strike or a lockout without reference of the dispute to the court entails a fine of £1,000 or two months' imprisonment. The dismissal of an employee for belonging to a union or because he is entitled to the benefit of an award subjects an employer to a penalty of £20. The court has power to prescribe a minimum rate of wages in any particular trade; to direct that unionists shall be employed in preference to non-unionists; to appoint a tribunal to determine whether an employer may employ non-unionists; to declare any regulation, custom, term of agreement, condition of employment, or dealing whatsoever in relation to an industrial matter to be a common rule of the industry affected and to direct in what way and to what extent such common rule shall be binding upon all persons engaged in that industry, whether they are before the court or not. Any union disobeying an order of the court is liable to a penalty of £500 and any individual to one of £5, and the court may specify the persons to whom such penalty shall be paid, and if the property of a union is insufficient to satisfy the award the individual members are liable up to £10. The power of the court includes all or any matters

relating to the wages, allowances, or remuneration of any persons employed or to be employed in any industry; to the hours of employment, sex, age, qualifications, or status of employees and the mode, terms, and conditions of employment; to the employment of children or young persons or of any person or persons or any class of persons in any industry or the dismissal of or refusal to employ any particular person or persons or class of persons; to any established custom or usage of any industry, either general or in any particular locality; to the interpretation of any industrial agreement. The court may regulate its own procedure in every respect. It may admit and call for such evidence as it thinks to be the best available, whether strictly legal evidence or not. Costs may be assessed on either party, though each party must pay the attorneys and agents whom it employs. The court may dismiss a proceeding where it thinks that the matter should and can be amicably settled. It may bring before it as parties any persons it thinks proper. It may sit in any locality and may call in the aid of expert assessors and compel the presence and testimony of any witnesses it sees fit to call. The president of the court has extensive powers of settling all preliminary matters in order that a dispute may be disposed of the more speedily.

Victoria.—The 48 members of the Victorian Legislative Council are elected for six years by freeholders, occupants of property rated at £25 a year, and members of the learned professions. The Legislative Assembly has 95 members elected for three years by universal male suffrage. The number of electors for the Council in 1901 was 130,672; for the Legislative Assembly, 276,314. The Governor is Sir George Sydenham Clarke. The ministry constituted in September, 1901, was composed as follows: Premier, Treasurer, and Minister of Labor, A. J. Peacock; Chief Secretary and Minister of Railways, W. A. Trenwith; Attorney-General, Sir Samuel Gillott; Minister of Agriculture, J. Morrissey; Minister of Public Instruction, W. Gurr; Minister of Lands, D. J. Duggan; Minister of Public Works and Health, W. M. McCulloch; Solicitor-General, A. Wynne; Minister of Mines and Water-Supply, J. B. Burton; without portfolios, R. McGregor and E. J. Crooke.

The public revenue in the year ending June 30, 1900, amounted to £7,460,855, of which £2,984,592 came from taxation, £3,008,521 from railroads, £586,061 from posts and telegraphs, £388,255 from Crown lands, and £493,426 from other sources. Of the tax revenue £1,972,216 were derived from customs, £329,377 from excise, £108,222 from the land tax, £126,478 from duties on estates of deceased persons, £18,660 from a duty on bank-notes, £170,600 from the stamp-duty, £43,968 from tonnage dues, and £215,071 from the income tax. The Government expenditure was £7,293,136, of which £1,852,088 was for the public debt, £1,801,954 for railroads, £259,869 for other public works, £521,918 for posts and telegraphs, £655,579 for public instruction, £320,118 for pensions, £299,610 for charitable institutions, £312,759 for police and prisons, £201,611 for defense, £95,032 for customs and harbors, £68,879 for Crown lands, £198,850 for mining and agriculture, £171,838 for law courts, £231,189 for general Government expenses, and £301,842 for other purposes.

The funded debt on June 30, 1900, amounted to £48,380,859, of which £36,740,813 were borrowed to build railroads, £8,342,895 for waterworks, £778,775 for state school-buildings, and

£2,518,376 for various public works. The average interest on the debt is 3.83 per cent. The local debts in Victoria amount to £10,659,300. The local revenues amount to £1,573,626, and expenditures to £1,602,377.

The ministers offered their resignations collectively in November, 1901. No immediate action was undertaken, and when the letter was at last presented they proposed to withdraw their resignations on the ground that circumstances had altered. They were therefore retained in office. A popular agitation impelled the ministry to go further than was intended in framing a measure for reducing expenditure on Parliament. The Labor party alone in Victoria, as in New South Wales, opposed the reduction of the number of representatives or the curtailment of their salaries, on the ground that it would weaken the representation of the working classes. The Government brought in a bill reducing the number of members in the Assembly and the Council, and limiting the ministers to 6. The qualification of voters for the Legislative Council was altered to simple registration as a ratepayer. Adult suffrage for both sexes was proposed, and provision was made for a dissolution of both houses after a joint session has failed to settle a deadlock. To meet a deficit of £229,000 in the year's accounts a loan of £250,000 at 3 per cent. was raised locally at the issue price of 94. After the assemblage of the state Parliament on May 27 the ministers handed in their resignations. Mr. Irvine, who led the victorious Opposition, formed a new Cabinet on June 8 as follows: Premier and Attorney-General, Mr. Irvine; Treasurer, Mr. Shiels; Solicitor-General, Mr. Davies; Minister of Railroads, Mr. Bent; Minister of Education and Health, Mr. Reid; Minister of Public Works and Agriculture, Mr. Taverner; President of the Board of Lands, Mr. McKenzie; Minister of Mines, Mr. Cameron; Chief Secretary and Minister of Labor, Mr. Murray; without portfolios, Messrs. McLeod, Kirton, Pitt, and Sachse. The new Cabinet proposed to reduce the number of members in the Assembly from 95 to 56 and in the Council from 48 to 28 and the number of ministers to 7. Provision was made for the settlement of deadlocks similar to that in the Federal Constitution. These proposals were satisfactory to Parliament, but when, in view of a probable deficit of £650,000, the ministers proposed a reduction of salaries in the public service they encountered a fierce opposition. The railroad men threatened to strike if Parliament approved the retrenchment scheme. On Sept. 9 the Cabinet was defeated in the Assembly by 44 votes to 33 on the proposal to reduce salaries. The ministers appealed to the country. The dissolution caused the factories act and the decisions of wages boards fixing the wages in many trades to lapse, thereby incensing the trade-unionists. The Government wished to prolong the operation of the temporary act for another year, but the Legislative Council insisted on discussing the whole subject. A commission was appointed to consider legislation of a permanent character. Meanwhile wages boards were empowered to fix minimum wages in the various trades. Employers who paid less were liable to a penalty. Nevertheless, they often evaded the act by various subterfuges.

Queensland.—The Legislative Council has 42 members, nominated for life. The Legislative Assembly consists of 72 members elected by the ballots of all males of full age who have at least resided six months in Queensland. Property owners and lessees of pastoral lands can vote

in every district in which they have lands. There were 97,739 electors on the registers in 1901. The Governor is Major-Gen. Sir Herbert Charles Chermiside, appointed in 1902. The Cabinet at the beginning of 1902 consisted of the following members: Prime Minister, Secretary for Mines, Chief Secretary, and Vice-President of the Executive Council, Robert Philp; Attorney-General, A. Rutledge; Secretary for Agriculture, D. H. Dalrymple; Home Secretary, J. F. C. Foxton; Secretary for Public Instruction, John Murray; Secretary for Public Lands, W. B. O'Connell; Secretary for Railways and Secretary for Public Works, John Leahy; Treasurer, Robert Cribb; without portfolio, George Wilkie Gray.

The revenue of the Government during the year ending June 30, 1901, was £4,327,345; expenditures, £4,855,533. Of the revenue £1,363,844 were derived from customs duties on imports, £201,160 from stamp-duties, £141,108 from excise and export duties, £66,814 from a duty on dividends, £52,525 from licenses, £321,927 from rent of pastoral lands, £263,303 from other rents and sales of land, £1,246,764 from railroads, £310,355 from posts and telegraphs. Of the expenditures £1,415,180 were for interest on the public debt, £310,511 for public instruction, £1,056,132 for operating railroads, £376,191 for post and telegraphs, £116,312 for public land administration, £53,141 for the Department of Agriculture, £194,894 for the Colonial Treasurer's Department, £88,792 for endowments to municipalities and divisions. The expenditure from loans during the year was £1,212,020, for railroads, rivers and harbors, telegraphs, water-supply, defense, etc. The revenue for 1902 was estimated at £3,908,500, exclusive of £325,734 retained by the Commonwealth, and expenditure at £3,887,899. The public debt on Jan. 1, 1901, amounted to £35,898,414.

The Queensland Government announced the intention of reducing the number of ministers and of members of the Legislature. An act enabling the Government to repurchase estates suitable for dairying for the purpose of cutting them up into small holdings for close settlement supplements a previous measure dealing with agricultural lands. Another act enables the state to grant special homestead areas adjoining each other to groups of settlers. According to another bill, pastoral holdings are to be reclassified in connection with an extension of the leases. Provision is made in Queensland, as in other states, for advances to be made to farmers, the loans to be expended only on improvements under official supervision. When the Kanaka exclusion bill was passed by the Commonwealth Parliament Premier Philp, in the interest of the sugar-planters, made an appeal that it should be reserved for the approval of the Imperial Government, but the Governor-General, on the advice of the Commonwealth ministry, signed it nevertheless. The planters of Queensland in their effort to defeat the purpose of the Labor party to exclude alien races so angered their opponents that they nearly lost the protective duty on sugar that was given in compensation for the cessation of Kanaka labor. The Commonwealth Parliament decided that no white laborers can be employed in the tropical lands if colored laborers are employed on the same plantations. The general election in Queensland took place in March. The Government party elected 38 members and the Opposition 30, of whom 24 are representatives of the Labor party. The sugar-planters are determined not to employ white labor so long as they can retain their blacks.

In five years the federal law requires Queensland to deport all Polynesians to the places from which they originally came. The state Government decided that when conditions on shore render it unsafe for islanders to land at their old homes they shall be brought back to Queensland, although from the beginning of 1902 the Federal Government ceased to issue licenses authorizing the employment of additional Kanakas. Farmers who employ white labor in growing sugar are entitled to a bonus of £2 a ton from the Federal Government. The planters have received the protective duty of £3 a ton, the promise of which made them eager to enter the federation, yet they are willing to see the union dissolved if they can not obtain the repeal of the exclusion act, which the Labor party of southern Queensland was most influential in carrying through with the support of labor politicians of other colonies, but against the wishes of the Queensland Government. The state Government is involved in the financial success of the sugar industry, having advanced £500,000 under the sugar-works guarantee act of 1893 to farmers for the erection of mills, most of which are in arrears and have been kept going by further subsidies. Other undertakings for which the great debt of Queensland was incurred have proved unremunerative, so much so that £1,000,000 of the £1,500,000 interest due on such debts had to be made good in 1901 out of the general revenue. With the protective duty and the bounty the prospect of raising sugar-cane with white labor is promising, but the high prices at which unoccupied land suitable for sugar is held by the owners deters small farmers from entering the field. The smaller industry of pearl-shell fishing can probably be carried on by white fishermen, as it was once. Neither the officials nor the people consider it a benefit to Queensland now, because the capitalists engaged in it are absentees and the Japanese divers take their wages back with them to their own country.

South Australia.—The Legislative Council consists of 24 members, one-third of whom are replaced every three years by the votes of freeholders, leaseholders, and householders occupying premises rated at £25 a year. The House of Assembly contains 54 members, which number will be reduced to 41. They are elected by universal suffrage. The franchise was extended to women in 1894. The number of registered voters in 1900 was 153,268. The Governor is Lord Tennyson, appointed in 1899. The ministry in office at the opening of 1902 was composed as follows: Premier and Chief Secretary, J. G. Jenkins; Attorney-General, J. H. Gordon; Treasurer, R. Butler; Commissioner of Crown Lands, L. O'Loughlin; Commissioner of Public Works, R. W. Foster; Minister of Education and Industry, T. H. Brooker.

The state revenue for the year ending June 30, 1901, was £2,824,212, and the expenditure £2,846,577. For 1902 the revenue was estimated at £2,585,758, of which customs produce £612,000; estimated expenditure, £2,562,701. Besides customs, railroad receipts, internal revenue, posts and telegraphs, and lands furnish the main part of the public receipts, and the chief items of expenditure are interest on the debt and the operating expenses of railroads and other services, only 10 per cent. being devoted to administration, courts, police, and defense. The public debt on June 30, 1901, amounted to £26,131,780, more than half of which was borrowed to build railroads, telegraphs, and water-works. The railroads yield a net profit of 3½ per cent.

Under the new Constitution of South Australia the members of the Legislature were reduced nearly one-third. The general election, which occurred in May, showed no change in the relative strength of parties except a slight loss in the Labor party. The Cabinet, reduced to 4 members by the change in the Constitution, was reconstituted at the end of March as follows: Premier and Chief Secretary, J. G. Jenkins; Attorney-General and Minister of Education, J. H. Gordon; Treasurer and Minister of Lands and Agriculture, R. Butler; Commissioner of Public Works, R. W. Foster. The revenue of South Australia was affected more severely than that of the other colonies by the causes that operated unfavorably in all, the drought and the fall in the prices of metals. The wheat yield was small and railroad receipts declined. The budget showed a deficit of £239,000, which had to be met by the issue of treasury bills. In order to balance the budget for the coming year the Government proposed additional taxation of incomes and new stamp-duties in conjunction with economies in railroad administration and the public service.

Western Australia.—The Legislative Council has 30 members, elected for six years by freeholders possessing property of the value of £100, householders occupying premises worth £25 a year, ratepayers assessed for £25 a year, or holders of leased land or licenses on which they pay the Government £10 a year. The Legislative Assembly contains 50 members, elected by persons of either sex who are twenty-one years of age and residents or owners of property or leaseholders in the district. The Governor is Sir Arthur Lawley. The ministry in office at the beginning of 1902 was composed as follows: Premier and Attorney-General, G. Leake; Colonial Treasurer and Colonial Secretary, F. Illingworth; Minister for Works, Cornthwaite H. Rason; Minister for Lands, Adam Jameson; Commissioner of Railways, W. Kingsmill; Minister of Mines, H. Gregory.

The revenue for 1900 was £3,010,005, and the expenditure £2,898,654. Of the revenue customs produced £987,185. The remainder comes mainly from railroads, the post-office, mining licenses, and leases of public lands. The debt on June 30, 1901, amounted to £12,709,430, requiring the payment of £486,800 for interest and £429,227 for the sinking-fund. The general election took place in January after the assumption of the premiership by Mr. Leake, whose electoral promises included the reduction of the number of members in both houses of the Legislature, electoral reform, a board of management for the gold-fields, a water scheme, the establishment of a harbor trust, a factories act, and new railroad construction. After the death of Mr. Leake a new ministry was formed on June 30 as follows: Premier and Attorney-General, Mr. James; Commissioner of Railways, Mr. Kingsmill; Minister of Mines, Mr. Gregory; Commissioner of Crown Lands, Mr. Jameson; Director of Public Works, Mr. Rason; Colonial Secretary and Treasurer, Mr. Gardener. Western Australia was exempt from the drought which affected the other states. The gold product for 1902 increased notably. The state revenue in 1902 was £3,688,048. Immigration increases, and agriculture, as well as mining, advances steadily. The water-works to supply Coolgardie were completed before the end of 1902.

Tasmania.—The Legislative Council numbers 19 members, elected for six years by possessors of freehold or leasehold property worth £10 or £30

a year respectively and by professional practitioners and holders of academic diplomas. The House of Assembly consists of 38 members, elected for three years by British subjects resident in the state for twelve months. There were 9,430 electors for the Council in 1901 and 41,286 electors for the House of Assembly. The Governor is Sir A. E. Havelock. The Cabinet consisted in the beginning of 1902 of the following members: Premier and Attorney-General, Sir N. E. Lewis; Chief Secretary, G. T. Collins; Treasurer, B. S. Bird; Minister of Lands and Works, E. Mulcahy.

The revenue for 1900 was £1,054,980, and expenditure £923,731. Of the revenue £466,218 came from customs. The revenue for 1901, including the sum retained by the Federal Government, was estimated at £865,071, and expenditure at £855,000. The public debt on Jan. 1, 1901, amounted to £8,511,005, of which £3,527,632 pays 3½ per cent. and the rest 4 per cent., the whole having been raised to construct railroads and other public works.

The transfer of the customs to the Commonwealth reduced the revenue of Tasmania, while it cheapened many commodities for the people. New taxes on incomes and inheritances, a graduated land tax on estates worth over £10,000, and additional stamp-duties were not sufficient to equalize revenue and expenditure, in spite of drastic economies. The Government proposed not only to reduce the number of members in the Legislature, but to amalgamate the two chambers, 10 members to be elected on the Council franchise and 20 on the Assembly franchise.

British New Guinea.—The governments of Queensland, Victoria, and New South Wales, which jointly guarantee the cost of administering British New Guinea within the limit of £15,000 a year, have had a voice in the affairs of this territory, which was proclaimed a British protectorate in 1887 at the solicitation of the Queensland Government. It embraces the south-eastern end of the island of New Guinea, and has an area of 90,540 square miles, containing a native population of about 350,000. The Europeans number 1,000, including gold-diggers, pearl-shell collectors, storekeepers, officials, and missionaries. The Commonwealth Government has proposed to provide £20,000 per annum for the next five years toward the expense of administering the territory, and on this condition the Imperial Government is prepared to resign the control of the administration. The present head of the local administration, who has the title of Lieutenant-Governor, is George Ruthven Le Hunte. Congregationalist, Roman Catholic, Wesleyan, and Anglican missionaries in different sections have done something to instruct and elevate the natives. Coconut groves have been preserved and extended, and trade with Europeans is increasing. Still savagery and cannibalism render the island unsafe for whites. Tobacco and coffee have been planted by Europeans. It is unlawful to acquire land from natives or to supply them with liquor or firearms, but land can be purchased from the Crown for 2s. 6d. an acre. The revenue in 1900 was £13,831, and expenditure £19,315. Alluvial gold is mined with machinery. There are about 200 diggers in the fields. Articles of food, clothing, tobacco, and hardware are imported from Queensland and New South Wales. Trepan, copra, gold, pearls, pearl shells, and sandalwood are exported. The value of imports for the fiscal year 1900 was £72,286, and of exports £56,167. Pearl and trepan collecting are the principal

source of profit to white adventurers on the New Guinea coasts, and for these occupations native laborers are recruited. These laborers have in many cases been starved, defrauded, and ill treated, causing them to run away, entailing upon them severe punishment, which has resulted in fights from which the whites have suffered. At some parts of the coast the natives are still addicted to savage raids and cannibal feasts, to which two white gold-diggers fell victims in February, 1901, and the missionary James Chalmers and his party in the April following. Late in the same year 20 persons were murdered and devoured on the Waria river. The Government staff is too small to afford protection over an immense territory or to mete out punishment. The Church of England mission, with a European staff of 26, has immediate control over 15,000 natives, and 1,000 children attend 14 schools. Under the teaching of missionaries the natives become ashamed of cannibalism, and though there are lapses among converts, the influence of civilization spreads rapidly among the people, who have considerable natural intelligence. While cannibal raids are still as frequent as ever in Dutch New Guinea and on the border, in British territory they grow less every year. The different missionary societies have apportioned the territory among themselves. The Anglicans on the northeast coast have the region that was the latest to be opened up, but which on account of the gold discoveries has become the center of interest to the whites.

AUSTRIA-HUNGARY, a dual monarchy in central Europe, composed, under the fundamental law of Dec. 21, 1867, of the Empire of Austria and the Kingdom of Hungary, inseparable constitutional monarchies, hereditary in the male line of the dynasty of Hapsburg-Lorraine and in the female line in the event of the extinction of the male line. The legislative power in affairs common to both monarchies, namely, foreign relations, military and naval affairs, with the exception of the national territorial armies, common finance, commercial and railroad affairs concerning both monarchies, the customs tariff, the coinage, and the administration of the occupied Turkish provinces, is exercised by committees of the legislative bodies of both monarchies, called the Delegations, which meet alternately in Vienna and Budapest, the Austrian and Hungarian capitals. The Delegations are composed of 20 members from each of the upper houses and 40 members from each of the popular chambers, elected by the respective bodies for each annual session. Each Delegation meets and votes separately, and in case of a disagreement the two Delegations come together and decide the matter by a joint vote. The common ministers are responsible to the Delegations and may be impeached for unconstitutional or illegal acts. The Emperor of Austria and King of Hungary is Franz Josef I, born Aug. 18, 1830, proclaimed Emperor of Austria on Dec. 2, 1848, when his uncle, Ferdinand I, abdicated in consequence of a revolution; crowned King of Hungary on June 8, 1867, when the ancient constitutional rights of the kingdom were restored. The heir presumptive is the Emperor-King's nephew, the Archduke Franz Ferdinand, born April 21, 1865, son of the late Archduke Karl Ludwig and the Princess Annunciata, daughter of the former King of Naples. The ministers of the whole monarchy at the beginning of 1902 were as follow: Minister of Foreign Affairs and of the Imperial House, Graf Agenor Maria Adam Goluchowski; Common Minister of War, Gen. Edmund, Freiherr von

Krieghammer; Common Minister of Finance, Benjamin de Kallay.

The Common Budget.—The expenditure for common affairs in 1899 was 328,756,000 crowns (1 crown = $\frac{1}{2}$ florin = 20.3 cents). The revenue from customs was 116,988,000 crowns; contribution of Austria, 145,272,000 crowns; contribution of Hungary, 66,496,000 crowns. The preliminary accounts for 1900 make the total expenditure 337,348,000 crowns, of which 124,950,000 crowns were obtained from customs; of the remainder Austria paid 139,333,000 crowns and Hungary 73,065,000 crowns. The approved estimates for 1901 make the total expenditure 337,000,000 crowns, customs yielding 125,039,000 crowns of this sum, leaving Austria to provide 156,979,000 crowns and Hungary 82,319,000 crowns. For 1902 the sanctioned estimates of expenditure amount to 365,181,966 crowns, 321,704,948 crowns for ordinary and 43,477,018 crowns for extraordinary purposes, appropriated as follows: 10,551,062 crowns for ordinary and 203,995 crowns for extraordinary expenses of the Ministry of Foreign Affairs, making a total of 10,754,357 crowns; 275,858,619 crowns for ordinary and 20,019,103 crowns for extraordinary expenses of the army, making 295,877,722 crowns; 30,803,200 crowns for ordinary and 15,887,620 crowns for extraordinary expenses of the navy, making 46,690,820 crowns; 4,174,307 crowns for expenses of the Ministry of Finance; 317,760 crowns for the Board of Control; 7,367,000 crowns of extraordinary expenditure for the military occupation of Bosnia. The customs revenue for 1902 was estimated at 110,541,299 crowns; receipts from the Government departments, 6,191,677 crowns; matricular contributions of the two halves of the monarchy, 254,640,667 crowns. The Ausgleich negotiated in 1887, fixing for ten years the proportional contributions of the two monarchies to the common expenditure and adjusting the customs and the financial relations in general, was continued provisionally after its expiration, no agreement having been reached as to a new arrangement. A joint commission in November, 1899, arrived at a compromise according to which Hungary should pay 34.4 per cent. and Austria 65.6 per cent. of common expenditure in excess of receipts from customs. The Austrian Reichsrath and the Hungarian Parliament failing to ratify this agreement, it was left to the decision of the Emperor-King to frame a *modus vivendi*. He decided on Dec. 30, 1899, that until July 1, 1901, the scheme of the joint commission should have application.

The general debt, consisting of debts incurred by the Empire before 1868, amounted on July 1, 1901, with the floating debt of 95,796,985 crowns, to 5,434,428,306 crowns. The share of Austria in the annual charges was 166,382,255 crowns for interest and 22,646,305 crowns for amortization; Hungary's share was 60,298,646 crowns for interest and 279,016 crowns for amortization. Since the creation of the dual monarchy no loans have been issued in common. There were 224,000,000 crowns of state notes in circulation on Jan. 1, 1901, which are guaranteed jointly. Provision is made for their retirement before Sept. 1, 1903. The Austro-Hungarian Bank had 1,494,023,320 crowns of bank-notes in circulation, which must be protected by a reserve of 40 per cent. in silver or gold. The state notes will be replaced by 5-crown silver pieces to the amount of 64,000,000 crowns and by 10-crown bank-notes, which as well as the silver pieces will be fully protected by gold. The gold basis was adopted for Aus-

tria-Hungary in 1892. A stock of gold was accumulated by the Austrian and Hungarian governments, and the amount of gold coined has been considerable. In 1900 only 6,672,000 crowns of gold coins were struck at the Austrian mint, which turned out 46,368,000 crown pieces in silver. The Hungarian mint in the same year coined 10,970,000 crowns in gold and 19,200,000 crowns in silver.

The Army.—The common army consists of 15 army corps, composed, with some exceptions, each one of 2 divisions of 2 brigades of infantry, 1 brigade of cavalry, 1 brigade of artillery, and 1 section of train. There are 62 brigades of infantry and 8 brigades of rifles; 5 cavalry divisions, with 18 brigades of cavalry; and 14 brigades of artillery, and 14 mountain-batteries. The 102 regiments of infantry are drawn from as many recruiting districts, in addition to which the Tyrol and Vorarlberg furnish 4 regiments of Tyrolian jägers, 3 districts of the Adriatic littoral furnish marine troops, and 4 districts of Bosnia and Herzegovina furnish regiments which are incorporated in the Austro-Hungarian army. The infantry have the Mannlicher rifle of the model of 1895, of 8-millimeter caliber, with a magazine holding 5 cartridges. The cavalry, consisting of 15 regiments of dragoons, 16 regiments of hussars, and 11 regiments of uhlands, are armed with sabers and repeating carbines. The field-artillery, consisting of 14 regiments of corps and 42 regiments of divisional artillery, have guns of tempered bronze, those of the field-batteries having a caliber of 9 centimeters, the mountain guns a caliber of 7 centimeters. The peace effective for 1901 of the common army was 3,597 superior and staff officers, with 2,736 men; 1,697 officers and 7,153 men attached to the military establishments; 9,428 officers and 161,602 men in the infantry of the line; 1,019 officers and 16,536 men in the Tyrolian jägers and rifle battalions, 1,890 officers and 45,906 men in the cavalry; 1,647 officers and 25,586 men in the field-artillery; 422 officers and 7,786 men in the fortress-artillery, organized in 6 regiments and 3 separate battalions; 495 officers and 8,445 men in the pioneers, of which there are 15 battalions; 89 officers and 1,490 men forming 1 regiment of 12 companies of railroad and telegraph troops; 79 officers and 2,964 men in the hospital corps; 417 officers and 3,309 men in the train; 584 officers and 9,935 men attached to the depots; 2,415 officers and 20,996 men forming 38 infantry regiments, and 246 officers and 4,231 men forming 6 cavalry regiments and 3 squadrons of Austrian Landwehr—total, 2,661 officers and 25,068 men; and 2,239 officers and 20,996 men forming 28 infantry regiments and 390 officers and 4,231 men forming 10 cavalry regiments of Hungarian Honved—total, 2,629 officers and 25,927 men. Total peace strength, 26,070 officers and 333,808 men, with 63,424 horses and 1,048 guns. The annual contingent of recruits for the common army is 103,100 men; for the Austrian Landwehr, 10,000 men; for the Hungarian Honved, 12,500 men. The Landwehr and Honved, in which the period of service is twelve years, are called out for instruction only. The term of active service is three years in the common army and seven years more in its reserve. In addition to the recruits taken for active service both the common army and the separate national armies have lists of substitutes or Ersatz troops who can be called out to fill any vacancies that occur. All who are not drawn for service either in the common army or in the Austrian or Hungarian national army or are not inscribed in the Ersatz reserves

are enrolled in the Landsturm and may be called out by the Emperor-King's order to fill gaps in either the common army or the national Landwehr of their own country, but Austrians may not be ordered to fight beyond the frontiers of Austria nor Hungarians outside of Hungary without a special legislative act of their Parliament.

The Navy.—The Austro-Hungarian navy is small, being designed principally for the defense of the Adriatic seaboard; but it is kept in a high state of efficiency. The Custozza, Erzherzog Albrecht, and Tegetthoff, of 5,900 to 7,400 tons, engined to steam 14 knots, are iron-clad battle-ships, with broadside batteries, built between 1872 and 1878, which have been refitted and re-armed with powerful batteries of 11-inch, 10-inch, 9½-inch, and smaller guns. Kaiser Max, Don Juan de Austria, and Prinz Eugen, of 3,600 tons, dating from the same period, have a heavy armament, and are good for coast defense, but too slow and not sufficiently protected to figure in the line of battle. The turret-ship Erzherzog Rudolf, of 6,900 tons and 12-inch armor, having a speed of 16 knots, and armed with 3 12-inch, 6 4½-inch, and 2 2½-inch guns, was built in 1887; and in the same year was turned out the Erzherzogin Stefanie, of 5,100 tons, with 9-inch armor, carrying 2 12-inch, 6 6-inch, and 2 2½-inch guns, and having a speed of 17 knots. The Monarch, Wien, and Budapest, of 5,600 tons, with 10.6 inches of Harvey armor, engines of 8,000 horse-power making 17 knots, 4 9.4-inch guns in their fore and aft turrets, 6 5.9-inch quick-firers in casemates, and 14 1½-inch quick-firers, were launched in 1895 and 1896. Of the same type improved are the more powerful Habsburg, Arpad, and Babenburg, launched in 1900, 1901, and 1902, having a displacement of 8,300 tons, 8.6 inches of Krupp armor, engines of 11,000 horse-power, and a main armament of 3 9.4-inch guns in turrets and 12 6-inch guns in casemates. Three new battle-ships have been begun which will have a displacement of 10,000 tons, 10 inches of armor, engines of 14,000 horse-power, and an armament of 3 11-inch and 14 6-inch guns. The armored cruiser Maria Theresa, launched in 1893, of 5,200 tons displacement, has a belt of 4-inch armor, engines of 9,000 horse-power capable of steaming 19 knots, and an armament of 2 9½-inch and 6 6-inch breech-loaders and 11 quick-firers. Of improved design is the Kaiser Karl VI, launched in 1900, displacing 6,100 tons, protected with 10.6-inch plates, having engines of 12,000 horse-power capable of making 20 knots, and armed with 2 9.4-inch guns and 8 5.9-inch quick-firers. Greater speed, dirigibility, cruising radius, and weight and energy of fire are to be attained in a cruiser of 7,400 tons which will have 8.7-inch armor and engines of 12,300 horse-power, and besides the fore and aft guns will carry 10 6-inch quick-firers. The protected cruisers Kaiserin Elisabeth and Kaiser Franz Josef I, launched in 1890, can make 19 knots with engines of 9,000 horse-power, and carry also the 2 9.4-inch breech-loaders, with 6 6-inch quick-firers. There are 6 protected cruisers of earlier construction, 4 coast-guards, 12 torpedo-gunboats, 4 monitors on the Danube, and a formidable flotilla of torpedo-boats, consisting of 32 of the first, 31 of the second, and 8 of the third class. The personnel of the navy in 1901 consisted of 563 officers, 180 cadets, 15 paymasters, 62 surgeons, 157 engineers, 94 mechanics, 173 employees, and about 8,000 sailors.

Commerce and Production.—The special imports into the Austro-Hungarian customs terri-

tory, which includes Bosnia and Herzegovina, were valued at 1,696,400,000 crowns in 1900, and the value of the special exports at 1,942,000,000 crowns. The imports of raw cotton were 144,136,000 crowns in value; of coal, 112,317,000 crowns; of wool, 88,886,000 crowns; of silk, raw and manufactured, 74,324,000 crowns; tobacco, 55,551,000 crowns; machinery, 51,978,000 crowns; hides and skins, 49,468,000 crowns; coffee, 48,100,000 crowns; flax and jute, 45,972,000 crowns; books and prints, 39,042,000 crowns; copper, 35,510,000 crowns; eggs, 27,405,000 crowns; wine, 24,892,000 crowns; corn, 19,099,000 crowns; hogs, 8,327,000 crowns; wheat, 4,212,000 crowns; rye, 897,000 crowns; lard and bacon, 366,000 crowns. The exports of lumber and wood manufactures were 254,295,000 crowns in value; of sugar, 186,551,000 crowns; of eggs, 99,262,000 crowns; of lignite, 69,560,000 crowns; of cattle, 61,768,000 crowns; of horses, 54,948,000 crowns; of glass and glassware, 52,733,000 crowns; of barley, 51,786,000 crowns; of malt, 50,802,000 crowns; of gloves and shoes, 46,675,000 crowns; of woolen manufactures, 41,087,000 crowns; of coal, 23,050,000 crowns; of poultry, 21,387,000 crowns; of barrel staves, 19,626,000 crowns; of geese feathers, 18,879,000 crowns; of beans, 15,876,000 crowns; of hops, 14,210,000 crowns; of beer, 12,134,000 crowns.

The values in crowns of the imports from and exports to the principal countries in 1900 were as follow:

COUNTRIES.	Imports.	Exports.
Germany	653,375,000	1,018,340,000
Great Britain	149,194,000	202,897,000
Italy	114,297,000	146,987,000
United States	152,823,000	87,935,000
Russia	89,149,000	71,661,000
Switzerland	56,299,000	68,630,000
India	84,242,000	45,647,000
France	53,864,000	68,490,000
Turkey	41,924,000	63,618,000
Roumania	32,227,000	43,211,000
Servia	42,218,000	24,174,000
Egypt	27,675,000	26,172,000
Brazil	43,489,000	5,364,000
Netherlands	16,343,000	27,442,000
Belgium	26,087,000	14,888,000
Greece	17,174,000	13,387,000
South America	24,072,000	4,241,000
Dutch East Indies	20,473,000	238,000

The area under cultivation in Austria in 1900 was 28,243,198 hectares, of which 10,624,851 hectares were under farm crops, 7,127,327 acres in meadow and pasture, 9,777,935 hectares planted with forest trees, 371,242 acres in gardens, 242,063 acres in vineyards, and 106,445 acres covered with fish ponds and lakes. The yield of wheat from 1,065,000 hectares was 14,741,000 hectoliters; of barley from 1,234,000 hectares, 20,525,000 hectoliters; of oats from 1,899,000 hectares, 37,021,000 bushels; of rye from 1,701,000 hectares, 19,906,000 hectoliters; of pulse from 282,000 hectares, 3,144,000 hectoliters; of buckwheat from 164,000 hectares, 2,158,000 hectoliters; of corn from 385,000 hectares, 5,426,000 hectoliters; of other cereals from 91,000 hectares, 1,370,000 hectoliters; of potatoes from 1,168,000 hectares, 117,020,000 quintals; of sugar-beets from 240,000 hectares, 52,282,000 quintals; of other beets from 175,000 hectares, 27,648,000 quintals; of wine from 253,000 hectares, 5,213,000 hectoliters; of hops from 19,000 hectares, 90,000 quintals; of tobacco from 3,700 hectares, 53,000 quintals; of hemp from 33,000 hectares, 52,000 quintals; of flax from 72,000 hectares, 227,000 quintals. The production of coal in Austria in 1900 was valued at 47,795,000 florins; of lignite, 56,317,000 flor-

ins; of pig-iron, 41,152,000 florins; of lead, 2,361,000 florins; of silver, 1,954,000 florins; of zinc, 1,582,000 florins; of quicksilver, 1,248,000 florins; of copper, 769,000 florins. The total product of the mines was valued at 116,727,240 florins; value of furnace products, 49,987,900 florins. The production of coal in 1899 was 109,925,000 centners; of lignite, 215,399,000 centners; of iron ore, 18,944,000 centners; of salt, 3,302,000 centners; of graphite, 336,000 centners; of silver, 39,572 kilograms; of copper, 8,811 centners; of zinc, 67,415 centners; of iron, 10,002,067 centners; of lead, 106,503 centners; of quicksilver, 5,104 centners. The value of fish caught in 1900 was 1,584,268 florins in summer and 1,076,652 florins in winter fishing. The production of beer in 1899 was 19,573,547 hectoliters; of alcohol, 1,538,189 hectoliters.

In Hungary the crop of wheat in 1900 from 3,564,000 hectares was 41,432,000 centners; of barley from 1,080,000 hectares, 12,362,000 centners; of oats from 1,082,000 hectares, 11,061,000 centners; of rye from 1,114,000 hectares, 10,793,000 centners; of pulse from 893,000 hectares, 3,008,000 centners; of buckwheat from 25,000 hectares, 167,000 centners; of corn from 2,588,000 hectares, 37,174,000 centners; of mixed grain from 141,000 hectares, 1,463,000 centners; of other cereals from 71,000 hectares, 572,000 centners; of potatoes from 575,000 hectares, 48,622,000 centners; of sugar-beets from 92,000 hectares, 19,857,000 centners; of other beets from 176,000 hectares, 43,794,000 centners; of wine from 260,000 hectares, 1,944,000 centners; of tobacco from 40,000 hectares, 599,000 centners; of hemp seed from 67,000 hectares, 282,000 centners; of rape seed from 34,000 hectares, 251,000 centners. The production of silk cocoons, in which 87,825 families were engaged, was 1,354,120 kilograms in 1900, valued at 2,517,267 crowns. Bees were kept in 12,042 villages, producing 38,508 centners of honey and 2,884 centners of wax; total value, 3,820,217 crowns. The forest in 1900 had an area of 9,040,677 hectares, of which 2,414,985 hectares were oak, 4,731,803 hectares were beech, and 1,893,889 hectares were pine. Exports of forest products in 1899 were valued at 86,411,000 crowns, and imports at 14,984,000 crowns. The value of lignite raised in Hungary in 1900 was 34,331,000 crowns; of coal, 14,486,000 crowns; of iron ore, 9,002,000 crowns; of ores containing lead, copper, silver, and gold, singly or in combination, 5,137,000 crowns. The value of gold produced was 10,721,000 crowns; of silver, 2,306,000 crowns; of pig iron, 37,772,000 crowns; of copper, 260,000 crowns; of lead, 836,000 crowns; of coal briquets, 1,157,000 crowns; of antimony, regulus, and antimony ore, 801,000 crowns; of pig pyrites, 727,000 crowns; of other mineral products, 1,453,000 crowns; total value of minerals and ores, 63,142,000 crowns; of furnace products, 56,037,000 crowns. The quantity of beer brewed in Hungary was 1,448,252 hectoliters in 1900; of alcohol distilled, 1,058,862 hectoliters; of sugar produced, 2,504,501 centners. The total value of the special imports into Hungary for 1900 was 1,110,354,000 crowns; of exports of Hungarian produce, 1,327,484,000 crowns. The imports of cotton goods were 124,518,000 crowns in value; of woolen goods, 81,233,000 crowns; of silk goods, 28,194,000 crowns; of wine, 24,124,000 crowns; of coal, 20,316,000 crowns; of ready-made men's clothing, 19,424,000 crowns; of machinery, 18,892,000 crowns; of women's garments, 18,855,000 crowns; of boots and shoes, 18,044,000 crowns; of tobacco, 17,889,000 crowns; of refined sugar, 16,933,000 crowns.

The exports of flour were 156,628,000 crowns in value; of cattle, 92,361,000 crowns; of wheat, 84,646,000 crowns; of hogs, 59,477,000 crowns; of rye, 47,807,000 crowns; of eggs, 34,497,000 crowns; of wine, 32,336,000 crowns; of corn, 31,744,000 crowns; of oats, 30,465,000 crowns; of horses, 28,608,000 crowns. Of the total imports 21.95 per cent. were raw products and 78.05 per cent. manufactures, while of the exports 60.78 per cent. were raw products and 39.22 per cent. were manufactures. Of the imports 79.51 per cent., 882,834,033 crowns, came from Austria, and 71.55 per cent. of the exports, 949,759,656 crowns, went to Austria. From Germany the value of 54,533,108 crowns was imported, and exports to Germany amounted to 141,200,927 crowns. The imports from Great Britain were 15,956,251 crowns in value, consisting mainly of cotton cloth and tobacco; the value of exports to Great Britain, consisting principally of wheat flour and barley, was 28,031,318 crowns. The largest commercial intercourse, after these countries, is with Servia, France, Switzerland, Italy, and Roumania.

Navigation.—The number of vessels entered at Austrian seaports during 1899 was 107,590, of 13,160,544 tons; cleared, 107,511, of 13,148,482 tons. Of the vessels 88 per cent., with 90 per cent. of the tonnage, were Austrian, Italy having the next largest percentage, and then Greece. At the port of Trieste 8,468 vessels, of 2,164,927 tons, were entered, and 8,487, of 2,166,289 tons, were cleared. The Austrian commercial marine on Jan. 1, 1900, comprised 12,039 vessels of all kinds, of 244,301 tons, with 33,503 sailors. Of the total number, which included 199 steamers, of 190,620 tons, 154, of 198,322 tons, were ocean vessels, 1,483, of 23,631 tons, were coasters, and 11,002, of 22,348 tons, were fishing vessels and other small craft.

At Hungarian ports 19,223 vessels, of 2,223,302 tons, were entered and 19,218, of 2,226,733 tons, were cleared during 1900. At Fiume were entered 10,739 vessels, of 1,681,151 tons; cleared, 10,732, of 1,684,329 tons. The commercial fleet of Hungary on Jan. 1, 1901, consisted of 61 ocean vessels, of 63,002 tons, 154 coasting vessels, of 6,063 tons, and 223 fishing vessels, etc., of 332 tons; total, 438 vessels, of 69,397 tons, of which 78, of 56,391 tons, were steamers.

Railroads, Posts, and Telegraphs.—There were 11,700 miles of railroad in Austria on Jan. 1, 1900, of which 4,713 miles were Government railroads, 1,989 miles were private lines operated by the Government, 4,998 miles were owned and operated by companies, and 62 miles were foreign railroads. The number of passengers carried in 1899 was 142,296,000; tons of freight, 114,512,000; gross receipts, 296,837,000 florins; expenses, 193,412,000 florins; capital cost, £246,915,000.

In Hungary the total length of completed railroads on Jan. 1, 1901, was 17,108 kilometers, of which the Government owned 7,662 kilometers and operated 6,491 kilometers of companies' lines, while 2,955 kilometers were owned and operated by companies. The number of passengers in 1900 was 64,412,000; tons of freight, 42,577,000; gross receipts, £11,472,000 sterling; expenses, £6,222,000; capital, £112,056,000.

The number of letters and postal cards that passed through the Austrian post-office during 1900 was 1,055,791,710; samples and printed matter, 137,626,510; newspapers, 107,738,700. The receipts were 107,718,310 crowns, and expenses were 98,411,819 crowns.

The number of letters and postal cards that passed through the Hungarian post-office was

319,770,000 in 1900; newspapers, 115,994,000; samples and printed matter, 51,906,000; money and postal orders, 21,018,000, of the value of £46,794,000 sterling; registered letters and parcels, 20,016,000. The receipts of the postal, telegraph, and telephone services were 47,103,000 crowns; expenses, 39,912,000 crowns.

The total length of telegraph lines in Austria in 1900 was 24,480 miles, with 107,750 miles of wire. The number of messages in 1900 was 15,057,176. There were 266 telephone exchanges and 105 interurban circuits, with a total length of 79,750 miles of wire. The number of conversations in 1900 was 95,262,595. The telegraph-lines of Hungary had a total length of 22,824 kilometers, with 114,831 kilometers of wire. The number of messages in 1900 was 14,370,439. There were 50 telephone exchanges, with 45 interurban circuits and connections with Vienna and Berlin. The total length of telephone wire was 74,093 kilometers. The number of conversations was 37,301,358.

The Triple Alliance.—The alliance between Germany, Austria-Hungary, and Italy, which expires in May, 1903, was prolonged in its original form for a further period of six years by a new treaty signed at Berlin on June 26, 1902. A dual alliance between Germany and Austria-Hungary, arranged in a conference between Prince Bismarck and Count Andrassy in 1879, bound each of the contracting powers to come to the assistance of the other with its military and naval forces in case of an attack on two sides at the same time, an attack of France and Russia against Germany, with or without Italy, or an attack of Russia and Italy against the Austro-Hungarian dominions. There existed previously the Dreikaiserbund between the Emperors of Germany, Austria-Hungary, and Russia, an understanding reached in 1873, which the *entente cordiale* between France and Russia unsettled. Nevertheless the first German Emperor was reluctant to agree to the Austro-German military pact, deeming it incompatible with his political and family relations to the Emperor of Russia. After it was carried through Prince Bismarck always insisted that a good understanding with Russia was an essential element of German policy, and after the dual alliance was expanded into a triple alliance by the adhesion of Italy, this military pact was uniformly represented as purely defensive, a guarantee of peace, an insurance against any disturbance of the existing equilibrium. When the relations between Italy and France became strained in consequence of the French occupation of Tunis, Italy was easily persuaded to abandon her position of isolation and join, in 1883, the alliance of the central powers. Italian Irredentism in respect to the coast provinces of Austria thereby received a check and ceased to be a danger to the peace of Europe. A tariff war with France further estranged Italy from her former ally. The terms of the dual alliance were after a time disclosed to the public, but those of the tripartite treaty have always been kept secret, though it may be inferred that Germany can only call upon her allies for active assistance in the event of a double attack, but will assist if necessary either one of them which is attacked from one side only. The burden of armaments has borne most severely upon Italy, the one of the three powers which had most to make up in developing its military strength with the weakest material resources. The heavy strain of taxation and the unlikelihood that Italy would receive compensation on the Adriatic, the only field for national expansion, for any sacri-

fices she might make for her allies, has caused a considerable revulsion of public feeling at times in Italy, but never sufficient to cause the successors of Crispi to abandon the alliance which he formed. A better feeling toward France and better trade relations did not alter the policy of the Italian Government. The economic difficulties of Italy, however, led that Government, before the alliance was renewed for twelve years on May 6, 1891, to press for favorable commercial terms. The complaints of Italians regarding the excessive burden of the military and naval armaments that Italy has kept up in her ambition to maintain her position among the great powers drew from the responsible statesmen of the allied powers the admission that the treaty does not compel Italy to mobilize any specified number of army corps or to bring her armed strength up to any particular standard. When the Franco-Russian *entente cordiale* matured into the dual alliance between the French Republic and Russia as an open rejoinder to the triple alliance, stress was laid on the pacific nature and conservative purpose of the dual alliance by its authors and its value in insuring peace as a counterpoise to the triple alliance, and those concerned in the latter reiterated their peaceful intentions. Just as the continuance of the political friendship and dynastic intimacy between Germany and Russia did not preclude the conclusion of the Austro-German alliance and subsequent Dreibund, an agreement made later between Austria and Russia to maintain the *status quo* in the Balkans was held to be perfectly compatible with the obligations of Austria toward her allies. In the same principle, when a rapprochement was attained in the spring of 1902 between Italy and France by an agreement on the part of the latter to respect the Italian sphere of interest in Tripoli, this separate understanding was not regarded as inconsistent with the fresh renewal of the triple alliance. Italy urged the need of advantageous terms for Italian products in the new commercial treaties as a necessary condition to her preserving the military strength that makes her alliance valuable, and pledges may have been made or assurances given without any such stipulations being embodied in the treaty of alliance, which the successive German Chancellors have averred is not complicated with economic questions. Count von Bülow likened the triple alliance to an insurance company rather than to an association for profit, and repeated the declarations that it is purely defensive and pacific, that it entails no obligations on the members to maintain their military or naval forces at a prescribed level, and that it is no artificial combination, but corresponds to a natural and historical balance of power, tending now even more than in the beginning to the preservation of the peace of the world, since the political combinations of the present go beyond the limits of Europe and the basin of the Mediterranean, the interests of the great powers embrace the whole world, and none of them can wage war in Europe without reflecting on far-reaching hazards in other quarters.

Count Goluchowski, when announcing on the meeting of the Delegations in May the approaching prolongation of the triple alliance, spoke of the dual alliance as its complement and an assistance in the fulfilment of its pacific task and of the extension of such political arrangements for the maintenance of the *status quo* to extra-European questions, as exemplified by the Anglo-Japanese treaty guaranteeing the integrity of China and Korea, just as the Austro-Russian *entente* insures the integrity of the Balkan coun-

tries. Special agreements made by individual powers belonging to the different groups concerning specific interests which affect them alone, as evidenced by the confidential relations existing between France and Italy or the satisfactory development of Austro-Russian relations resulting from the agreement of 1897, are not opposed to the general principles which brought about the union of the principal groups. The agreement of France to respect Italy's aspirations in Tripoli, and perhaps also to intervene in no way to frustrate her ambitions in Carniola and Istria and in Albania, Italy leaving to France a free hand in Morocco, deprives of all its force and practically ends the Anglo-Italian Mediterranean agreement, leaving England without a supporter for her claims to a share in the division of Morocco and with no ports save her own as naval bases from which to conduct operations in the Mediterranean unless she shall enter into a similar alliance with Spain. It was England herself who caused the defection of her ally and the Franco-Italian rapprochement when in bargaining over protectorates and spheres of influence in various parts of the world she conceded to France the Hinterland of Tripoli; a concession which France has used to purchase the friendship of Italy and the isolation of England in the matter of more vital interests, probably by resigning the French claim to this region to Italy. It is said that in connection with the old treaty Italy entered into an engagement to send in the event of an aggressive war on Germany and Austria, an army corps through the Tyrol to take up a position with the German army on the Rhine and an army corps through Hungary to be placed under the command of King Carol of Roumania and to invade Bessarabia alongside of Austrian and Roumanian troops. These obligations are supposed to have been omitted from the military agreements and plans of campaign adopted when the new treaty was signed, which itself was officially stated to be identical with the original treaty of alliance, and like it is to be kept secret, although the Austrian and Italian governments are believed to be willing to disclose its terms. The idea that a political alliance can subsist concurrently with a commercial war has been repudiated by Hungarian statesmen more outspokenly than it has in Italy. Austria-Hungary, however, obtained no pledges for fair treatment of, Hungarian exports, especially those that under Agrarian pressure are in danger of being shut out from the German market when the commercial treaties are renewed. No positive assurances were given either to Austria or to Italy regarding the German tariff, which will depend on the action of the Reichstag. The renewal of the military convention with Germany without modification was therefore viewed in Hungary as a temporary engagement which will not be again renewed if the Germans frame a hostile tariff. The Italian people took a similar view. The Slavs of Austria were decidedly averse to the renewal and look upon it as a mere alliance between the ministerial chancelleries which lacks the approval of the nations concerned. In Chinese affairs Germany acted with Russia and France, and the triple alliance had no significance. It gives to Austria-Hungary and to Italy an outward prestige and importance that they would not have if they stood alone; still it has not been to them the source of strength and welfare that Germany has made of it for herself. As to the practical application of the military convention, the danger of such wars as it contemplates is much more remote now than when

it was originally concluded. The French people do not renounce their hope of recovering their lost provinces, yet the impulse of revenge no longer stirs the nation, since Germany has given up the attitude of truculent provocation for one of studied courtesy, which the French Government is constrained by national feeling to receive but coolly. No more have the Italians abandoned their aspirations for the unredeemed Italian lands and the shores of the Adriatic, nor does the Hapsburg monarchy cease to contemplate the prospect of an Austrian port on the Mediterranean, nor has Russia resigned her secular ambition to hold the seats of the Eastern Empire or given up the role of guardian of all the Slav peoples. The chance, however, of a new war over the Eastern question seems less likely than a peaceful division if the Turks are to be driven out of Europe. Germany from the start refused to support the ambition of Austria. When the triple alliance was new Bismarck declared that to Germany the Balkan peninsula was not worth the bones of a Pomeranian grenadier. A collision of the great Continental armies in central Europe over Alsatia, Luxemburg, Belgium, the Germans of Esthonia, the Esths of Prussia, or any other question seems impossible. So well protected are the frontiers, so destructive the modern weapons, so enormous the forces that an attack would be like national suicide. The renewal of the triple alliance was followed by a meeting of the German Emperor and the Czar, who was visited by the President of the French Republic in return for his journey to France. The King of Italy paid a visit to the Czar and stopped in Berlin, but did not go to Vienna.

The Ausgleich.—The acrimonious conflict between the Austrian and Hungarian governments over the renewal of the Ausgleich, which has been kept up almost uninterruptedly for six years, reached a critical stage in the summer of 1902, when negotiations were broken off until the Emperor intervened between the two Prime Ministers. Dr. von Körber gave warning that Austria had made the last concessions in regard to the autonomous tariff, and yet the Hungarian Parliament still insisted on its demands. The Austrian Reichsrath, which came to a deadlock six months before over the language question and was brought into working order again only by a threat from the Prime Minister to suspend the Constitution, gave the Government united support in its insistence on the Austrian views, and it was the general feeling that in the concessions already offered Austria sacrificed her interests to such an extent that the Ausgleich when concluded on such terms would be the last one. The danger of an immediate disruption of the customs union seemed to be averted. Meanwhile the continuance of the deadlock placed Austria-Hungary at a disadvantage in respect to the negotiations with other nations for the new commercial treaties, for until the fiscal relations of the two halves of the monarchy were settled there was no adequate basis for these negotiations. The dissensions over the tariff involved many technical questions. In the main the Hungarians desired to protect their agriculture by the imposition of high duties on foodstuffs and raw materials, while the Austrians wanted to be guaranteed against arbitrary interpretations by the Hungarian authorities that would give an unfair advantage to the industries of Hungary which the state helps in the effort to wrest the domestic market from the Austrian manufactures by granting subsidies, remitting taxes, and allowing discriminating railroad rates in con-

tradiction to what the Austrians hold to be the spirit of the customs union. In Hungary there is a strong party in favor of an independent customs territory, and in Austria the idea of the economical separation of the two monarchies has taken root, though in the latter country more effort would be required to adjust business to such a condition.

Austria.—The legislative authority for the empire is vested in the Reichsrath, but each province possesses a large measure of autonomy and has its Landtag to legislate on all matters not reserved by the Constitution for the Reichsrath, which has general authority to legislate on all matters concerning rights, duties, and interests that are common to all the lands represented in the Reichsrath. The Reichsrath is composed of a Herrenhaus and an Abgeordnetenhaus. The Herrenhaus contains 18 princes of the imperial family, 67 heads of the territorial families, 5 cardinals, 6 prince-bishops, and 140 members nominated for life. The Abgeordnetenhaus contains 425 members elected for six years—85 by large proprietors, 118 by towns, 21 by chambers of commerce and trade councils, 129 by rural communes, and 72 by the general male population paying 4 florins in direct taxes or otherwise qualified. The ministry in office at the beginning of 1902 was composed as follows: President of the Council and Minister of the Interior, Dr. E. von Körber; Minister of National Defense, Graf Zeno von Welsersheimb; Minister of Finance, Dr. E. Ritter Böhm von Bawerk; Minister of Railroads, Dr. H. Ritter von Wittek; Minister of Justice, Baron A. Spens von Booden; Minister of Public Instruction and Worship, Dr. W. Ritter von Hartel; Minister of Commerce, Baron G. von Call von Culmbach and Rosenberg; Minister of Agriculture, Baron K. de Giovanelli; without portfolios, Dr. A. Rezek and Dr. Leonard Pietak.

Area and Population.—The area of Austria is 115,903 square miles. The population according to the census of Dec. 31, 1900, was 26,150,597, or 226 to the square mile. The increase in ten years was 2,214,802, giving a yearly rate of 0.93 per cent. The area of the individual provinces and their population in 1890 and 1900 are given in the following table:

PROVINCES.	Square miles.	POPULATION.	
		Dec. 31, 1890.	Dec. 31, 1900.
Lower Austria.....	7,654	2,661,799	3,100,493
Upper Austria.....	4,631	785,831	810,246
Salzburg.....	2,767	173,510	192,763
Styria.....	8,670	1,282,708	1,350,494
Carinthia.....	4,005	381,008	367,397
Carniola.....	3,856	498,958	508,150
Coastland.....	3,084	695,384	756,546
Tyrol and Vorarlberg.....	11,324	928,760	981,949
Bohemia.....	20,060	5,643,004	6,318,697
Moravia.....	8,583	2,276,870	2,437,706
Silesia.....	1,987	605,649	680,422
Galicia.....	30,307	6,607,816	7,315,816
Bukovina.....	4,035	646,591	730,195
Dalmatia.....	4,940	527,426	593,783
Total.....	115,903	23,805,413	26,150,597

The number of marriages in 1900 was 214,214; of births, 967,939; of deaths, 658,680; excess of births, 309,259. The number of Austrian emigrants who sailed from German and Dutch ports in 1900 was 94,611, of whom 91,768 were destined for the United States, 178 for Brazil, and 131 for the Argentine Republic. The population of the chief towns on Dec. 31, 1900, was as follows: Vienna, 1,674,957; Prague, 201,589; Lemberg, 159,877; Gratz, 138,080; Trieste, 134,143; Brunn,

109,346; Krakau, 91,323; Pilsen, 68,079; Czernowitz, 67,622; Linz, 58,791.

Finances.—The revenue for 1902 was estimated at 1,685,966,357 crowns, from the following sources: Reichsrath and Council of Ministers, 1,705,936 crowns; Ministry of the Interior, 2,951,314 crowns; Ministry of Defense, 854,578 crowns; Ministry of Instruction and Worship, 14,447,716 crowns; Ministry of Finance, 1,183,733,249 crowns; Ministry of Commerce, 129,342,120 crowns; Ministry of Railroads, 281,813,370 crowns; Ministry of Agriculture, 36,109,822 crowns; Ministry of Justice, 2,554,558 crowns; pensions, 2,974,834 crowns; state debt, 1,246,500 crowns; debt administration, 21,500 crowns; sale of state property, 1,078,352 crowns. The total expenditures for 1902 were estimated at 1,685,117,944 crowns, distributed as follows: Imperial household, 9,300,000 crowns; Imperial Cabinet Chancery, 179,338 crowns; Reichsrath, 2,688,569 crowns; Supreme Court, 49,724 crowns; Council of Ministers, 3,089,629 crowns; contribution to common expenditure, 263,479,377 crowns; Ministry of the Interior, 68,033,678 crowns; Ministry of Defense, 60,823,851 crowns; Ministry of Instruction and Worship, 79,008,269 crowns; Ministry of Finance, 275,499,513 crowns; Ministry of Commerce, 130,413,080 crowns; Ministry of Railroads, 242,592,720 crowns; Ministry of Agriculture, 46,050,002 crowns; Ministry of Justice, 71,337,631 crowns; Board of Control, 460,800 crowns; pensions, 60,276,080 crowns; subventions and donations, 16,618,110 crowns; state debt, 353,913,528 crowns; debt administration, 1,304,045 crowns. Extraordinary expenditures amounting to 562,000,000 crowns for railroad construction and similar objects will be spread over five years ending with 1905. The total receipts of the Government in 1899 amounted to 932,775,000 florins, or 1,865,550,000 crowns, and expenditures to 970,401,000 florins, or 1,940,802,000 crowns.

The national debt on June 30, 1901, amounted to 3,621,157,782 crowns, including a floating debt of 13,017,082 crowns. The annual charge for interest and amortization was 150,813,218 crowns. The annual charge for interest and amortization of the general debt falling to Austria's share was 189,028,560 crowns.

Politics and Legislation.—The Pan-Germanic propaganda has been openly carried on in Austria with funds collected in Germany. The extremists of the German Liberal party, especially the politicians who have borne an active part in the war of languages, those representing German constituencies in Bohemia, go to the length of advocating the annexation of German Austria, and Bohemia and other of the Slav lands as well, to the German Empire. Those who dream of a greater Germany expect to absorb the Italian coast provinces also so as to make Germany a Mediterranean power, and in the north Holland and Flanders and the Baltic provinces of Russia. In 1902 an earnest campaign was begun among the Saxons of Transylvania, who are smarting under the present Magyarizing policy of the Hungarian Government, which proceeded to repress the agitation with more energy than the Austrian Government has shown. The *Los von Rom* movement in Austria, the conversion of Roman Catholics to the Evangelical creed, is purely political in its origin and intent, yet numerous German pastors have gone to Austria to propagate their faith. The Austrian authorities have taken no steps to abate the German demonstrations, merely regarding them as a phase in the race and language conflict,

calling for no interference with either the German or the Czech agitators except when they come to blows. Since the Austrian Government refrains from repressing the treasonable utterances of its own citizens it can not call upon Germany to take action against those who inspire and aid the agitation from over the border. Therefore Count Goluchowski could describe the attitude of the Prussian, Saxon, and Bavarian governments as perfectly correct. In March the Pan-Germanic group in the Reichsrath created a scandal by offering cheers for the Hohenzollerns. The Pan-Germanic League, after setting on foot the German agitation in Transylvania, encountered such resistance that the movement was abandoned. The Germans and the Young Czechs in the Reichstag several times had violent altercations. The suggestion of a commercial alliance of European nations to carry on a general tariff war against the United States had its origin among the Pan-Germans. The pearl-button and several other peculiarly Austrian industries have been seriously affected by the starting of competing establishments in America. In Germany the official and the general popular opinion was antipathetic toward the machinations of the Pan-Germans in Austria, and Bismarck's words were recalled that if Austria did not exist it would have to be invented. A conflict about a high school at Cilli rekindled the animosities between Slavs and Germans. The town is composed of a German population, but it is the center of a district in which the Slovenes greatly predominate. It was proposed that instruction in the Slovene language, which was used in some of the lower classes, be discontinued there and transferred to some other town. When this motion was defeated by a majority consisting of Czechs, Poles, and German Ultramontanes, the German People's party and other factions of the Germans declared war on the Slavs. The ministry found a way of solving this difficulty by granting the Slovenes satisfactory compensation and to the Germans their demand, which was in accord with the principles of the language ordinances which the Czechs asked to have reenacted. When another question of the sort was brought up in the Reichsrath before this one was settled, the Germans on being defeated in the vote made a riotous uproar which broke up the sitting. The nationality feud in Bohemia rendered the proceedings of the Landtag quite sterile. The Czechs demanded the recognition of a Bohemian constitution, the Germans the establishment of German as the state language.

In the early part of the year occurred labor riots in Trieste, which were brief, but of an extraordinarily violent character because of the intervention of anarchists of the Italian type. The stokers on the Austrian Lloyd steamships having struck work, the trade-unionists of the city, who have a united labor association, threatened a general sympathetic strike, which was speedily set in motion, first by the workmen in the shipyards, then by the employees on the street-cars and the railroads, and finally by the gashouse workers. All traffic and business stopped. The union leaders warned the strikers against violence, but agitators induced some of them to enforce the cessation of work by throwing missiles into premises where production was going on and to attack the residence of the Statthalter. The police and military proceeded to suppress violence with energy and were in turn attacked furiously. The result was that the troops used their firearms twice, killing and

wounding 40 rioters, while numerous injuries were inflicted with bayonets. Many arrests were made, and the Government justified the severity of the measures taken on the ground that the disturbances were revolutionary. Among the persons arrested were well-known anarchists.

Hungary.—The legislative authority is vested in a Parliament consisting of the House of Magnates and the House of Representatives. The House of Magnates is composed of 17 royal archdukes, 55 ecclesiastical dignitaries, the 10 bannerets of the kingdom, the Count of Presburg, the 2 keepers of the crown, the 2 presidents of the administrative court, the president of the royal table of Budapest, 3 delegates of the Diet of Croatia-Slavonia, the Governor of Fiume, 7 princes, 169 counts, and 49 barons sitting as hereditary members, 50 members nominated for life by the King, and 27 members elected by the House of Magnates. The House of Representatives consists of 413 members elected for five years or the duration of Parliament by the counties and towns of Hungary and 40 delegates

population in active military service, which numbered 114,811, making the total population of Hungary 19,207,103.

The number of marriages in 1900 was 169,687; of births, 768,673; of deaths, 531,189; excess of births, 237,484. The number of emigrants in 1900 was 54,767, of whom 41,320 passed through German ports and 13,447 through other European ports. The population of the principal towns on Dec. 31, 1900, was as follows: Budapest, 732,322; Szeged, 102,991; Szabadka, 82,122; Debreczen, 75,006; Pozsony, 65,867; Zagreb, 61,002; Hodmezo-Vasarhely, 60,883; Keckskemet, 57,812; Arad, 56,230; Temesvar, 53,033; Nagyvarad, 50,177.

Finances.—The revenue of the Hungarian Government in 1900 was 1,042,023,000 crowns from ordinary and 155,013,000 crowns from extraordinary sources; total, 1,197,036,000 crowns. The revenue for 1901 was estimated at 1,056,582,297 crowns, and expenditure at 1,056,556,417 crowns. The estimated revenue for 1902 was 1,086,870,018 crowns, of which 1,035,800,608

THE NEW HUNGARIAN HOUSES OF PARLIAMENT—THE FRONT ON THE DANUBE.

elected from among its own members by the Diet of Croatia-Slavonia.

The Council of Ministers constituted on Feb. 25, 1899, was composed as follows: President of the Council, Koloman Szell; Minister of National Defense, Baron Geza Fejervary; Minister of Finance, Dr. Ladislaus de Lucaks; Minister of Worship and Public Instruction, Dr. Julius de Wlassics; Minister of Agriculture, Dr. Ignatius Daranyi; Minister of Croatia-Slavonia, Ervin de Czeh; Minister of Justice, Dr. Alexander Ploss; Minister of Commerce, Dr. Alexander Hegedus; Minister of the Imperial Cabinet, Count Emanuel Szechenyi.

Area and Population.—The area of the Hungarian dominions, including Croatia and Slavonia, is 322,310 square miles. The population enumerated on Dec. 31, 1900, was 19,092,292, an increase of 1,742,894 since 1890. Hungary proper, with an area of 108,258 square miles, had 15,656,904 inhabitants, 153 to the square mile; the town of Fiume, having an area of 8 square miles, had 38,139; Croatia and Slavonia, with an area of 16,773 square miles, had 2,397,249, or 149 to the square mile. These figures do not include the

crowns were from ordinary and 51,069,410 crowns from extraordinary sources. Of the ordinary revenue 218,000 crowns were from pensions, 2,510,331 crowns from state debts, 201,466 crowns from restitution of loans to various portfolios, 331,392 crowns from redistribution of advances from guaranteed railroads, 2,000 crowns from the Ministry *ad latus*, 7,915,915 crowns from the Ministry of the Interior, 698,365,837 crowns from the Ministry of Finance, 279,920,940 crowns from the Ministry of Commerce, 38,579,910 crowns from the Ministry of Agriculture, 5,358,413 crowns from the Ministry of Worship and Instruction, 1,797,989 crowns from the Ministry of Justice, and 598,415 crowns from the Ministry of National Defense. The ordinary expenditures were estimated at 992,204,074 crowns, transitory expenditures at 34,360,047 crowns, investments at 60,184,962 crowns; total expenditure, 1,086,749,083 crowns. Of the ordinary expenditure 9,300,000 crowns were for the civil list, 179,338 crowns for the Cabinet chancery, 3,533,018 crowns for Parliament, 72,640,295 crowns the Hungarian contribution to common expenditure, 41,325 crowns for pensions charged to common expendi-

ture, 20,593,597 crowns for Hungarian pensions, 260,989,781 crowns for the national debt, 27,356,467 crowns for debts of guaranteed railroads assumed by the state, 156,896 crowns for guaranteed railroad interest, 8,681,409 crowns for loans chargeable to separate departments of Government, 16,540,741 crowns for the administration of Croatia-Slavonia, 335,640 crowns for the Accountant-General's office; 563,962 crowns for the administration of courts, 1,026,720 crowns for the minister-presidency, 144,632 crowns for the Ministry *ad latus*, 93,360 crowns for the Ministry of Croatia-Slavonia, 42,783,046 crowns for the Ministry of the Interior, 177,342,111 crowns for the Ministry of Finance, 194,695,480 crowns for the Ministry of Commerce and Industry, 46,156,457 crowns for the Ministry of Agriculture, 34,878,386 crowns for the Ministry of Public Worship and Instruction, 36,379,523 crowns for the Ministry of Justice, and 37,791,890 crowns for the Ministry of National Defense.

The national debt of Hungary amounted at the end of 1901 to 5,186,323,000 crowns, of which 2,284,580,000 crowns were consolidated debt, 2,174,802,000 crowns annuities, 23,263,000 crowns treasury bonds, 168,446,000 crowns debts of various ministries, and 535,232,000 crowns arrears outstanding.

Politics and Legislation.—Whereas under the former ministries commerce and industry were nourished at the expense of the agriculturists, the amalgamation of the old National party with the Liberals under Szell has so strengthened the Agrarian element in the present Ministerial party that everything must bend to the agricultural interests. Minister Hegedüs was unable to accomplish any of his plans for the advancement of commerce, except such measures as were apparently prejudicial to the expansion of trade, such as one restricting commercial agents. He lost the confidence of commercial and manufacturing circles when he was obliged to shelve all his promised reforms, and when he ascribed his failure to the opposition of the Agrarians he drew their wrath upon himself. On Feb. 27, 1902, he gave in his resignation. The former chief of the National party, Horansky, was appointed his successor. The new Minister of Commerce died before he could show his ability, and for some weeks the different groups of the Liberals struggled for the portfolio. The Prime Minister found a solution by conferring it on one of the Dissident Liberals, Prof. Ludwig Lang, who accepted on May 9. In March an arrangement was made by the Minister of Finance, sanctioned by Parliament on April 9, for the conversion of the 1,100,000,000 crowns of $4\frac{1}{2}$ per cent. Hungarian bonds into 4 per cent. rentes, which was effected by the agency of the Vienna Rothschilds and Berlin bankers. The Pan-Germanic movement among the Swabians or Saxons of Hungary distressed and alarmed the Hungarian patriots because in the movement for unification and conformity while the Roumanians were rebellious and the Croats stickled for their nationality and conformity, the Germans stood by the Magyars. The disaffection of the Germans was regarded as factitious, incited by agitators paid by the Pan-Germanic League, some of whom came from Germany. The ministry has adopted measures for regulating and restricting emigration. A new law forbids any Hungarians to emigrate so long as duties to the state, including military service, and family obligations remain unfulfilled. Emigration agencies and transportation companies will be under strict control, and misleading statements or advertisements designed

to induce persons to emigrate will entail severe punishment. The Croats, who oppose any exercise of Hungarian dominion over their little country, which they would enlarge by the absorption of Bosnia and Herzegovina and a union with Dalmatia, are so divided by differences in religion that their national patriotism is stultified by internal discord. The dream of a greater Serbia embraces Croatia and Slavonia, Dalmatia, and the Servian districts of southern Hungary, as well as the occupied provinces, Montenegro, Novi Bazar, northern Albania, and a large slice of Macedonia. The Catholics of Croatia alone call themselves Croats, while the Oriental Orthodox are content to be called Servians. The newspaper organ of this latter party reproduced from a Belgrade journal an article ridiculing a message from a Croatian society to the Emperor Franz Josef in which he was addressed as King of Croatia. The effect of this publication was the wrecking of the newspaper office, the Servian bank, and all stores and places of business belonging to Orthodox citizens of Agram. The police used their swords without being able to quell the riot. The military were called out, and when order was restored after two days over 100 persons were found to be seriously injured. Similar disturbances occurred in other towns, and at night on Sept. 2 the mob, reinforced by a large number of peasants, attempted to lynch an officer of Servian nationality. On the following day martial law was proclaimed in Agram. The Catholic Croats aspire to be a separate kingdom under the Hapsburg monarchy, and a party of the Dalmatians would amalgamate their province with an independent Croatian nation, as was proposed by the Opposition in the Dalmatian Diet. The Orthodox Greek Croats detest the Magyars even more heartily than do the Catholics, but they would cast their fortunes with greater Serbia. The Servians deny to the Croats a distinct nationality and decry the servile ambition that would be content with foreign rule, while the Croats describe the Servians as merely a degenerate and schismatic offshoot of their race. Even after the military held strict watch over Agram and the passion of the mob subsided the animosity provoked among this excitable people by a newspaper diatribe, in which the keenest thrust was the denial of a future for the Croatian nation, lingered and had serious results. The Servians, who have a large part of the local trade, were systematically boycotted, and Servians in the employ of Croats were dismissed.

Bosnia and Herzegovina.—The Turkish vilayets of Bosnia and Herzegovina were taken under the military occupation and civil administration of the Austro-Hungarian Government by the authorization of the Congress of Berlin which framed the treaty of July 13, 1878. The Christian population of the sanjak of Novibazar is protected by Austro-Hungarian troops, while the civil administration is Turkish. The revenue for 1902 was estimated at 44,846,281 crowns, the expenditure at 44,582,296 crowns, not including the expenses of the military occupation, which are borne by the Austro-Hungarian Government. The population in 1895 consisted of 673,246 Oriental Orthodox Christians, 548,632 Mohammedans, 334,142 Roman Catholics, 8,213 Jews, 3,596 Evangelicals, and 263 others. Sarajevo, the capital, had 38,083 inhabitants. Of the population 88 per cent. are dependent on agriculture, growing corn, wheat, and other cereals, potatoes, sugar-beets, flax, and hemp. Forests cover 45 per cent. of the surface. Prunes and

marmalade were exported to the amount of 5,040,000 crowns in 1900, and cattle of the same value. Iron, copper, salt, manganese, and quick-silver are mined. There are 628 miles of railroads. The line, 105 miles in length, to Cattaro in southern Dalmatia was opened in July, 1901. There are 1,660 miles of telegraph-line, with 3,615 miles of wire; the number of messages in 1900 was 447,648. The number of letters and postal cards carried in the mails was 11,084,575. Young men at the age of twenty are liable to be called into

the army. There are 4 infantry regiments of Bosnian troops and 4 reserve battalions, the total force being 6,711 men. The Austrian troops of occupation numbered 20,110 men in 1902. The population increases at a yearly rate of nearly 2 per cent. The people complain of taxation, but the tithe, which is the heaviest direct tax, has not been materially increased since 1900, nor very greatly since 1883. The revenue has increased under Austro-Hungarian administration to more than three times what it was in Turkish times.

B

BAPTISTS. Baptists in the United States.

—The American Baptist Year-Book for 1902 gives the following statistics of the regular Baptist churches in the United States: Number of associations, 1,691; of churches, 44,453; of ministers, 30,561; of members, 4,269,063; of baptisms during the year, 207,515; total amount of contributions, \$14,138,195; value of church property, \$89,389,992. These figures indicate an increase for the year of 11 associations, 494 churches, 35,837 members, 10,280 baptisms, \$347,895 in contributions, and \$1,243,600 in value of church property. A slight gain is also shown in the aggregate of contributions per capita and increase of 2,011 Sunday-schools, 3,638 teachers, and 48,649 pupils.

The Baptists have in the United States 9 theological seminaries, with 74 teachers, 1,018 students, real estate valued at \$1,185,538, and \$2,759,976 of endowments; 103 universities and colleges, with 1,920 professors, 28,620 students, \$17,984,798 of property, and \$18,289,749 of endowments; and 91 academies, with 737 teachers, 12,967 students, \$4,023,022 of property, and \$1,301,115 of endowments.

One hundred and seventeen newspapers and periodicals are published in affiliation with Baptist churches.

The members of the Baptist churches in the United States are thus classified according to sectional and to racial affiliations: Northern Baptists, 1,059,753; Southern white Baptists, 1,628,710; Southern negro Baptists, 1,580,600. Compared with similar returns for 1901, these figures show gains in one year of 3,766 Northern Baptists, 21,339 Southern white Baptists, and 10,742 Southern negro Baptists. Allowances should, however, be made for probable inaccuracies in the count of the negro Baptists.

American Baptist Publication Society.—

The seventy-eighth annual meeting of the American Baptist Publication Society was held in St. Paul, Minn., May 22 and 23. The receipts for the year from sales in the publication department had been \$694,795. In the missionary department \$114,610 had been received from churches, individuals, income from invested funds, and bequests, exceeding the receipts of the previous year by \$5,628; yet through the increase of missionary work and the enlargement of beneficence an additional deficiency of \$6,422 had been incurred, making the total indebtedness \$25,047. The receipts for Bible work had been \$11,941. In addition to these amounts there had accrued to the missionary department \$10,300 in annuity funds, and \$40,000, a special gift, from an anonymous donor. The whole amount received during the year from all sources had been \$939,981. More of the books published by the society had been sold during the past year than in any previous year of its history. Among the publications of

which special mention was made were the American Commentary on the New Testament, with a corresponding work on the Old Testament in course of preparation, and a series of Baptist histories, handbooks, and biographies. Twenty-seven new publications had been issued during the year.

American Baptist Home Mission Society.

—The seventieth annual meeting of the American Baptist Home Mission Society was held in St. Paul, Minn., May 24 and 26. Although the year had closed with a nominal debt of \$13,629, it was regarded as having been one of exceptional prosperity. The total receipts had been \$614,223, of which \$4,212 had come from Sunday-schools and \$2,262 from Young People's Societies. The receipts from legacies had been \$78,348; \$8,150 had been added to the permanent fund and \$40,553 to the conditional fund, while \$67,776 had been put into enlarged facilities for the schools. The expenditure had been greater in consequence of the enlargement of both educational and missionary work; of it \$207,965 had gone for missions and \$110,229 for education. Within the last five years 175 churches which had been aided by the society had become self-supporting. The church at Monterey, Mexico, was approaching that point, and the church at Santiago, Cuba, had voluntarily assumed a part of the support of its pastor. Twelve hundred and seventy-eight missionary laborers and teachers had been supported wholly or in part by the society, viz., 45 in the New England States, 75 in the Middle and Central States, 229 in the Southern States, 878 in the Western States and Territories, 10 in Canada, 20 in Mexico, 1 in Alaska, 6 in Cuba, and 9 in Porto Rico. Three hundred and two missionaries and 13 teachers had labored among the foreign populations (French, Scandinavian, and German), 58 missionaries and 210 teachers among the colored people, 24 missionaries, and 30 teachers among the Indians, 15 missionaries and 12 teachers among the Mexicans, 5 missionaries and 1 teacher among the Cubans, 7 missionaries and 2 teachers among the Porto Ricans, 4 teachers among the Mormons, and 595 missionaries among Americans. The society aided in the maintenance of 33 schools established for the colored people, the Indians, and the Mexicans; besides 7 day-schools for the Chinese, 1 day-school in Utah, 2 in New Mexico, 1 in Cuba, and 2 in Porto Rico; in all, 46 schools. Steady progress had taken place in the general character of the work done in the schools receiving the support of the society. Special emphasis had been placed upon industrial training at several of the schools, and it was believed that superior work in this line was being done. Eighty churches had been aided during the year by gift or loan, or both. The amount of money in the gift fund available for the erection of meeting-

houses had been \$25,511, and this had been distributed among 74 churches.

American Baptist Missionary Union.—The eighty-eighth annual meeting of the American Baptist Missionary Union was held in St. Paul, Minn., May 21 and 22. The financial receipts of the year from all sources had been \$680,518, of which \$385,295 had come in the form of donations and \$115,861 through the woman's societies. These receipts had been sufficient to meet the appropriations for the year's work, and to afford a surplus of \$2,840 to be applied to the reduction of the deficit of \$38,279 brought over from two years before. One hundred and seventy-eight missionaries were employed. The missions in heathen lands returned 112,000 members, and those in "nominally Christian" lands 117,000 members; and 16,823 converts had been baptized during the year. A marked increase was noted in the number of candidates of high qualifications offering themselves for missionary service abroad; and the society was assured of being able to obtain additions to its working force commensurate to the means that would be supplied for supporting new laborers. Twenty candidates were awaiting appointment.

The missions were in Europe, including those in northern and southern France, Germany, Sweden, Spain, Russia, Finland, Denmark, and Norway, and in heathen lands—Burma, Assam, South India (Telugus), China, Japan, Africa, and the Philippine Islands. They returned: Missions in Europe, 1,187 preachers, 1,039 churches, with 117,099 members, and 92,575 pupils in Sunday-schools; missions in heathen lands, 481 missionaries, 1,299 native preachers, with 3,325 native helpers, 1,008 churches, having 111,650 members, and 35,321 pupils in Sunday-schools; giving in all 2,486 preachers, 2,047 churches, 228,749 members, and 127,896 pupils in Sunday-schools. The 16,283 baptisms returned during the year included 7,786 in Europe and 8,497 in heathen lands; and the \$571,447 contributed by the mission churches were made up of \$464,250 contributed by European churches and \$107,197 by those of the missions in heathen lands. Further, the missions in heathen lands returned 1,473 schools, with 37,385 pupils. Ten schools for the higher education, including theological schools, were returned in the heathen field. The figures show an increase for the year of 93 churches, 4,184 baptisms, 15,824 members, 8,173 pupils in Sunday-schools, and \$56,120 in contributions, and a decrease of 23 preachers.

An account was given in the report of the Executive Committee of the conferences the committee had held with representatives of the auxiliaries and the women's societies for the consideration of their relations to one another and of the conclusions which had been reached.

The chairman of the Executive Committee, Mr. C. W. Perkins, gave an address to which much importance was attached, explaining the methods of business of the committee and the manner in which the funds of the society were distributed. The Executive Committee is composed of 15 members, 8 of whom may be ministers, while 7 must be laymen; these members live within a convenient distance of Boston, Mass. With the exception of the two days of the annual meeting of the society, the committee is practically the American Baptist Missionary Union. It has absolute control of all the property of the union, both personal and real. It meets at the office in Boston every two weeks. The executive officers at the rooms consist of the secretaries and the treasurer. The work of the

home secretary is the collecting of funds in the United States, and includes the supervising and directing of the district secretaries, the seeking and examination of candidates for missionary appointment, and all the correspondence which naturally takes place in the United States. The foreign secretary conducts the correspondence with foreign countries. The treasurer attends to the disbursement of money under the direction of the Executive Committee. The accounts of the treasurer in the United States are made up annually on April 1. The accounts for the foreign field are made up on Oct. 1; and the financial year of this country and of foreign countries differ, therefore, by six months. The Executive Committee meets after the adjournment of the general meeting, and considers and prepares a list of appropriations for the coming year, beginning with the 1st of the next October. Into that budget is put every expenditure which can be foreseen or estimated, and the whole is appropriated at one time; and to this amount additions may afterward be made, as emergencies arise, from time to time. Hence, when the treasurer reports a debt on April 1, it does not necessarily mean that he has no money in the treasury, but simply that he has not in hand sufficient money to meet all his payments to the 1st of the next October—six months in advance. A mission treasurer is connected with each one of the missions. When the budget has been made out, the foreign secretary notifies each missionary of the amount which he has at his disposal for all purposes for the coming year, beginning Oct. 1, and the treasurer notifies each of the mission treasurers what amount he is authorized to pay to each missionary. The Missionary Union becomes thus, in effect, a foreign banking-house. It keeps its own account in London, draws its own bills of exchange, and does its own financing. The credit of the union is unquestioned. The invested funds of the union consist of \$600,000, which were given on the condition that they should be invested and the income only expended; and \$380,000 subject to annuities. The union owns real estate in nearly every country in which it works, having an estimated total value of from \$800,000 to \$1,000,000. In educational work the union has confined itself as far as possible to the preparation of ministers, native workers, and evangelists in the lands in which it labors. Theological schools, colleges, and preparatory schools are established where they seem to be absolutely necessary and can be advantageously used to that end. It has 7 theological schools and 4 colleges. In many countries the union is obliged to print its own literature; and in some of these the written and printed language, the inhabitants having never had such, was made by its missionaries. Medical work and hospitals are conducted in subordination to the missionary and spiritual work. In all its operations the Executive Committee is simply seeking to bring the religion of Jesus Christ to the knowledge, and if possible to the acceptance, of those people who have not heard it.

Relations of the Woman's Societies.—At the mid-year meeting of the boards of all the Baptist missionary societies (Northern), held in New York in December, 1901, a joint committee was appointed, consisting of representatives of the American Baptist Missionary Union and the four Woman's Baptist Foreign Missionary Societies of the East, the West, of Oregon, and of California, to consider whether a closer relationship could be established between the parent organization and its auxiliaries. A pre-

liminary meeting of this committee was held in Boston, Jan. 28, 1902, at which the three Western societies were represented by letters; and after further correspondence a final meeting was held Feb. 19, at which the three larger societies were represented by delegates, and those of California and Oregon by letter. A report was unanimously adopted at this meeting, and afterward approved by the board of the societies concerned, in which the absolute need of "woman's work for women" was asserted. The belief was expressed "that the educational work in missions which the woman's societies are doing in our own country through the instruction of children in bands and Sunday-schools, the preparation and distribution of literature, and the stimulation of a more thorough study of missions by our circles of women and girls, with their training in habits of benevolence, is a sufficient reason for the existence of these societies, and we would deprecate any change which might interfere with their sense of individual responsibility." A continued separate organization of the woman's societies of the East and the West was regarded as desirable, but a union of the societies of Oregon and California with that of the West was advised. Respecting the unity of the work of all the societies, the report continues: "We consider that there is already one treasury for the foreign work, we regard the woman's societies in the light of helpful and efficient auxiliaries, whose several treasuries are only places of deposit for funds to be used in the foreign mission work, which funds are duly sent to the treasury of the Missionary Union, and are finally administered by the Executive Committee of the union. The title to all property in foreign countries, acquired by the payment of money collected by the woman's societies, is held by the Missionary Union; all women candidates are appointed and their fields are designated by the Executive Committee, and their salaries are paid by order of the Executive Committee through the treasury of the Missionary Union; every appropriation for the foreign work of the woman's societies is submitted to the Executive Committee, and can become operative only with their approval. The woman's societies also appropriate large sums for educational, medical, and evangelistic work, at the request of the Executive Committee, to support work where the woman's societies have no representative." The woman's societies method of raising funds "quietly among the women through collectors and by means of envelopes or mite-boxes" was commended as preferable to that of making promiscuous appeals to the whole congregation.

Joint Conference of Societies.—A joint conference of the American Baptist Missionary Union, the Publication Society, and the Home Mission Society was held at St. Paul, Minn., May 12, to hear reports and consider questions concerning the relations of the three societies. The report of the Commission on Systematic Benevolence, which was referred to this meeting from the several societies, related the history of the work of the commission, and closed with a recommendation that it be discontinued; whereupon the presidents of the several societies were requested to appoint a committee of 7 members for each on Christian stewardship for three years, whose duty it shall be to foster the work already done by the Commission on Systematic Benevolence, and whose distinctive work shall be to supervise a campaign of education in the fundamental principles of Christian stewardship among the churches. Contingent upon its secur-

ing a sufficient guarantee fund for three years by special subscription this committee was authorized to appoint a superintendent to give his whole time to the work, but who should in no respect be regarded as a special representative for any one of the societies. It was decided that in connection with the anniversaries each year, a session should be devoted to hearing the annual report of this committee and to the consideration and discussion of the whole question of Christian stewardship. The committee of 3 members from each of the 3 societies on collecting agencies reported concerning the investigations they had made, recommending the continuance of the policy of the employment of district secretaries, but adversely to the combination of the offices, so that one man shall represent the 3 organizations in a given territory, while suggesting that an experimental trial of the plan might be made in a selected district. The plan called the "wheel plan," under which causes are each exclusively presented in rotation, in a given territory, at proper intervals, was unanimously approved by the committee and recommended by the conference. Other recommendations of the committee related to conferences between the several secretaries and the committees of arrangement of State conventions and local associations, looking to avoidance of congestion and friction, and to the plan of appointing associational secretaries as the local advisers and helpers of the district secretaries. The 3 societies and the 4 woman's missionary societies were advised to appoint a committee to formulate a plan for combining all their publications in a single monthly and a bulletin, each representing all the denominational missionary interests—this committee to report in 1903. By agreement of the 3 societies a committee of 15 was provided for, to consist of 7 ministers, 5 laymen, and 3 women, to whom all matters respecting the relations between the societies shall be referred, whose duty it shall be to ascertain such facts as whether there be any lack of proper adjustment and proper cooperation as to fields of labor, collecting and other agencies, and methods of work; whether there may be improvement in their mutual relations for more harmonious, effective, and fruitful service; whether changes are needful or desirable in their forms of organization, in their constitutions, by-laws, agencies, and methods of work; and if changes are needed, recommending what they shall be.

Following the recommendations of a conference held in 1901 in connection with the anniversaries at Springfield, Mass., the constitutions of the 3 principal societies were so changed as to make the qualifications for membership in them alike.

Woman's Societies.—The twenty-fifth annual meeting of the Woman's Baptist Home Mission Society was held in St. Paul, Minn., May 19 and 20. The occasion was celebrated as the "silver anniversary" of the society, and the proceedings were marked by the reading of historical papers and addresses, relative to the general organization, the State and local branches, and the several fields of work. The labors of the society were in practise distinctively directed to the women and children, with the purpose of Christianizing and consequently elevating the homes of the people. The agencies it used were house-to-house visitation, schools for children, children's meetings, Bible bands, women's (or mothers') meetings, parents' conferences, and training classes for workers. The work had been carried

on during the quarter of a century now completed at a total cost of \$1,122,654; in addition to which goods and supplies valued at \$223,173 had been distributed. The receipts for the past year had been \$88,561. One hundred and twelve centers of work were established in 34 States and Territories of the United States, 3 states of Mexico, Cuba, Porto Rico, Canada, among Americans in frontier States, among the Indians, and among Chinese, Syrian, Bohemian, Jewish, Scandinavian, and negro populations in the United States. The woman's society in northern California had given up its separate organization and become one with this society.

The twenty-fourth annual meeting of the Woman's American Baptist Home Mission Society was held in Boston, Mass., May 7 and 8. The receipts for the year had been \$34,733 for the general work and \$4,798 for the Alaskan work; but deficiencies were left in the accounts of both branches amounting together to \$3,094. The larger portion of this sum was obtained during the meetings, whereby the debt was reduced to \$805. The labors of the society were prosecuted among the negroes of the South, among the Indians, among foreign populations, and in Porto Rico and Alaska.

The thirty-first annual meeting of the Woman's Baptist Foreign Missionary Society of the West was held in St. Louis, Mo., May 6 and 7. The receipts for the year had been \$42,000 for the general work of the society and \$1,700 for the home for missionaries' children. The society had under its care 220 schools, 231 teachers, 6,771 pupils, and 100 Bible women, 2 hospitals, and 2 dispensaries, in which 9,818 patients had been treated, with 387 outside patients. The report of the joint Committee on the Relation of the Missionary Union and its Auxiliary Woman's Societies, recommending the continuance of woman's work as now carried on, was approved, and the Woman's Baptist Missionary Societies of California and Oregon were invited to unite organically with this one.

Young People's Union.—The Baptist Young People's Union of America held its eleventh annual meeting in Providence, R. I., July 10 to 13. Mr. John H. Chapman, of Illinois, was chosen president for the year. The report of the Board of Managers showed that all outstanding obligations, including a debt of \$20,000, had been paid. There had been a total return in the past year of 10,927 examination papers, and in ten years of 108,189. The net receipts for the year had been \$17,982, besides \$40,196 in the business department of the Baptist Union. The assets amounted to \$33,271.

Southern Baptist Convention.—The Southern Baptist Convention met in its forty-seventh annual session at Asheville, N. C., May 8. The Hon. James P. Eagle, ex-Governor of Arkansas, was chosen president. The report (eleventh) of the Sunday-School Board showed that the total receipts for the year had been \$89,345, or \$10,964 more than in the preceding year. The reserve fund had been increased by \$6,000, and stood at \$50,000, safely invested. Twelve thousand dollars additional had been set aside to start a building fund, and the house and lot in which the board transacted its business were included in the table of assets. The appropriations for the year aggregated \$15,886, not including the missionary boxes. By the "Book Endowment Plan" gifts of \$500 constitute a fund, bearing the donor's name, to be applied to publishing books, which is used continuously in the issue of new books as fast as it is restored

by sales. The list of Sunday-school periodicals had been enlarged. An annual lecture course on Sunday-school work was provided for at the Louisville Theological Seminary. The Bible department was increasing in importance every year. An agency for the circulation of mission literature was maintained by this board and the Home Mission Board jointly at Baltimore, Md. The Home Mission Board had received \$98,950 cash during the year, an increase of \$12,045 over the receipts of the previous year, besides special gifts, subject to annuities, of \$1,500. The church building and loan department, established about two years previously, had received less than \$100 additional to the \$4,110 received during the first year of its operation. It had made a number of loans, of from \$150 to \$400 each, for periods of from three to five years. Work in the mountain regions was done in cooperation with the State mission boards, mainly in the establishment and maintenance of schools, which were mostly in the charge of preachers serving in the county adjacent, and of other teachers. Thirteen schools were maintained, and others would be established as circumstances might allow. In cooperative work among the negroes the board had expended \$1,917 in the States of Georgia, Kentucky, Missouri, North Carolina, and Virginia, the American Baptist Home Mission Society and the State boards paying like sums. Sixteen missionaries had been employed, who had held 116 institutes and reported 408 baptisms. The board had also cooperated with the National Baptist Convention (colored) in the support of two general missionaries, expending \$1,350. Five stations besides Havana were maintained in Cuba, with 5 missionaries and 8 teachers. The year's receipts of the Foreign Mission Board had been \$173,849, and the board entered the new year with a balance in bank of \$13,379. The missions in China, Japan, Africa, Mexico, Italy, and Brazil returned 139 churches, with 171 outstations, 115 missionaries, 38 ordained native preachers, 133 native helpers, 7,821 members, with 1,439 baptisms during the year, and native contributions amounting to \$18,356. Two training-schools for young preachers were maintained in China, 1 in Africa, 1 in Italy, 1 in Mexico, and 2 in Brazil. Publication societies were established at Rio, Brazil, and Canton, China. Twenty of the 25 missionaries ordered sent out by the previous convention had been sent, and 6 more were under appointment. The Southern Baptist Theological Seminary reported a prosperous year. While other seminaries were complaining of a falling off in the number of students, this institution had gained 12, and now had 243. The report of the Committee on Cooperation, which was unanimously adopted, recommended that associational members to the convention be regarded as messengers to their associations and requested to represent the work of the convention; that a statistical secretary be appointed; and that the secretaries of the State boards and the State boards constitute a committee on cooperation to make suggestions for uplifting the people of the South.

The contributions of the Woman's Missionary Union Auxiliary to the Southern Baptist Convention had been \$54,776 in cash and \$33,153 in boxes.

Education Society.—The American Baptist Education Society, holding its session for 1902 in connection with the meetings of the Southern Baptist Convention, met at Asheville, N. C., May 8. The report showed that grants had been made during the year to 10 institutions of \$127,-

\$400 in all, conditioned upon \$346,000 more being secured; 11 institutions had successfully completed their efforts to secure the supplementary amounts required, reporting a total of \$476,000 pledged; and payments had been made by the society to 15 institutions, of \$67,955—a sum which was supplemented by \$213,942 collected by the institutions. Within the past twelve years the society had paid in grants to institutions \$1,069,522, while the aggregate of collections reported (including \$400,000 by the University of Chicago) was \$2,081,625; making the aggregate increase \$3,151,148. A favorable report was made of the meeting of the trustees of the Southern Baptist Theological Seminary on the admission of woman missionaries as students of the seminary. Two hundred and fifty students had matriculated in the institution, 50 of them being from outside the bounds of the Southern Baptist Convention.

Negro Baptists.—The negro Baptists numbered in 1860 not more than 400,000; but at the end of 1901 they had increased till their number was returned at 1,800,000, and 1,600,000 was regarded as a safe estimate, after exaggerations were allowed for. They have about 16,000 churches and 10,500 ordained ministers, many of the ministers serving several churches. Their numbers in the States where they are most numerous are: In Alabama, 182,075; in Texas, 137,639; in North Carolina, 140,205; in South Carolina, 140,107; in Mississippi, 200,118; in Georgia, 221,442; in Virginia, 227,208. During 1901 75,000 baptisms were reported and estimated among them. Marked intellectual progress had taken place among them during the past forty years. While in 1860 the minister who could read the Bible was an exception, in 1900 the exception was the man who could not read it. In the cities and large towns generally there were able, cultivated ministers, who preached to intelligent congregations meeting in excellent and well-furnished houses of worship, while the Sunday-schools were studying the International lessons; but in the rural regions progress was slow and the conditions were not such as were desirable. But the general eagerness of the negro Baptists to provide for the education of their children was seen in the fact that nearly all the 26 schools aided by the American Baptist Home Mission Society were crowded to overflowing. The enrolment in these and in some other schools not receiving aid from the society was about 7,500. The negro Baptists have well-organized State conventions and local associations, through which a considerable missionary and educational work is done. The National Baptist Conference, organized about 1886, has a foreign mission board, which in 1901 raised about \$6,000 for all purposes; a home mission board, with its own subordinate publication board that had been at work about five years; and an educational board of about the same age, which has not as yet undertaken any distinctly school work. Another body, the Lott-Carey Convention, in some of the Atlantic coast States, in 1901 raised nearly \$3,000 for missionary work in Africa. Negro Baptist conventions in 6 States have been in cooperation with the American Baptist Home Mission Society and the Mission Board of the Southern Baptist Convention, primarily for the benefit of ministers who have had only meager educational advantages. This work had been very beneficial. Plans for broader cooperation were now under consideration.

The colored National Baptist Convention met in Birmingham, Ala., Sept. 17. The Rev. E. W.

Morris, D. D., presided. Prominence was given to the foreign mission work, and much interest was manifested in it. The National Baptist Publishing House reported a prosperous and profitable work and success in the independent publication of its own literature. One of the sessions of the meeting, at which an address was delivered by Mr. Booker T. Washington, was marred by a disaster resulting from a panic, in which 104 persons of the crowded audience were killed and 9 others injured.

The annual meeting of the Lott-Carey Foreign Missionary Society, held in Washington, D. C., in September, was attended by more than 150 delegates. The financial reports were satisfactory and indicated a flourishing condition.

Baptist Convention of Ontario and Quebec.—The annual Convention of the Baptist Churches of Ontario and Quebec met in Montreal, Oct. 15. In his annual address the retiring president, A. McNee, Esq., spoke of the material prosperity of the churches, of the educational advantages they enjoyed with their 6 institutions for the higher learning, of the importance of a clear, candid, large, liberal, and symmetrical presentation of their distinctive doctrines, avoiding narrowness and dogmatism, and, in view of the movements toward organic union in other families of churches, of the desirability of making an earnest effort to "consolidate all those bodies more or less intimately related to the Baptists, and whose differences are superficial rather than vital." The Rev. J. L. Gilmour, B. D., was chosen president of the convention. The educational report related to the condition of McMaster University, with Woodstock and Moulton Colleges, in which 500 students were enrolled. The current account of these institutions showed a surplus of \$2,523 in excess of expenditure. The Forward Movement fund showed a debit balance of \$14,083, against which there were unpaid subscriptions, estimated to be good, amounting to about \$8,000. The other institutions of higher learning were Acadia College, Nova Scotia (under the jurisdiction of the Convention of the Maritime Provinces), Feller Institute in Quebec, and Brandon College in Manitoba. The Publication Board reported a total of \$42,404 assets. A net profit of \$502 was returned, and had been distributed among certain benevolent causes. The Sunday-School Committee returned 36,450 enrolled pupils, with an average attendance of 24,998, with 4,472 officers and teachers, and contributions of \$4,287 to various missions and \$12,897 for school purposes. Of the 427 schools, 16 were mission schools and 2 union schools. The advisability of appointing a superintendent of Sunday-school work was recommended by the convention to the consideration of the boards interested in this subject, and to the committee. The Church Edifice Board, with a permanent fund of \$9,500, had received \$2,718, and had made loans amounting to \$2,385. During its history it had helped 91 churches with loans aggregating \$43,000. Four churches had repaid their loans in full during the year. The total disbursements of the Committee on Western Missions (Manitoba, the Northwest, etc.) had been \$6,337. Seventy-three men were engaged in work in the missions, which returned 98 churches and 300 preaching stations. Fourteen German and 6 Scandinavian churches were mentioned. The Board of Home Missions had assisted 124 pastors and 50 students, who had been serving 290 churches and preaching stations. The churches had given \$10,297 to missions, returning, according to the representations of the report, 44 per cent. on an annual invest-

ment in them of \$23,044. Eight new churches had been or were being erected, 5 had declared for self-support, 22 had reduced their applications for aid, 12 new churches had been organized during the year, and 726 baptisms were returned. The total receipts of the board had been \$27,980, and the expenditures \$30,382. The report on the state of religion showed that in all the churches 18 ministers had been ordained during the year, 2,201 persons had been baptized, and that the present number of members was 43,940, showing a net gain of 689 members. Throughout the denomination there had been 1 baptism to every 17 members. The churches had expended \$390,865, of which \$313,845 were on work at home and \$77,020 on work abroad; showing an average of \$7.22 per member on work at home and \$1.76 on work abroad, or a total average of \$8.98 per member; besides which special contributions had been made to extraordinary objects.

The main strength of the convention is in Ontario and the Western provinces. In Lower Canada the Baptists have 31 English-speaking churches, with 2,100 members. Of the 19 churches comprising the Eastern Association, 11 are assisted by the Home Mission Board. Besides the English-speaking churches there are 10 French churches, with about 500 members, making the whole number of members in the province of Quebec about 2,600.

Convention of the Maritime Provinces.—The annual Baptist Convention of the Maritime Provinces met in Yarmouth, Nova Scotia, Aug. 23, the sessions being preceded by a ministers' institute on the preceding day. The Rev. Dr. E. M. Saunders was chosen president of the convention. A communication was received from the Free Baptist General Conference declining to consider favorably the proposals of the Baptist convention to cooperate in the work of education and of foreign missions. The Foreign Mission Board reported that its total receipts had been \$18,370, of which \$4,862 had come from the churches, \$8,875 from the Ladies' Aid Societies, and the rest from invested funds and other sources. The accounts showed a deficit of \$1,379 for the year, making an accumulated deficit of \$5,627. Additional contributions of \$1,800 were made to the foreign mission fund during the sessions of the convention, making it possible to show a reduction of the deficit. The report of home missions showed but little if any advance. Favorable reports were made by the university and its associated institutions, particularly by the Ladies' Seminary, the faculty of which was to be enlarged. A decline was noticed in the number of students preparing for the ministry in attendance at the university. Additional contributions were reported to the fund of \$60,000, upon the completion of which a gift of \$15,000 was promised to Acadia College by Mr. John D. Rockefeller. The general receipts for all purposes showed an increase for the year of \$2,000 in Nova Scotia, but a decrease of more than \$1,000 in New Brunswick and Prince Edward Island. More than half of the contemplated Century fund of \$60,000 had been completed. A commission of 6 brethren, 2 in each province, was constituted to have charge of the raising of funds for all the denominational objects. Estimating for non-reporting churches, the number of members was returned as more than 51,000, and 1,598 baptisms were reported.

Baptists in Great Britain.—From the British Baptist Handbook for 1902 it appears that the gain in membership of the British Baptist churches for 1901 was 7,330, compared with

about 12,000 the year before, making the present total membership 372,998. The gain in Sunday-school attendance was 4,000, giving a total of 532,219 pupils. The triennial statistics of Baptists in the world showed 4,454,699 Baptists church-members in all, making a gain in three years of more than 300,000, and of 748,000 in the last six years. Of this total gain in the latter period, 524,000 were in the United States, 41,000 in Great Britain and Ireland, and 183,000 in the rest of the world. There were about 280,000 Baptist church-members in the British colonies. Of these, 113,826 were in India, or about one-seventh more than in Canada.

The Baptist Union of Great Britain and Ireland met in its annual spring session April 27. The president for the year, the Rev. J. R. Wood, opened the meetings with an address in which he spoke of the place and influence of the minister and the danger to be apprehended from the presence of the commercial spirit in the Church. The report of the council referred to an increase of 7,320 members and 38 pastors in charge as having taken place during the year. The receipts as figured up in the cash summary had amounted to £95,012, of which £79,672 had been on account of the Twentieth Century fund. The expenditure had been £12,500. An increase of £3,426 appeared in the Home Mission fund, by which 109 churches in 21 associations, and 37 mission stations, with 79 mission pastors in all, had been aided. The aided churches had 5,560 communicants, with an average attendance of 9,095 persons, and 8,943 children in the Sunday-schools. The responses to appeals in behalf of the Annuity fund had been generous, and all annuities would be paid in full. The sum total of cash contributed and promises made to the Twentieth Century fund (intended to be £250,000) to the day of the meeting of the assembly had been £235,134; while £6,000 more had been promised contingent upon the whole amount being raised.

The capital of the Baptist Building fund stood at £54,521. During the year 41 churches had received grants, varying from £40 to £600 in each case, to the extent of £30,040. The loans repaid amounted to £12,389. Forty-four churches were waiting for loans to an aggregate amount of £15,220, or more than the probable income for the next fifteen months.

A resolution respecting the education bill protested against the measure as one which would lower the standard of national efficiency and perpetuate and extend the injustice of the appointment by private managers of the teachers of public schools, whose stipends it was proposed to pay entirely out of the public funds. The bill, in its main provision, was characterized as a further endowment of the Established Church, and the union would offer it a determined and unceasing opposition. Another resolution called on all friends of Sunday closing of public houses to press the demand for a comprehensive measure which would extend the blessing to the whole of England. A proposition for the establishment of a Baptist Union Sustentation fund, drawn up by the late Mr. William Chivers, was submitted to the assembly, and was referred to the committee for consideration. The plan contemplates the inclusion in the fund of the existing augmentation and home mission funds of the union; and the object of the fund is declared to be "to secure a minimum salary to all duly accredited ministers whose churches are connected with the fund, and to make provision for home evangelization in new or needy districts." The last business of the meeting was the announce-

ment of the completion of the Twentieth Century fund of £250,000, the final subscriptions having come in since the opening of the assembly.

The annual meetings of the Baptist Missionary Society were held in London, April 29 and May 1. The report represented that the purpose determined upon at the centenary meeting of the society several years before, to raise the annual income to £100,000, had never been carried out, but they had been forced to face each year a deficit of £10,000, which had to be met by special subscriptions. The deficit this year was £9,909, toward the removal of which subscriptions were taken during the meeting, whereby it was reduced to £3,700.

The general receipts of the Zenana Mission had amounted to £11,035, and the expenditures to £10,705. The mission staff numbered 63 missionaries in India and 5 in China. In India, visits were paid regularly to about 3,000 zenanas, 1,500 zenana pupils were under instruction, and 97 schools were taught, with nearly 4,000 pupils. The missionaries returning to China had been warmly welcomed back by the Chinese Christian women.

The Bible Translation Society returned a total income of £1,554, and a balance in hand of £101 after meeting all expenses. Progress was reported in the preparation and revision of versions of the Scriptures in Bengali, Oriya, Cingalese, and Dualla and other languages of the Congo.

The autumnal assembly of the union was held in Birmingham, Oct. 6-9, Tuesday, Oct. 7, being given to the meeting of the Baptist Missionary Society. At this meeting a farewell was given to 10 missionaries returning to their fields and 4 new missionaries going out; and a resolution was adopted pledging cooperation with the visitation of the churches which had been instituted for the purpose of securing sufficient funds to maintain an equilibrium between income and expenditure, and of obtaining further support to meet the new and promising openings that were presenting themselves and the increasing demands for reinforcements from fields already occupied. The address of the President of the Union, the Rev. J. R. Wood, was on The Church and the Nation. The treasurer of the Twentieth Century fund of £250,000 (which had all been subscribed) reported that the amount of £204,000 in cash had been received for it—£173,000 of the sum from England. A considerable additional amount was expected from Wales, and some from England. The education bill was the subject of an active discussion, and resolutions were unanimously adopted declaring that the members of the assembly maintained the objections against the bill offered in the spring meeting of the union for the following reasons:

"1. That the bill seeks to confirm and to perpetuate clerical control of elementary schools.

"2. That it provides no effective remedy for the grievous wrong which is done to non-conformists and other parents in 7,470 parishes where the only public elementary schools are those whose avowed object is the training of the scholars in the principles of the Established Church.

"3. That in the case of 11,777 Church of England and 1,045 Roman Catholic schools, while the entire cost of teaching staff and furniture and apparatus would be defrayed from the public purse, denominational managers would appoint and dismiss teachers and prescribe any form of religious instruction which they pleased; and

"4. That the bill violates the fundamental

principle of the Constitution that taxation shall be accompanied by popular control. They regard the bill as the product of an alliance between the Government and the High Anglican party and the Roman Catholic hierarchy, having for its main purpose the clericalizing of education at the cost of the just rights of all Free Church citizens and to the injury of Protestantism and non-conformity; and since this attempt occurs at the end of a series of sectarian aggressions in our national educational legislation, and as a fresh and unprovoked disturbance of the present arrangement, they are resolved to use their political influence to secure a system of national education in harmony with the principles of justice and efficiency, and in which every public elementary school shall be unsectarian and placed under the management of a board of which women may be members, and no citizen, teacher, or scholar be placed at any legal disadvantage on account of religious opinion.

"They now declare their solemn determination not to submit to this measure if it becomes law and to render it unworkable by every lawful means in their power. They are not surprised that very many of the opponents of the bill have resolved to suffer restraint of goods as a protest against this obnoxious measure, rather than pay the school rate, and they are for their own part resolved to adopt this course." A committee was appointed to consider the question of a sustentation fund. Addresses were delivered and papers read during the meetings on the problem of The Mid-Town Church and the growing alienation of the working classes from places of worship, The Problem of Suburban Work, The Missionary Dispensary, The Rural Baptist Church, Lay Preaching Power; and a public evening meeting was devoted to the Exposition of Free Church Principles.

Baptist Jubilee in New Zealand.—Jubilee celebrations of the foundings of the first Baptist churches in the colony were held in New Zealand early in the year. The Baptist Union was not formed till 1882. The returns from the associated churches showed that there were 34 churches in the union, with 3,679 members, and sitting accommodations for 9,790 persons.

BELGIUM, a constitutional, representative, hereditary monarchy in western Europe. The legislative power is vested in the Senate and the Chamber of Representatives. Senators are elected for eight years, one-third by provincial councils and two-thirds by the direct vote of the people. Half the Senators retire every four years. The Chamber contains 152 members, one to 40,000 inhabitants, elected for four years. Every male citizen twenty-five years of age possessing full civil rights and domiciled for one year in his commune has a vote. If he is thirty-five years of age, married or a widower with children, and pays 5 francs in direct taxes, he is entitled to 2 votes. If he possesses real property of the value of 2,000 francs or investments in the public funds yielding 100 francs a year, he may cast 2 votes. If he is a graduate of an institution of higher education or holds or has held public office or practises a profession implying the possession of higher education he has 2 votes; and if, in addition, he is the head of a household or an owner of property or public stocks, he has 3 votes. There were 1,452,232 individual electors in 1900 who cast 2,239,621 votes for Representatives and 1,227,720 who cast 1,994,153 for Senators. The number of Representatives is determined after each census, and the Senate consists of half their number.

The reigning sovereign is Leopold II, born April 9, 1835, who, on Dec. 10, 1865, succeeded his father, Leopold I, a prince of Saxe-Coburg, who was elected King of the Belgians by a National Congress on June 4, 1831, after the secession on Oct. 4, 1830, of Belgium from the Netherlands. A treaty was signed on Nov. 15, 1831, by Austria, Great Britain, Germany, Russia, guaranteeing the perpetual neutrality and inviolability of Belgium. The heir to the throne is Philippe, Count of Flanders, born March 24, 1837, the king's only brother, who has one son living, Prince Albert, born April 8, 1875.

The Council of Ministers appointed on Aug. 5, 1899, was composed as follows: President of the Council and Minister of Finance and of Public Works, Count de Smet de Naeyer; Minister of Foreign Affairs, Baron P. de Favereau; Minister of Justice, M. van den Heuvel; Minister of Agriculture, Baron van den Bruggen; Minister of the Interior and of Public Instruction, M. de Trooz; Minister of War, Major-Gen. A. Cousebant d'Alkemade; Minister of Railroads, Posts, and Telegraphs, M. Liebaert; Minister of Industry and Labor, Baron Surmont de Volsberghe, who resigned on Aug. 20 and was succeeded by Gustave Francotte.

Area and Population.—The area of Belgium is 11,373 square miles. The population in 1902 was 6,693,000. The census of that date makes it 6,693,810, or 589 to the square mile, an increase of 624,489 in ten years. The number of marriages in 1899 was 55,765; of births, 194,268; of deaths, 126,963; excess of births, 67,305. The number of divorces in 1899 was 563. The number of immigrants in 1900 was 29,231, and of emigrants 25,064; net immigration, 4,167. The population of the principal towns on Dec. 31, 1900, was as follows: Brussels, including suburbs, 561,782; Antwerp, 285,600; Liège, 173,708; Ghent, 160,949; Mechlin, 56,013; Verviers, 52,203.

Finances.—The ordinary revenue of the Government in 1899 amounted to 483,372,000 francs, and the ordinary expenditure to 570,442,000 francs. In 1900 the ordinary revenue was 491,905,000 francs. For 1902 the budget estimate of revenue was 489,040,050 francs, of which 26,438,000 francs are derived from property taxes, 21,629,000 francs from personal taxes, 9,000,000 francs from trade licenses, 1,600,000 francs from mines, 43,355,806 francs from customs, 68,725,640 francs from excise, 2,902,000 francs from various taxes, 30,200,000 francs from registration and other fees, 19,720,000 francs from succession duties, 8,000,000 francs from stamp-duties, 913,000 francs from fines, 2,105,000 francs from rivers and canals, 204,370,000 francs from railroads, 10,000,000 francs from telegraphs, 15,910,230 francs from posts, 1,510,000 francs from steamboats, 2,985,000 francs from domains and forests, 14,999,300 francs from profits of the Bank of Belgium and other chartered enterprises, and 4,677,074 francs from repayments. The total expenditure for 1902 was estimated at 488,344,403 francs, of which 133,781,107 francs were for interest and sinking-fund of the public debt, 5,115,276 francs for the civil list and dotations, 26,791,400 francs for the Ministry of Justice, 3,283,988 francs for the Ministry of Foreign Affairs, 30,160,181 francs for the Ministry of the Interior and Public Instruction, 12,412,756 francs for the Ministry of Agriculture, 16,448,800 francs for the Ministry of Industry and Labor, 160,327,494 francs for the Ministry of Railroads, Posts, Telegraphs, and Telephones, 55,205,371 francs for the Ministry of War, 34,498,820 francs for the

Ministry of Finance and of Public Works, 7,334,210 francs for the gendarmerie, and 2,076,000 francs for repayments, etc.

The national debt on June 30, 1901, amounted to 2,650,898,150 francs, of which 2,428,111,982 francs are loans raised at 3 per cent. interest, 2,826,536 francs represent the capitalized value of annuities, and 219,959,632 francs are the share of Belgium in the old debt of the United Netherlands, a perpetual debt on which 2½ per cent. interest is paid. The loans were raised almost entirely for the building of railroads and other useful and remunerative public works. They are redeemable by means of a sinking-fund. The revenue of the provincial administrations in 1898 was 18,819,013 francs, and expenditures 15,938,019 francs; provincial debts, 32,207,082 francs. The ordinary revenue of communes amounted to 118,742,538 francs, and expenditure to 117,144,676 francs; the extraordinary revenue to 59,278,223 francs, and expenditure to 62,172,216 francs.

The Army.—The standing army is raised partly by conscription, to which every Belgian is liable at the age of twenty, and partly by voluntary enlistment. The strength of the army on the peace footing in 1902 was 267 staff and superior officers, 1,921 officers, and 27,788 men in the infantry, 370 officers and 5,770 men in the cavalry, 633 officers and 8,682 men in the artillery, 152 officers and 1,703 men in the engineers, 78 officers and 963 men in the administrative departments, 210 surgeons, 41 veterinarians, and 71 officers and 2,903 men in the gendarmerie; total, 3,743 officers and 47,809 men, with 10,879 horses. The infantry soldiers carry Mauser magazine rifles of the model of 1889, of 7.65 millimeters caliber, holding 5 cartridges. The field-artillery have 204 Krupp breech-loading steel guns of 8.7 centimeters bore in the mounted and 7.5 in the horse batteries. Conscripts are allowed to furnish substitutes, which the Ministry of War provides on the payment of a maximum price of 1,600 francs. The nominal term of service is eight years in the active army and five years in the reserve. Unlimited leave is given after service with the colors for twenty-eight to thirty-six months. The war strength of the army is 143,000 men, with 28,600 horses. It is proposed to increase the strength to 180,000 men by shortening the term of service.

Commerce and Production.—Of the total area of Belgium 65.06 per cent. is cultivated, 17.70 per cent. is forest, and 17.24 per cent. is waste, marsh, river, road, and building and mineral land. Less than 19 per cent. of the people are dependent on agriculture. The production of wheat from 180,377 hectares in 1899 was 3,816,777 hectoliters; of barley from 40,242 hectares, 1,402,871 hectoliters; of oats from 248,693 hectares, 10,101,950 hectoliters; of rye from 283,375 hectares, 6,543,152 hectoliters; of potatoes from 184,690 hectares, 33,246,046 hectoliters; of sugar-beets from 54,099 hectares, 18,068,318 quintals; of other beets from 40,561 hectares, 17,383,656 quintals; of tobacco from 2,148 hectares, 34,067 quintals. The quantity of hops gathered was 63,911 quintals. The annual value of forest products is estimated at 22,000,000 francs. The value of quarry products in 1899 was 55,448,745 francs. The quantity of iron ore mined in 1899 was 201,445 tons, valued at 1,073,100 francs; the quantity imported from Luxembourg and other countries was 2,621,336 tons. There were 125,258 persons employed in the coal-mines, which produced 22,072,000 tons, valued at 274,444,000 francs. The production of pig iron was 1,024,576 tons, valued at 74,404,000 francs; of manufac-

tured iron, 475,198 tons, valued at 76,437,000 francs; of steel ingots, 731,249 tons, valued at 76,521,000 francs; of steel rails, 633,950 tons, valued at 90,154,000 francs. The value of zinc smelted in 1899 was 74,629,000 francs; of silver, 15,381,000 francs; of lead, 5,931,000 francs. The production of raw sugar was 244,722 tons; of refined sugar, 67,605 tons; of spirits, 678,460 hectoliters. The catch of cod, herring, etc., was valued at 4,537,998 francs.

The value of the general commerce in 1900 was 3,594,425,067 francs for imports and 3,297,509,775 francs for exports. The imports by sea amounted to 1,698,624,895 francs; by land and river, 1,895,800,172 francs; general exports by sea, 1,406,988,704 francs; exports by land and river, 1,890,521,071 francs. The imports for domestic consumption were 2,215,700,000 francs in value; exports of Belgian produce and manufacture, 1,922,900,000 francs; transit trade, 1,374,600,000 francs. The imports of cereals for domestic consumption in 1900 were valued at 297,872,000 francs; of textile materials, 214,904,000 francs; of resins and bitumen, 92,873,000 francs; of lumber, 85,515,000 francs; of minerals, 77,259,000 francs; of chemical products, 72,401,000 francs; of coal, 70,486,000 francs; of hides and skins, 64,696,000 francs; of machinery, 54,861,000 francs; of rubber, 52,057,000 francs; of drugs, 47,051,000 francs; of oil-seeds, 46,900,000 francs; of diamonds, 40,256,000 francs; of cotton goods, 37,079,000 francs; of colors and dyes, 35,904,000 francs; of coffee, 31,587,000 francs; of tallow, 30,557,000 francs; of wine, 30,251,000 francs; of yarns, 29,930,000 francs; of copper and nickel, 27,536,000 francs; of iron, 26,746,000 francs. The special exports of textile fibers was 112,235,000 francs in value; of coal, 111,796,000 francs; of linen and other yarns, 79,406,000 francs; of railroad cars, 78,601,000 francs; of glass, 76,840,000 francs; of wrought iron, 75,656,000 francs; of cereals, 65,413,000 francs; of raw sugar, 59,520,000 francs; of machinery, 57,711,000 francs; of zinc, 49,617,000 francs; of hides and skins, 47,856,000 francs; of chemical products, 44,343,000 francs; of cut diamonds, 43,005,000 francs; of rubber, 41,248,000 francs; of fertilizers, 34,183,000 francs; of minerals, 33,451,000 francs; of coke, 32,736,000 francs; of woolen yarn, 32,536,000 francs; of cotton goods, 30,844,000 francs; of horses, 29,361,000 francs; of colors and dyes, 29,172,000 francs; of resins and bitumen, 28,712,000 francs.

The special imports from and exports to the principal foreign countries in 1901 were valued in francs as follows:

COUNTRIES.	Imports.	Exports.
France.....	875,346,000	426,092,000
Germany.....	323,890,000	426,564,000
Great Britain.....	300,856,000	359,054,000
Netherlands.....	196,381,000	217,903,000
United States.....	266,674,000	76,860,000
Russia.....	125,532,000	31,483,000
Argentine Republic.....	118,563,000	20,939,000
Spain.....	41,334,000	36,666,000
Roumania.....	73,546,000	4,434,000
Sweden and Norway.....	58,296,000	17,768,000
Italy.....	27,123,000	32,121,000
Congo State.....	46,028,000	11,515,000
British India.....	39,862,000	17,594,000
Brazil.....	40,954,000	9,337,000
Australia.....	37,392,000	12,786,000
Switzerland.....	6,496,000	30,634,000
Chile.....	28,980,000	7,643,000
China.....	5,457,000	17,230,000
Egypt.....	3,435,000	14,628,000

Navigation.—The number of vessels entered at Belgian ports during 1900 was 8,619, of 8,500,772 tons; cleared, 8,620, of 8,476,874 tons. The merchant navy on Jan. 1, 1901, consisted of 4

sailing vessels, of 741 tons, and 69 steamers, of 112,518 tons. Of the vessels entered and cleared in 1900 Belgium owned 1,906 entered, of 1,380,390 tons, and 1,908 cleared, of 1,384,776 tons; Great Britain, 4,042 entered, of 3,804,974 tons, and 4,019 cleared, of 3,759,418 tons; Germany, 1,037 entered, of 1,679,067 tons, and 1,035 cleared, of 1,670,504 tons; Norway, 530 entered, of 319,102 tons, and 538 cleared, of 330,404 tons; Sweden, 237 entered, of 193,391 tons, and 243 cleared, of 203,141 tons; Denmark, 237 entered, of 235,310 tons, and 242 cleared, of 236,986 tons; Holland, 203 entered, of 203,777 tons, and 199 cleared, of 196,121 tons; Japan, 48 entered, of 197,055 tons, and 49 cleared, of 201,034 tons; France, 148 entered, of 148,730 tons, and 149 cleared, of 149,232 tons; Russia, 66 entered, of 67,113 tons, and 67 cleared, of 68,540 tons.

Railroads, Posts, and Telegraphs.—The total length of railroads in operation on Jan. 1, 1901, was 2,833 miles, of which 2,503 miles were operated by the Government and 330 miles by companies. The number of passengers carried during 1900 was 123,700,046 on the state and 15,428,041 on the companies' railroads; gross earnings, 209,194,311 francs on the state and 28,130,076 francs on the companies' railroads; expenses, 140,428,195 francs for the state and 11,828,518 francs for the companies' railroads. The state railroads cost 1,963,623,697 francs to build. Since the first railroad was constructed in 1834 the Government has received in net profits above all expenses for operation, maintenance, and interest on borrowed capital amounting for the whole period to 115,528,477 francs.

The post-office in 1900 carried 137,617,928 private letters, 25,365,408 official letters, 65,384,943 postal cards, 123,648,551 circulars, etc., and 134,724,720 newspapers; receipts were 25,242,483 francs, and expenses 13,498,196 francs.

The telegraphs of Belgium had on Jan. 1, 1901, a total length of 3,975 miles, with 24,940 miles of wire. The total number of despatches in 1900 was 14,411,487; receipts were 9,309,440 francs; expenses, 8,596,234 francs. There were 37,285 miles of telephone wires and 14,920 stations. The number of conversations in 1900 was 39,884,321.

Legislation.—The Chambers in the early part of the session of 1902 agreed to the Government's military reform bill, which reduces the term of service and increases the effective strength of the army 20 per cent. by an extension of the volunteer system. The antigambling bill, which suppresses the public gaming-houses in Ostend and Spa and all gambling clubs in Belgium, was finally passed by the Chamber of Representatives, March 22. A workmen's accident bill divides the risk between employer and employee. In case of temporary or permanent incapacity the workman receives half the amount of his average earnings, and this is paid to his family for a certain number of years if he is killed. Contributory negligence on the part of the injured workman does not absolve the employer from his liability for compensation. Employers are bound to insure themselves in a company approved by the Government or to deposit a sufficient insurance fund in the state savings-bank. A commission is appointed for the settlement of claims, which includes representatives of both employers and working men.

At meetings held at the People's Palace in Brussels and in all the industrial centers of the provinces the Socialists of Belgium decided to start a new movement for universal equal male suffrage. A manifestation in front of the Parliament buildings announced for Mardi gras was

frustrated by a strong cordon of troops and police who kept the demonstrating bands out of the neutral zone around the houses of Parliament, the royal palace and the ministries, within which political demonstrations are forbidden. The question was soon brought up in the Chamber. Liberals, Democrats, and Christian Socialists joined in the demand for a revision of the Constitution. From the various groups working for a change in the electoral law motions were offered in the Chamber for a similar change in the municipal and provincial voting franchise, which can be effected by the legislative action of Parliament without alteration of the national Constitution. Every such motion was rejected. The Moderate and Progressist sections of the Liberal party united on a program calling for the abolition of plural voting and for proportional representation, though the Moderates reserved the option of proposing a double vote either for heads of families or for men who have reached a certain age. The Premier said that the Government was determined not to alter the present system of plural voting, as a safeguard against the Socialists who threatened to use the extended franchise as an instrument to accomplish their ideals. The Socialist demonstrations grew threatening and violent when the Government refused to discuss a compromise. The Minister of War called out the reserves. Coal-miners began to strike and bomb outrages were committed against Clerical party leaders when the Chambers reassembled in April and the Socialists and Liberals were ready to press the question in Parliament. On the night of April 10, when mobs attempted to erect barricades in the streets of Brussels after a stormy debate in the Chamber, the troops fired volleys and used their bayonets. The Socialist leaders threatened a general strike if the Government used force to suppress the popular demonstrations. It became evident that the Government could no longer rely on the troops as heretofore to turn their weapons against the populace. The ministers still resisted the discussion of revision in Parliament, determined not to yield once more to popular tumults. The Socialists threatened to order a general strike and stoppage of business as well as a legislative deadlock. The Government insisted that provisional credits should be voted first sufficient for the needs of administration till the end of October. The number of members by which the Chamber should be increased, to correspond with the increase in the population, was also given precedence. The third Government measure was an extraordinary budget of 100,000,000 francs for public works. The Socialists carried on obstruction for five days without being able to prevent the first two points of the Government program from being acted upon. Their violent behavior in the Chamber and the street disturbances that followed estranged the Liberals, who were as desirous of electoral reform as the Socialists. Whenever in the opinion of the ministers a demand for a revision of the Constitution is ripe for action the two Chambers resolve themselves into a Constituent Assembly. After a general strike of working men had occurred in 1891 and another in 1893 in favor of universal suffrage a compromise was accepted by the Clerical party, which had then been in power since 1884 and still remains in power. The Constituent Assembly enacted the present franchise law giving a vote to every man twenty-five years of age, 2 votes to husbands or widowers of thirty-five having legitimate issue or to owners of real estate worth 2,000 francs, and 3 votes to those

possessing either of these qualifications who are university graduates or professional men. The number of qualified electors was increased from 135,000 to 1,400,000 with over 2,000,000 votes. This extension of the franchise admitted Socialists to the Chamber, but was unsatisfactory to the Liberals, who carried through a system of proportional representation in 1899. Until this was adopted the *scrutin de liste* frequently left the Liberals without representation in districts where they almost had a majority. The Belgian system of proportional representation is worked out by dividing the total vote for each list by the number of members to be elected; the quotient is the electoral divisor which regulates the division of seats among the candidates of the different parties by the number of times it is contained in the total number of votes cast for each party ticket. The result for the whole country in 1900 was to give still to the Clericals an unduly large proportionate representation. In a total ballot of 2,075,000 the Clericals cast 1,040,000 votes, the Liberals and Progressists 535,000, the Socialists over 500,000. In the allotment of seats the Clericals obtained 85, the Liberals and Radicals 33, the Socialists 33, the Christian Democrats 1, giving the Catholics a majority of 18 over the united Opposition parties, who polled a popular vote about equal to theirs and in the true proportion would have as many seats. Hence the old Liberals as well as the Radicals entered into coalition with the Socialists, willing to sacrifice, if necessary, to political expediency Janson's old scheme of allowing men who have reached the age of thirty-five or forty or married men to vote twice, and to accept the Socialist program of one man one vote, while the Socialists on their side agreed to adopt the favorite Liberal principle of proportional representation. The Socialists and Liberals proposed to lower the voting age to twenty-one and to alter the composition of the Senate. The Catholics proposed to couple woman suffrage with the Socialist plan of an equal franchise for all electors. This innovation was resisted by the Liberals, who anticipated that the influence the clergy can exert over the female mind, especially in the more ignorant classes, would secure to the Clericals a permanent majority. The Government bill increasing the number of Deputies from 152 to 166 and the number of Senators from 76 to 83 passed the Chamber on April 12 without opposition. The arrest of M. Vandervelde, the Socialist leader, on April 12 led to a serious riot in Brussels. The troops charged with fixed bayonets and fired volleys, while the rioters used revolvers and glass bombs filled with corrosive fluids. Disturbances occurred in other towns. This outbreak caused a breach between the Socialists and the Liberals, who wished to withdraw from the alliance and urged the Government to dissolve Parliament when the Socialists decreed a general strike. The strike began in the coal-mines and spread to all the trades. In three days more than 200,000 men quit work. On April 17 Count de Smet de Naeyer gave his decision not to bring forward equal suffrage because the majority of the people did not want it, because there was no chance of a two-thirds majority in the Constituent Assembly in its favor, and above all because the Government would not yield to mob rule and allow the proceedings of Parliament to be dictated from the street or the action of the Government to be influenced by strikes, intimidation, and violence. By 84 votes to 64 the Chamber on April 18 decided not to admit the question of revision to consideration. The un-

compromising negative of the Prime Minister made the business men of the country, whose affairs were at a standstill, as indignant against the Clericals as against the Socialists. The latter appealed to the King and announced that they would bring the question of revision before the Chamber until it should be considered. On April 19 at Louvain a mob drove the militia back into their quarters, where they loaded their rifles, and when again pressed hard they fired and killed and wounded a number of people. The people fired revolvers at another company, which replied with a volley, killing 7 and wounding 18. The strike was declared at an end by the council of the Labor party, and on April 21 the working men generally resumed their occupations. The Chamber voted the budget on April 25. The sum of 7,000,000 francs was voted to indemnify Ostend and Spa for the loss entailed by the suppression of gambling. The public-works budget was also passed. The session was closed on May 20. The elections for renewing one-half of the Chamber were held on May 25. There were 77 retiring members to be replaced, and 14 additional members were elected to bring up the number of Deputies to 166, as decreed in the recent act enlarging the Chamber to meet the increase in the electorate. In conformity with the same act 7 new Senators were elected. The new Chamber consisted of 95 Catholics, 35 Liberals, 34 Socialists, and 2 Christian Democrats, increasing the Clerical majority over the united Opposition from 20 to 24. Of the newly created seats 8 went to Catholics, 3 to Socialists, 2 to Liberals, and 1 to a Christian Democrat. The new seats in the Senate were divided between 4 Clericals, 2 Liberals, and 1 Socialist.

The Sugar Convention.—Several international conferences have been held with the object of bringing about a mutual agreement for the regulation or abolition of the bounties given by Continental governments to protect the production and encourage the export of beet-sugar. These bounties are accompanied by high revenue-producing excise duties and a surcharge on imports sufficient to shut out foreign sugar from the producing countries. The effect of these duties is to make sugar a luxury in countries where the most sugar is grown, twice as dear or more in France, Germany, or Austria as it is in England, where no duties have been imposed hitherto on its importation or consumption. England used to import and refine cane-sugar grown mostly in the West Indies. When Germany, France, Austria, and Belgium began to give bounties England could get sugar from the Continent for less than the actual cost of production. The importation of cane-sugar ceased altogether, and the British refineries went out of business. On the other hand, the manufacture of British jams, confectionery, and biscuits, cheapened by the low price of sugar, grew to enormous proportions and these articles were exported to all parts of the earth. Meanwhile Jamaica and other British West India islands, British Guiana, Mauritius, and other colonies which formerly supplied Great Britain with raw sugar languished and declined and the capital invested in sugar plantations was to a great extent lost or withdrawn. The poverty and distress in the island colonies and the falling off of the colonial revenues reached such a stage at last that the British Government granted large sums in aid. On the recommendation of a commission experimental stations were established for the purpose of developing seed cane by selection of a higher saccharine content, as has been done with the sugar-beet, and public

aid was given to encourage more scientific, economical, and thorough methods of extracting the sugar from the cane by the use of modern machinery. The colonies called upon the Imperial Government to impose countervailing duties upon bounty-fed sugar, as the United States Government has done for the protection of American sugar-growers. In the sugar-producing countries of Europe the bounties were a heavy fiscal burden which tended constantly to increase, because France or Germany or Austria at the first appearance of foreign competition in sugar immediately increased the bounty or raised the duty, which further reduced domestic consumption, and any change made by one country was outdone by the others. All these countries were competing for the English market, which was more valuable to them than all the other foreign markets together. Germany, the greatest sugar-producing country in the world, sold more sugar to England than the German people themselves consumed. Over a third of the German crop went to Great Britain, and a like proportion of the Austrian sugar, which found another good market in British India. Just as in the Continental nations the producers and refiners of sugar brought powerful pressure on their governments to bring about an increase in the bounties and protective duties and by all means to prevent a decrease, so the manufacturers of England and Scotland who used sugar became a strong and united interest fighting against the imposition of countervailing duties, supported by the general popular sentiment in favor of cheap sugar. To raise the price of this necessity of life by taxation was represented as a violation of the principle of free trade, though the friends of the colonists argued that duties equivalent to the bounties were necessary to secure free trade to the cane-growers. The manufacturing industries using beet-sugar, which were in Great Britain and were influential in Parliament and in the press, had grown into a bigger business than the production of cane-sugar in British colonies. The popular view was that, if the Continental governments chose to make a present out of their public funds to the British public by granting bonuses to their sugar-producers to enable the latter to sell sugar so much cheaper in the English market, the British public would be foolish not to accept the boon granted at the cost of foreign taxpayers. The impoverishment of the colonists, unable longer to pay the expenses of the colonial administration, the dearth of sugar and lessening consumption in the beet-growing countries, the overproduction of sugar and glutting of the foreign markets, and the embarrassing charge of the bounties were, however, growing evils that had at some time to be faced and could not at any time be ignored by publicists and statesmen. The first diplomatic conference convoked to deal with these conditions was held in London in 1888. The powers invited by Great Britain to meet to consider the abolition of bounties signed a convention on Aug. 30, 1888, in which they agreed in principle to the total suppression of open or disguised bounties on the exportation of sugar. They agreed to exclude from their respective territories any sugar coming from countries which continued to pay bounties on manufacture or export. Germany, England, Belgium, Spain, Italy, the Netherlands, and Russia signed the convention. France adhered to it in principle and reserved the right of signing later. Austria-Hungary promised adhesion if all important producing and consuming countries would agree to suppress bounties. The

definite adhesion of Austria and France was never secured, and therefore the system of bounties and prohibitive duties flourished more rankly than before. Ten years later the Belgian Government, at the instance of Germany and Austria and with the encouragement of Great Britain, invited the same powers to a new conference. The German and Austrian governments were willing to suppress bounties at once, which was desired by Great Britain. The Belgian and Dutch representatives proposed gradual abolition. France reserved the right to continue a system of indirect bounties, and Russia declined to discuss its system of drawbacks for exports, denying that it was of the nature of a bounty, while the Austro-Hungarian delegate pronounced it equivalent to a bounty on exportation. The conference came to an end without agreement, with the understanding that the Belgian Government should carry on a diplomatic correspondence with the other governments, and if the basis of an understanding could be reached through diplomatic channels the conference could be reconvoked later. Sugar production had doubled since the earlier convention. In December, 1901, the representatives of the powers met in conference once more at Brussels. The situation had changed, chiefly in that England no longer viewed the bounty question with platonic wishes for the abolition of bounties, but indifference as to the time when they should be abolished, since the British people reaped the material profit so long as they were continued. The necessities of the British sugar colonies had reached the stage when the British Parliament had to come to their aid with substantial grants to offset the bounties. Reciprocity agreements had been made with the United States which afforded some relief, but this was likely to be temporary. The needs of the British treasury made a revenue from sugar imperative, and the tax could not be framed in utter disregard to these colonies. India was already permitted to impose a countervailing duty on bounty-fed sugar. The effect on the sugar trade of Austria would be disastrous. Overproduction caused a crisis in Germany and other countries. While the beet-growers were losing money the refining trust, or cartel, in Germany continued to make large profits. Germany is the greatest sugar-producing country in the world. The production in 1901 was 2,300,000,000 kilograms, of which 700,000,000 kilograms were consumed in Germany, 750,000,000 kilograms were exported to Great Britain, and 850,000,000 kilograms went to other countries. Great Britain also has taken about a third of the Austrian output, and only a third is consumed at home. Germany has given away 29,000,000 marks yearly in bounties, which did not save the growers and manufacturers of raw sugar from a serious crisis, although the cartel made a profit of 90,000,000 marks in the first year after its organization in June, 1900. By agreement between the refiners and the manufacturers of raw sugar, the latter received 55,000,000 marks, but this did not counterbalance the loss resulting from the reduction of the price of raw sugar from 205 to 155 marks a ton. On the other hand, the 53 refineries were able to divide their share as an extraordinary profit. A direct bounty on the exportation of sugar was given in Germany and Austria-Hungary, and since 1897 in France. In Belgium and in Russia indirect bounties were given to encourage the production of sugar. The excise tax duty, which limits home consumption in all European countries which produce sugar, was 20 marks per

100 kilograms in Germany and equally excessive in other countries. In France consumers, owing to the bounty system, had to pay 66 francs per 100 kilograms for an article normally worth 30 francs. In addition to the excise duty an import duty of 20 marks per 100 kilograms was charged in Germany and one of 22 crowns in Austria-Hungary. In France the surtax had been reduced to 10 francs and in Belgium to 5 francs. The cartel system was developed first in Austria and copied in Germany. It had the effect of increasing production, and at the same time further limiting home consumption. While fixing prices at a higher figure at home, manufacturers were obliged to lower them abroad beyond all precedent, and still could not find a market for the surplus stocks, which were never so large in Germany and in Austria. In December, 1901, the representatives of the powers met once in a conference at Brussels. The British as well as the Belgian government had endeavored to find a basis for negotiations in the preliminary correspondence, and the bounty-paying governments had to face the alternative of countervailing duties that would eventually restore the English market to the cane-growing colonies unless they voluntarily gave up the payment of bounties and reduced the prohibitory surtax on imports. In any case they had to look for an expansion of the home market to take the place of the English market, which was certain to be supplied henceforth, in great part at least, with cane-sugar. The consumption of sugar in Great Britain, including that of the manufacturing establishments, is 37 kilograms per head of population. In the United States it is 29 kilograms. In Germany the consumption per capita is 13.3 kilograms, in Austria only 8.4 kilograms.

The Agrarians in Germany made a mien as if they would defeat the ratification of the convention and talked of a tariff war with England. In the end the treaty was ratified and it was arranged to fix the excise duty at 14 marks, instead of 20 marks, which with the reduction of the import duty from 20 marks to 4.80 marks reduces the total tariff from 40 to 18.80 marks. In France it was lowered from 64 to 30 francs.

The sugar convention was signed at Brussels on March 5. The signatory powers undertook to suppress from Sept. 1, 1903, all direct and indirect bounties for the benefit of the production or exportation of sugar or of sweetmeats, chocolate, biscuits, condensed milk, or other articles containing a notable proportion of sugar; also to limit the surtax on imports to a maximum of 6 francs per 100 kilograms; and to impose a special duty on imports from countries which continue to grant bounties either for production or export, this duty to be at least equal to the amount of bounty given. Bounty-fed sugars may even be prohibited by any of the contracting parties, but the sugars imported from any of the contracting countries or from colonies belonging to them which do not give bounties and submit to the obligations of the convention must be admitted at the lowest import rates, and no discrimination shall be made between cane and beet sugar. Spain, Italy, and Sweden are freed from the obligation to give no bounties on production so long as they do not export sugar, and from the limitation of the surtax and the obligation to levy a countervailing duty. Bounties include, besides direct bonuses to exports or production, total or partial exemptions from taxation granted for a part of the manufactured product, profits derived from surplusage

of output or from the exaggeration of the drawback, and advantages derived from any surtax in excess of the maximum rates fixed by the treaty, which are 6 francs for refined and 5½ francs for other sugars. Revenue officers must supervise factories and refineries in each country. A permanent international commission of surveillance will be established in Brussels, which will exercise a general control, settle any litigious questions that may arise, and decide as to the admission of states that have not taken part in the conference. The convention was concluded for five years, to be continued thereafter by tacit agreement from year to year, any power having the right to withdraw by giving notice before Oct. 31. In case such notice is given by any of the contracting parties the Belgian Government will convoke within three months a new conference to decide on the measures to be taken. Great Britain made a special declaration that during the continuance of the convention no direct or indirect advantage would be given to the importation of colonial sugars into the United Kingdom. The Netherlands made the same engagement in respect to the Dutch colonies. Both Great Britain and the Netherlands agreed to submit the convention to their self-governing colonies and invite their adhesion. The ratifications were to be exchanged before Feb. 1, 1903.

France objected to the total abolition of bounties, wishing to retain an indirect bounty of 4.80 francs in order to balance the reduction in the duty. Germany, supported by Austria-Hungary, resisted the reduction of the surtax to 5 francs, on which England at first insisted, supported by Belgium and France. Germany also strove hard to have the date of the going into force of the convention postponed for one year longer. A proposition emanated from Great Britain to have the cartels suppressed by law, but it was withdrawn. The persons associated in the cartels in Germany and Austria and all others interested in growing beets or manufacturing sugar opposed vigorously all the features of the convention and met in conference at Berlin to discuss ways of defeating it. Opposition was also shown by the jam-makers and other British manufacturers. Roumania, which has hitherto imposed an import duty of 51 francs, desired to be placed in the category of the exempt non-exporting countries, but by decision of the conference will adopt the duty of 6 francs. The United States was not represented at the conference, nor were any of the countries producing cane-sugar, neither Cuba nor the British or Dutch colonies except indirectly by their home governments, which represent them diplomatically and have undertaken to influence them to sign the convention. Russia declined to take part in the conference. The Russian Government asserts that it does not promote the export of sugar, either by direct or by indirect bounties. It regulates the amount sold in the home market in order to prevent overproduction and to lessen the cost of production, and thereby increase consumption in Russia. The Ministry of Finance fixes each year the amount of sugar to be placed on the home market after payment of the ordinary excise duty of 1.75 ruble per pood, and this amount is apportioned among the various producers, each receiving permission to sell a certain quantity in Russia. Any producer wishing to sell more must pay an extra excise duty of 3.50 rubles per pood. He may, however, export as much as he pleases without paying any duty whatsoever. He may also arrange with any of his fellow producers to transfer to them any

part of the allotment that he is allowed to dispose of in Russia on payment of the ordinary excise tax. If therefore he can find a market for his sugar abroad he may sell at a premium his right to sell sugar in Russia. The United States Government has taken the view that this operates as an indirect bounty, and such is the opinion held by the governments that participated in the conference. The Russian Government, on the contrary, contends that it gives no sugar bounty, and therefore under the most-favored-nation clause other countries are precluded from imposing countervailing duties on Russian sugar; that it would be a breach of existing commercial treaties even if the Russian system of regulating the home market could legitimately be regarded as an indirect bounty. In a note to the governments which took part in the Brussels conference the Russian Minister of Finance said that if it could be proved that a system like the Russian interferes with the natural development of international competition the Russian Government would gladly take part with the other powers in considering by what means it would be possible to obviate such effects; but it would only consent to do this if the question were submitted for consideration in its full extent, and all the consequences of indirect measures, such as the giving of premiums, the regulation of production, and the action of syndicates of various kinds tolerated or protected by governments were made the subject of discussion, and it were admitted that the agreement arrived at should apply, not only to sugar, but to other products which play a part in international commerce. This offer, it was hoped, would show the readiness of the Russian Government to cooperate in protecting from artificial reduction the prices of sugar and other products on the international market. It was in effect a proposal to suppress or to regulate by international agreement the cartels, syndicates, or trusts which have been developed in Germany to a fuller extent than in other countries, not the sugar cartel alone, but the steel cartel and other combinations which regulate production and prices and the export of surplus products in all the main branches of industry which adopt various methods of selling cheap abroad in order to sell dear at home. The Russian import duty on sugar is 6 rubles per pood on refined, and 4.50 rubles on raw sugar. The Russian producers are therefore protected by a surtax of 4.25 rubles per pood, equivalent to 32.50 francs per 100 kilograms. The Russian Government upheld its argument that the application of countervailing duties against Russian sugar would be an infringement of treaties. It did not intend to carry on a general tariff war against all the powers at once, but would consider itself free to disregard treaty stipulations when it saw fit and to adopt such measures as would be advantageous to Russia in the case of any of them. Goods imported into Russia by industrial trusts would be the first to be subjected to discriminating treatment. India imposed countervailing duties on bounty-fed sugar after the failure of the Brussels conference of 1898, but they were not sufficient to keep out European beet-sugar, which constituted more than half of the Indian imports in 1902. Austrian sugar alone exceeded the imports from Mauritius, and this was supposed to be due to the operation of the sugar cartels as revealed in the discussions at Brussels. After the conclusion of the Brussels convention the countervailing duty was fixed by the Indian Government at a higher figure, against which

action the Austro-Hungarian and also the Russian Government raised a protest.

BOLIVIA, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 18 members, elected for six years, and a House of Representatives containing 64 members, elected for four years. The President of the republic is elected for four years by the direct suffrage of the people, and is not re-eligible for the next succeeding term. Gen. José Manuel Pando was elected Constitutional President by a national convention at Oruro on Oct. 23, 1899. The Constitution, which had been suspended since April 14, 1898, was then again put in force. Col. Lucio Peres Velasco was elected First Vice-President and Dr. Anibal Capriles Second Vice-President. Congress has since held regular sessions. One-third of the Senators and one-half of the Representatives are replaced every two years. The Cabinet at the beginning of 1902 consisted of the following members: Minister of Foreign Affairs and Public Worship, Dr. Federico Diez de Medina; Minister of Finance and Industry, Dr. Demetrio Calvimontes; Minister of the Interior, Anibal Capriles; Minister of Justice and Public Instruction, Andres S. Muñoz; Minister of War and Colonies, Col. Ismael Montes.

Area and Population.—The area, including the territories, is estimated at 734,390 square miles. The population, estimated from the incomplete returns of the census of Sept. 1, 1900, is 1,788,674. The department of La Paz, area 171,130 square miles, had 423,800 inhabitants; Oruro, area 21,350 square miles, had 86,081; Chuquisaca, area 39,890 square miles, had 196,143; Cochabamba, area 21,430 square miles, had 326,163; Tarija, area 34,610 square miles, had 77,887; Potosi, area 52,100 square miles, has an estimated population of 365,500; Beni, area 100,580 square miles, is estimated to have 38,700; Santa Cruz, area 87,700 square miles, has a population estimated at 210,800. The estimate of population for the territory of Madre de Dios, area 13,400 square miles, is 18,600, and for the Purus territory, area 192,200 square miles, the estimate is 45,000. The people are mainly of the native Indian race. There are numerous mestizos and very few of pure European blood. Many Indian tribes still retain their original organization and customs. La Paz has 57,000 inhabitants; Cochabamba, 21,886; Sucre, the political capital, 20,900.

Finances.—The revenue for 1901 was estimated at 7,965,350 bolivianos, the exchange value of the boliviano, or Bolivian dollar, being 36 cents. The chief part of the revenue comes from customs duties, estimated to produce 6,292,150 bolivianos. Excise duties, the mint, and licenses for trading in rubber are the other sources. The expenditure for 1901 was estimated at 7,152,359 bolivianos, of which 2,730,123 bolivianos were for the army, 1,173,100 bolivianos for public works, 929,658 bolivianos for the public debt charges, and 439,124 bolivianos for posts and telegraphs. The foreign debt, originally 6,550,000 bolivianos, has been reduced by applying 40 per cent. of the Arica customs to its extinction, and in 1900 only 818,813 bolivianos were outstanding. The internal debt amounted in 1901 to 4,004,020 bolivianos. The departments received in 1901 from land taxes, excise duties on coca, tobacco, and spirits, stamp-duties, and subventions from the National Government a revenue estimated at 2,152,359 bolivianos, and spent 2,178,600 bolivianos, mainly for police, justice, public works, education, and public worship.

The Army.—There is a standing military force of 2,560 men. The militia held in readiness

number about 30,000, and the regular and extra reserves 40,000, besides which there is a territorial guard of 10,000 men. According to a law made in 1892, military service in these various bodies of the National Guard is compulsory on all Bolivians between the ages of twenty-one and fifty years. The active army consists of 2 battalions of infantry, each of 4 companies of 220 men, armed with Mauser rifles of the Argentine model of 1893 and the Bolivian of 1898, having a caliber of 7 millimeters; 2 cavalry regiments; and 2 regiments of artillery. There is a garrison battalion in each department.

Commerce and Production.—Coffee is exported to Chile and the Argentine Republic. Sugar is grown to be distilled into rum, but the supply of this beverage is supplemented by imports from Peru. The production of coca, mostly in La Paz, is valued at 3,000,000 bolivianos a year. Cinchona is another important export. Large quantities of rubber are obtained in the Acre region and shipped down the Amazon. The production of silver, including the contents of concentrated ores, in 1899 was 11,155,190 ounces. The export of barillas, or tin ore, in 1900 was 10,080 tons, and of bar tin 1,591 tons. The annual production of copper barillas is 3,000 tons. Gold is washed by Indians, and companies have been formed to work some promising locations. Lead, zinc, antimony, bismuth, wolfram, salt, and petroleum are found. The total value of imports in 1900 was 13,344,116 bolivianos, and of exports 35,657,690 bolivianos. Imports of cotton goods were valued at 2,011,494 bolivianos; woolen goods, 1,549,409 bolivianos; provisions, 1,454,406 bolivianos; cattle, 1,004,294 bolivianos; machinery and hardware, 1,060,177 bolivianos; spirits and wines, 971,628 bolivianos; clothing, 731,053 bolivianos. The value of mineral exports was 23,794,268 bolivianos; of vegetable products exported, 11,249,295 bolivianos; of animals and animal products, 614,127 bolivianos. The exports of silver and silver ores were valued at 13,691,268 bolivianos; tin and tin ores, 8,579,539 bolivianos; copper ore, 1,025,030 bolivianos; bismuth, 271,702 bolivianos; lead, antimony, wolfram, gold, and zinc, 106,467 bolivianos; rubber, 10,403,959 bolivianos; coca, 563,713 bolivianos; coffee, 157,068 bolivianos. Silver is exported largely in the form of coin without being reported, and there are great quantities of rubber shipped from river ports unknown to custom-house officers. The principal merchants are Germans, who deal in English and other goods besides German. The imports from Germany in 1900 were valued at 3,109,521 bolivianos; from Great Britain, 2,265,344 bolivianos; from Peru, 1,710,306 bolivianos; from the Argentine Republic, 1,028,715 bolivianos. About 44 per cent. of the exports are destined for Great Britain, 35 per cent. for Germany, and 6 per cent. for France. The Government in 1899 established a custom-house on the Acre river, which flows into the Purus, at a newly established port called Puerto Alonso. The bulk of Bolivian commerce passes through the seaports of Arica and Antofagasta, formerly Bolivian, which were occupied by Chile after the defeat of the Peruvian and Bolivian alliance in 1880. The seaboard province of Bolivia which Chile retained as a pledge for the payment of an indemnity has an area of 29,910 square miles. The value of the nitrates obtained for the benefit of the Chilean Government since then from the coast provinces has been estimated at 700,000,000 bolivianos. In reply to the demands which the Bolivian Government has made for the fulfilment of the promise of Chile to restore a seaport to Bolivia

Chile has offered instead to pay 6,000,000 bolivianos in compensation. This proposition Bolivia has refused to consider.

Railroads, Posts, and Telegraphs.—A railroad from Antofagasta enters Bolivian territory at Ascotan, and has been extended to Uyuni and Oruro, with a branch to Huanchaca, the Bolivian sections having a length of nearly 500 miles. A railroad from La Paz to the Peruvian frontier, to connect with the Peruvian line now half built from the port of Mollendo to Lake Titicaca, is soon to be undertaken. A line from Santa Cruz to the river Paraguay is contemplated. Railroads from Oruro to Cochabamba and from Challapata to Colquechaca have been authorized, and a route has been examined for an international railroad into the Argentine Republic.

The total length of telegraph-lines is 2,454 miles. The number of letters, postal cards, newspapers, and other mail-matter carried in the mails in 1900 was 2,222,176 in the internal and 725,240 in the international service.

Boundary Dispute.—In the extreme north of Bolivia the valleys of the Acre and Yacu and of the upper Purus and Jurua have been claimed both by Bolivia and Brazil, and the Acre territory, which is one of the richest rubber districts remaining, has been disputed by Peru also. American traders have long sent parties into this region to gather rubber, which is taken in boats down the Amazon, the only outlet. When none of the governments which claim the territory exercised any authority there adventurers from various parts of the world attempted to set up an independent republic there, intending to exploit its natural wealth for their private benefit. They fell to quarreling among themselves, and others came in to contend for the prize. One dictator succeeded another until the interested governments, each of which protested against the recognition of the foreign usurpers, took steps independently of each other to assert sovereign rights and suppress the American and European claimants. Bolivian, Brazilian, and Peruvian officials entered with a force of soldiers and went through the form of assuming the administration; but they did not stay. When two of these forces came together, each disputed the right of the other to be there, and once or twice shots were fired. Whenever the Government forces retired the foreigners again set up their authority, and among them desperate conflicts arose. The shipments of rubber from this vast and wild country continued in spite of the occasional interference of the white desperadoes and of savage tribes. Men interested in the rubber trade were involved in the scheme to set up an independent jurisdiction. The chief object of the men who proclaimed the republic of Acre was to avoid paying 15 per cent. export duty which Bolivia levies on rubber. Although some of them were Brazilian citizens, the Government of Brazil did not favor the erection on its border of an irresponsible state of buccaneers whose treatment of the Brazilian natives whom they took into Acre to gather rubber was barbarous. The frontier between Brazil and Bolivia was submitted to arbitration. The Brazilian claim to the Acre territory was rejected by the arbitrator. What the rights of Peru were on these affluents of the Amazon and the Andean plateau remained undecided. In 1902 an arbitration treaty was arranged with Peru. Bolivia had already for two years or more exercised jurisdiction and maintained a custom-house in Acre. The Acre territory, triangular in shape, is bounded on the

north by the recently laid down frontier of Brazil, on the southwest by the yet to be determined Peruvian boundary, and on the southeast by a line running from the source of the Abunã to the Madre de Dios. A Bolivian expedition made its way with great difficulty, and not without considerable fighting, over the Andes, down the river Beni, up the Orton, across to the Acre, and down that river to the Brazilian frontier, where a custom-house was established and has since been maintained and defended by a military force, the expense of which is considerably greater than the revenue that can be collected. The revenue was in fact not collected, for to do so it is necessary to have a custom-house on each river and watch every outlet. The only means of communication with Bolivia is through swamps and forests and high and difficult passes over two mountain chains. Access from the Atlantic, on the other hand, is practicable by way of the Amazon up the Acre and the other rivers which traverse the territory, which are navigable by light-draft steamers. The rubber exported from the Acre and its affluents has reached 3,500 tons per annum, and from the other rivers 5,000 tons. Already three-quarters of the best Pará rubber is brought from this region, and the production is increasing yearly. As soon as the dispute with Brazil was settled by the award of the Acre and Yacu valleys to Bolivia the Bolivian Government was ready to deal with responsible capitalists who would form a chartered company to administer and police the territory and collect the revenues, as well as to develop and exploit its resources. A syndicate was formed by Sir Martin Conway and New York capitalists, who obtained from the Government of Bolivia, subject to confirmation by the Bolivian Congress, two concessions comprising the whole of the territory, about 120,000 square miles. The Acre concession covers the northern region which was in dispute between Bolivia and Brazil. The Caupolicán concession entitles the company to take up 15,000 square miles on the northeastern slope of the Andes and the plain at its foot as far as the junction of the Madeira river with the Beni. This latter district is believed to be very rich in minerals. Gold has been found in several places in promising quantities, and coal and petroleum are known to exist. This district Sir Martin Conway had explored himself. There are india-rubber forests on the mountain slopes and on the plains which contain both the known species of rubber-trees and are said to contain several others. These forests belong to private owners, who make little use of them. In the much more extensive Acre concession the valleys are covered with rubber forests. In the Andes are rich mineral deposits. On the slopes corn, potatoes, and grapes thrive, and on the great plains coffee, cacao, sugar-cane, coca, and vanilla, as well as rubber, are produced. The eastern slope is salubrious and suitable for colonization by white men. In the Acre concession the company assumes the fiscal administration under the laws of Bolivia and is to collect all customs and taxes. It has the sole right of purchasing from the Government at a stated price any rubber lands or other valuable sites not already the property of individuals. It has a monopoly of the right of navigation on the rivers, save against those to whom the right has already been conceded, and it receives all the mineral rights within the territory. Its profits are for sixty years to be free from all taxation, and it can import anything free of duty. Of the taxes and duties it collects it retains 40 per cent. and pays

60 per cent. over to the Government. The company undertakes to maintain a police force at its own expense, but the Government will furnish troops if they are necessary to defend the frontiers. At the end of thirty years the Bolivian Government may resume the fiscal administration, but the company may retain its privileges of trading and exploitation perpetually. The company can develop ways of communication of all sorts and charge tolls for their use. It undertakes to assist the Government to raise a loan on the security of the Government's share in the taxes and customs. In Caupolicán the company receives an exclusive title to all valuable lands as soon as they are surveyed, is exempt from taxes and customs duties for fifty years, can charge tolls on roads and waterways for that period, must maintain a police force and establish a postal service, and pays to the Government 20 per cent. of the annual profits, while 20 per cent. more are to be expended in improving communications. The great rubber forests on the Beni, Madre de Dios, and Orton rivers, which have their outlet down the Madeira river, are outside these concessions and are already in the hands of individuals and companies which lose a good part of the rubber in the falls of the Madeira and pay heavy charges for transport. The Acre rubber goes down the Purus and the Yurua, while that from Caupolicán is transported by a mule road, which is being improved, over the cordilleras to Lake Titicaca. A strip along the border of both Acre and Caupolicán is the district which Peru disputes with Bolivia. What part of the areas can be claimed by Peru can only be determined by a survey of the frontier. Whenever the Bolivian Government has attempted to establish its authority in these regions Peru has raised a protest, and when the terms of the concession to American capitalists were made known the Peruvian Government strongly protested. On several occasions agreements have been signed between Bolivia and Peru in order to settle their differences, but they have never been finally ratified. The last agreement, concluded after the Brazilian arbitration and before the concession to the Anglo-American chartered company, seemed more likely to lead to a definite treaty. The Brazilian Government protested yet more vigorously against the lease to an American syndicate of a vast territory on the Amazon river, such syndicate to have powers of internal administration. Bolivia offered to transfer to Brazil one-fifth of the syndicate's holding in order to allay this opposition. The Brazilian Government replied on April 14, 1902, that the territory in question is still the subject of contention with Peru, and in no case would Brazil agree to a lease which gives to the lessee the use of military force and really gives up sovereign rights, so that if Brazil were a party to such an arrangement she would have to meet face to face authorities which she never can or will acknowledge. The Brazilian Government thereupon withdrew from the consideration of the Brazilian Congress a treaty of commerce and navigation with Bolivia which had been submitted to its approval, threatened to break off all diplomatic relations with Bolivia if the lease of territory in the Acre region were not rescinded, and announced that obstacles would be placed in the way of any development by the syndicate of this region by means of the affluents of the Amazon running through Brazilian territory. The United States Government, while making it clear that it could not interfere in behalf of the American syndicate beyond asking fair consideration, ten-

dered its good offices for the settlement of the boundary dispute.

BRAZIL, a federal republic in South America. The National Congress consists of a Senate of 63 members, 3 from each state and 3 from the federal district, elected for nine years by direct suffrage, one-third retiring every three years, and a House of Deputies containing 212 members, 1 to 70,000 of population, elected for three years. Every adult male Brazilian has the right to vote, with the exception of soldiers in active service, members of monastic orders, paupers, and persons who have been convicted of crime. The President of the Republic is elected by direct suffrage for four years. Dr. Manoel Ferraz de Campos Salles was elected President for the term beginning Nov. 15, 1898, and Dr. Francisco Rosa e Silva was elected Vice-President. The following ministers were in office at the beginning of 1902: Minister of Foreign Affairs, Dr. Olyntho de Magalhães; Minister of Finance, Dr. Joaquin Martinho; Minister of War, Marshal João Nepomuk de Medeiros Mallet; Minister of Industry, Alfredo Maia; Minister of the Interior and Justice, Sabino Barroso; Minister of Marine, Rear-Admiral J. Pinto da Luz.

Area and Population.—The area of Brazil is officially estimated at 3,218,130 square miles. A census taken in 1900 was rejected by the Government as defective, since it showed a decrease in population, whereas a considerable increase was expected. According to the census of Dec. 31, 1890, the population was 14,333,915, consisting of 7,237,932 males and 7,095,983 females. Rio de Janeiro had in 1900 about 750,000 inhabitants. The total population in 1890 comprised 6,302,198 white persons, 4,638,495 of mixed race, 2,097,426 negroes, and 1,295,796 Indians. The number of immigrants in 1898 was 53,822, including 33,272 Italians, 11,662 Portuguese, 5,943 Spaniards, 669 Austrians, 477 Germans, 247 French, 137 Russians, and 129 Swiss. The total number of foreigners domiciled in Brazil is estimated at 2,695,500, comprising 1,300,000 Italians, 800,000 Portuguese, 300,000 Germans, 100,000 Spaniards, 80,000 Poles, 10,000 French, 5,000 British, and 100,500 others.

Finances.—The estimated revenue in 1900 was 53,975,000 milreis in gold and 312,958,000 milreis in paper, and the estimated expenditure was 36,974,000 milreis in gold and 263,162,000 milreis in paper. For 1901 the revenue was estimated at 58,869,000 milreis in gold and 286,082,000 milreis in paper, and the expenditure at 37,510,000 milreis in gold and 244,514,000 milreis in paper. The budget for 1902 makes the revenue 42,877,000 milreis in gold and 257,361,000 milreis in paper, of which 33,430,000 milreis in gold and 130,580,000 milreis in paper were import duties, 1,000,000 milreis in gold and 72,744,000 milreis in paper were internal revenue, 34,870,000 milreis in paper were excise duties, 90,000 milreis in gold and 7,645,000 milreis in paper were funding bonds, 8,357,000 milreis in gold were receipts allocated to the guarantee of the paper currency, 2,920,000 milreis in paper were special revenue for the redemption of the currency, 6,000,000 milreis in paper were revenue for the amortization fund, 2,530,000 milreis in paper were for the port fund, and 72,000 milreis in paper were for a salvage fund. The expenditures for 1902 were estimated at 33,555,000 milreis in gold and 224,415,000 milreis in paper, of which 15,916,000 milreis in paper were for the Ministry of the Interior and Justice, 889,000 milreis in gold and 828,000 milreis in paper for the Ministry of Foreign Affairs, 23,200,000 milreis in paper for the Ministry of Marine, 45,579,000 mil-

reis in paper for the Ministry of War, 10,771,000 milreis in gold and 67,177,000 milreis in paper for the Ministry of Public Works, and 21,895,000 milreis in gold and 71,815,000 milreis in paper for the Ministry of Finance. The estimated surplus of 9,322,000 milreis in gold and 32,946,000 milreis in paper was to be devoted to redeeming paper currency, augmenting the guarantee fund, reducing the internal debt, and improving harbors. The actual receipts in 1901 were 36,234 contos, or 36,234,000 milreis, in gold and 236,304 contos, or 236,304,000 milreis, in paper, and at the end of the year there was a surplus of 27,387,000 milreis, reckoned in gold. The budget for 1903 estimates the revenue at 43,120,000 milreis in gold and 255,540,000 milreis in paper and the expenditure at 42,600,000 milreis in gold and 238,498,000 milreis in paper.

The external consolidated debt outstanding on Jan. 1, 1901, was 394,686,449 milreis, and the internal consolidated gold debt amounted to 27,259,000 milreis, making the total debt payable in gold 421,945,449 milreis. The internal consolidated debt payable in paper was 543,826,637 milreis, and there was a floating debt of 165,577,335 milreis. The paper money in circulation amounted to 689,000,000 milreis, making the total paper debt 1,398,403,972 milreis. The states owe about 50,000,000 milreis in gold.

The Army and Navy.—The active army had a nominal strength of 28,160 men in 1901, organized in 40 battalions of infantry, 14 regiments of cavalry, 6 regiments of field-artillery containing 24 batteries, 6 battalions of fortress artillery, 2 battalions of engineers, and 6 squadrons of train. The army is recruited by enlistment, and its actual strength was much smaller. Since 1875 military service in the National Guard is by law obligatory. Although the law has not been enforced, the National Guard is being reorganized and improved. The soldiers of the regular army are armed with Mauser rifles of the caliber of 7 centimeters. The gendarmerie numbers about 20,000 men.

The navy in 1901 consisted of 2 third-class battle-ships, 2 iron-clad coast-guards, 7 armored gun-boats, 10 small cruisers, 18 gunboats, 10 first-class torpedo-boats, 11 second-class torpedo-boats, 2 submarine boats, 2 torpedo school-ships, and 2 monitors. The old battle-ships *Riachuelo* and *24 de Mayo* have 11-inch armor and carry in their turrets 4 9.2-inch breech-loaders, besides which they have 6 4.7-inch quick-firers, 2 3-pounders, and 15 machine guns. The French-built *Deodoro* and *Floriano*, of 3,162 tons, are plated with 13.7-inch Harveyized armor and armed with 2 9.4-inch guns, 2 6-inch howitzers, and 2 4.7-inch quick-firers. The *Tamandare*, built in Brazil in 1890, and the English-built protected cruiser *Barroso* have a strong quick-firing armament.

Commerce and Production.—The main product of Brazil is coffee, the supply of which has of late years exceeded the world's requirements. The fall in prices caused a commercial crisis in Brazil, but now the depression is more severely felt in other coffee-growing countries where the cost of production is greater. The supply of rubber from the valley of the Amazon increases, but it is brought from remoter districts. In Bahia and other states rubber-trees have been planted in anticipation of the exhaustion of the supply from the forests. The production of sugar in Pernambuco, Rio de Janeiro, Bahia, and other states was 250,000 tons in 1901. In Pernambuco rum is distilled in increasing quantities. In Minas-Geraes about 148,000 ounces of gold are

produced annually, and the production of diamonds in that state and in Bahia is about 40,000 carats. The export of manganese ore from Minas-Geraes is valued at 660,000 milreis. The exports of coffee in 1900 amounted to 8,924,469 bags of 132 pounds; of sugar, 2,573,338 bags; of cotton, 94,139,655 pounds; of rubber, 27,416 tons; of hides from Bahia, 290,581 tons; of tobacco from Bahia, 305,703 bales; of cacao, 221,974 bags; of piassava, 60,683 bales. The total value of exports in 1900 was about 340,000,000 milreis. The value of imports, consisting of cotton cloth, woollens, machinery, hardware, coal, flour, cattle, jerked beef, rice, codfish, salt pork, butter, corn, olive-oil, macaroni, tea, salt, petroleum, lumber, wine, etc., was estimated at 200,000,000 milreis. The serious agricultural and commercial crisis through which Brazil has been passing since the fall in the prices of coffee and sugar has been aggravated by a decline in the price of india-rubber. The coffee industry has adjusted itself to the new conditions and still competes successfully with all other coffee-growing countries. A general recovery is noticeable in the economical situation, and since the finances of the Government have been placed on a sounder basis European capital is expected to flow into Brazil again. The undeveloped resources of the country are enormous. Besides gold, which is now mined by English companies, the states of Minas-Geraes and Bahia contain nearly all kinds of minerals. Another field of enterprise yet untouched is presented in the virgin forests that cover the states of Pará, Amazonas, and Matto Grosso, full of valuable timber that can be easily floated down the deep rivers.

Navigation.—The number of vessels in the foreign trade entered at the port of Rio de Janeiro during 1900 was 843, of 1,522,754 tons, and 790, of 1,409,122 tons, were cleared; the number of coasting-vessels entered was 860, of 445,016 tons, of which 760, of 260,338 tons, were Brazilian. At Bahia 554 vessels in the foreign trade, of 1,140,978 tons, were entered, and 1,445 Brazilian coasting-vessels, of 240,386 tons. A law restricting the coasting-trade to Brazilian vessels has been in force since 1896. The merchant marine on Jan. 1, 1901, comprised 358 sailing vessels, of 79,807 tons, and 233 steamers, of 92,028 tons.

Railroads, Posts, and Telegraphs.—The railroads in 1899 had a total length of 8,718 miles, and 4,989 miles more were begun, 4,670 miles surveyed, and 8,440 miles projected. Many of the railroads were built with a guarantee of 6 or 7 per cent. interest on their capital from the Government, which has purchased some of these lines and leased others after having paid out large sums for guaranteed interest.

The post-office in 1899 carried 38,085,000 letters and postal cards and 29,250,000 pieces of printed matter and samples.

The telegraphs have a length of 12,630 miles of line, with 25,220 miles of wire. The number of despatches in 1898 was 2,662,711.

Politics and Legislation.—The congressional session which began on May 3, 1902, was the last one of the presidency of Campos Salles. When his term began gold payments were suspended and 788,000 contos of reis in paper money were in circulation. The rate of exchange for the paper milreis averaged 7½ d. and Brazilian bonds were at 50 per cent. discount. There was due on the loan of 1897 the sum of £1,122,000 and £275,000 for war material, and the treasury owed 20,350 contos in bills and 11,000 contos to the Bank of the Republic, while the President

found only £81,713 with the Rothschilds in London and 5,500 contos in the treasury. There were, moreover, large deficits from previous years. To cut down expenses and provide more money was the only way to get the country out of its difficulties, and that was the program adopted by the Government at the risk of incurring unpopularity. The paper money has since then been reduced to 108,000 contos, the rate of exchange has risen to 12d., and Brazilian bonds have risen 35 per cent. The rest of the loan of 1897 has been repaid, no treasury bills were outstanding, and the Government had at the end of the financial year £2,000,000 credit in London and 12,000 contos and £300,000 sterling with the Bank of the Republic. The era of deficits has changed to one of substantial surpluses. With the funding loan of £8,750,000 the nominal amount of the debt was about £2,000,000 greater, but adding the amount of paper money redeemed to £4,500,000 of gold bonds and 6,200 contos of internal bonds, a considerable amount of debt has been wiped out. The San Francisco railroads were acquired by the Government by bonds paying 5 per cent., instead of the 7 per cent. stipulated, a saving of £136,000 per annum; and for the purchase of the other guaranteed railroads £9,900,000 of 4-per-cent. bonds were issued, only £500,000 more than would have been due on the guarantees if they had remained the property of the companies. The Government has leased some of the redeemed lines with advantage, the deficits of some had been turned into surpluses, and the surpluses of others increased.

The commercial agreement with Italy was continued till Dec. 31, 1902, pending a new arrangement. In return for concessions in favor of Italian products, for which on account of the large Italian population there is a growing demand in Brazil, the Brazilian Government asked for complete exemption from duty on Brazilian coffee; when this was refused, it offered to continue the minimum tariff for three years only in return for a large reduction in the Italian coffee duty. Germans complain that German immigrants and their descendants in Brazil encounter hostility more than the Italian settlers and are subjected to injustice; that in many cases the provincial government of Rio Grande do Sul had declared their land titles defective because the Brazilian landowners who sold the farms to their ancestors had failed to fulfil the terms on which the land had been granted. The German owners had therefore in some cases been ejected and in others had been compelled to buy the land over again without allowance being made for the improvements they had made themselves. Nevertheless, emigration to Brazil is encouraged by the colonial party in Germany in the hope that the German communities there will preserve a patriotic attachment to the empire and extend its influence.

Dr. Francisco Rodrigues Alves, who arranged with the European companies for the transfer of the guaranteed railroads to the Government, was on March 1 elected President of the republic for the term beginning Nov. 15, 1902, and Dr. Silvano Brandao was elected Vice-President. On Sept. 2 Dr. Joaquin Murtinho, who carried out the reforms for the restoration of the country's finances, desiring to enter the Senate, resigned the Ministry of Finance, which was taken over by Sabino Barroso, the Minister of the Interior, for the remainder of the presidential term.

BRITISH COLUMBIA, a province of the Dominion of Canada. Area, 383,300 square miles; population, about 177,000.

Politics and Legislation.—At the beginning of 1902 the Government was composed of James Dunsmuir, Premier and President of the Council; D. M. Eberts, Attorney-General; J. D. Prentice, Minister of Finance, Agriculture, and Education; W. C. Wells, Chief Commissioner of Lands and Works. The Department of Mines was vacant, and remained so until Feb. 27, when E. G. Prior, who had once been a member of the Conservative Government at Ottawa, was appointed minister. In politics the Government was a coalition, and the personal element remained during this year an important feature in British Columbia politics, although a feeling in favor of introducing direct party politics into the administration of provincial affairs grew steadily in force. A stormy session of the Legislature followed, with a fluctuating Government majority. Mr. Dunsmuir went to England after its adjournment to attend the coronation, and not long after his return he resigned the premiership in favor of Col. Prior, who on Nov. 26 announced the following as his Cabinet: Premier and Minister of Mines, E. G. Prior; Attorney-General, D. M. Eberts; President of the Council, W. W. B. McInnes; Minister of Finance, J. D. Prentice; Provincial Secretary and Minister of Education, Dennis Murphy; Commissioner of Lands and Works, W. C. Wells.

Meanwhile the Legislature had been opened on Feb. 20 by Lieut.-Gov. Sir Henri Joly de Lotbinière, after C. E. Pooley had been elected Speaker and Richard McBride chosen leader of the Opposition at a party caucus. The speech from the throne contained these passages:

"In view of the unfavorable conditions which affected the mining industry during 1901, it is especially gratifying to know that the output of the mines considerably exceeded that of any previous twelve months, and that the year closed with several detrimental causes removed, and with prospects of greatly increased activity and development. Negotiations with the authorities at Ottawa, begun last year, have been continued by my Government, and a conference has been agreed to for the further discussion of matters affecting the relations of the province of British Columbia and the Dominion of Canada under the terms of union. A report will be laid before you concerning the results of the commission to inquire into and adjust, where possible, freight rates on agricultural products. It is satisfactory to state, as a consequence, that substantial reductions have been made, and shipping facilities have been improved. It is also a matter of very great satisfaction that the agricultural industry in this province is so prosperous. To further the interests of the stock-raisers of the interior a measure will be submitted providing for the establishment of a system of cold storage in connection with abattoirs.

"The subject of fishery development is one which has been receiving greatly increased attention, and the efforts of my Government are in the direction of placing the industry on a more satisfactory footing. Steps will be taken with a view to the introduction of a fair measure of redistribution. Measures will be submitted for your consideration having for their object the encouragement of immigration and the settlement of unoccupied lands. A measure will also be submitted for the purpose of consolidating existing loan acts and obtaining authority thereunder for the issuance of a new loan.

"Under the authority of legislation of last session, agreements have been entered into with several companies for the manufacture of pulp

and paper, and negotiations are now being carried on for the establishment of these industries. Negotiations are being carried on for the purpose of securing the construction of a railway from Bute inlet to Yellowhead pass, to connect with the railway system on Vancouver island, and for the construction of the Coast Kootenay Railway. Legislation will be introduced dealing with taxation and assistance to hospitals. The estimates of revenue and expenditure have been carefully prepared with a view to the strictest economy being exercised, and will be submitted without delay."

An important piece of legislation during the session, which closed on June 21, was a measure increasing the number of members of the Legislature from 38 to 42. Vancouver received 1 more member, or 5 against Victoria's 4. The bill passed its second reading on March 25 by 32 to 3, and was declared by many Opposition members to be extremely fair. It eventually became law.

Railway Legislation.—The most important enactment of the session was the passing of a measure that temporarily settled the problem of aiding transportation through the northern part of the province and of meeting the popular demand for some form of competition with the Canadian Pacific Railway. By this act, which was presented on May 6 and finally passed, the old Victoria, Vancouver, and Eastern Railway project was merged in a new line—the Vancouver and Coast Kootenay Railway—and Messrs. Mackenzie and Mann, with their American supporter, J. J. Hill, received the reward of prolonged agitation. The measure provided for land and monetary aid to the Canadian Northern Railway, from Bute inlet to the eastern boundary of the province, and to the Vancouver and Coast Kootenay Railway Company. To aid the Canadian Northern, the Government was to pay for the first 50 miles of railway, beginning at or near Bute inlet, \$4,800 a mile; from the end of the said first 50 miles to the point nearest to Quesnel, \$4,000 a mile; from the said point nearest Quesnel to the eastern boundary of British Columbia, at or near Yellowhead pass, \$4,500 a mile; and also 20,000 acres of land for each mile of railway, the company to sell the land at the current price of Government lands, and to accept the cash subsidy in British Columbia 3-per-cent. inscribed stock.

For the Vancouver and Coast Kootenay Railway the Government offered \$4,000 a mile for the westerly 80 miles; for the next 100 miles, \$4,800 a mile; and for the other 110 miles, \$4,000 a mile. The railway was to connect with the Victoria Terminal Railway and ferry company's line for Victoria. The Canadian Northern was also to run a ferry to Vancouver island and a railway down Vancouver island to Victoria. The Government also introduced a bill to borrow \$3,000,000 to aid the railways, to pay the overdraft, and to carry on other public works.

The War.—On June 2 the following resolution was unanimously passed: "That this house, having heard with the greatest satisfaction that the war in South Africa has been brought to a successful termination, desires to extend to his Majesty's Government the most sincere and loyal congratulations upon the happy occasion."

In the course of his speech the Premier made the following remarks:

"It is at once a matter of pride and patriotic joy that we can join with the people of Great Britain and Britons everywhere in celebrating the successful outcome of a conflict in which our brave Canadian sons took so valorous and con-

spicuous a part, having among colonial troops won special distinction everywhere in South Africa and throughout the whole war. It is especially gratifying to us to know that among Canadians the boys of British Columbia were ever to the front in deeds of bravery and shared the hardest fighting and the longest and most memorable marches. The gallant charge at Paardeberg will live long in history, and is engraved in the hearts of the British people."

Finances.—The receipts of the province for the fiscal year ending June 30, 1902, were \$2,140,751, the expenditure \$2,475,334. The estimated receipts for the year ending June 30, 1903, were stated to be \$2,222,568; the estimated expenditure, \$2,486,127. The following are the details of the receipts for the first and second periods mentioned. The estimate of receipts included: Dominion of Canada—subsidy, grant, and interest, \$305,968.65; land sales (including estimated collections on overdue payments, \$40,000), \$80,000; land revenue (including rental of lands and water dues), \$37,000; timber royalty and licenses, \$80,000; timber leases, \$110,000; free miners' certificates, \$100,000; mining receipts, general, \$175,000; licenses, \$80,000; real-property tax (including estimated collections on arrears, \$80,000), \$210,000; personal-property tax (including estimated collections on arrears, \$60,000), \$140,000; wild-land tax (including estimated collections on arrears, \$75,000), \$130,000; income tax (including estimated collections on arrears, \$15,000), \$55,000; revenue tax, \$150,000; mineral tax, \$130,000; fines and forfeitures and small debt court fees, \$16,000; law stamps, \$14,000; probate fees, \$10,000; registry fees, \$80,000; printing-office receipts, \$15,000; interest on investment of sinking-funds, \$35,000; Chinese restriction act, 1884 (Dominion refund), \$40,000; fisheries, etc., \$35,000; succession duty, \$20,000; royalty and tax on coal, \$130,000; miscellaneous receipts, \$44,100.

The expenditures in 1901-'02 included \$411,440 upon the public debt, \$253,980 upon salaries, \$231,132 upon justice, \$41,325 upon legislation, \$124,380 upon the maintenance of public institutions and \$87,300 upon hospitals and charities, \$110,200 upon administration of justice, \$369,537 upon education, \$32,200 upon transport and revenue services, \$804,641 upon public works, and \$119,900 upon miscellaneous matters.

The Opposition denounced the Government very freely for extravagance and for fling up alleged deficits year after year. R. G. Tatlow and Dennis Murphy were the chief speakers on this subject, and the latter estimated the public debt of the province at the close of 1902 as being nearly \$10,000,000. Speaking on May 3, he explained this as follows: "The debt as it appears in the balance-sheet is about \$6,450,465.08; unrecoverable assets, principally payments of interest on railway bonds, the details of which he had given, were \$298,676.05; discount on diking items, \$400,000; total, \$6,749,141.13. To this must be added the overdraft for the current year. Taking the Finance Minister's own figures—he thought they were below the mark—this overdraft will on June 30, 1902, amount to \$1,600,000. The overdraft on June 30, 1901, was \$871,771.56, so that the increase during the current year will be in round numbers \$729,668. Adding this amount to the debt as already computed of \$6,749,141.13, the total net debt of the province on June 30, 1902, would be \$7,878,141.13. The Finance Minister intended to raise a new loan of \$3,000,000, of which, according to his own figures, \$1,600,000 would be eaten up by the overdraft, leaving the sum of \$1,400,000 to be added

to the net debt, which would therefore be, when this new loan was floated, \$4,278,141.13."

General Development.—The increase in development of British Columbia is shown by the following tables:

	1881.	1891.	1901.
Number of miners.....	2,792	4,591	10,000
Number of fishermen.....	1,850	3,798	23,000
Number of farmers.....	2,381	5,874	10,000
Number of houses.....	6,992	16,775	30,000
Population.....	49,459	98,175	177,272

	1871.	1881.	1891.	1901.
Revenue.....	\$192,000	\$397,035.06	\$1,038,237.95	\$1,605,920
	1871.	1881.	1891.	1901.
Exports.....	\$1,912,907	\$2,255,753	\$6,199,280	\$21,645,000
Imports.....	1,790,352	2,480,246	5,477,411	11,137,436
	\$3,703,259	\$4,744,999	\$11,676,691	\$32,782,436

	1874.	1881.	1891.	1901.
Coal mined (tons).....	81,000	228,000	1,029,097	1,692,000

In the ten years 1890-1900 there were spent in hospitals \$528,000; education, \$2,388,138; roads, streets, bridges, wharves, \$3,790,775; works and buildings, \$2,425,280; surveys, \$330,473.

Mineral Production.—The total product of the mines of the province up to and including 1901 was \$172,241,988, of which \$80,000,000 was in gold and \$54,000,000 in coal and coke. The total production in 1898 was \$10,906,861; in 1899, \$12,393,131; in 1900, \$20,686,780. In the year ending Dec. 31, 1901, the placer gold produced was valued at \$970,100, the lode gold at \$4,348,603, the silver at \$2,884,745, the copper at \$4,446,963, the lead at \$2,002,733, the coal and coke at \$5,016,398, the miscellaneous minerals at \$417,238.

Education.—The report of the Superintendent of Education for the year 1900-'01 says the total enrolment during the year was 23,615, an increase of 2,084. Of this number, 12,069 were boys and 11,546 girls. The enrolment of the 5 high-schools was 584, an increase of 31; at the graded schools, 15,460, an increase of 1,647; and at the common schools, 7,571, an increase of 406. The average daily attendance of all schools was 15,334.

The expenditure for education proper during the year was: Teachers' salaries, \$213,088.23; incidentals, \$20,428.07; per capita grant to city districts, \$65,840.76; education office, \$12,205.81; normal school, \$1,944.30; total, \$313,507.18—less fees for teachers' examination, \$1,320—net expenditure, \$312,187.17. The expenditure for the construction of new schoolhouses, furniture, and repairs and improvements to school property was \$38,345.14. The average cost for each pupil in enrolment districts for principals and teachers was \$59.26, and the average monthly salary for rural teachers and monitors \$52.66.

The Chinese Question.—On Feb. 27 the report of the royal commission of 1901 to inquire into the question of Oriental immigration was submitted to Parliament. The decisions of this voluminous document may be briefly summarized.

The belief was expressed that the Chinese kept out immigrants who would become permanent citizens, and created conditions inimical to labor and dangerous to the industrial peace of the community where they resided, spent little of their money, and traded chiefly with their own people. The commissioners believed it was impossible for the province of British Columbia to take its place and part in the Dominion unless its population was free from any taint of a servile class not imbued with a sense of the du-

ties and responsibilities appertaining to citizenship. The estimated white population of British Columbia was 129,000, and 16,000 Chinese. The commissioners pointed out that British laws recognized that aliens can be kept out of the country, especially if as a class they are undesirable. The commissioners approved the views of the Legislature of British Columbia, alleging the probability of a great disturbance to the economic condition of the province and of grave injury being caused to the working classes by the large influx of laborers from China. They found that the capitation tax at \$100 was ineffective and inadequate. They were of the opinion that the further immigration of Chinese laborers into Canada ought to be prohibited, and in the meantime the capitation tax should be raised to \$500. Messrs. Clute and Foley recommended that the capitation tax should be raised at once, while Commissioner Munn recommended that \$300 should be imposed for two years, and if a prohibitive treaty be not obtained within that period, that it be then raised to \$500.

Boards of Trade Convention.—A convention was held at Kaslo during the week ending March 1, composed of representatives of the boards of trade of British Columbia. Resolutions were passed, including one from Traill in favor of increasing the duties on white lead and other manufactured lead products in Canada; another from Rossland regarding proposed popular safeguards against corporation control of fuel and its price in the Crow's Nest fields; one protesting against the injustice of the existing mineral tax, and asking the Government to reduce it so as to levy on the net value of the ore by deducting, in addition to the present freight and treatment charges, the cost of mining exclusive of capital expenditures. It was declared that further revenue might be obtained by rigidly enforcing the tax of 25 cents an acre now levied on non-working Crown-granted mineral claims, and also by increasing the fees for recording assessments.

Conservative Convention.—On Sept. 12-15 a gathering of representative Conservatives was held at Revelstoke. It was addressed by R. L. Borden, the Dominion party leader, and John Houston, M. P., was elected president of the Provincial Conservative Association. Charles Wilson, K. C., was selected as the provincial leader, and after speeches from Col. Prior, the Hon. T. Carter-Cotton, and the Hon. R. McBride, opposing leaders in provincial politics, a resolution was passed in favor of the introduction of Dominion party lines into provincial affairs. The following resolutions were also passed:

"That the policy of the party in matters of provincial roads and trails, ownership and control of railways, and the development of agricultural resources as laid down in the platform adopted in October, 1899, is hereby reaffirmed.

"That to encourage the mining industry the taxation of metalliferous mines should be on a basis of percentage on net profits.

"That Government ownership of telephone systems should be brought about as the first step in the acquisition of public utilities.

"That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state-owned mines may be easily possible if their operation becomes necessary or advisable.

"That in pulp-land leases provisions should be made for reforestation; and that steps should be taken for a general preservation of forests by guarding against a wasteful destruction of timber.

"That the Legislature and the Government of the province should persevere in an effort to secure the exclusion of Asiatic labor.

"That the matter of better terms in the way of subsidy and appropriation for the province should be vigorously pressed upon the Dominion Government.

"That the silver and lead industries of the province be further encouraged by the imposition of increased customs duties on lead and lead products imported into Canada, and the Conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

"That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees."

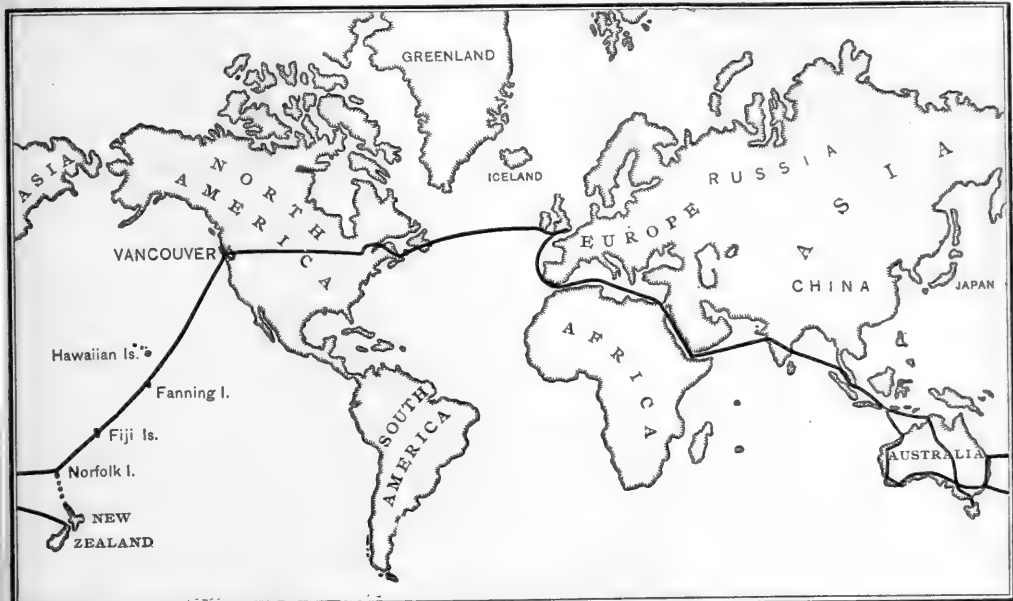

ent elected G. R. Maxwell, M. P., as his successor, chose Mr. Martin the party leader by a substantial majority, and passed resolutions in favor of the adoption of party politics in provincial affairs and of fealty to Sir Wilfrid Laurier as the Dominion leader.

Labor Party and Questions.—On April 11-13 a convention of labor representatives was held at Kamloops, and Christopher Foley, of Rossland, was elected president of a newly organized provincial Progressive party, with the following platform:

"1. That we gradually abolish all taxes on the producer and the products of the producer, shifting them on land values.

"2. Government ownership of railways and means of communication.

"3. That the Government establish and operate smelters and refineries to treat all kinds of minerals.

TELEGRAPH CABLES BETWEEN GREAT BRITAIN AND HER COLONIES.

Meeting of Liberals.—On Feb. 6 a provincial Convention of Liberals opened in Vancouver, with Senator Templeman, chairman of the provincial Executive of the party, in the chair. The object was to discuss the question of introducing party lines into provincial politics and to select a leader or discuss the advisability of doing so. The whole matter soon settled into a struggle on the question whether Mr. Martin should be chosen by the convention or the subject be postponed to another occasion. The chairman found the meeting hard to control from the beginning, and the first important issue raised was the right of the provincial Executive to appoint its members as members of the convention. Disputes as to credentials, therefore, occupied the attention of the 110 delegates present for hours, and the speeches were interspersed with opinions for and against the adoption of party lines. Finally a vote of 69 to 41 declared that the provincial Executive and the editors of Liberal newspapers appointed by that body were not entitled to membership in the convention. Senator Templeman and his friends then left the hall, and those pres-

"4. That the franchise be extended to women.

"5. The abolition of property qualifications for all public offices.

"6. Farms, improvements, implements, and stock not to be taxed, and wild lands to be assessed at the price asked for them by speculative holders.

"7. No land or cash subsidies. Lands to be held by the actual settlers.

"8. Ten per cent. of all public lands to be immediately set aside for educational purposes, and the education of all children, up to the age of sixteen years, to be free, secular, and compulsory. Text-books, meals, and clothing to be supplied out of the public funds when necessary.

"9. Compulsory arbitration of labor disputes.

"10. Restriction of Oriental immigration by a law on the lines of the Natal act; and if said law be disallowed it be repeatedly reenacted until the end sought is obtained.

"11. That to protect us from Asiatics already in the province the Government insert a clause in all private acts to this effect: 'This act shall be null and void if the company fails to enter

into an agreement with the Government as to conditions of construction and operation,' and the House pass a resolution instructing the Government to prohibit the employment of Asiatics on all franchises granted by the provincial House.

"12. Conservation of our forest riches. Pulp-land leases to contain a provision for reforestation, so as to produce a perennial revenue and make pulp manufacture a growing and permanent industry.

"13. That the act compelling the scaling of logs by Government scalers be enforced.

"14. Absolute reservation from sale or lease of a certain part of every known coal area. All coal leases or grants hereafter made to contain a provision enabling the Government to fix the price of coal loaded on cars or vessels for shipment to British Columbia consumers.

"15. Municipalization and public control of the liquor traffic.

"16. The right to a referendum where a valuable subsidy or franchise is to be carried.

"17. That all transportation companies be compelled to give transportation free to members of the Legislative Assembly and Supreme Court and county judges.

"18. Election day to be a public holiday. Provision made that every employee shall be free from service at least four consecutive hours during polling time."

The British Pacific Cable.—At three o'clock in the morning of Oct. 31, 1902, at Suva, in the Fiji Islands, was completed the last link in the Pacific cable, placing Vancouver, British Columbia, in direct communication with Australia and New Zealand. A message of congratulation was despatched immediately to the King, and another to Lady Vogel, expressing regret that her husband, the late Sir Julius Vogel, had not been spared to see the consummation of the plan which is a monument to his genius and foresight. The new cable, which was laid under the direction of F. R. Lucas, engineer-in-chief to the Telegraph Construction and Maintenance Company, extends southwest from Vancouver by way of Fanning island, Fiji, and Norfolk island to Australia and New Zealand, with its Australian terminus at Southport, Queensland, and its New Zealand terminus at Doubtless Bay, Auckland, and is the first cable across the Pacific Ocean. The cable was laid by the Anglia and the Colonia, the former ship lying on the Southport, Norfolk island, New Zealand, and Fiji sections 2,438 knots of cable, weighing 5,421 tons. On the Fanning-Fiji section she laid 2,181 knots, and a small section of 113 knots, the gross weight of these being 4,223 tons. The Colonia, which laid the Vancouver-Fanning section, paid out in all 3,540 knots of cable, weighing 7,684 tons. The cost of the project was about £2,000,000, of which expense Great Britain bears five-eighths and the colonies the remainder, and the scheme was successfully carried through by Sir Sandford Fleming in the face of much opposition. The line is put down at depths never before attempted and will furnish the solution of many interesting problems in deep-sea cable-laying. It is unlikely that the methods at present in use for the recovery of broken cables would be at all practicable in such deep waters. The completion of the Pacific cable puts Great Britain in direct communication with all her colonies. Hitherto telegraphic communication between Canada and Australia has been possible only by way of the West Coast of Africa or the Red Sea, and *en route* the message had to pass through territory belonging to a dozen different nation-

alities; but now the Dominion has been brought 10,000 telegraphic miles nearer the Australasian Commonwealth, while the mother country in times of international stress can rest confident that her messages to her children abroad will pass through none but friendly hands.

BULGARIA, a principality in eastern Europe under the suzerainty of Turkey, created an autonomous tributary principality by the treaty of Berlin signed on July 13, 1878, by representatives of the great powers. The Prince of Bulgaria, according to the treaty, was to be elected by the population and confirmed by the Sublime Porte, but could not be chosen from any of the dynastic families of the great powers. Eastern Roumelia, which received administrative autonomy under a Christian Governor-General to be nominated by the Porte, proclaimed its union with Bulgaria in 1885, and in 1886, the powers having tacitly accepted the *fait accompli*, the Sultan appointed the Prince of Bulgaria to be Governor-General and has not since attempted to exercise the political or military authority reserved to him by treaty. Prince Ferdinand of Saxe-Coburg was elected Prince of Bulgaria by a Great Sobranje on July 7, 1887, after the abdication of Prince Alexander of Battenberg, but his election was not confirmed by the Porte and the great powers till 1896. The heir to the throne is Prince Boris, born Jan. 30, 1894, who was received into the Orthodox Greek Church on Feb. 14, 1896. The legislative authority is vested in a single Chamber called the Sobranje, composed of 150 members, 1 to 20,000 of population, elected for five years, unless the Sobranje is dissolved before the term expires, by the votes of all adult male Bulgarians. A Great Sobranje of 300 members, specially elected, is convoked whenever the amendment of the Constitution, the succession to the throne, the appointment of a regency, or the cession or annexation of territory is in question.

The Cabinet of ministers, constituted on March 14, 1901, consisted at the beginning of 1902 of the following members: President of the Council and Minister of Finance, Petko Karaveloff; Minister of Foreign Affairs and Worship, Dr. S. Daneff; Minister of the Interior, Michael Saraffoff; Minister of Justice, Dr. Alexander Radeff; Minister of War, Major-Gen. S. Paprikoff; Minister of Commerce and Agriculture, Alexander Ludskanoff; Minister of Public Works, Ivan Belinoff.

Area and Population.—The area of the principality proper is 24,380 square miles; of Eastern Roumelia, called South Bulgaria, 13,700 square miles. The population of the entire country by the census of December, 1900, was found to be 3,733,189, that of South Bulgaria being 1,091,854. Sofia, the capital, had 67,920 inhabitants; Philippopolis, the capital of Eastern Roumelia, 42,849; Varna, 33,443; Rustchuk, 32,661; Slivno, 24,548; Shumla, 22,928; Plevna, 18,709. The number of marriages in 1899 was 32,027; of births, 149,006; of deaths, 90,324; excess of births, 58,682.

Finances.—The estimated revenue for 1901 was 95,286,900 lei, or francs, and the estimated expenditure 95,222,535 lei. Of the revenue 38,654,000 lei came from direct taxes and 27,920,500 lei from indirect taxes. The chief expenditures were 31,586,750 lei for the public debt, 20,200,000 lei for the army, 10,716,863 lei for public works, 7,800,188 lei for education, and 6,586,453 lei for the interior. The debt on Sept. 30, 1900, consisted of 39,188,000 lei of the 6-per-cent. loan of 1888 for the purchase of the Rustchuk and Varna Railroad, 24,840,000 lei of the 6-per-cent.

loan of 1889, 121,717,000 lei of the 6-per-cent. loan authorized in 1892, 21,875,000 lei of five-year 6-per-cent. treasury bonds issued Jan. 1, 1900, and secured on the tobacco tax, and 9,700,000 lei of the Russian occupation debt. The Eastern Roumelian tribute payable to Turkey is 2,951,000 lei per annum, besides 500,000 lei to clear up the arrears of 5,243,000 lei. The Government was authorized by a law passed in June, 1899, to convert the entire public debt into a new loan of 260,000,000 lei with interest at 5 per cent. The Bulgarian tribute and the Bulgarian share of the Turkish public debt were to be fixed according to a provision in the Berlin treaty. The claims of Russia for the expenses of the occupation, 26,500,000 lei payable in annual instalments of 2,100,000 lei, ought to have been extinguished at the end of 1902. The Eastern Roumelian tribute, originally fixed at 6,125,000 francs, was reduced in 1883 to 4,625,000 francs. After the union with Bulgaria, in 1885, the Government left it unpaid till 1888, when a further reduction to 3,250,000 francs was obtained on condition that the arrears should be paid up in annual instalments of 500,000 lei. In 1896 the Bulgarian Government withheld the tribute, owing to a dispute with Turkey, and in 1897 the Administration of the Turkish Debt, to which the tribute had been assigned, agreed to take 2,850,000 lei henceforth if promptly paid each year. Since 1900, however, it has not been paid. The amount of the foreign consolidated debt on Jan. 1, 1902, was 198,753,404 lei. Of the effective proceeds of the loans of 1889, 1892, and 1900, amounting to 156,285,300 lei, 111,694,868 lei were spent on railroads and harbors, while the remainder was used to meet deficits in the budget and pay interest for the sinking-fund. The floating debt on Jan. 1, 1902, amounted to 78,297,893 lei, exclusive of payments of 13,373,000 lei due on the last two budgets. To clear off the floating debt, the tobacco loan of 1900, and a part of the loan of 1892, the Government in 1901 arranged with a Paris bank to borrow on the guarantee of the tobacco revenue 125,000,000 francs at 8½, to be repaid in fifty years with interest at 5 per cent. A tobacco monopoly was to be created and conceded until the extinction of the loan to the bank, which, through the agency of a company whose officers it would appoint, would have for that period the exclusive privilege of manufacturing and selling tobacco and supervision over its cultivation, importation, and exportation. Of the surplus profits, after paying interest and amortization on the loan and 8 per cent. dividends to the shareholders, the state would receive 65 per cent. and the company 35 per cent. The loan was negotiated by the Cabinet of Petko Karayeloff, leader of the Democratic party, who before he took office deprecated a foreign loan, denounced the creditors of Bulgaria, the Jewish houses of Vienna and Berlin, and protested against monopolies in general and against granting concessions of any kind to foreigners. All the economies he could effect when he became Premier and Minister of Finance were of slight value, and by remitting the unpopular tithe duty he had further crippled the resources of the Government. After obtaining, with difficulty, a loan of 4,000,000 lei from the Russian State Bank to avert insolvency, he had to make the very terms with the foreign money-lenders that he had denounced as ruinous and humiliating. The money for the proposed tobacco loan was to be provided, in fact, not by the contracting French bank, but by the financiers who already held Bulgarian securities, and who were therefore interested in averting

national bankruptcy. The budget passed by the Sobranje in 1902 was not much better than the others, notwithstanding the promises of the Kankoffist ministry to economize. The improvement in production and trade and in the general prosperity, however, was a favorable augury. The estimate of revenue for 1903 was 95,955,400 lei and that of expenditure was 98,898,337 lei, leaving a deficit of 2,942,937 lei, which was more than doubled by the uncollected arrears of taxes and the expenditure of 1,000,000 lei on the celebration of the battle of Shipka, on which occasion half the Bulgarian army maneuvered for the inspection of the Czar's generals.

The Army.—Service in the army is obligatory. The term is two years in the infantry and three years in the other arms. There are 24 regiments of infantry and skeletons of 24 reserve regiments; 5 regiments of cavalry, each of 5 squadrons; 6 regiments of field-artillery, each divided into 3 sections of 3 batteries of 6 guns each; 3 battalions of fortress-artillery; and 3 battalions of engineers and 1 technical battalion composed of 1 railroad company, 1 company of pontonniers, 1 company of telegraphists, and 1 company of train. The infantry are armed with Mannlicher repeating rifles of the model of 1888, having a bore of 8 millimeters. The cavalry carry carbines of the same caliber. The artillery have Creusot field-pieces of 8.7 centimeters caliber and Krupp mountain guns of the caliber of 7 centimeters. The peace strength of the army in 1901 was 2,500 officers and civil employees and 40,555 men, with 7,400 horses. The war effective is 126,970 men, with 23,432 horses and oxen and 312 guns, besides a reserve of 81,996 men, with 15,356 horses and 120 guns.

Commerce and Production.—The land tax in Bulgaria is one-tenth of the produce, paid in money or in kind. Villages have common pastures and woodlands which are not taxed. Of the total area, 9,570,500 hectares, 2,435,900 hectares are covered with farm and garden crops, 113,512 hectares are vineyards, 4,587,838 hectares are pasture, 1,676,250 hectares are forest, 312,000 hectares are waste, and 445,000 hectares are building land, road, water, etc. The farmers, who contribute 70 per cent. of the population, generally own the land they till. The main crop is wheat, most of which is exported. The production of attar of roses in 1900 was 4,300 kilograms. The mercantile business is done mainly by foreigners—Greeks, Roumanians, Austrians, and Jews of various nationalities. Textiles, hardware, machinery, groceries, building materials, leather, petroleum, paper, and salt are the chief imports. The total value of imports in 1900 was 46,342,100 lei; of exports, 53,982,629 lei. The imports of textile goods were 13,296,869 lei in value; of groceries, 3,984,213 lei; of metals and metal manufactures, 5,197,706 lei; of machinery and implements, 2,786,114 lei; of lumber and wood manufactures, 1,355,215 lei; of leather and leather goods, 2,353,026 lei. The exports of cereals were 27,128,280 lei in value; of textile fibers and cocoons and woolen stuffs, 4,324,454 lei; of live animals, 5,609,462 lei; of animal food products, 4,632,535 lei; of attar of roses, 3,719,380 lei. The trade with the principal countries in 1900 is given in lei in the table on the next page.

The total value of imports in 1901 was 70,044,073 lei and that of exports 82,769,759 lei, showing an increase of 51 and 53 per cent. respectively. Imports from England were 6,380,000 lei more than in the preceding year; from Turkey, 5,400,000 lei more; from Austria-Hungary, 4,500,000 lei more; from Germany, 4,200,000 lei more;

Navigation.—The number of vessels entered at Bulgarian ports during 1900 was 10,833, of 2,357,527 tons; cleared, 10,827, of 2,360,914 tons.

Railroads, Posts, and Telegraphs.—The length of railroad in Bulgaria and Eastern Roumelia in 1900 was 970 miles, of which 784 miles were the property of the Government.

The length of Government telegraph-lines in 1899 was 3,270 miles, with 6,740 miles of wire. The number of despatches sent was 1,356,041. There were 1,228 miles of Government telephone-lines.

The postal traffic in 1899 was 21,176,000 pieces of mail-matter; receipts, including telegraph receipts, 3,906,637 lei; expenses, 3,105,168 lei.

Political Affairs.—The coupons of the foreign debt were paid in July, 1901, with 4,000,000 francs advanced by the Russian Government, which in January, 1902, had to give an extension of the time for repayment. Premier Karaveloff laid before the Sobranje in December, 1901, the contract for the loan, which after protracted negotiations had been obtained from the French bank on condition that a monopoly of tobacco be given to the lenders. He was deserted by many of his own followers, who were pledged to vote for the loan. The Stambuloffists, however, for patriotic reasons determined to support the unpopular measure, which seemed to offer the only escape from bankruptcy. Although promising excessive profits to the concessionaires, the tobacco monopoly in the hands of foreigners offered financial advantages to the Government, which loses about 2,500,000 lei of the tobacco revenue every year through contraband, and the country would benefit by the introduction of improved methods of cultivating and curing tobacco. But the country was exasperated against the grasping foreigners. This entering wedge of foreign financial control roused the national jealousy of the Bulgarians. When the question of sanctioning the arrangement was put to the Sobranje in the beginning of January Karaveloff was defeated, and the ministry resigned. M. Daneff, who had much to do with negotiating the loan for which M. Karaveloff as Minister of Finance had to accept the responsibility, formed a new Cabinet on Jan. 5, in which M. Saraffoff, the chief negotiator, was retained. It was a purely Zankoffist ministry, which was not what the opponents of the loan wanted. The first vote of supply asked for was therefore refused. The Sobranje was dissolved and new elections were ordered in order to ascertain the temper of the people and give time to seek some other method, if possible, to save the Government from bank-

ruptcy. Gold was obtained from Bulgarian banks to pay the coupon which fell due in the meantime. The new ministry let it be known that it considered the conditions of the loan rejected by the Sobranje as null and void and that it would endeavor to conclude another arrangement. An extensive fraud on the Government was discovered in which some officials and politicians were implicated. Plates for printing revenue stamps had been stolen, and forged stamps to the amount of 2,000,000 lei or more had been sold and used throughout the country for several years. The ministry was composed of Zankoffists. Numerous changes were made in the official *personnel* in preparation for the elections. Direct interference or coercion was precluded by the new electoral law, which the Government promised to observe loyally. On Feb. 6 the new Minister of Public Instruction, M. Kantcheff, who had been a schoolmaster in Macedonia and was quite popular, was murdered by a discharged teacher, also a Macedonian, and once his pupil, who was crazed by his desperate fortunes.

The Sobranje elected on March 2 contained 93 Progressist Liberals, or Zankoffists, the ministerial party; 16 Liberals; 33 Populists, led by Geshoff; 12 National Liberals, or Stambuloffists, led by D. Petkoff; 18 Democrats, followers of Karaveloff; 7 Social Democrats; and 10 Agrarians. The peasants in many places made demonstrations against the concession of the tobacco monopoly to foreigners, and the result of the election was a popular condemnation of the proposed loan. Before the Sobranje assembled Dr. Daneff went to Paris and St. Petersburg to obtain, if he could, more favorable loan conditions. The financial embarrassment of the Government was the effect of the economic distress of the people, caused by a succession of bad harvests and an unfavorable state of foreign exchanges, and still more the result of financial errors and mismanagement on the part of the Government, of excessive military expenditure, extravagant outlay on public works, fiscal changes in 1895 which reduced revenue with a corresponding curtailment of expenses, and the return to tithes in kind in 1900 which could not be collected. When the principality was first established there were surpluses for three years, then for ten years surpluses and deficits alternated, and since 1892 the deficit has been chronic, averaging 9,500,000 lei a year. During the late period of agricultural depression taxes fell in arrears to the amount of 20,000,000 lei. The unbusiness-like remissness of the Bulgarians in meeting financial obligations, a national trait of this peasant nation exhibited not only by individuals but by the Government, which in some instances has met the coupons only by obtaining advances from abroad at the last moment and has shown culpable indifference in regard to the Eastern Roumelian tribute, the hostility shown toward foreign creditors, the frequent political disturbances, and the recrudescence of the Macedonian agitation have combined to impair the public credit, although the debt is light and the productive resources of the soil and the people are abundant.

On March 23 the Cabinet was reconstructed as follows: Premier and Minister of Foreign Affairs, Daneff; Minister of Finance, Saraffoff; Minister of the Interior, Ludskanoff; Minister of Justice, Radeff; Minister of War, Gen. Paprikoff; Minister of Public Instruction, Todoroff; Minister of Commerce and Agriculture, Abrasheff; Minister of Public Works, Constantinoff. All the members

belonged to the Zankoffist party. Ministers Daneff and Sarafoff, through the influence of the Russian court, secured in Paris a contract for a loan of 100,000,000 francs at 5 per cent., to be taken at 83, on the security of the tobacco-tax revenue without the concession of a monopoly of tobacco. For the purpose of ratifying this agreement and of voting supplies the Sobranje was summoned in extraordinary session on May 5. The election of the aged Dragan Zankoff as president of the Sobranje indicated that the reconstituted ministry could rely on its narrow majority. Since the reconciliation with Russia the old party programs had lost their value. The Government policy was to seek the good-will of Austria-Hungary as well as of Russia and to cultivate friendly relations with Roumania and Servia and a loyal understanding with the Porte. A good harvest and returning prosperity offered the best chance for a reestablishment of the national finances and the attraction of foreign capital for the development of the resources of the country. This ministry was not easily to be dragged in the wake of the Macedonian agitators; yet it would not be harsh or hasty in its treatment of the popular heroes, whom the Prince himself privately abetted in order to prove himself a true Bulgarian. The Macedonian trouble assumed a more serious aspect in 1902. The organizers of revolution in the Turkish vilayets were Bulgarian officers who left active service for the reserve in order that they might teach Macedonian rebels to fight effectively under military leading. The situation in Macedonia for a year past had been one of demoralization and danger. Large bodies of troops from Asia Minor quartered there held in check the threatened revolt in 1901, but this military occupation of the country, where distress was felt from natural causes as well as from political agitation rendered the situation of the Christian inhabitants more intolerable. The quiet ones often suffered for the misdeeds of the rebels and brigands; All the Turkish troops on the frontier could not prevent such acts as the kidnaping of Ellen Stone. The lawless acts of Macedonian bands provoked reprisals from the Mussulman inhabitants, who formed themselves into guerrilla bands to take reprisals, and, when caught by the Turkish troops, they were more leniently dealt with than the Christian lawbreakers. A constant stream of Macedonian emigrants passed over the border into Eastern Roumelia. The Macedonian committees smuggled many thousands of rifles into Turkey. Weapons and ammunition were hidden in churches and other places in towns as well as in secret nooks in the mountains. The Bulgarian Government appealed to the powers to force Turkey to carry out the reforms promised in the treaty of Berlin and threatened to strengthen the frontier garrisons if Turkey continued to mass troops on the border. The Russian and Austrian embassies in Constantinople called the attention of the Porte to the situation in Macedonia, and in consequence of these representations the Sultan appointed the Grand Vizier, the Minister of Foreign Affairs, and the Minister of Public Instruction a commission to consider measures of reform. Russia had advised the Porte to proceed with severity against disturbers, but carefully to avoid injustice. Russia and Austria jointly warned the Government at Sofia. The extreme wing of the revolutionary party, led by Boris Sarafoff, was enabled by the ransom paid for the release of Ellen Stone to resume active operations early in the spring. Bands of Bul-

garians entered Macedonia, levied blackmail and committed outrages, attacked Turkish patrols, and intimidated the Christians by murdering those who condemned the proceedings of the Macedonian committees. The Bulgarian Government proved its loyal intentions by removing Macedonian refugees into the interior and taking possession of all firearms found in the frontier districts. At the same time it reminded Russia and Austria that the Berlin treaty assured to the Christians of the vilayets some such degree of self-government as the Cretans already enjoyed. On detecting the chief agents of the Central Macedonian committee in the business of forming bands, the Government threatened to dissolve the committee. The Macedonian committees and the Bulgarian clergy tried to prevent the consecration, which at last took place on June 30, at Uskub, of a Servian bishop, Monsignor Firmilian, whose acceptance by the Porte was due to the intercession of the Russian ambassador. The Turkish investigating commission recommended minor modifications of the civil administration, building of roads, the establishment of schools, and a reorganization of the gendarmerie so that the revolutionary bands might better be hunted down and the peaceful inhabitants protected. The local authorities in the disturbed vilayets disarmed the Christians, who by law are not allowed to keep weapons; nor are Mohammedans, but in their case the law is never enforced. The extortion of the Turkish officials often drove impoverished *rayas* into the revolutionary bands which combined brigandage with patriotism. For that reason the Austrian and Russian ambassadors advised the Porte to choose a better class of officials and to pay them their salaries regularly. When a congress of Macedonian committees was called to meet in Sofia the Austrian and Russian representatives advised the Bulgarian Government to interdict it and the Turkish representative called for the arrest of Boris Sarafoff, the former president of the central committee, who had been tried for the murder of the Roumanian professor Mikhaileano, and whose chief lieutenant, Deutcheff, was supposed to have planned and directed the abduction of Ellen Stone. Sarafoff was still the leading spirit in organizing the Macedonians for revolution, while Gen. Zontcheff, the president, and the other members of the committee who succeeded Sarafoff and his colleagues devoted the funds they collected to recruiting and fitting out the bands of Bulgarians who invaded Macedonia. These bands were much larger than the groups of 6 or 7 men which Sarafoff founded on the Nihilist plan, pledged to obey every order from the superior committees and to murder traitors. The Bulgarian bands were military bodies of 100 or more, led by professional officers. They traversed the Turkish provinces as far south as Salonika, aided by Macedonian peasants who kept them informed of the movements of the Turkish troops. Wherever they could engage the troops on equal terms they did so, in order to give their actions the appearance of regular warfare. The gendarmerie and troops, on the other hand, sought to evade encounters, and often let the bands escape when it would have been easy to capture them, bribed perhaps to do so by the Bulgarians. The Zontcheff and Sarafoff factions were bitterly hostile to each other. Sarafoff asserted that the new committee had no object but the aggrandizement of Bulgaria, and he put forth a program of Macedonian autonomy instead of annexation to Bulgaria. When the congress met on Aug. 10 he appeared with delegations from 45 societies,

mostly Macedonian. The Zontcheff wing, composed of delegates from 45 societies in Bulgaria and Macedonia, excluded the Sarafoff delegates, over the vote of 15 of the delegates admitted, who declared themselves also partizans of Sarafoff, who therefore in the rupture that followed commanded the allegiance of the larger and more vigorous section of the party. The police seized documents of the central committee which proved that Gen. Zontcheff was actively fitting out bands to operate in Macedonia. He was therefore arrested on Sept. 2 and interned in his native place. Other members of the committee and ex-officers were arrested or took to flight. The fighting in Macedonia, which in other years comes to an end early in June, continued through summer and autumn till the mountains were covered with snow. There were 80,000 troops in Macedonia, most of them quartered on the people, a serious burden in addition to the taxes, which took a fifth of their income. Neither the Bulgarian bands nor the Macedonian secret societies gave much trouble to the authorities who in Monastir restored a tolerable degree of order and made a show of governing in a civilized manner under a *vaki* who was a capable and enlightened administrator, but unable to restrain the corrupt practices of his subordinates. In Uskub and wherever the Albanians predominated the semblance of an insurrection kept up by the Bulgarian bands inflamed the arrogance of the Albanians, which the Turks have never in the course of ages attempted to subdue, and provoked them to acts of cruelty and rapacity that made the condition of the Christians unbearable.

A consular convention between Bulgaria and Austria-Hungary was concluded and ratified by the Sobranje. The narrow and uncertain majority supporting the Government in the Sobranje was unsatisfactory to the ministers, who seized an opportunity to dissolve the Chamber again. The elections, which took place in September, were more easily influenced by the Government than the last ones. The heterogeneous Sobranje gave place to one in which the Government party had an overwhelming majority.

BUREAU OF AMERICAN REPUBLICS, INTERNATIONAL. This is the representative organization in Washington, D. C., of an agreement entered into by the independent republics of North and South America for the purpose of bringing about closer trade relations between them, to disseminate information by the publication of their tariff laws and all other laws and provisions that may be enacted by them relating to trade and navigation, and for the collection and publication of useful statistics and general information of interest to all. The organization was the one practical outcome of the first International Conference, commonly known as the Pan-American Congress, held in Washington in 1889-'90. Article II of the recommendations adopted by that conference on this subject says:

"The international union shall be represented by a bureau to be established in the city of Washington under the supervision of the Secretary of State of the United States, and to be charged with the care of all the transactions and publications, and with all the correspondence pertaining to the international union."

It was also stipulated that this bureau should be called The Commercial Bureau of the American Republics, and that its organ should be a publication to be entitled the Bulletin of the Commercial Bureau of the American Republics.

The scope and field of this publication was explained, and an estimate was made of the probable expense of maintaining the bureau, which was not to exceed \$36,000 a year. Each republic was required to pay its share of this expense in proportion to its population, and a schedule of the first year's proportionate payment of each country was embodied in the report of the committee presenting the project to the conference. This proposed assessment of each country forms the following table:

Argentine Republic	\$1,462 50	Honduras	\$131 25
Bolivia	450 00	Mexico	3,900 00
Brazil	5,250 00	Nicaragua	187 50
Chile	937 00	Paraguay	93 75
Colombia	1,462 50	Peru	975 00
Costa Rica	75 00	Salvador	243 75
Ecuador	375 00	United States	18,806 00
Guatemala	525 00	Uruguay	225 00
Haiti	187 00	Venezuela	825 00

In order that no delay should occur in organizing the bureau, the Government of the United States was asked to advance the expenses each year. The State Department at once took up the project, and the bureau was organized in Washington, practically under the directorship of the Secretary of State, with William E. Curtis as director. Regardless of the amount of work accomplished and the information disseminated through its publications, the bureau led a precarious existence, owing to the difficulty of obtaining information and the cooperation of the many countries that had entered into the agreement. The first year's report shows that 28 publications were issued besides the regular bulletin, these including handbooks of the republics, patent and trade-mark laws, import duties, and commercial directories. The commercial directories were intended for the use of manufacturers and merchants in forwarding catalogues and circulars and opening correspondence, and the demand for them, especially in the United States, demonstrated the eagerness on the part of those for whom they were intended to introduce their wares into markets hitherto practically unknown or unsought. A perplexing question was at once pressed upon the attention of the executive officer of the bureau owing to the demand for its publications, the demand increasing so rapidly as to make compliance impossible because of the limited editions. This led to the issuing of a circular in October, 1893, giving a list of the publications that had not been exhausted, with a price affixed, for which the copies could be secured by application to the Government Printing-Office. This list contained 39 publications obtainable, out of 69 that had been published by the bureau since its organization.

A resolution adopted by the International Conference recommended the adoption of a common nomenclature that should designate in alphabetical order, with equivalent terms in English, Spanish, and Portuguese, the commodities on which import duties are levied, to be used by all the American nations for the purpose of levying customs imports, and also to be used in shipping manifests, consular invoices, entries, clearance petitions, and other customs documents. This work was turned over to the bureau and conducted under its direction by authority of the acts of Congress of July 14, 1890, and July 16, 1892. The work was advanced as rapidly as possible, but it entailed a great amount of labor, and though the two appropriations of \$10,000 each were exhausted and seven years elapsed before the work was completed, when the schedule was published it was found to contain many errors and inaccuracies, owing chiefly to

the use of local names in some of the countries that are entirely unknown in other countries in which the same language is spoken; and, as a consequence, it was not acceptable to them.

Of the nations that entered into the agreement to form the union, the Argentine Republic notified the State Department in a communication through its minister of its withdrawal under date of March 2, 1892, and shortly afterward Colombia also notified the department of its intention to withdraw after paying its quota to June 30, 1893. Chile and the Dominican Republic had neither ratified the recommendation constituting the union nor declared their intention of entering it, but in March, 1892, the Dominican Government announced its desire to enter the union and authorized its representative to pay the amount of its annual assessment. The annual report of the director of the bureau for 1893 shows that the Argentine Republic, Bolivia, Nicaragua, Paraguay, and Peru had not paid their quotas, though nearly all of them promised to do so. The existence of the bureau gradually became so uncertain that it was finally decided by the State Department to make a determined attempt at reorganization, and an invitation was extended to the accredited representatives of the Latin-American republics to this country, requesting them to meet the Secretary of State for the purpose of consulting in regard to the future work of the bureau and enlarging its scope. This meeting was held on April 1, 1896, in the diplomatic room of the State Department, and all the nations were represented with the exception of the Argentine Republic, Bolivia, Paraguay, the Dominican Republic, and Haiti. The result of this meeting, after an animated discussion on the part of the various representatives, was the unanimous request that the Secretary of State appoint a committee of 5 members to act as an executive board of the bureau, to whom all matters should be referred. Accordingly, this committee was appointed, and at a meeting held June 4 it made its report, which was adopted as a basis for the government of the affairs of the union, and it was ordered that the provisions be put into force at once, without prejudice to their being referred to the respective governments represented.

Under this new plan of organization and the active interest taken in the affairs of the bureau by the diplomatic representatives forming the Executive Board, the bureau began a new existence, and its scope was much widened. An office was opened in New York for soliciting business, as it was decided to publish advertisements of reputable firms in the Monthly Bulletin, and an agent was employed for that purpose. This action, however, soon brought forth a vigorous protest from the publishers of export papers, who declared that the soliciting and publishing of advertisements was not within the province of an official organ of the Government, and that this was interfering with their legitimate business. Arguments were presented by the director of the bureau favoring the advertising project, but it was subsequently shown that with the increased business the expenses of the bureau had increased to such an extent that it was necessary to call for an appropriation of \$41,972 to meet the deficiency for six months ending June 30, 1898, which appropriation was made by the United States without objection. At a meeting of the Executive Board it was shown that of \$36,000 in advertising contracts made, 40 per cent. was required to be paid to the solicitor, who demanded his percentage before the bills

against the advertisers could be collected, which required an additional outlay of capital by the bureau, and as a consequence it was decided to terminate all existing contracts for soliciting advertisements and subscriptions to publications of the bureau upon commissions, and to discontinue the New York office. This action was taken at a meeting held Feb. 28, 1898. The previous year had seen the completion of the code of commercial nomenclature in the three languages proposed, and also that of a commercial directory that cost \$48,000. Through the good offices of the representatives of the Latin-American countries in the United States and ministers accredited by the United States, the bureau obtained the privilege of sending its mail-matter free of postage from the governments of Costa Rica, Ecuador, Guatemala, Haiti, Honduras, Nicaragua, and Venezuela through their respective territories. Mexico was the only country that had hitherto granted these privileges. Soon afterward the Argentine Republic, which had withdrawn from the union, announced its intention to take the formal steps necessary to enter it, and this announcement was shortly followed by that of Chile, Colombia and Paraguay, although they had not formally withdrawn from the union, had failed to pay their annual assessments, but now they paid their indebtedness, thus showing their disposition to become active members of the union. This was followed by Bolivia and Peru granting postal franchise privileges, which now made 14 of the republics granting this privilege, including our islands and Canada.

The second International Conference, held in Mexico in 1901-'02, fully recognized the importance of the bureau to all the republics; and the Mexican Government assigned two rooms adjoining the conference hall for its use and the installation of a reference library. With the view of rendering the bureau still more useful to all the countries represented in its administration and making it still more valuable in establishing and maintaining closer relations between them, the conference adopted a plan of reorganization that is intended to increase the efficiency of the bureau and enable it to discharge its duties to better advantage. One of the aims in the adoption of the plan was the making of the management of the bureau more truly international. The new regulations provide that the bureau shall be under the management of a governing board composed of the Secretary of State of the United States, who is to be its chairman, and the diplomatic representatives in Washington of all the other governments represented in the bureau. This governing board is required to meet once a month, excepting in June, July, and August of each year, and may hold special meetings any time on the call of the chairman, or on the request of any two members. The merit system of filling places is adopted, and it is provided that all applicants shall be examined to determine their fitness for the places for which they apply. It is required that an itemized budget be prepared annually, estimating the expenses of the bureau for the succeeding year, and this budget is to be transmitted to each government, together with a statement of the amount to be paid by such government on the basis of the existing apportionment of the expenses, and each government is required to transmit the amount of its assessment to the Secretary of State of the United States six months in advance. The bureau is given authority to correspond, through the diplomatic representatives of the several governments in

Washington, with the executive departments of those governments, and is required to furnish such information as it may possess, or can obtain, to any of the republics requesting it. Each of the republics agrees to facilitate the gathering of information by the bureau; to send to it promptly two copies of each of its official publications for preservation in its library, and to supply such information as may be requested by the director. Provision is made for the continuation of the publication of the Monthly Bulletin in English, Spanish, Portuguese, and French; and for the publication of such maps, topographical and geographical charts, and other publica-

W. W. ROCKHILL.

tions as the governing board may direct. All the publications of the bureau are to be kept free from advertising as soon as the existing contracts expire, and said publications are to be considered public documents and are to be carried free in the mails of all the republics. The bureau is made custodian of the archives of the International American Conferences,

and is especially charged with the performance of the duties imposed upon it by the conference. The specific duties thus imposed upon the bureau at the last conference were:

The carrying out of the provisions of the resolution looking to the collection, compilation, and dissemination of more complete statistical data and information regarding the resources of the several republics; the fixing of the date for, and the performance of the general executive work of the sanitary convention to be called in accordance with the resolution adopted on the subject of quarantine and sanitation; the performance of the general executive work of the Customs Congress to meet in the city of New York, and also the Coffee Congress, which met in New York Oct. 1, 1902, and adjourned on the 29th (see COFFEE), and the keeping of the accounts of the American International Archeological Commission. In addition to these duties specifically prescribed by the conference, it was recommended that the bureau should collect, compile, and keep

on file, and should publish to such extent as may be practicable, information regarding commercial laws; the banks of the American republics, their capital stock and deposits; the patent laws of the several countries, changes in said laws, patents granted, and decisions of the courts of the several countries in patent litigation; complete monthly reports of exports and imports of the several countries; the arrival and departure of vessels from the ports of the American republics, with their tonnage; the length, stated in miles and kilometers, of railways, street-railways, and telegraph and telephone lines in the several countries, and complete data as to the new lines projected or being built; information regarding new private enterprises, so far as can be obtained; information regarding new public works of all kinds; the most complete vital statistics of each of the republics and of its important cities that can be obtained; and such other information as the director, with the approval of the governing board, may determine. It is stipulated that the library established by the bureau be known as the Columbus Memorial Library. This last provision was made at the suggestion of Mr. Calvo, delegate to the conference from Costa Rica, who said that at the previous conference a recommendation to that effect had been unanimously approved, but no practical steps had been taken to carry out the idea. He further said that the chief aim in establishing the library, which was to be practically only an amplification of the existing one in the bureau, was to create a valuable collection of Latin-American books of commercial and statistical information. In the director's report for the fiscal year 1901 it was stated that the existing library consisted of 8,948 volumes. In the year 1,456 books and pamphlets were received, of which 991 were gifts. About 2,000 periodicals were received, including daily and weekly newspapers.

The reorganization of the bureau was immediately taken up after the adjournment of the International Conference at Mexico in the early part of the year, in conformity with the resolutions adopted. Mr. W. W. Rockhill continues in office as the director, and Mr. Nicolas Veloz Goiticoa was elected by the governing board to fill the place of secretary, vacated by the death of Dr. Guzman; Dr. José Ignacio Rodríguez, long connected with the bureau as chief translator, was confirmed in his office, and received the additional honor of librarian of the Columbus Memorial Library; and Mr. W. C. Fox, who represented the bureau as acting director at the conference in the city of Mexico, was confirmed in his office of chief clerk, and was made editor of the Monthly Bulletin.

C

CALIFORNIA. (See under UNITED STATES.)
CANADA, DOMINION OF, a federal union of British provinces in North America; area, not including the far Northern Franklin Territory, 3,653,946 square miles; population, 5,369,262.

Government and Politics.—At the beginning of 1902 the Dominion Government was composed of Sir Wilfrid Laurier, Premier and President of the King's Privy Council for Canada; Sir R. J. Cartwright, Minister of Trade and Commerce; R. W. Scott, Secretary of State; David Mills, Minister of Justice; Frederick William Borden, Minister of Militia and Defense; William Mulock, Postmaster-General; Sydney Arthur Fisher, Min-

ister of Agriculture; Joseph Israel Tarte, Minister of Public Works; William Stevens Fielding, Minister of Finance; Andrew George Blair, Minister of Railways and Canals; Clifford Sifton, Minister of the Interior and Superintendent-General of Indian Affairs; William Paterson, Minister of Customs; Michel Esdras Bernier, Minister of Inland Revenue; Richard Reid Dobell, without portfolio; and James Sutherland, without portfolio.

Early in the year several changes occurred in the Government. On Feb. 8 it was announced that the Hon. Mr. Mills had been appointed to the Supreme Court of Canada; that the Hon.

Charles Fitzpatrick was to succeed him as Minister of Justice; that Henry George Carroll, K. C., M. P., was to replace the last-mentioned as Solicitor-General, without a seat in the Cabinet; and that the Hon. William Templeman, of British Columbia, was to become a member of the Government without portfolio. Mr. Fitzpatrick was sworn in on Feb. 22. The Hon. James Sutherland, M. P., who had been a member of the Government since 1899, without portfolio, had already been sworn in as Minister of Marine and Fisheries on Jan. 16, in place of Sir Louis Davies, who had gone to the Supreme Court in the preceding December.

The most important political event of the year, however, was the retirement of the Hon. J. Israel Tarte from the Government. As he represented a considerable French following in preceding elections, and had old-time Conservative party associations, his separation from the Liberal ministry created a sensation. His speeches during some months had been very protectionist and had become more so as the time of Sir Wilfrid Laurier's return from England drew near. On Oct. 20—two days after the Premier's return—Mr. Tarte sent in his resignation, and in his letter made the following statement: "I shall not discuss with you at the present time the question as to whether I was right or wrong in the course I have followed. You are the leader of the Government, and your opinion, as far as my attitude is involved, must prevail. You told me that my utterances are causing trouble. I have no right and no desire to be a source of embarrassment to you or the party with which I have been connected since 1892. My views on the tariff are well known to you. I have on several occasions stated them publicly in your presence, and discussed them often privately with you. Entertaining the opinion that the interests of the Canadian people make it our duty to revise the tariff of 1897, with the view of giving a more adequate protection to our industries, to our farming community, and our working men, I can not possibly remain silent. I prefer my freedom of action and speech under the circumstances, even to the great honor of being your colleague."

Sir Wilfrid Laurier, in his reply, accepted the resignation upon constitutional grounds and for the following expressed reasons: "If you had reached the conclusion that the interest of the country demanded without delay an increase of the customs duties, the first thing for you to do as a member of the Government, before addressing your views to the country, would have been to place them before your colleagues, with the object of obtaining that unanimous action of the Cabinet which is the very foundation of responsible Government. If you had not been able to obtain from your colleagues their consent to the course you recommended, you would have been obliged then either to accept their views or sever your connections with them, and then for the first time you would have been free to place your views before the public. Such was the very simple course which was binding upon you; but to remain a member of the Government, and at the same time to advocate a policy which had not yet been adopted by the Government, was an impediment to the proper working of our constitutional system, and implies a disregard for that loyalty which all those who are members of the same administration owe to each other, and have a right to expect from each other."

A few days later Mr. Tarte assumed editorial charge of *La Patrie*, a French-Canadian Liberal paper in Montreal, and announced that he would

entertain an independent attitude toward the Government. After a short delay Raymond Prefontaine, K. C., M. P., formerly mayor of Montreal, was appointed Minister of Marine and Fisheries, and the Hon. Mr. Sutherland was transferred to Mr. Tarte's late department Nov. 12. Meanwhile R. L. Borden, M. P., the Conservative leader, had been making a tour of Manitoba, the Northwest Territories, and British Columbia, accompanied by Messrs. E. F. Clarke, J. Clancy, R. Blain, D. Henderson, and other Conservative members of Parliament. A great many speeches were made, and the ground was taken that Mr. Tarte was coming over to Conservative policy and fiscal principles. Mr. Borden left Winnipeg for his home in Nova Scotia on Oct. 21, and before doing so issued a final appeal to the people of the west to support a policy of adequate protection to Canadian industries and of a national transportation system. Parliament had met and dispersed many months before this. On Feb. 13 it was opened by the Earl of Minto, Governor-General, with a speech from the throne, in which he said:

"Application having been made by the Canadian Pacific Railway Company for approval of an increase of its capital, to meet the demand for additional rolling-stock and other improved facilities for handling the growing traffic, my ministers availed themselves of the opportunity to stipulate that the long-pending question of the power of the Governor in Council to regulate the tolls of the company should be submitted to the courts for a judicial decision. The correspondence and others papers will be laid before you.

"The inventor, Mr. Marconi, having met unexpected obstacles to the carrying on of his experiments in wireless ocean telegraphy in a sister colony, my ministers deem it expedient to invite him to continue his operations on the coast of Nova Scotia, and they availed themselves of his presence in Canada to enter into negotiations resulting in an arrangement through which, should the project prove as successful as is hoped for, the Government and people of Canada will enjoy the benefits of the invention on very favorable terms, including rates for transatlantic messages very much below those now existing.

"I am pleased to inform you that the display made by Canada of her products at the several expositions at which they had been exhibited during the last year has attracted much attention, and has already resulted in many inquiries and orders for our goods. I may also congratulate you on the satisfactory condition of the revenue, and on the steady and continuous expansion of the general business of the country as evidenced by the increased volume of exports and imports. With the view of still further facilitating and developing our trade with other countries, it will probably be found expedient to increase the number of our commercial agencies; and Parliament will be asked to consider the desirability of making additional provision for that purpose.

"I have also pleasure in informing you that the governments of Australia and New Zealand have accepted an invitation from my Government to attend a conference in London next June for the consideration of trade, transportation, cable, and other matters of intercolonial concern, and it is hoped that the meeting may lead to an extension of Canadian trade with those important portions of his Majesty's dominions. I have further to advise you that my Government, having caused inquiry to be made, has reached the conclusion that the establishment of direct steam-

ship service with South Africa would enable Canada to secure in that country a profitable market for her varied products, and, to that end, will endeavor to arrange for such a service."

The session was comparatively quiet. The principal events were the act authorizing the Canadian Pacific Railway to increase its capital stock considerably, the legislation enabling Manitoba farmers to erect free grain warehouses at railway-stations, and the granting of representation to the Yukon Territory. The following were the chief acts passed and duly assented to by the Governor-General at the prorogation of the houses on May 15:

To incorporate the Indian River Railway Company.

To incorporate the Sovereign Life Assurance Company of Canada.

To incorporate the Nipissing and Ottawa Railway Company.

To incorporate the St. Lawrence and Northern Railway Company.

To incorporate the Strait of Canso Bridge Company.

To incorporate the Crown Bank of Canada.

To incorporate the Knapp Tubular Steamship Company.

To incorporate the Canadian Manufacturers' Association.

To incorporate the Pacific Northern and Omenica Railway Company.

To amend the bills of exchange act.

Further to amend the Canada evidence act, 1893.

Further to amend the acts respecting the Northwest Territories.

Further to amend the Yukon Territory act and the acts in amendment thereof.

To incorporate the Toronto and Niagara Power Company.

To amend chapter xli of the Statutes of 1901 respecting the administration of justice in Yukon Territory.

To amend the land titles act, 1894.

To amend the Chinese immigration act, 1900.

To amend the naturalization act.

To incorporate the Yukon Pacific Railway Company.

To incorporate the Manitoba and Keewatin Railway Company.

To incorporate the Canada Eastern Railway Company.

To incorporate the Nepigon Railway Company.

To incorporate the Canada Central Railway Company.

To incorporate the North Shore Power, Railway, and Navigation Company.

To provide for the establishment of a Medical Council in Canada.

To amend the immigration act.

To amend the fruit marks act, 1901.

To incorporate the Securities Bank of Canada.

To incorporate the Metropolitan Bank.

To incorporate the Union Life Assurance Company.

To amend the Manitoba grain act, 1900.

Respecting the coasting-trade of Canada.

To amend the customs tariff, 1897.

To incorporate the Canadian Northern Telegraph Company.

Respecting the incorporation of joint-stock companies by letters patent.

The Budget of 1902.—On March 17 the Minister of Finance presented his sixth annual statement to the House of Commons. He had no changes in the tariff to announce, and he said that machinery and structural iron for beet-

sugar factories would remain free of duty for another year from April 1. He estimated the revenue for the fiscal year ending June 30, at \$56,800,000, the expenditure at \$51,000,000, and the addition to the debt of the Dominion at about \$6,000,000. He was able to say that his expression of belief in his last budget speech that the country had about reached the crest of the wave of business prosperity had been proved incorrect by the activities and progress of the past year. The revenue had been greater than his estimate, and larger than that of the years 1899-1901, as the following table showed:

SOURCES.	Year ending June 30, 1900.	Year ending June 30, 1901.	Increase.
Customs	\$28,374,147	\$28,425,284	\$51,186
Excise	9,868,075	10,318,266	450,190
Post-office	3,205,535	3,441,504	235,969
Railways	4,774,162	5,213,381	439,219
Lands	1,388,023	1,517,319	129,295
Miscellaneous	3,420,050	3,596,945	176,895
	\$51,029,992	\$52,514,699	\$1,484,704

Mr. Fielding drew special attention to the post-office returns. There was an increased revenue of \$235,969, and the total receipts of the department were \$3,441,504. But the expenditure was \$3,939,446. He said, however, that the deficits had once been as high as \$800,000, and that in the meantime Mr. Mulock had not only reduced the amount, but had cut the British postage in two and reduced the Canadian postage one-third. In railways he described the condition as noteworthy. From total receipts of \$3,140,678 in 1896, when the Laurier Government took office, the amount had risen in 1901 to \$5,213,381. The total expenditure in consolidated fund account, or permanent expense account, was \$46,866,367, against \$42,975,279 in the preceding year. In legislation there had been an increase of \$342,424; in arts, agriculture, and statistics—which included the census—the increase was \$235,645; in militia there was an increase of \$215,495; in railways and canals—chiefly the working expenses of the Intercolonial Railway—the increase was \$1,136,660; in public works the increase was \$1,096,743; in the Government of the Northwest Territories, \$150,177; and in the post-office, \$173,431. Adding to this consolidated fund expenditure and the capital account expenditure—such as railway subsidies and the South African War and a certain class of public works—the total was \$57,982,866, against \$52,717,466 in 1899-1900. For railways on capital account there was an expenditure in 1901 of \$3,914,010; for canals, of \$2,360,569; for public works, of \$1,006,983; for Dominion lands, of \$269,060; for militia, of \$135,884; for the Canadian Pacific Railway, of \$8,978. The total was \$7,695,488, an increase altogether of \$226,645. The net public debt was described by the minister as having been \$268,480,003 on June 30, 1901, against \$265,493,806 in the previous years. In the five preceding years, he added, the increase had been \$9,982,570, an average of \$1,996,514, compared with an average of \$6,563,075 in the preceding eighteen years. The exact increase for 1900-'01 was \$2,986,196.

The statements of the minister were variously criticized, and on May 13 Mr. Borden, the Opposition leader, introduced the following motion:

"That the total expenditure during each fiscal year from 1892 to 1901, both inclusive, was as follows: In 1892, \$42,272,136; in 1893, \$40,853,728; in 1894, \$43,008,834; in 1895, \$42,872,338; in 1896, \$41,702,383; in 1897, \$42,972,756; in 1898, \$43,334,281; in 1899, \$51,542,635; in 1900, \$52,717,467;

in 1901, \$57,982,868. That the Finance Minister estimates that the total expenditure for the fiscal year ending June 30, 1902, will be \$65,250,000; that the annual expenditure on both consolidated revenue and capital account has increased between 1897 and 1901 by no less a sum than \$15,010,110; that during the period above mentioned the revenues of the country have been unusually large, and the Government claims a total net surplus of \$19,743,527.69, but no portion thereof has been applied in reduction of the public debt, which, with the addition estimated by the Finance Minister for the current fiscal year, will have increased from \$258,479,432.77 in 1896 to \$274,480,000 in 1902, an increase of more than \$16,000,000; that the Minister of Finance estimates that the total revenue for the year ending June 30, 1902, will be \$56,800,000; that notwithstanding this very large revenue the Minister of Finance estimates that the public debt will be increased during the current year about \$6,000,000; that the House desires to place on record the opinion that the expenditure for the year ending June 30, 1902, and the proposed expenditure for the year ending June 30, 1903, are excessive and extravagant, and regrets that the Government, with the exceptionally large revenues at its command, has not only failed to reduce, but has largely increased the public debt and has incurred capital expenditure for which the country does not receive and can not expect an adequate return."

The motion was lost on a party division of 84 to 41.

The supplementary estimates for the fiscal year ending June 30 were presented to Parliament on May 6. The total was \$5,739,301. Of this amount, \$3,386,201 was chargeable to consolidated fund and \$2,353,100 to capital account. This made the main estimates \$59,100,939 for the year beginning in July, 1902. There were \$10,000 for experimental farms; \$175,000 for the St. Louis Exhibition; \$20,000 for the Cork and Wolverhampton Exhibition; \$50,000 defenses at Esquimalt; \$300,000 arms and ammunition; \$150,000 to purchase rifles; \$50,000 for the coronation military contingent; \$315,000 for the Halifax garrison; \$1,315,000 for the intercolonial and \$36,000 for Yukon public buildings; for the Northwest Government, \$107,000; and for the Yukon Government, \$384,500.

Canada at the Coronation.—During the greater part of the year the subject most universally discussed in Canada was perhaps that of the coronation. Bound up with it also were the visits of Canadian premiers and leaders to the motherland; the conferences held there upon many important subjects; and the hospitalities extended to Canadians. The royal invitation specially extended to the Premier of Canada made him the guest of the British nation during a specified period, with headquarters at the Hotel Cecil, in company with the Premiers of Australia, New Zealand, Cape Colony, Natal, and Newfoundland, and certain appointed representatives of the Crown colonies and the Indian Empire. The premiers of all the provinces of Canada were also invited to be present at the coronation, though not as guests at the expense of the nation. In accordance with the King's desire to make the coronation an imperial event, each part of the empire was asked to send a contingent of troops. Canada sent 656 soldiers, chiefly veterans of the war, the cavalry being under the command of Lieut.-Col. R. E. W. Turner, V. C., D. S. O., of Quebec, and the infantry under Lieut.-Col. H. M. Pellatt, of Toronto.

The Coronation Conference.—In a communication addressed to the Governor-General of Canada, on Dec. 27, 1901, Mr. Chamberlain conveyed a formal intimation of the coronation having been fixed for June 26 following, and an expression of the King's desire that the Premier of Canada should be present and be a guest of the Government, together with his wife, for a fortnight from the time of arrival. On Jan. 23, 1902, the Colonial Secretary cabled Lord Minto as follows: "It is proposed by his Majesty's Government to take advantage of the presence of the premiers at the coronation to discuss with them the questions of political relations between the mother country and the colonies, imperial defense, commercial relations of the empire, and other matters of general interest. Should your ministers desire to submit definite proposals or resolutions on any of the above questions, or should they wish to suggest any further subject for discussion, I should be glad to be informed of the purport by cable, in order that the other governments can be communicated with." The period of three weeks after the coronation was suggested as that during which the premiers should remain as his Majesty's guests. Under date of Feb. 3, Lord Minto replied, accepting the invitation for Sir Wilfrid and Lady Laurier, and dealing with matters of policy as follows: "Referring to the several questions mentioned in your despatch of Jan. 23, the only one which, in the opinion of my ministers, gives promise of useful discussion, is that of the commercial relations now existing between the mother country and the great self-governing colonies, and particularly Canada, which are regarded by my ministers as entirely satisfactory, with the exception of a few minor details; and they do not anticipate that in the varying conditions of the colonies there can be any scheme of defense applicable to all."

This correspondence was laid before the Canadian House of Commons on March 11, and Mr. Borden, leader of the Conservative Opposition, brought up the subject in the House on May 12. He read the correspondence between Mr. Chamberlain and Lord Minto; deprecated as discourteous the action of the Government in declining to discuss imperial defense; declared that of the three possible features before the country—independence, annexation, or present conditions—he preferred the last, and believed that it would be the permanent one; and pointed to advantages which Canada had long received from its protection by the British naval and military forces. He then, at considerable length, discussed the existing preferential tariff and the various proposals for preferential trade in its wider sense; quoted the Premier's statement in the session of 1901 that preferential trade throughout the empire could not be discussed without premising the abolition of the protective conference, and could have no useful result under present condition of government in the Dominion. He concluded by asking for an authoritative statement as to the policy of the Government in connection with the coming conference. "We want to know whether the Government, while retaining for Canada full control of all her public moneys and her system of defense, is prepared to discuss with the imperial authorities a system of imperial defense. We want to know whether the Prime Minister proposes, as he did in 1897, and as the Minister of Agriculture did in 1901, to tell the Government and the people of the mother country that Canada desires no preference in the British markets. We want to know whether the Government are yet fully seized of the fact that

the British Government have adopted a policy with regard to duties on breadstuffs which the right honorable gentleman and his colleagues have repeatedly declared during the last five or six years was absolutely impossible of adoption by the mother country in the near future."

In his reply Sir Wilfrid Laurier deprecated the idea of any discourtesy, and pointed out that the subjects referred to would all be discussed apart from his Government's expression of opinion as to the value of such discussion. As to imperial defense especially, both he and his colleagues felt that no useful purpose could be served by debating it. "If it be intended simply to discuss what part Canada is prepared to take in her own defense, what share of the burden must fall upon us as being responsible for the safety of the land in which we were born and to which we owe our allegiance, in which all our hopes and affections are centered, certainly we are always prepared to discuss that subject. Nor do I believe that we need any prompting on that subject, or that our attention should be specially called to it." But this was not imperial defense as now much mooted. "There is a school abroad, there is a school in England and in Canada, a school which is perhaps represented on the floor of this Parliament, which wants to bring Canada into the vortex of militarism, which is the curse and the blight of Europe. I am not prepared to indorse any such policy."

The conference, as finally constituted, was composed of the Premiers of Canada, Australia, New Zealand, Cape Colony, and Natal, with Mr. Chamberlain and certain appointed representatives of colonies still under Colonial Office control. The arrangements made for submission to the various colonial parliaments included plans for contributions to the imperial navy—accepted by all the countries except Canada—and an understanding with Australia as to a future tariff preference for British goods. Upon the subject of a return preference by Great Britain for that granted by Canada in 1898, long discussion took place, and the following is a summary from the official report as issued in the succeeding November:

"From the beginning of the proceedings the Canadian ministers have claimed that, in consideration of the substantial preference given by Canada for some years to the products of the mother country, Canadian food products should be exempted in the United Kingdom from the duties recently imposed. Representation to this effect previously made through the High Commissioner for Canada were supplemented by the ministers both in writing and in personal interviews with the imperial ministers. Mr. Chamberlain, in behalf of the Imperial Government, was unable to agree to proposals of the Canadian Government, and while highly appreciating the good feeling manifested by Canada in the granting of preferential treatment, did not think its material advantages to the trade of the United Kingdom were as great as the Canadian ministers claimed. He further said that the change desired by Canada would be an important departure from the established fiscal policy of the United Kingdom, and that if the proposal could be entertained at all, as to which he was not prepared to commit himself, it would be necessary for Canada to offer some material tariff concessions beyond those which she has already voluntarily given. The Canadian ministers pointed out that the Canadian tariff was by no means prohibitive; that large quantities of goods were imported, and that a great proportion of these came from for-

eign countries. In any lines in which there was a reasonable probability that these goods could be manufactured in Great Britain, it might be possible so to readjust duties as to give an additional advantage to the British manufacturer, and thus turn over to him a volume of trade the profits of which now go to foreign countries. This readjustment might be brought about in any or all of the following ways: 1. In some cases by the reduction of duties now imposed on British goods, where such reduction might be made without injustice to any Canadian industry. 2. By the transfer of some articles from the free list to the dutiable list at such rates as would give substantial preference to the British manufacturer, instead of leaving him, as at present, on even terms with the foreign competitor as respects such articles. 3. By imposing a small duty as respects foreign goods on some articles now on the free list, while allowing them to continue free as respects British imports. 4. In some cases possibly by an increase in the duty of foreign articles, thus increasing the amount of the preference on British goods. Such increase on foreign articles could, however, only be justified where the market could be supplied by the British manufacturer at the preferential rates of duty. The Canadian ministers said that if they could be assured that the Imperial Government would accept the principle of preferential trade generally, and particularly grant to the food products of Canada in the United Kingdom exemption from duties now levied, they, the Canadian ministers, would be prepared to carry on the discussion on the lines above mentioned and endeavor to give to the British manufacturer an increased advantage over his foreign competitor in the markets of Canada."

The Alaskan Boundary.—This question was fitfully discussed in the press and by publicists in 1902, although no serious developments arose. Speaking in the House of Commons on Feb. 11, 1901, Sir Wilfrid Laurier had declared that the Americans have "taken such an attitude that it seems almost impossible to reconcile the two opposing views." He hoped, however, that if an honorable settlement could not be reached, an honorable compromise might still be effected. In the meantime, and in view of the further complications that might arise at any moment from fresh discoveries of gold, "we have agreed on a provisional boundary which will serve as a boundary so long as the question remains unsettled, and that provisional boundary has been settled by geographers of the two countries." In answer to an inquiry from Mr. R. L. Borden, the Premier said that the agreement was "in the nature of a compromise between the respective positions taken by the two parties." On April 16, in the course of a discussion upon Yukon matters in committee, Mr. Sifton, Minister of the Interior, made the following statement regarding international arrangements and the position at the moment: "As to the portion of the territory which lies contiguous to Alaska, there is a provisional boundary-line agreed to between the two governments, and that line, wherever necessary, has been laid down upon the ground by commissioners appointed by the parties. Our commissioner and the commissioner of the United States went up last season and laid out the boundary-line at the only place practically necessary—that is, across the Dalton trail to Pyramid Harbor. Under the terms of the provisional arrangement, the summit of the White pass, which was also used by travelers before the railway was opened, is considered to be the provi-

sional boundary-line. So we have at all the passes where travel is possible, a fixed provisional boundary-line, and there can be no difficulty about administration."

The Prime Minister, on May 6, in connection with a question asked by Mr. E. G. Prior, said that the point of difference between the American and the Canadian governments was, as to where the Portland channel referred to in the Anglo-Russian treaty really is. "They want to make it run up Observatory inlet, and then to the west, making out that Observatory inlet is only a small inlet running into the interior. We, on the other hand, contend that Portland channel is as it is described on the map of Vancouver, on which the treaty of 1825 seems to have been based, namely, all that channel of water which runs west of Pearse island."

The Fourth Census.—Details of the Dominion census taken in 1901, under the auspices of Archibald Blue and Thomas Cote, were published in 1902. The population of Canada, which numbered 3,635,024 in 1871, 4,324,810 in 1881, and 4,833,239 in 1891, was announced as being 5,369,262 in 1901. The only province that showed a decrease was Prince Edward Island—from 109,078 to 103,259. The largest numerical increase was in Quebec, which rose from 1,488,535 to 1,648,898; the largest proportional increase was in the Northwest Territories and Yukon, which had grown from 98,967 to 211,649. Ontario increased slightly, from 2,114,321 to 2,182,947; Nova Scotia, from 450,396 to 459,574; New Brunswick, from 321,263 to 331,120. Manitoba grew from 152,506 to 254,947, and British Columbia from 98,173 to 177,272. The increase in city and town population was marked all over the country. In 1891 the rural districts had 3,296,141 inhabitants, and in 1901 3,349,065, while the urban growth was from 1,537,098 to 2,020,601. It was distributed as follows:

PROVINCES.	RURAL.		URBAN.	
	1891.	1901.	1891.	1901.
Manitoba.....	111,498	184,714	41,008	70,233
Ontario.....	1,295,323	1,247,190	818,998	935,752
New Brunswick.....	272,362	253,835	48,901	77,285
Nova Scotia.....	373,403	330,191	76,993	129,383
Prince Edward Island.....	94,833	88,304	14,255	14,955
Quebec.....	988,830	992,667	499,715	656,231
British Columbia.....	60,945	87,825	37,238	89,447
Territories.....	98,967	164,334	47,315

According to religions or sects there were 142 divisions recorded and classified. Only 5 had more than 100,000. The population showed a total of 2,460,471 males in 1891 and 2,372,768 females, while in 1901 there were 2,751,473 males and 2,619,578 females.

Immigration.—The immigration arrivals in Canada for the fiscal year ending June 30, 1902, were 26,388 from the United States; 17,259 from the British Isles; 6,870 from Austria, including Galicia; 3,759 from Russia and Finland; 2,451 from Scandinavia; 1,048 from Germany; 1,048 from Hungary; 654 from France and Belgium; from miscellaneous nations 7,902; and constituted a total of 67,379. The figures showed an increase of 18,230 over the previous year, made up as follows: Britain, 5,449; United States, 8,401; Continent of Europe, 4,380.

Militia and Defense.—According to figures furnished the Minister of Militia and Defense for his annual report dated March 12, 1902, and supplied by Col. Lord Aylmer, adjutant-general, the regimental establishment of the active militia Dec. 31, 1901, was 38,090 officers, non-com-

missioned officers, and men; the number ordered to drill during the year was 35,437; and the total number trained or partly trained was 30,262. The number of officers and men participating in the royal review by the Duke of Cornwall and York at Quebec was 3,546; at Toronto, 10,801; at Halifax, 3,766. The total appropriation for militia services in the year ending June 30, 1901, was \$3,097,752, with pensions for the Northwest rebellion, the Fenian raids, and the troubles of 1837 amounting to \$21,240 additional. The total revenue was \$85,470, which included \$22,035 from the Royal Military College at Kingston.

Canada and the South African War.—The number of troops supplied by the Dominion to aid in the extension of the empire in South Africa was 8,000, and the losses in killed and wounded and by disease were 377. The expenditure by the Canadian Parliament was \$2,000,000, and the amount expended by the British War Office in the purchase of Canadian food supplies, etc., was \$7,500,000. The terms of peace were signed on May 31, 1902, but on March 31 occurred one of the bravest actions of the war. At Kleinhardts Lieut. Carruthers, of Kingston, Ontario, was in command of a small Canadian rear-guard, and, though attacked on three sides by an enemy of at least 500 in number and by a heavy rifle and shell fire, he held his ground until 17 of his 21 men were killed or wounded and their ammunition was exhausted. This little action saved the day and brought a flood of congratulatory telegrams and British praises to Canada. Lord Roberts cabled to the Governor-General his appreciation of the "splendid stand" of the Canadian Mounted Rifles, and Mr. Chamberlain declared that they had maintained the "splendid traditions of Canadian valor."

Conference of Boards of Trade.—This was held in the Parliament buildings at Toronto on June 4-6. It met under the auspices and initiative of the Toronto Board of Trade and its officers—Mr. A. E. Ames, President; Messrs. J. F. Ellis and J. D. Allen, Vice-Presidents; and Mr. Paul Jarvis, Secretary. President Ames was selected as chairman, and Mr. Jarvis was appointed secretary of the conference. In his opening address Mr. Ames referred briefly to the elements of supremacy and success that existed within the British Empire. "It remains, in order that the position of the empire shall be maintained and advanced, that the elements of prosperity, which are all available in large measure, shall be recognized, shall be studied, and shall be safeguarded, and that there shall be intelligent cooperation among the countries interested. I believe no one expects that the delegates have come to this conference with the idea of trying to turn things upside down and trying to have employed any but methods of natural evolution. I take it, however, that the coming together of such an influential body means that you consider that the best method of dealing with problems is not to shirk their discussion, and that nowadays it does not do to drift. I think there is also, underlying this assemblage, the feeling that the brightest day which the British Empire can have will be when Great Britain and the other self-governing countries of the empire all combine in realizing that united, in every sense, they stand; and divided, in any sense, they fall."

After prolonged and important discussion, resolutions were passed in favor of cheaper newspaper rates between Canada and Great Britain; of the removal of the British embargo upon Canadian live cattle; of the extension of the Pa-

cific cable scheme so as to create a complete line of British state-owned cables around the globe; of establishing a Canadian commercial depot in London, and of consular agents in other countries; of a fast Atlantic steamship line, and of Government aid to a steam service to South Africa; of a heavier duty on lead products; of increased copyright powers; of the appointment of a railway commissioner and Government encouragement of ship-building industries; of the enactment of an insolvency law; the encouragement of Canadian trade via Canadian ports; and increased aid to transportation facilities. The following resolution was also passed: "That in the opinion of the conference it is the duty of the Dominion, as an important division of the empire, to participate in the cost of the general defense of said empire, and therefore that an annual appropriation should be provided in the Dominion budget for this purpose, to be expended as the Dominion Government may direct."

Another resolution was passed in favor of preferential trade as follows: "That this conference is of opinion that Great Britain can best serve the interests of the empire by giving the products of her colonies a preference in her markets as against the products of foreign countries, it being believed that such preference would stimulate trade and at the same time benefit Great Britain by largely freeing her from dependence upon foreign countries for her food supplies; and with that view the Prime Minister of Canada is hereby requested to urge at the imperial conference the securing of a royal commission, composed of representatives from Great Britain and the colonies, to investigate conditions and to suggest such preferential treatment of imports from the various parts of the empire as shall be best calculated to insure the fullest benefits."

Railways.—The twenty-first annual report of the Canadian Pacific Railway Company for the year ending June 30, 1902, was preceded by a statement of the result of the company's operations during the fiscal year ending June 30. The gross earnings were \$37,503,053; working expenses, \$23,417,141. The surplus for the year was \$7,709,913. The working expenses for the year amounted to 62.44 per cent. of the gross earnings, and the net earnings to 37.56 per cent., compared with 60.75 and 39.25 per cent. respectively in 1901. The earnings per passenger per mile were 1.75 cent, and per ton of freight per mile 6.75 cents, against 1.93 and 6.70 cents respectively in 1901. Four-per-cent. consolidated debenture stock to the amount of £650,000 was created and sold on account of the construction of branch lines authorized, and for the purpose of acquiring first-mortgage bonds, on which the interest is guaranteed by the company, of the Mineral Range Railroad Company, the Columbia and Western Railway Company, and the British Columbia Southern Railway Company.

The sales of the company's lands in the year amounted to 1,362,852 acres for \$4,442,136, an average price of \$3.26 an acre, and the cash receipts enabled the directors to redeem and cancel 5-per-cent. land bonds to the face value of \$1,401,400, leaving in the hands of the public at the end of the fiscal year \$1,430,000 of these bonds, all of which have since been called for redemption and cancellation.

The statement of the Grand Trunk Railway Company for the half year ending June 30, 1902, showed gross receipts of £2,377,201 and working expenses of £1,603,612, leaving net traffic receipts of £773,589. To this latter amount cer-

tain other sums were added, which increased the total to £875,175. Deducting charges for interest, the sum of £255,635 was left as available for the payment of dividends. The receipts from passengers were £601,469; from mails and express, £106,314; from freight and live stock, £1,597,954; from miscellaneous sources, £71,464—a total of £2,377,201 or \$11,886,005. The number of passengers carried was 3,525,855, and the tons of freight and live stock were 5,675,338. On maintenance of way and structures £242,466 were spent; on maintenance of equipment, £436,063; on conducting transportation, £853,633; on general expenses and taxes, £71,450. Four-per-cent. debenture stock to the amount of £411,003 was issued during the half year as part provision for the repayment of £522,200 Northern Railway 5-per-cent. bonds, and £85,600 of Montreal and Champlain bonds were repaid. Sir Charles Rivers-Wilson, the president, concluded his statement on Oct. 1 by saying that "the cost of operation has been reduced, increased dividends are available for distribution, and additions to capital have been maintained within the most reasonable limits."

By the completion of the line between Port Arthur and Winnipeg the Canadian Northern Railway took rank this year as the fourth system in Canada in point of mileage.

The company completed this year an extension of the Carman branch 19.8 miles west of Carman. The company also owns the Winnipeg Great Northern Railway's line of 40 miles from a point near Winnipeg to St. Laurent, Manitoba, which was built some years ago, but has not been operated.

Mackenzie, Mann & Co.'s system also includes the Inverness and Richmond Railway in Nova Scotia, of which 61 miles are in operation—giving them a total of 1,304.7 miles in operation.

The report of the Railway Commission is an elaborate document submitted to the Government on Feb. 10, 1899, by Mr. S. J. McLean after careful investigation, but not made public until 1902. The commissioner gave his conclusions regarding the possible establishment of an independent railway commission in Canada; and the Minister of Railways announced in Parliament that a bill substantially embodying the commissioner's plan would be introduced next year.

Trade and Commerce.—The foreign trade of Canada for 1902 exceeded all records. The exports of home produce were as follow: Mines, \$34,947,574; fisheries, \$14,058,070; forests, \$32,119,429; animals and their produce, \$59,245,433; agriculture, \$37,152,688; manufactures, \$18,462,970; miscellaneous, \$32,599; total, \$196,019,763.

There was a gain over 1901 in everything but the products of the mine. The increase in agricultural exports was very marked, and was partly attributable to the shipment of war supplies. Canadian exports to and imports from the countries with which the Dominion had the largest dealings in 1902 were as follow:

COUNTRIES.	Exports.	Imports.
Great Britain	\$109,348,245	\$49,215,698
United States	66,566,835	120,809,856
British colonies	11,559,839	3,680,274
Belgium	1,363,098	1,790,697
France	1,300,798	6,670,778
Germany	1,298,654	10,514,089

The exports to Great Britain in 1902 were \$16,490,720 more than in 1901, and the imports from Great Britain increased \$6,395,698. Exports to the United States decreased \$1,416,838, and imports from that country increased \$13,659,631.

The noteworthy increase in Canadian exports to Great Britain and the United States since 1897 is shown in the increase of the former from \$69,533,852 to \$109,348,245, and of the latter from \$39,717,057 to \$66,566,835. Similarly, imports increased \$20,000,000 in amount from Great Britain and \$63,000,000 from the United States.

Shipping.—Canada stands eighth in the point of ownership of vessel tonnage among the nations of the earth, leading Spain, Sweden, Holland, Denmark, Greece, Japan, Turkey, and other countries. Great Britain heads the list, the United States being second, then Germany, Norway, France, Italy, Russia, and Canada. The marine departmental report for 1901 showed that the total number of vessels remaining on the register books of the Dominion Dec. 30, 1901, including old and new vessels, sailing vessels, steamers, and barges, was 6,792, measuring 664,483 tons register tonnage—an increase of 57 vessels and an increase of 4,949 tons register compared with 1900. The number of steamers on the registry books on the same date was 2,177, with a gross tonnage of 297,421 tons. The number of new vessels built and registered in the Dominion of Canada in 1901 was 335, measuring 34,481 tons register tonnage.

Fisheries.—The export of fish from the Dominion in 1900 amounted to \$10,720,352. The total value produced, as shown by the annual report of the Fisheries Department for 1901, was \$21,557,639, a decrease of \$334,067 from the previous year. Divided among the provinces, the production was as follows: Nova Scotia, \$7,809,152; British Columbia, \$4,878,820; New Brunswick, \$3,769,742; Quebec, \$1,989,279; Ontario, \$1,330,294; Prince Edward Island, \$1,059,193; Manitoba and the territories, \$718,159. Salmon led in the list of the value of fish taken, the figures being \$3,893,217, cod being set down for \$3,614,775, lobsters for \$3,055,350, herring for \$1,853,237, and mackerel for \$1,549,448. None of the other fish reached the million-dollar mark. In the halibut fishery on the Pacific coast a growth in value of \$130,000 was noted in a total of \$405,963. The capital invested in the industry was \$10,990,125. The lobster plant was valued at \$1,419,100, while the British Columbia salmon industry was credited with establishments valued at \$1,420,000. Altogether, about 80,000 men were employed, at least for a part of their time, in the work of the fisheries, and made use of 1,200 schooners, 38,930 boats, and 6,295,000 fathoms of net. The total expenditure by the Marine and Fisheries Department for the fiscal year ending June 30, 1901, amounted to \$1,527,830.53. The expenditure for maintenance of lighthouse and coast service amounted to \$505,436.08; construction, \$73,376.08; total, \$578,812.72; while for the previous year the expenditure for lighthouse and coast service, including construction, was \$516,494.40, showing an increase of expenditure of \$62,318.

Mines.—According to the Geological Survey report for 1901, the production of metallic minerals included: Copper, to the extent of \$6,600,104; gold from the Yukon, \$18,000,000; gold (all other), \$6,462,222; iron ore, \$762,284; pig iron from Canadian ore, \$1,212,113; lead, \$2,199,784; nickel, \$4,594,523; silver, \$2,993,668; a total of \$42,824,698.

In non-metallic minerals the production included actinolite to the value of \$3,126; arsenic, \$41,676; asbestos and asbestic, \$1,186,434; chromite (exports), \$25,444; coal, \$14,671,122; coke, \$1,264,360; corundum, \$53,115; feldspar, \$4,710; fire-clay, \$5,920; graphite, \$28,880; grindstones,

\$55,690; gypsum, \$340,148; limestone, \$183,162; manganese ore (exports), \$4,820; mica, \$160,000; baryta, \$3,842; ochers, \$16,735; mineral water, \$100,000; molding sand, \$29,240; natural gas, \$312,359; peat, \$660; petroleum, \$953,415; pyrites, \$113,044; salt, \$262,328; talc, \$842; cement (natural rock), \$94,415; cement (Portland), \$535,615; granite, \$155,000; pottery, \$200,000; sands and gravels (exports), \$117,465; sewer-pipe, \$250,115; slate, \$9,980; terra-cotta, pressed brick, etc., \$278,671; building material, \$4,820,000. The total structural materials and clay products was \$6,461,261, and the total of all other non-metallic minerals was \$19,821,072.

Agriculture.—The value of some Canadian farm-products exported in 1901 showed a phenomenal increase in volume when compared with 1896, such as peas, which had risen from \$1,299,491 in the latter year to \$2,674,712 in 1901; flour, which had risen from \$718,433 in 1896 to \$4,015,226 last year; and oats, which in 1896 amounted to \$273,861, had risen in 1901 to \$2,490,521. In the butter trade the value of the exports in 1901 was \$3,295,663, having increased from \$1,032,089 in 1896; while from the port of Montreal alone the number of packages carried in cold storage increased from 227,863 in 1900 to 410,893 in 1901. Canadian butter won a better relative place in the markets of the United Kingdom than it had occupied at any previous period. The bacon trade also manifested phenomenal progress. In 1896 the value of the exports of pork, bacon, hams, etc., was only \$4,446,884, whereas at the close of the last fiscal year it had risen to \$11,829,820. In cheese, while in 1896 the exports were valued at \$13,953,571, in 1900 they exceeded \$19,800,000, and in 1901 reached \$20,690,951.

Criminal Statistics.—The increase of lunacy was 22.76 per cent. in 1901 over the number of cases in 1891, while the population increased but 11.76 per cent. Generally speaking, the country underwent a moral improvement. There was a decrease in crime in Prince Edward Island, New Brunswick, Manitoba, Ontario, the Yukon, and British Columbia; the territories showed an increased ratio, while Nova Scotia and Quebec showed a small increase. The report of urban crime showed a proportion of 29.80 in every 10,000 inhabitants; the rural, 2.35 in every 10,000. The returns by occupation showed that convictions in the agricultural, commercial, domestic, professional, and laboring classes had decreased. The industrial class only had not improved. England supplied 6.35 per cent. of the persons convicted; Ireland, 2.9 per cent.; Scotland, 1.07 per cent.; Canada, 72.01 per cent.; the United States, 4.04 per cent.; other foreign countries, 16 per cent.; other British possessions, 13 per cent.

Liquor Statistics.—The Dominion revenue from excise in the year ending June 30, 1902, was \$11,257,485, against \$10,423,865 in 1901 and \$7,916,483 in 1898. Of the total in 1902, spirits amounted to \$5,620,613, malt to \$1,077,809, tobacco to \$3,563,578, and cigars \$897,360. The quantity of spirits produced during the year was 3,234,147 proof gallons, against 2,652,708 in 1901. The consumption of spirits per head was 0.796 gallon, compared with 0.765 in 1901, 0.701 in 1900, and 0.740 in 1893. Then there was an export of 151,799 proof gallons, against 87,471 in 1898.

CARNEGIE INSTITUTION. On Jan. 28, 1902, Andrew Carnegie gave an endowment fund of \$10,000,000 to the Carnegie Institution. This institution was incorporated on Jan. 4, 1902, "to conduct, endow, and assist investigation in any department of science, literature, or art, and to this end to cooperate with governments, universi-

ties, colleges, technical schools, learned societies, and individuals."

In Mr. Carnegie's deed of gift he further explains the objects of the institution. "It is proposed," so runs the document, "to found in the city of Washington an institution which with the cooperation of institutions now or hereafter established, there or elsewhere, shall in the broadest and most liberal manner encourage investigation, research, and discovery—show the application of knowledge to the improvement of mankind, provide such buildings, laboratories, books, and apparatus, as may be needed; and afford instruction of an advanced character to students properly qualified to profit thereby. Among its aims are these:

"1. To promote original research, paying great attention thereto as one of the most important of all departments.

"2. To discover the exceptional man in every department of study, whenever and wherever found, inside or outside of schools, and enable him to make the work for which he seems specially designed his life work.

"3. To increase facilities for higher education.

"4. To increase the efficiency of the universities and other institutions of learning throughout the country, by utilizing and adding to their existing facilities and aiding teachers in the various institutions for experimental and other work in these institutions as far as advisable."

The trustees are: President of the United States, President of the Senate, Speaker of the House of Representatives, Secretary of the Smithsonian Institution, and President of the National Academy of Sciences (all *ex officio*) and Daniel C. Gilman, president; Abram S. Hewitt, chairman; John S. Billings, vice-chairman; Charles D. Walcott, secretary; William N. Frew, Lyman J. Gage, John Hay, Henry L. Higginson, Henry Hitchcock (since deceased), Charles L. Hutchinson, William Lindsay, Seth Low, Wayne MacVeagh, D. O. Mills, S. Weir Mitchell, William W. Morrow, Elihu Root, John C. Spooner, Andrew D. White, Edward D. White, and Carroll D. Wright. E. A. Hitchcock, Secretary of the Interior, was elected a trustee to fill the vacancy made by the death of his brother, Henry Hitchcock, of St. Louis.

The trustees at their annual meeting in November, 1902, adopted the following propositions as guides for the Executive Committee in selecting projects to which the funds and energies of the institution are to be devoted:

"First, to promote original research by systematically sustaining—

"(a) Projects of broad scope that may lead to the discovery and utilization of new forces for the benefit of man, pursuing each with the greatest possible thoroughness.

"(b) Projects of minor scope that may fill in gaps in knowledge, of particular things or restricted fields of research.

"(c) Administration of a definite or stated research under a single direction by competent individuals.

"(d) Appointment of research assistants.

"Second, to increase facilities for higher education by promoting (a) original research in universities and institutions of learning by such means as may be practicable and advisable. (b) The use by advanced students of the opportunities offered for special study and research by the Government bureaus in Washington.

"The Carnegie Institution will not undertake:

"(a) To do anything that is being well done by other agencies.

"(b) To do that which can be better done by other agencies.

"(c) To enter the field of existing organizations that are properly equipped or are likely to be so equipped.

"(d) To give aid to individuals or organizations in order to relieve them of financial responsibilities which they are able to carry or in order that they may divert funds to other purposes.

"(e) To enter the field of applied science, except in unusual cases.

"(f) To purchase land or erect buildings for any organization.

"(g) To aid institutions when it is practicable to accomplish the same result by aiding individuals who may or may not be connected with institutions.

"(h) To provide for a general or liberal course of education."

At the same meeting the following appropriations were authorized: For scientific research, \$200,000; for the reserve fund, \$100,000; for administrative expenses, \$50,000; for the publication of scientific memoirs and papers, \$40,000. It was decided to issue a year-book in December, 1902, to contain the advisory reports and such other information regarding the work of the institution as might be deemed wise.

CHEMISTRY. Chemical Theory.—A considerable part of the address of Prof. James Dewar as president of the British Association, at Belfast, Sept. 10, was devoted to the discussion of researches concerning extreme cold, the absolute zero, and the liquefaction and congelation of gases, with which the speaker had been closely associated. The first conception of a zero of temperature is accredited to Amonson, who in 1794 constructed a thermometer scale in which the zero was placed at a point corresponding with —240 of the centigrade scale—"a remarkable approximation to our modern value for this point of *minus* 273 degrees." Amonson's experiments were verified by Lambert in 1779, who estimated the value of the zero as —270°. Other estimates followed, with widely varying results, till in 1848, when "the whole question took an entirely new form," and Lord Kelvin, applying the principles underlying Carnot's work on the Motive Power of Heat, calculated the zero at —273° C. "It was a great advance to demonstrate by the application of the laws of thermodynamics not only that the zero of temperature is a reality, but that it must be located at 273° below the freezing-point of water. As no one has attempted to impugn the solid foundation of theory and experiment on which Lord Kelvin based his thermodynamic scale, the existence of a definite zero of temperature must be acknowledged as a fundamental scientific fact." Systematic experiments in the production of extreme cold are traced from the production of liquid carbonic acid by Thilorier in large quantities and his discovery, in 1835, that the liquid could be frozen into a snow by its own evaporation. A very important step in the investigation was the Bakerian lecture of Andrews, in 1869, on The Continuity of the Gaseous and Liquid States of Matter, in which the critical temperature and the relations of pressure were defined and experimental proof was given that "the gaseous and liquid states are only distinct stages of the same condition of matter, and are capable of passing into one another by a process of continuous change."

Van der Waals, in his essay On the Continuity of the Gaseous and Liquid States, gave "the equation of continuity," involving the relations of pressure, temperature, and volume; molecular

Andrew Carnegie

pressure; and molecular volume. A second contribution by Van der Waals to the theoretical side of the question, in *The Theory of Corresponding States*, was even more important than his original essay. This theory with the propositions that have been developed has been of the greatest importance in directing experimental investigation and in attacking the difficult problem of the liquefaction of the most permanent gases. In this matter theory has far outrun experiment. In the meantime experiment had gone on, and most of the gases had been liquefied; and the problem had become not so much how to produce intense cold as how to save it when produced from being immediately leveled up by the relatively superheated surroundings. For this purpose the author contrived a system of double-walled vessels, with the space between the walls very highly exhausted. "Vessels of this kind are now in general use, and in them liquid air has crossed the American Continent." Liquid hydrogen—that being the last of the gases yet refrigerated—is the lightest liquid known to exist, and by far the coldest. It boils at -252.5°C , or 20.5° absolute. Reduction of the pressure by the air-pump brings down the temperature to -258° , when the liquid becomes a solid resembling frozen foam, and this by further exhaustion is cooled to -260° , or 13° absolute, the lowest steady temperature that has yet been reached. "This gap of 13° might seem at first sight insignificant in comparison with the hundreds that have already been conquered. But to win one degree low down the scale is quite a different matter from doing so at higher temperatures; in fact, to annihilate those few remaining degrees would be a far greater achievement than any so far accomplished in low-temperature research." With the liquefaction and evaporation of a gas as much more volatile than hydrogen as that is than nitrogen it might be possible to reach a lower temperature—say 5° absolute—but even a second hypothetical substance of like relative volatility—as perhaps helium—would not bring the experimenter quite to the point of his ambition. "That the zero will ever be reached by man is extremely improbable. . . . But supposing all difficulties to be overcome and the experimenter to be able to reach within a few degrees of the zero, it is by no means certain that he would find the near approach of the death of matter sometimes pictured. Any forecast of the phenomenon that would be seen must be based on the assumption that there is continuity between the processes studied at attainable temperatures and those which take place at still lower ones." The speaker doubted whether such an assumption was justified.

In a communication to the National Academy of Sciences, April, 1902, Prof. T. W. Richards treated of the hypotheses that may reasonably be tried to account for changes in atomic volume. It seems very extraordinary, he held, that notwithstanding the stupendous mass of chemical facts that have been collected and the important researches that have been made in physical chemistry, we are still without knowledge of the nature of a chemical compound and of the manner in which its constituents are held together. We are not even certain that they are held together by mutual attractions; for though the evolution of heat usual when bodies combine indicates a satisfaction of mutual forces simultaneously with the act of combination, there are still cases in which heat is absorbed during combinations. This fact suggests an inquiry whether

there may not be other agencies than mutual forces the action of which results indirectly in the formation of chemical bodies; and whether, if so, such agencies may not be a factor even of those combinations in which they are aided by direct forces. When hydrogen and chlorine come together no condensation of which account is taken occurs, although an enormous evolution of heat takes place. The extreme chemical activity of the resulting gas, however, seems to prove that it is not a complete chemical compound. Notwithstanding the great energy with which the ions have approached one another, they are still so active that the case must be regarded as very different from that when a mixture of hydrogen and oxygen loses one-third of its volume in combining. A body may undergo contraction without combining with a different body, as in the case when the vapor of water is cooled. In all such cases heat is plentifully evolved, and molecule unites with molecule. It may be questioned how far the heat of chemical reaction is anything more than heat of contraction. Contraction does not necessarily consist solely in the approach of atoms toward one another. If an atom is a vortex, it must be in itself elastic and capable of deformation; and it may be so even if it is not a vortex. If atoms are compressible the mutual attraction between two atoms would naturally tend to deform them. Hence we have, further, to determine the relation between such deformations and their valency. Apparently, highly compressible elements have low valency, while elements of high valency, like carbon, are little compressible. Such considerations as these noted should be borne in mind in the construction of new hypotheses upon which experimental investigations are to be based.

In his presidential address before the section of chemistry of the British Association Prof. Edward Divers, of the Imperial University of Tokio, Japan, presented what he designated as *The Atomic Theory without Hypothesis*, or divested of the conception of atoms as discrete particles. He thought that the conception of bodies as not continuous in texture, but as composed of discrete minute particles, had been a bar to the full and universal acceptance of Dalton's atomic theory, and offered a new view, divested of all reference to the physical constitution of matter, in which only the conditions of chemical equality between substances should be regarded.

In their study of the theory of radio-activity, E. Rutherford and Frederick Soddy observe that all the most prominent workers in the investigation, including M. and Mme. Curie and M. Becquerel, agree that the phenomenon is the function of the atom and not of the molecule. In the experiments of the authors with the emanation produced by thorium compounds and the property it possesses of exciting radio-activity on surrounding objects the radio-activity appeared in each case as the manifestation of a special kind of matter in minute amount. The emanation behaved in all respects like a gas, and the excited radio-activity it produced as an invisible deposit of intensely active material, independent of the nature of the substance on which it was deposited, and capable of being removed by rubbing or the action of acids. The position is thus arrived at, that radio-activity is at once an atomic phenomenon and the accompaniment of a chemical change in which new kinds of matter are produced. Before such a view was entertained attempts made to explain it on existing

hypotheses proved unsatisfactory. It is apparent that in radio-activity we are dealing with phenomena outside of the sphere of known atomic forces, for the whole process goes on independently of temperature and chemical affinity. The idea of the chemical atom in certain cases spontaneously breaking up with evolution of energy is not of itself contrary to anything that is known of the properties of atoms. The changes brought to knowledge by radio-activity, although undeniably material and chemical in nature, are of a different order of magnitude from any that have been before dealt with in chemistry—being of an extreme order of minuteness. It is a significant fact that the radio-active elements are all at the end of the periodic table. If we suppose that radium is the missing second higher homologue of barium, then the known examples—uranium, thorium, radium, polonium (bismuth), and lead—are the five elements of heaviest atomic weight. Nothing can yet be said of the mechanism of the changes involved; but whatever view is ultimately adopted, it seems not unreasonable to hope that radio-activity affords the means of obtaining information of processes going on within the chemical atom.

The radio-active elements are considered by Mr. Geoffrey Martin, of the University of Berlin, as examples of elements undergoing decomposition at ordinary temperatures. In all probability the behavior is not peculiar to heavy radio-active elements, but occurs with other elements in the periodic system at suitable temperature ranges which differ with different elements.

Through his experiments with liquid and solid hydrogen, Prof. James Dewar has been able to learn much concerning the true relations of that element. Faraday, Dumas, Daniell, Graham, and Andrews thought that if hydrogen could ever be brought into the state of a liquid or solid it would reveal metallic characters; but Prof. Odling, in 1861, pointed out in his *Manual of Chemistry* that the chlorous relations of hydrogen were as decided, important, and frequent as its other ones, and expressed the opinion that it was essentially a neutral or intermediate body, and should not be expected to present, in its liquid or solid form, the appearance of a metal. Dumas found analogies between hydrogen and magnesium, and thought that both elements probably had the same atomic volume; and he deduced a density for hydrogen near the value that has been obtained in subsequent experiments. Newlands, in 1872, regarded it as the lowest member of the chlorin family; Mendeléef placed it with the alkali metals; and Dr. Johnstone Stoney classed it with the alkaline earth metals and magnesium. The conclusion of Prof. Odling has been confirmed by Prof. Dewar's researches. In the account of his investigations given in his presidential address before the British Association, 1902, Belfast, he cites the case of liquid hydrogen as an excellent illustration of the truth that no theoretical forecast, however apparently justified by analogy, can be finally accepted as true until confirmed by actual experiment. As described in this address, liquid hydrogen is a colorless transparent body. It has a clearly defined surface, is easily seen, drops well, in spite of the fact that its surface tension is only the twenty-fifth part of that of water or one-fifth that of liquid air, and can be poured easily from vessel to vessel. The liquid does not conduct electricity, and, if anything, is slightly diamagnetic. Compared with an equal volume of liquid air, it requires only one-fifth the quan-

tity of heat for vaporization; on the other hand, its specific heat is ten times that of liquid air or five times that of water. The coefficient of expansion of the fluid is about ten times that of gas. It is by far the lightest liquid known to exist, its density being only one-fourteenth that of water; the lightest liquid previously known was marsh-gas, which is six times heavier. The only solid which has so small a density as to float upon its surface is a piece of pith wood. At ordinary atmospheric pressure it boils at -252.5° C., or 20.5° absolute. The critical point of the liquid is about 29° absolute, and the critical pressure is not more than 15 atmospheres. The vapor of the hydrogen arising from the liquid has nearly the density of air—that is, fourteen times that of the gas at the ordinary temperature. It becomes a solid, resembling frozen foam, at -258° C., and may be got in the form of a clear, transparent ice, melting at about 55° absolute, under a pressure of 55 millimeters, and having one-eleventh the density of water.

In a lecture on Catalysis, Prof. William Ostwald defined a catalyst as any substance which will alter the velocity of a chemical reaction without appearing in the final product, and catalysis as the process induced by it. Catalysis is extremely common, and as a matter of fact appears wherever the velocity of a chemical reaction can be measured. Catalytic reactions were divided by the author into four groups: 1. Release in supersaturated solutions, as when such solutions of Glauber's salts are crystallized by a small trace of the solid substance with which the solution is saturated. It also appears in solutions of gases, vapors, etc. 2. Catalysis in homogeneous solutions—the largest and theoretically the most important class of contact reactions. 3. Heterogeneous catalysis, which is illustrated in the action of platinum on combustible mixtures of gases, as of oxygen and hydrogen, or in the combustion of sulfur dioxide to trioxide. 4. Enzymes, which are to be looked upon as catalysts that are in the organs during the life of the cell, and by the action of which it discharges the greatest part of its duties. There seems to be no kind of chemical reaction which can not be catalytically influenced, no chemical substance, whether element or compound, which can not act catalytically. There are both general and specific catalysts. Among the theories of catalysis that have been proposed, that of Liebig, that it is the direct consequence of the law of inertia; the hypothesis of molecular vibrations; and the theory of Euler, that the catalytic substance has the property of altering the concentration of the ions—were reviewed by the author and found to be inexplicable or insufficient. In the case of the first class of catalyses, however—release in supersaturated solutions—the theory is known. In all cases there is the formation of a system the stability of which is not the greatest possible under the given conditions of temperature and pressure. There are, on the contrary, other more stable conditions which are characterized by the fact that in them a new phase—that is, a physically different component with other properties—makes its appearance. In supersaturated Glauber's salt this is the solid salt; in supersaturated soda water it is carbonic-acid gas.

Experiments on the antiseptic properties of dilute solutions of acids were made by M. Bial on yeast-cells. The retarding action of different acids on the development of the cells was measured by observing the amount of carbon dioxide liberated from a solution of grape-sugar. It

was found that the concentrations of the solutions which are just sufficient to check the development of the cells completely are much smaller in the case of the strong acids like hydrochloric and sulfuric acids than in the case of weak acids, such as acetic and butyric acids. The results led the author to conclude that the antiseptic power is essentially determined by the hydrogen ion which is contained in the solution, and that the electrolytic dissociation theory is competent to account for the observed phenomena in a satisfactory manner. As is required by this theory, it is found that the addition of neutral acetates to a solution of acetic acid diminishes the antiseptic power of the acid; the concentration of the active component of the solution, the hydrogen ion, being under these circumstances reduced to a much smaller value.

In a lecture at the Royal Institution, Prof. Otto N. Witt, of Berlin, explained that in order to become a dyestuff a substance must not only be so intensely colored that it could communicate its own shade to colorless substances holding it in solution, it must not only be soluble in water or other liquid suitable for preparing a dye-bath, but it must also be soluble, and even much more soluble than in water, in the colloid which forms the substance of the textile fiber. The finished dyed fabric is nothing more or less than a solid solution of the dyestuff in the substance of the fiber, unless there are chemical influences, such as that of the mordants, at work to change the solution into a suspension by precipitating the dyestuff after its immigration into the fiber. This peculiar combination of solubilities is rare in colored substances of an inorganic nature; and in the vast domain of organic substances of the aliphatic series few dyestuffs are met with, but in the aromatic series, where the power of selective absorption of light is very frequent, it would be curious if they were not of common occurrence. Since the physical properties of every compound are direct functions of its molecular constitution, it is easy to believe that this peculiar combination of solubilities would be the result of certain general conditions fulfilled in many members of the aromatic group; and the theory the author had proposed twenty-five years before was simply an attempt to discover those conditions by investigating the constitutional peculiarities of all those dyestuffs whose constitution was known in those days. In the molecule of every coloring-matter whose constitution was known certain atomic constellations had been observed which seemed to be essential, and of which two must always be present—chromophores and auxochromic groups. Of the former, about two dozen were known, all agreeing in the fact that they could not exert their influence except in the presence of the auxochromic groups, of which very few were known. There must exist a law governing the formation of chromophoric groups, but so far it has not been definitely established, though some progress has been made toward doing so. Our knowledge of the chemical causes of the physical properties of coloring-matters is continuously developing, and lately some definite views have been formed about the connection of the chemical constitution of the aromatic bodies with that form of selective absorption of light known as fluorescence. Much work has been done on the constitution of the azo-colors, the introduction of which was the direct result of early efforts to conduct the search for new coloring-matters on definite scientific principles. The number of dyestuffs of this class is extraordi-

nary; and it has been computed that 3,150,000 different ones are at present easily accessible. Of these, at least 25,000 are patented, while more than 500 are manufactured on the larger scale. Azo-dyestuffs can be produced at will to dye wool or silk or cotton, to dye slowly or quickly, to stand soap, or acid, or alkali; and this possibility of adjusting their properties with almost mechanical precision has been the cause of the greatest successes of the color industry. While this field has borne its rich harvest, other fields have not been neglected. Perhaps the greatest and most brilliant success of the chemistry of dyestuffs has been the industrial synthesis of indigo.

An experimental basis has been laid for the chemical theory of the formation of petroleum by the researches of MM. Paul Sabbatier and J. B. Senderens on the action of reduced nickel, iron, and other metals upon hydrocarbons. By the direct hydrogenation of acetylene in the presence of nickel these authors have obtained liquid mixtures of hydrocarbons which can be made to correspond with the American or Caucasian petroleum by varying the conditions of the experiment. To account for the formation of petroleum, it is thus sufficient to admit that there are in the depths of the ocean free alkali metals and metallic carbids which in contact with water give rise to mixtures of hydrogen and hydrocarbons. These cases encounter nickel, cobalt, or iron in a finely divided state, and thus give rise to the mixtures of hydrocarbons, so as to form natural petroleum. Berthelot and Mendeléef had supposed that the natural hydrocarbons were mainly formed by the action of steam upon metallic carbids; but difficulty had been found in applying this theory to the formation of the naphthas of the Russian oil-fields.

Chemical Physics.—It was found in the experiments of E. Rutherford and F. Solly, of McGill University, that thorium from which the radio-active constituent (Thx) has been separated regained its activity with time, while the activity of Thx decreased with time. Thx was observed to possess a distinct chemical behavior which differentiated it from thorium. Ammonia was the only reagent of those tried capable of separating it from the latter. Experiments are cited which indicated that Thx was continuously produced by thorium compounds at a constant rate. The rate of production of Thx and rate of decay of its activity were apparently unaffected by known agencies. Both changes proceeded independently of the chemical and physical conditions of the molecule. The source of the energy required to maintain the radio-activity of thorium over indefinite periods was therefore supposed to be found in a chemical change producing new types of matter. Emanating power appeared to be a property of Thx, and not of thorium, and was proportional to the activity of the Thx present. The decay and recovery of the emanating power of Thx and thorium were completely analogous to the decay and recovery of radio-activity. These results find their simplest explanation in the view that one of the products is gaseous and in the radio-active state is the emanation. The result arrived at, that radio-activity is the consequence of changes in which new types of matter are formed, leads to the conclusion that it is the result of subatomic changes. In experiments made after the writing of this account, solution in water was found to increase the emanating power of thorium nitrate nearly two hundred times, and solutions of thorium chlorid gave a large amount of emanation.

Simultaneously with the observation of the latent emanating power of thorium nitrate, it was noticed that preparations of thorium carbonate varied enormously in radiating power according to the method in which they were prepared. In the course of the experiments to which these observations led, it was found that active filtrates produced under various conditions described by the authors contained no thorium, or at most only a minute trace, but another substance in very appreciable quantities which when precipitated with sodium phosphate appeared as a white substance possessing both emanating power and radio-activity many hundredfold greater than those of thorium. This substance has not yet been obtained in sufficiently large quantities for an exhaustive chemical investigation, and it is impossible at present to say what it may prove to be. The authors do not believe, however, that it is the radio-active or the emanating constituent of thorium. The evidence of a series of observations leads to the conclusion that the major part of the radio-activity of thorium—ordinarily about 54 per cent.—is due to a non-thorium type of matter (Thx) possessing distinct chemical properties, which is temporarily radio-active, its activity falling to one-half its volume in about four days. The constant radio-activity of thorium is maintained by the production of this material at a constant rate. Both the rate of production of the new material and the rate of decay of its activity appear to be independent of the physical and chemical condition of the system. The Thx further possesses the property of exciting radio-activity in surrounding inactive matter, and about 21 per cent. of the total activity under ordinary circumstances is derived from this source. Its rate of decay and other considerations make it probable that it is the same as the excited radio-activity caused by the thorium emanation, which has been shown to be produced by Thx. There is evidence that if by any means the emanation is prevented from escaping in the radio-active state, the energy of the radiation goes to augment the excited radio-activity in the compound. Thorium can be freed by suitable means from both Thx and the excited radio-activity which the latter produces, and then possesses an activity about 25 per cent. of its original value, below which it has not been reduced. The residual radiation consists entirely of rays non-deviable by the magnetic field, whereas the other components comprise both deviable and undeviable radiations. Most probably, the authors suggest, this residual activity is caused by a second non-thorium type of matter, produced in the same changes as Thx, and it should therefore prove possible to separate it by chemical methods.

T. W. Richards predicates two conceivable causes of compression in a substance. The pressure may be applied from the outside or it may be due to the internal attraction or affinity of the smallest particles of the substance for one another. That is, the substance may be compressed either by an outside pressure or by the intensity of its own cohesion. The former cause may be typified by highly compressed gases, the second by liquids. In solids we must consider also the directive agency which manifests itself in crystalline form and optical structure. The presence of the crystal-making force complicates the phenomenon, and is a considerable stumbling-block to the study of the theoretical tension of solids. In view of these facts, it seemed to the author possible that the study of compression as manifested by atomic volume under different cir-

cumstances, as well as of atomic compressibility, might afford some light as to the affinities at work. The outcome of the author's first studies, of which an account was communicated to the American Academy of Arts and Sciences, is that atomic volume is not constant, but is a function of pressure and temperature, and, probably, of electric stress.

Enumerating some of the results that had been attained in low-temperature studies (with liquid air and liquid hydrogen), Prof. James Dewar said at the British Association meeting that the great majority of chemical actions are entirely suspended; but fluorin is still active at the temperature of liquid air. Whether solid fluorin and liquid hydrogen would interact, no one can at present say. Bodies naturally become denser, but even a highly expansive substance like ice does not appear to reach the density of water at the lowest temperature, a fact confirmatory of the view that the particles of matter under such conditions are not packed in the closest possible way. The force of cohesion is greatly increased at the extremely low temperature, as is shown by the additional stress required to rupture metallic wire. This fact is mentioned as being of much interest in connection with two conflicting theories of matter: that of Lord Kelvin, that the forces which hold together the particles of bodies may be accounted for without assuming any other agency than gravitation, or any other law than the Newtonian; and the opposite view, that the phenomena of the aggregation of molecules depend upon the molecular vibration as a physical cause. Hence, according to this theory, at the zero of absolute temperature, the vibratory energy being in complete abeyance, the phenomena of cohesion should cease to exist, and matter generally be reduced to a heap of cosmic dust. The second view receives no support from experiment.

The photographic action of light is diminished at the temperature of liquid air to about 20 per cent. of its ordinary efficiency, and at the still lower temperature of liquid hydrogen only about 10 per cent. of the ordinary sensitivity remains. At the temperature of liquid air and liquid hydrogen a large range of organic bodies, and many inorganic ones, acquire under exposure to violet light the power of phosphorescence. Such bodies glow faintly so long as they are kept cold, but become exceedingly brilliant during the period when the temperature is rising. Even solid air is a phosphorescent body. All the alkaline earth sulfides which phosphoresce brilliantly at the ordinary temperatures lose this property when cooled, and have it renewed on heating; but such bodies may be stimulated through the absorption of light at the lowest temperatures. Radio-active bodies, on the other hand, like radium, which are naturally self-luminous, maintain their luminosity unimpaired at the very lowest temperatures, and are still capable of inducing phosphorescence in bodies like the platino-cyanides. Some crystals become for a time self-luminous when cooled in liquid air or hydrogen, owing to induced electric stimulation causing discharges between the crystal molecules. This phenomenon is very pronounced with nitrate of uranium and some platino-cyanides.

A long series of experiments were made by Prof. Dewar and Prof. Fleming on the electric and magnetic properties of bodies at low temperatures—such as the thermoelectric powers of pure metals, the magnetic properties of iron and steel, dielectric constants, the magnetic and electric constants of liquid oxygen, and magnetic

susceptibility. The results showed that electric resistance by pure metals is largely dependent upon the molecular or atomic motion which gives rise to temperature, and that the process by which the energy constituting what is called an electric current is dissipated essentially depends upon non-homogeneity of structure and upon the absolute temperature of the material. It is not shown, but left doubtful, that resistance would vanish altogether at zero of absolute temperature and all pure metals become perfect conductors of electricity; but other observations are mentioned, made at very low temperatures, which appear to point to an ultimate finite resistance. In magnetic work the result of greatest value was the proof that magnetic susceptibility varies inversely as the absolute temperature.

The properties of 19 elements were examined by Mr. Hugh Ramage in a comparative study of the structure, densities, and melting-points of some groups of elements and of the relation of the properties of elements to their atomic mass. The elements and groups were: 1. Lithium, sodium, potassium, rubidium, and cesium. 2. Copper, silver, and gold. 3. Magnesium, zinc, cadmium, and mercury. 4. Calcium, strontium, and barium. 5. Aluminum, gallium, indium, and platinum. The flame spectra of the metals were much simpler than the arc or spark spectra, and might be regarded as the fundamental spectra. They furnish purely experimental data with which to begin an investigation of the laws which govern the distribution of lines in spectra and by which to study the relations of the physical and chemical properties of the metals to their spectra. Diagrams have been drawn to show the important points revealed. Among the facts observed in the study of these diagrams were: 1. That the metals considered may be classified into groups according to their spectra, the elements in each group appearing to have a similar atomic structure. 2. The connecting lines between the members of the chemical groups are not continuous; there are certain breaks in them. These occur between the metals sodium, magnesium, and chromium and the metals of the respective groups higher up in atomic masses. The break between the sharp series in the spectra of the aluminum group is very slight; that between the diffuse series is very marked and corresponds to marked changes in the densities and cooling-points of these elements. 3. The cause of the displacement of corresponding lines in some strictly homogeneous elements is intimately connected with the atomic masses. The shift of the subordinate series of potassium, rubidium, and cesium is proportional to the atomic mass, while the shift of the principal series is very nearly proportioned to the square of the atomic mass. 4. The lines which connect the corresponding members of the homogeneous doublets and triplets approach one another as the atomic mass decreases, and intersect on the line of zero atomic mass. The spectra of potassium, rubidium, and cesium change regularly with atomic mass. The whole study is regarded as indicating that the properties of the elements are fundamentally due to the structure of the atoms as revealed by their spectra rather than to the quantity of matter in them.

New Substances.—Having in a previous paper published an account of the preparation and properties of liquid silicon hydride, MM. H. Moissan and S. Smiles have continued their research, and have given further proof of the formula Si_2H_6 , which they found for it. This silicid corresponds among silicon compounds to ethane in

the carbon series; it is spontaneously inflammable in presence of air, and possesses very energetic reducing properties. It decomposes carbon tetrachloride and sulfur hexafluoride with violence.

Describing, in the *American Chemical Journal*, some reactions between acid and basic amides and liquid ammonia, Messrs. Franklin and Stafford observe that solutions of these amides in liquid ammonia are conductors of electricity, a fact possibly due to electrolytic dissociation of the dissolved substances. These amides seem to bear a relation to liquid ammonia which in many respects is very similar to that borne by ordinary acids and bases to water. Complete or partial neutralization of the dissolved amides takes place with the formation of one or more molecules of the solvent in which the reaction takes place. By bringing together liquid ammonia solutions of different acid and basic amides, the authors have prepared a large number of metallic substituted amides—such, for example, as monopotassium acetamide, monopotassium and dipotassium benzamide, monopotassium and dipotassium sulfamide, monopotassium and dipotassium urea, magnesium acetamide, etc.

Herr Th. Gross reports in the *Elektrochemische Zeitung* as one of the results of the investigation of the behavior of silicon when exposed to long-continued electrolysis that he obtained evidence of the probable presence of some second element in the fused mixture produced. The silicon recovered after passing the electric current through silica when dissolved in twice its weight of pure caustic potash showed a deficiency on the original weight. The part lacking was found in a small quantity of a substance possessing different physical and chemical properties. This substance was easily soluble in hydrochloric acid. When heated in a porcelain crucible it melted and yielded a brown mass, which on treatment with hydrogen gas left a gray residue possessing metallic characteristics resembling those of selenium. The experiments are regarded as requiring further confirmation.

In a paper on persulfuric acid read in the Royal Society, Prof. H. E. Armstrong and T. Morton Lowry said that on electrolyzing strong solutions of sulfuric acid, Faraday in 1834 noted "a remarkable disappearance of oxygen." This was shown by Berthelot in 1878 to be due mainly to peroxidation of the sulfuric acid. An anhydride, S_2O_7 , was isolated, and Berthelot therefore concluded that the corresponding perdisulfuric acid, $\text{H}_2\text{S}_2\text{O}_8$, was formed when sulfuric acid was peroxidized either by anode oxidation or by interaction with hydrogen peroxide. The perdisulfates were isolated by Marshall in 1891 by electrolyzing solutions of acid sulfates, and have found a technical application in photography. This simple explanation of the peroxidation of sulfuric acid remained unchallenged until Caro found in 1898 that when the perdisulfates are dissolved in sulfuric acid, and the solution is again neutralized, a product is obtained which possesses the property of oxidizing aniline to nitrobenzene. None of the salts of Caro's modified persulfuric acid have yet been isolated, and only indirect methods are therefore available for obtaining its constitution.

Some experiments in the destruction of rats in ships as a prophylactic against the communication of plague are referred to in the *Lancet* of July 19 as demonstrating the superiority of a gas called Clayton gas to sulfurous acid or carbonic acid gas for that purpose. This gas is essentially a sulfur dioxide, but there occurs in it by

virtue of the peculiar method by which it is obtained a technical "impurity," which gives it its special value. This "impurity" is sulfur trioxid, the presence of which is manifested by the burning properties of the gas. Clayton gas is produced by the combustion of sulfur in a current of air during which the temperature rises sufficiently high to lead to the formation of some amount of sulfur trioxid. The gas is used mixed with air in the proportion of 10 to 15 per cent. It is said that less than 5 per cent. of the Clayton gas will destroy rats and other vermin, while at least 15 per cent. of pure sulfur dioxide is required for the destruction of vermin life. Yet Clayton gas has no appreciable action on colored materials, foodstuffs, paints, or dry metals except in a moist atmosphere. Its fire-extinguishing qualities are also remarkable; a mixture containing 8 per cent. of it rapidly extinguishes burning materials:

Pentafluorid of iodine was obtained by M. Moissan without difficulty in a perfectly pure state by the action of fluorine upon solid iodine. It formed a colorless liquid solidifying at $80^{\circ}\text{C}.$, and boiling without change at $97^{\circ}\text{C}.$ Analysis shows that the fluorid has undoubtedly the composition IF_5 , and it is noteworthy that it can be distilled in a current of hydrogen without any reaction taking place. This fluorid possesses very great chemical activity. Most elementary bodies decompose it, and it produces with compound bodies a large number of double decompositions. Pentafluorid of iodine is decomposed about $500^{\circ}\text{C}.$, iodine being formed, and possibly a new fluorid of iodine.

A monomethylarsin—the analogue in the cacodyl group of methylamine—has been prepared by A. W. Palmer and W. H. Dehn. Indications of the existence of such a compound had been obtained three years before by the reduction of methylchlorarsin; but as this is costly and difficult to prepare, a more suitable starting-point was found in cacodylic acid. This, on reduction with amalgamated zinc dust and hydrochloric acid, gives the CH_3AsH_2 , which is separated from the hydrogen that accompanies it by passing through a U-tube surrounded by a mixture of solid carbon dioxide and ether. Monomethylarsin is a colorless, mobile liquid which boils, under ordinary atmospheric pressure, at $2^{\circ}\text{C}.$, and possesses the penetrating, objectionable smell of cacodyl. It rapidly attacks india-rubber, and combines immediately with oxygen, without, however, catching fire spontaneously; in this respect differing from dimethylamine. The production of monophenylarsinic acid is discussed in the same paper.

In the manufacture of a pigment which in composition is a hydrated basic ferric oxide, $\text{Fe}_2\text{O}_3 \cdot \text{Fe}_2(\text{OH})_6$, one of the first commercial applications is presented of those physico-chemical theories which have been developed largely by the study of dilute electrolysis. The waste ferrous liquor derived from iron pickling—generally ferrous sulfate or chloride, with some free acid—is neutralized and then oxidized by the joint action of air and steam. As the oxidation proceeds an alkali, as sodium carbonate in solution, sufficient to maintain substantial neutrality, is produced, and simultaneously therewith a large volume of water, which is the true precipitating agent. The effect is that known as hydrolysis, or the decomposition by water of a salt composed of a base and acid between which there is a great disparity of strength—in the present instance a compound of a weak base with a strong acid. By the oxidation of ferrous sul-

fate, basic ferric sulfate is formed, and this salt in the presence of a large volume of water is hydrolyzed, yielding sulfuric acid and basic ferric hydrate—the pigment in question. A reaction of this character would, of course, soon reach an equilibrium, and the yield of pigment would be but small, wherefore the gradual addition of alkali to combine with the acid as it is liberated and to insure the continuance of the reaction to the complete precipitation of the iron. The pigment is bright yellow in color, but is readily converted by heat into the several iron oxide reds, and affords also a reliable base for mixed pigments. Its absorptive capacity for oil greatly exceeds that of the standard pigments, being two and a half times that of standard French ochre, and seven and a half times that of white lead. Its covering powers as compared with these pigments is about proportionately high.

Exposing powdered niobite and sugar charcoal to the temperature of the electric furnace, Prof. Moissan obtained a substance rich in niobium and tantalum. From this tantalum was separated by a series of chemical processes as a brilliant metallic mass having strong reducing properties and exhibiting reactions closely resembling those of niobium, an increased reducing action being the only difference noticed. Containing not more than 0.5 per cent. of carbon, it scratched rock crystal with ease. It was infusible before the oxyhydrogen blowpipe, which transformed it rapidly into tantalic acid. It could be fused in the electric furnace, but only with a very powerful arc. Its density was 12.79, while the density of the tantalum prepared by Berzelius was 10.08, and that of Rose's tantalum 10.78. Finely powdered tantalum took fire when gently heated in fluorine, and gave off abundant vapors of a fluorid. The element took fire in oxygen at $600^{\circ}\text{C}.$, and burned with lively incandescence; but no reactions took place at that temperature with sulfur or the vapor of iodine. Reactions of chlorine and the resultant products are described. From the reactions found, taken together, it appears that tantalum possesses very particular reducing properties, which cause it to resemble the metalloids rather than the metals.

A new gas derived from radium was described by M. and Mme. Curie, who having placed very active radium in a glass vessel and exhausting and allowing the apparatus to stand, found that the pressure steadily increased. When the small volume of gas thus collected flowed along glass tubes it made them phosphorescent, and eventually blackened them. Prompted by this observation, E. Rutherford and Miss H. T. Brookes examined the power of radio-active substances to emit radio-active particles continuously. Applying the rule of the inverse order of the coefficient of diffusion to that of molecular weight, they calculated for this gas or vapor a molecular weight lying between 40 and 100. These numbers are taken to exclude the possibility of the substance being vapor of radium, for its atomic weight is greater than that of barium. They conclude that the emanation is in reality a heavy radio-active vapor or gas. The thorium emanations are also supposed to be gaseous in character. The physical properties of these emanations or gases are described as being most remarkable. The radium emanation not only continues for long intervals to be a source of radiation which is apparently similar in character to easily absorbed Röntgen rays, but in some way manufactures from itself a positively charged substance which travels to the negative electrode and becomes a source of secondary radio-activity.

The action of radiferous barium chlorid, contained either in sealed tubes or gutta-percha sheaths and held in the hand or carried in the pocket for from six to ten hours, has been found by MM. Henri Becquerel and P. Curie to be at first to produce a slight redness of the skin near the substance. This redness conforms to the shape of the tube and increases in intensity. The skin next falls off from the part affected, and sinks in and begins to suppurate. Under proper treatment, which may last sometimes for a month, the lesion heals and leaves a scar. In one case a similar burn was experienced when the substance was enclosed in a thin metallic box. In general, the duration of the effect varies with the intensity of the active rays, and with the intensity of the exciting action.

New Processes.—It has been found by Camille Martignon that tellurium, gold, and platinum in all their different forms are attacked by a mixture of hydrochloric acid and oxygen at temperatures much below that of the oxidation of hydrochloric-acid gas in oxygen. The mixture constitutes a chlorating agent for a great number of materials. In the three cases mentioned its action can be compared to that of free chlorine.

With an apparatus essentially modified from that of Hampson for the liquefaction of air, Mr. M. W. Travers has obtained liquid hydrogen in quantity. Hydrogen at a pressure of 200 atmospheres is subjected to a preliminary cooling at -80°C . in solid carbonic acid and alcohol. It is then successively cooled by liquid air boiling under atmospheric pressure and under a pressure of 100 millimeters, after which it escapes from the Hampson valve, and being sufficiently imperfect gas at the low temperature (-200°C .) obtained by the liquid air boiling under low pressure, regenerative cooling is produced, as in the liquefaction of air by the Hampson machine. Liquid hydrogen is thus obtained, and is collected in a vacuum vessel which is specially isolated from external heat.

The production of oxygen and hydrogen gases by the electrolysis of solutions of caustic alkali is carried on as a regular industry at works in Rome, Milan, Zurich, Lucerne, Hanau, Brussels, and Paris. In the Schuckert electrolyzer a 15-per-cent. solution of caustic soda is used as the electrolyte, and the decomposition by the electric current goes on so rapidly and regularly that a continuous supply of distilled water is required to keep the process going. The most efficient work is given at a temperature of 70°C ., with an electro-motive force of 2.8 volts. With a Schuckert electrolyzer 660 millimeters in length, 450 millimeters in breadth, and 280 millimeters high, a primary charge of 50 liters of sodium-hydrate solution, and a current of 600 amperes, 220 liters of hydrogen, and 110 liters of oxygen at 15°C . temperature and 760 millimeters pressure are produced per hour.

The remarkable influence which is exerted by traces of iron in determining and regulating the oxidation of various organic substances was first observed by H. J. H. Fenton about twenty years ago, and the observation has opened to him since a very wide and fruitful field of investigation. The work in it is still being extended in several directions. In a communication by Mr. Fenton to the Cambridge Philosophical Society a brief summary was given of the researches on the subject already published, and of new results which had recently been obtained. The conditions of the oxidation method showed very close analogies, with certain natural processes, and

many experiments were in progress with a view to throwing further light upon the function of the iron.

In the decomposition of the natural phosphates by sulfuric acid in the manufacture of superphosphatic fertilizers fluorin is released in the form of hydrofluoric acid or of fluorid of silicon, to the annoyance of manufacturers, and with danger of contaminating the atmosphere. For a time the gases were led through water, and with the solution thus formed sodium, magnesium, or aluminum fluosilicates were prepared, which were of little use, except that the last two might be applied to the hardening of stone. Fluosilicic acid has more recently been found to have strong antiseptic properties, and to be very useful as a preservative of manure, checking the denitrifying action of bacteria, for which purpose it surpasses plaster, kainite, and superphosphate of lime. In a recently patented preparation, the fluosilicic acid is incorporated with clay in a powder, which is accompanied by another powder consisting of a porous substance saturated with sulfuric acid. When the powders are scattered over the manure pile, the antiseptic fluosilicic acid is generated by the action of the sulfuric acid on the fluosilicates.

Since the discovery of the compound of hydrogen and nitrogen known as hydrazoic acid numerous modes of preparing it have been worked out. Most of these depend upon the use of organic compounds. Purely inorganic syntheses have been made by Wislicenus from sodium amid and nitrous oxid, and by Tanater from hydrazin and nitrogen chlorid. In a third synthesis recently described by Tanater, a mixture of hydrazin sulfate and hydroxylamin hydrochlorid is treated in acid solution with an oxidizing agent and distilled, when hydrazoic acid passes off with the distillate.

Artificial silk is now manufactured in France from wood-pulp dissolved in electrically made bisulfide of carbon. The solution of wood-pulp, prepared in the usual way, as for paper-making, is squirted through glass nozzles of exceedingly small dimensions, whence it issues in fine hair-like threads. These fibers are to all intents and purposes silk as soon as the volatile solvent has evaporated. They are then prepared in the usual way and spun into threads.

By a patented process lead dioxid is now produced electrochemically from a solution of an alkaline chlorid in which litharge is suspended.

Atomic Weights.—In the annual table of atomic weights published by the International Committee, the values on the basis of $\text{O}=16$ are given unaccompanied by the didactic table based on $\text{H}=1$. The withdrawal of the didactic table is explained to be in accord with a widely expressed wish. It is generally felt that if O is to be taken as $=16$ for any purpose, it should be taken so for all purposes. In a paper read to the American Society of Science and Arts, Prof. T. W. Richards appealed to chemists to conform to the decision of the International Committee. He pointed out that $\text{O}=16$ has served as the experimental standard of reference in the great majority of cases, that the great bulk of valuable work has already been published on that basis, and that the use of this standard involves no great didactic difficulties; and he contends that the decision of the International Committee is in itself an important reason for admitting this standard, and that uniformity of usage is more important than any of the special advantages claimed by either side in the discussion. The only alterations of atomic weights in the

current year's table were those of calcium from 40 to 40.1, iron from 56 to 55.9, and tellurium from 127 to 127.6.

The results of a redetermination of the atomic weight of uranium have been published by Prof. T. W. Richards and Mr. Merigold. Of previous determinations, that of Zimmermann, who in 1886 found the value 239.59, was regarded by the authors as most worthy of consideration. Zimmermann's method, which was based upon the preparation of pure UO_2 and its conversion into U_2O_5 , seemed likely to give too high numbers, because of the difficulty of obtaining the lower oxid free from occluded gases, and of oxidizing it completely. The authors chose for the basis of their research the analysis of uranous bromid. The analysis was effected by oxidizing uranous bromid to uranic bromid by means of hydrogen peroxid and then precipitating the bromin by means of silver nitrate. The results showed satisfactory concordance, and led to a conclusion expressed by the authors as follows: "If O be taken as 16 and bromin as 79.955, the atomic weight of uranium appears to be not far from 238.53." It is remarked that although this number differs by more than a unit from that given by Zimmermann, the percentage difference (0.45) is smaller than many which have often been passed unheeded in the case of elements of smaller atomic weight. It is, however, a noteworthy difference, and the probability seems to the authors to be that Zimmermann's number was too high.

Through concentrating by fractional crystallization the greater part of the radiferous barium at her disposal, Mme. Curie succeeded in obtaining about 1 decigram of perfectly pure radium chlorid. This enabled her to determine the atomic weight of radium. She found it to be—taking chlorin = 35.4 and silver = 107.8—radium = 225, with a probable uncertainty of not more than 1 unit radium being considered a bivalent element. Pure anhydrous radium chlorid is described by Mme. Curie as being spontaneously luminous. From its chemical properties, radium appears to be an element of the alkaline earthy series, and is the proper homologue of barium. According to its atomic weight, it should be placed in Mendeléef's table below barium in the alkaline earthy series, and on the line with thorium and uranium.

It has been often observed that when calculated to the standard $\text{O} = 16$, many of the atomic weights approach whole numbers in a much larger proportion than they theoretically should according to the theory of probabilities. This subject is referred to by Arthur Marshall, in the *Chemiker Zeitung* (July 19), in a paper in which attention is called to some very remarkable relationships which appear to exist in many cases between the atomic weights of allied elements. Taking from the tables accepted by the German Chemical Society the 18 values calculated to two places of decimals, the chances against their approaching whole numbers are as 4.120 to 1. If the atomic weights are referred to $\text{H} = 1$, little or no tendency appears to approach whole numbers. The most striking relationships appear when certain of the atomic weights are referred to entirely different standards. Thus, the atomic weights of the halogen elements and silver are exactly in the ratio $\text{Cl} : \text{Br} : \text{Ag} : \text{I} = 90 : 203 : 274 : 322$. In the case of the alkali metals the proportions are even simpler: $\text{L} : \text{NH}_4 : \text{Na} : \text{K} : \text{Rb} = 7 : 18 : 23 : 39 : 85$. Then in the horizontal series, $\text{V} : \text{Cr} : \text{Mn} : \text{Fe} : \text{Ni} : \text{Cu} : \text{Zn} = 54 : 55 : 58 : 59 : 62 : 67 : 69$. Other analogies are shown in Mr.

Marshall's paper. It is not yet time, the author observes, to work out relationships for all the elements; for there is still too great uncertainty about many of the atomic weights; but those referred to above appear to be thoroughly well established.

In experiments for determining the atomic weight of arsenic, W. Clarence Brough proceeded by four methods, namely, conversion of silver arseniate with silver chlorid and reduction of this to metallic silver; conversion of silver arseniate into silver bromid; conversion of lead arseniate into lead chlorid; and conversion of lead arseniate into lead bromid. The mean of results obtained in 26 experiments was 75.008, with a probable error of ± 0.006 . While this result is not regarded as conclusive, it is considered as in many respects "certainly confirmatory."

Prof. T. W. Richards has determined the atomic weight of caesium at about 132,879, with a range of from 132,873 to 132,882.

The same subject of the most suitable standard for the calculation of atomic weights is discussed by Mr. Cecil Hollins, who shows that when oxygen was taken instead of hydrogen, and the value of its atomic weight was raised from 15.88 to 16, the unit was lowered to 0.9925 of the atomic weight of hydrogen. In this scale the atomic weights of the elements exhibit a considerable tendency to agree with Prout's whole-number hypothesis—18 of them being integral against 6 when $\text{H} = 1$ is used as the standard, and the sum of the deviations from unity being only 10.298 as against 15.861. So, by further lowering the unit, he might expect that the atomic weights of the elements would still more closely approach to integers. By dividing each of the atomic weights into the nearest whole numbers, the author obtained factors ranging between 1.0101 for helium and 0.9859 for silicon, the mean of which was 0.99877. If this be taken as the unit, the atomic weights of the elements show a further tendency to become integral; and by treating these in the same way the total weight is again reduced, the mean factor now being = 0.99867. The results upon 17 elements on whose atomic weights authorities are agreed, namely, hydrogen, helium, lithium, sodium, potassium, oxygen, sulfur, selenium, nitrogen, fluorin, chlorin, carbon, chromium, beryllium, calcium, aluminum, and boron, were encouraging. Thus, while 3 of the 17 atomic weights are integral when the standard is $\text{H} = 1$, and 6 when it is $\text{O} = 16$, 10 are so when the factor 0.99877 is taken, and 15 when the factor is 0.99867. The total deviations under these different units, taking them in the same order, are 2.87, 1.448, 1.064, 0.729. The author's paper is only preliminary, and his research is to be continued.

Chemical Analysis.—The thirty-seventh volume of the proceedings of the American Academy of Arts and Sciences contains the results of an investigation of the decomposition of mercurous chlorid by dissolved chlorids, the work of Messrs. T. W. Richards and E. H. Archibald. This decomposition is shown to be considerable if the chlorid solutions are fairly concentrated—a point of considerable importance in the analytical determination of mercury as mercurous chlorid. The action is not of a catalytical nature, but a definite condition of equilibrium is set up, the dissolved mercury being supposed to exist in the form of a complex ion represented by the formula HgCl_4 in the solution.

A method for the extraction of bromin proposed by Anson G. Betts is based on a reaction

between bromin and phenol in aqueous solution, by which tribromophenol and hydrobromic acid are formed. The reaction takes place instantly and at ordinary temperatures. A precipitate of tribromophenol appears if the brine contains as much as 0.002 per cent. of bromin. It was found impossible to precipitate all the bromin and form hydrochloric acid. Electrolysis is suggested as an advantageous method of setting bromin free. If the phenol is pure, the precipitation is crystalline and filters easily. If cresol is present, the precipitate is tarry. By drying and heating the precipitate, most of the bromin is recovered as hydrobromic acid. The rest is caught by passing the vapors through an alkali solution or a solution of ferrous bromid. Reduction of the precipitate by iron and mineral acid will regenerate the phenol. The process is best carried on by saturating one part of the brine with chlorin and the other part with phenol, and then mixing the two portions. Other organic bodies, such as acetylen, are suggested as suitable for recovering bromin from brine.

A new and simple test for albumin described by Flora C. Fuhs is based upon the facts that albumin is coagulated by carbohc acid; equal volumes of non-albuminous urine and a mixture composed of equal parts of carbohc acid and glycerin form an emulsion which clears up entirely on agitation, leaving a perfectly transparent and highly refractive liquid; and equal volumes of albuminous urine and the carbol solution when mixed produce a white turbidity, which remains in spite of agitation, and does not precipitate on standing or redissolve.

Lilly Grant Kollok and Edgar F. Smith give an account in the *Journal of the American Chemical Society* of quantitative determinations of uranium in solutions of the acetate, sulfate, and nitrate. A special table is given of results in the separation of uranium from barium, calcium, magnesium, and zinc. No satisfaction could be obtained in the attempt to separate it from nickel and cobalt.

The deposits of salts called alkali in Wyoming occupy undrained depressions in geological deposits extending from the Triassic to the present, and range from mere efflorescence to a thickness sometimes reaching 15 feet. The larger beds are often covered with water in the spring, whence they have been called lakes. The deposits are always found upon a muddy base. The mire smells of hydrogen sulfid and contains the same salts that form the deposit resting upon it. As described by W. C. Knight and E. E. Slosson, these deposits are rarely very pure, but are mixtures of several salts, with alternating layers of sand, salt, and mud. The classes of deposits that carry carbonates in quantity contain as principal salts, sodium carbonate, sulfate, and chlorid. Gypsum occurs, but is not prominent. Traces of potassium, lithium, iron, aluminum, manganese, borates, nitrates, sulfates, and phosphates are often found. Mirabilite constitutes the greater mass of most of the deposits, and epsomite is abundant. Different deposits vary greatly in composition, and different parts of the same bed show very often different proportions of the contained salts.

Difficulty is met in the classification of mineral waters on account of the way they shade into one another. A method is suggested by Prof. E. H. S. Bailey, of the University of Kansas, of designating them according to their predominant ions. Thus he would have: 1. The chlorid group, in which chlorids are predominant. 2. The sulfate group, marked by the predominance of

the sulfates. 3. The chlor-sulfate group, in which the chlorid and sulfate ions are about equal. 4. The carbonate group, in which carbonate ions are abundant. 5. The chlor-sulfate-carbonate groups, containing a considerable quantity of the ions of each class. 6. The sulf-hydride group, in which hydrogen sulfide is given off—the waters commonly called sulfur waters. 7. The chalybeate or iron group, which includes also waters containing manganese ions. 8. The special group, or waters which owe their value to some special substance, like lithia or borax. 9. The soft-water group, or waters which contain only a small quantity of mineral substance. More than 90 mineral waters of the State of Kansas are classified under this system.

New Apparatus.—A simple electric thermostat is described by William Duane and Charles A. Long, of the University of Colorado, with which the temperature of a bath can be kept constant to within one one-thousandth of a degree C. for a considerable time. The heat is supplied by an electric current, which in the case of a conducting liquid flows through the liquid itself; and in the case of a non-conducting fluid, flows through wires suspended in the bath. A system of tubes containing a liquid with a large temperature coefficient expansion is placed in the bath, and by means of a suitable mechanism the expansion of this liquid interrupts or reduces the strength of the heating current when the required temperature has been reached. The makes and breaks of the current follow in so rapid succession that no perceptible variations occur in consequence of the interruptions.

A new form of electric resistance laboratory furnace designed by Prof. Holbone, of the Reichsanstalt, Berlin, permits the easy attainment of temperatures up to 1,500° C. by the use of the ordinary 110-volt electric supply. The furnaces are made in two forms, one being adapted for heating crucibles, and the second for heating tubes 44 centimeters in length; but both are alike in principle, the electric current being carried through a resistance coil of platinum or nickel wire, wound around a thin porcelain tube or cylinder. The crucible or substance to be heated is placed within the latter, and the space between the outer side of the coil and the containing vessel is packed with asbestos or powdered quartz. Using nickel, the temperature of the furnace can not be raised above 1,000° C. without damage to the coil, but with platinum it is possible to attain a temperature of 1,500° C. with a current of 14 ampères and 110 volts. It is necessary in the use of these furnaces to include a resistance in the circuit, and to use only half of the maximum current when the heating is first begun. The use of the exterior resistance enables the temperature of the furnace to be registered with ease within somewhat narrow limits. Further advantages claimed for the furnaces are that the separate portions are replaceable when worn out, that the heating spirals can be easily removed and changed to suit special temperatures when required, and that with the tubular form of furnace, the heating of the substance can be carried on in the absence of air and in the presence of any desired gas or gaseous mixture.

An electrical furnace described by S. A. Tucker and H. R. Moody is after the Moissan type, and is composed of carbon bricks 12 inches by 4 by 2, luted together with Dixon's stove-polish. The sides are of 6-inch bricks, and a working span of 6 by 4 by 2 inches is available, which can be increased or diminished according to the charge

used. The whole is then clamped and held firmly together by iron cross-bars provided with adjustable screws on each end, the bars being insulated from the body of the furnace by strips of asbestos. The end bricks are perforated with 1.5-inch holes containing a collar of asbestos or a small cylinder of clay, through which the electrodes of carbon (1 by 12 inches) pass into the furnace-chamber. Connection is made with these electrodes by copper sleeves lined with copper gauze and tightened with set screws, which at the same time carry copper lugs that hold the flexible cables.

Miscellaneous.—The Electrochemical Society (of America) held its first meeting in Philadelphia, Pa., April 3 to 5, Prof. T. W. Richards presiding. Twenty papers were read and discussed during the sessions, and arrangements were made for the publication of the proceedings.

In his presidential address before the meeting of the Chemical Society in Philadelphia, F. W. Clarke presented as the chief need of chemistry at present a better organization of research. While appreciating the great work done by individuals laboring independently, the speaker thought that collaboration and systematization were urgently required. Laboratories of research, he said, should be established in all civilized countries. Work should be so regulated by conference as to avoid repetition, each worker reinforcing the others. The primary function of the scheme should be to perform the drudgery of science, to carry on the tedious, laborious, elaborate investigations from which the solitary worker shrinks, but which are nevertheless essential to the development of chemistry. Brilliant discoveries might be made in the course of these investigations, but incidentally and not as their main purpose.

A large increase has taken place in recent years in the manufacture of artificial graphite in the United States, the product of the year 1901 having amounted, according to the reports of the Geological Survey, to 2,500,000 pounds, as compared with 860,750 pounds in 1900, and 162,382 pounds in 1897, when the commercial production began. More than half of the output for 1901 was in the form of graphitized electrodes for use in the manufacture of alkali and bleaching by electrolytic processes. The rest was employed in the manufacture of paints, lubricants, pencils, motor-brushes, crucibles, and dry batteries.

Sodium amalgam was allowed by M. Moissan to act upon ammonium iodid in solution in liquid anhydrous ammonia at a temperature of about -39°C . Under these conditions the sodium amalgam reacted upon the ammonium iodid and became more fluid without the formation of any gas. The sodium iodid formed, together with the excess of sodium, were next removed by liquid ammonia at a temperature of -40° , and then with ether at -86°C . The solid ingot thus produced was then placed in a tube kept at -90°C . and connected with a mercury-pump. It was found that a perfect vacuum could be maintained in the apparatus without any gas being given off by the ingot. The temperature was then allowed to rise, when a mixture of ammonia and hydrogen gases in the proportion of two of the former to one of the latter was given off. All these facts apparently point to the conclusion that the radical NH_4 is actually present in the metallic mass prepared at -39°C .; but M. Moissan believes that this is really not the case, there being a possibility that a metallic ammoniacal hydrate is formed. He has found that when sodium

amalgam reacts with a solution of ammonia in water there is a slow evolution of gas without foaming. If, however, sodium hydride in solution in sodium amalgam is placed in the same liquid, there is at once a foaming mass produced, which may last for two or three days.

Quicklime, if pure and free from silicates, is melted only in small quantity and with great difficulty at the highest temperature attainable with the oxyhydrogen blowpipe. It has, however, been found by M. Henri Moissan to be melted with great ease in the electric furnace, when it may be made to boil. On cooling, crystals were found, which belonged to the cubical system; but after keeping for a few months they broke up into other crystals, which acted upon polarized light. The density of the lime was raised from 3.3 to 3.4 by fusion. Since lime forms the basis of the electric furnace, it is of importance to study the effect of heating to high temperature with various substances. The results of reactions with carbon, silicon, boron, titanium, chromium, manganese, iron, nickel, cobalt, and platinum were presented in M. Moissan's paper.

In experiments on the decomposition of hydrogen peroxid on exposure to sunshine, R. T. D. Arcy found (a) that dilute solutions of that substance are rapidly affected by exposure to sunshine. When an aqueous solution containing 4 per cent. of H_2O_2 was exposed in a flask to a sunshine of five days in June, about three-fourths of the hydrogen peroxid were decomposed. In open dishes the compound was more rapidly decomposed, and the effect was not dependent—at any rate, to any considerable extent—upon the decomposition taking place simultaneously, and it was not an effect of temperature. (b) That the surface of a solution of hydrogen peroxid undergoing this decomposition is capable of discharging negative electrification. (c) That the days in which sunlight decomposes H_2O_2 most rapidly are the days in which the discharging action is most pronounced. The conclusion is drawn by the author that the decomposition of hydrogen peroxid by light is a possible source of production of positive and negative ions in the atmosphere.

Experiments are described by J. Matuschek which indicate that the proportion of water present in petroleum contaminated with bituminous products of distillation raises the flash-point and the combustion-point of the petroleum. This increase depends on the quantity of water present. Further, it was found that the regular rise of the flash-point and combustion-point is maintained only up to a certain degree. The regularity ceases as soon as small drops of water begin to form in the mixture during the experiment.

CHILE, a republic in South America. The Congress consists of a Senate of 32 members elected for six years by the provinces, in the proportion of 1 Senator to 3 Deputies. The Chamber of Deputies is composed of 94 members, elected in the proportion of 1 member to every 30,000 people in each department. Every male citizen twenty-one years of age and able to read and write has the right to vote for both Deputies and Senators. The President of the republic is elected indirectly through a college of electors for the term of five years. German Riesco was elected President on June 25, 1901, entered upon office on Sept. 18, 1901, and appointed the following Cabinet: Prime Minister and Minister of the Interior, Ramon Barros Luco; Minister of Foreign Affairs, Worship, and Colonization, Eliodoro Yañez; Minister of Justice and Public In-

struction, Manuel E. Ballesteros; Minister of Finance, Juan E. Sanfuentes; Minister of War and Marine, Beltran Mathieu; Minister of Industry and Public Works, Ismael Tocornal.

Area and Population.—The area of Chile is estimated at 290,829 square miles. The population on Nov. 28, 1895, was 2,712,145, being 9.6 to the square mile. On Jan. 1, 1901, the population was estimated at 3,128,095. That of Santiago, the capital, was estimated at 291,725; of Valparaiso, 135,674. The number of marriages in 1900 was 13,331; of births, 110,697; of deaths, 106,812; excess of births, 3,885. The immigration was 1,031.

Finances.—The revenue in 1900 was 103,965,030 pesos, and the expenditure 104,730,054. For 1902 the revenue was estimated at 96,950,000 pesos, of which 48,000,000 pesos are derived from duties on nitrates, 400,000 pesos from the duty on iodine, 26,000,000 pesos from import duties, 1,400,000 pesos from posts and telegraphs, 800,000 pesos from custom-house storage, 4,000,000 pesos from treasury receipts, 15,000,000 pesos from railroads, 500,000 pesos from stamps, and 850,000 pesos from other sources. The expenditure was estimated at 95,850,000 pesos, of which 19,625,458 pesos were for finance, 13,033,481 pesos for the army, 11,120,326 pesos for the navy, 11,585,327 pesos for the interior, 19,875,624 pesos for railroads, 8,986,645 pesos for education, 5,370,468 pesos for justice, 1,698,500 pesos for public works, and 4,554,171 pesos for other purposes.

The foreign debt of Chile on Jan. 1, 1901, was £17,230,680, equal to 229,742,400 pesos, and the internal debt amounted to 75,826,488 pesos. The foreign loans pay 4½ and 5 per cent. To keep pace with the Argentine Republic in armaments Chile had a harder task to perform than the rival state. In 1901 the price of Chilean bonds declined from 5 to 8 per cent. in the London market and an attempt to place a new loan of £3,000,000 was unsuccessful. New York financiers were equally obdurate. The Tarapaca nitrate fields, from which Chile derives 60 per cent. of the public revenue, will be exhausted in twenty or thirty years. In 1898, three years after the adoption of the single gold standard, the Government found itself in such financial straits that it issued 50,000,000 pesos of new paper money, of which 20,000,000 pesos were lent to the banks to relieve the money crisis. In order to withdraw the paper money at the end of four years a new loan of £4,000,000 was obtained in England. In November, 1901, the period for the redemption of paper money in gold was prolonged two years.

The Army.—Compulsory military service was introduced by the law of Sept. 5, 1900, which declares every Chilean liable to serve nine months with the colors from the age of twenty, and afterward nine years in the first and fifteen years in the second reserve. The number enrolled as fit for service in 1901 was 400,397. Of 41,114 subject to be called into the active service 11,500 were drafted into the army, which numbered in all 17,385 men. The number of officers was 868. The infantry weapon is the Mauser rifle made after a Chilean model. The cavalry have carbines of the same pattern. The artillery use Krupp rapid-fire guns.

The Navy.—The Chilean navy consists of 5 armored vessels, 4 cruisers, 11 gunboats, 4 destroyers, and 15 first-class and 4 second-class torpedo-boats. The belted cruiser O'Higgins, launched in England in 1896, has 7 inches of armor on the hull, a displacement of 8,500 tons, a speed of 21 knots with engines of 16,000 horse-power, and a powerful armament consisting of 4

8-inch guns mounted in barbettes, 10 6-inch quick-firing guns in casemates, and 10 3-inch and 10 six-pounder quick-firers. The armored cruiser Esmeralda, also English-built and launched in the same year, displacing 7,030 tons, can make 23 knots with engines of 18,000 horse-power, and carries 2 8-inch guns, 12 6-inch quick-firers, 4 4.7-inch, 8 3-inch, and numerous lighter ones. The Blanco Encalada, an unarmored cruiser of 4,420 tons, launched in 1893, carries 2 8-inch guns and 10 6-inch and many smaller quick-firers, and is capable of making 22 knots with engines of 14,500 horse-power. The Ministro Zenteno, of 3,600 tons, a 20-knot cruiser, launched in 1896, carries 8 6-inch and 14 smaller quick-firers. The other vessels are older except the destroyers, built in England in 1896, and all capable of going 30 knots or faster.

Commerce and Production.—More than half the people of Chile are agricultural. The country produces cereals in large quantities. There are 10,000 acres in vineyards, producing wine of good quality. Excellent fruits are raised, and vegetables of many kinds. About 500,000 cattle and 2,000,000 sheep and goats are reared each year. The exports of barley in 1900 were 24,063 metric tons; of wheat, 9,440 tons; of merino wool, 1,480 tons; of ordinary wool, 2,300 tons. More important are the mineral products, especially the copper and the nitrates of Atacama and Tarapaca. In 1900 there were 25,178 metric tons of metallic copper and 20,210 tons of ore exported. The production of gold in 1900 was 1,871 kilograms; of silver, 45,438 kilograms. The quantity of manganese ore exported in that year was 25,715 metric tons; of cobalt, 25 tons; of borate of lime, 13,175 tons; of coal, 325,042 tons; of guano, 34,435 tons. The nitrate deposits cover 89,177 hectares and are estimated to contain 231,600,000 tons. The production was 1,490,000 tons in 1900 and 1,263,000 tons in 1901. The production of iodine was 193 tons.

The total value of imports in 1900 was 128,538,142 pesos; of exports, 167,674,635 pesos. The imports of coal were 13,494,960 pesos in value; of sugar, 6,518,105 pesos; of cotton goods, 6,047,201 pesos; of oils, 3,480,856 pesos; of sacks, 2,983,084 pesos; of woolen suitings, 2,973,401 pesos; of chintzes, 2,911,745 pesos; of flannels, 2,757,798 pesos; of paper, 2,668,667 pesos; of iron, 2,484,562 pesos; of cattle, 2,290,074 pesos; of drugs, 2,192,365 pesos; of coffee, 1,862,725 pesos; of rice, 1,474,869 pesos. The exports of niter were 109,945,156 pesos in value; of copper, 19,834,365 pesos; of iodine, 4,043,172 pesos; of coal, 3,900,460 pesos; of gold, 2,806,608 pesos; of silver, 2,499,116 pesos; of leather, 2,348,053 pesos; of copper ore, 2,021,267 pesos; of barley, 1,472,061 pesos; of wool, 1,465,883 pesos; of guano, 1,377,400 pesos; of borate, 1,317,676 pesos; of wheat, 944,075 pesos; of manganese ore, 761,406 pesos. The value of mineral products exported was 151,626,206 pesos; of agricultural products, 14,704,822 pesos; of reexports, 1,343,607 pesos. The value in pesos of the trade with different countries in 1900 is given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain	42,481,942	123,236,317
Germany	34,321,877	20,227,090
United States	12,098,808	6,387,345
France	9,289,642	7,970,126
Peru	6,715,492	1,675,203
Argentine Republic	2,538,418	389,268
Uruguay	2,011,058	518,552
Italy	2,232,361	10,022
Brazil	1,540,170	149,163

Navigation.—During 1899 there were entered at Chilean ports 7,267 vessels, of 10,016,704 tons, and cleared 7,154, of 9,738,769 tons.

The commercial marine on Jan. 1, 1901, consisted of 81 sailing vessels, of 35,228 tons, and 55 steamers, of 32,873 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation was 2,880 miles, of which the Government owned 1,355 miles, built at a cost of 86,463,437 pesos, and earning 14,944,872 pesos gross in 1900, while expenses were 15,917,434 pesos. The number of passengers carried was 6,565,254; metric tons of freight, 2,229,172.

The post-office in 1900 handled 13,925,466 letters and postal cards, 18,118,329 printed packets, and 1,243,639 other packets; the receipts were 1,136,887 pesos, and expenses 1,178,322 pesos.

The telegraphs on Jan. 1, 1901, had a length of 14,592 miles, of which 11,882 miles were state lines, over which 1,286,936 messages were sent. There are 5,804 miles of telephone-lines belonging to two companies.

Political Affairs.—The dispute with the Argentine Republic, which almost reached the point of hostilities at the end of 1901, occurred at a time of financial embarrassment for Chile. A failure of the wheat harvest and a strike in the nitrate-fields which reduced revenue were temporary causes which aggravated the difficult financial position into which the republic has arrived after spending a redundant revenue for many years. In January, 1902, Congress imposed an additional duty of 10 per cent. on all imports. To cover purchases of war material the Government was authorized by Congress to issue treasury bills for £2,500,000 running five years, which German bankers were expected to take on the guarantee of nitrate-mines and land in Tierra del Fuego. From Feb. 15 nitrate duties could be paid 10 per cent. in gold and 90 per cent. in currency, instead of 35 per cent. in gold. For making certain payments owed by the Government an indefinite delay was ordered. A combination among nitrate concerns gave a pretext for increasing the export duty on nitrate 6d. (a third of a peso) per quintal, which was expected to give by \$5,000,000 gold more revenue. The intended acquisition of 2 additional new ships by the Argentine Government had to be duplicated, and accordingly 2 battle-ships were ordered, to cost over £1,000,000 each. When the loan negotiations failed the Government had to take £1,000,000 from the currency redemption fund, which was to be replaced by selling salt-peter and guano lands, by which means £2,000,000 more would be raised, enabling the Government to dispense with the loan. The Government decided to effect 10,000,000 pesos of retrenchments, mainly in the army and navy and the educational budgets, and thus expected to meet all expenditure, counting on £3,207,500 of receipts from the export tax on salt-peter, 1,500,000 pesos from the alcohol tax, and 54,370,000 pesos from other sources. Congress met in an extraordinary session on April 9 to consider proposals for the regulation of insurance companies, the reconstruction of the Valparaiso mole, the sale of the cruisers Pinto and Errazuriz, and the construction of the Transandine Railroad. The action of the Government in borrowing from the conversion fund to pay for the new armaments was condemned as unconstitutional and Congress refused to sanction the sale of the 2 cruisers. Consequently the Tocornal-Yañez ministry resigned on April 25. The President had difficulty in finding statesmen willing to accept office

and face the financial crisis in the disorganized state of parties at a critical juncture of the disarmament negotiations with Argentina. A Cabinet was formed at last on May 4 as follows: Premier and Minister of the Interior, Barros Luco; Minister of Foreign Affairs, Rafael Balmaceda; Minister of Finance, Guillermo Barros; Minister of Justice and Public Instruction, G. Figueroa; Minister of Public Works, Ismael Valdez; Minister of War and Marine, Victor Manuel Lamas. The Moderate Liberals, hitherto the Opposition, promised to support the new ministers in a policy of peace and financial reform. When Congress opened on June 1 an agreement with the Argentine Republic had been reached through the mediation of Great Britain. The July interest on the Chilean bonds was paid with a temporary loan of £1,000,000 from the banks. The contracts for the new cruisers with English ship-builders were taken off the hands of the Government by the British Government.

The boundary dispute with the Argentine Republic was left to the arbitration of England, and the danger of Argentine interference in the quarrel with Peru and Bolivia regarding the retrocession of Tacna and Arica was averted, but Chile was bound to abide by treaty engagements (see ARGENTINE REPUBLIC). A secret pact between Chile, Colombia, and Ecuador secured the support of Colombia as well as of Ecuador to Chile's proviso that general arbitration, as proposed at the Pan-American Congress in the city of Mexico, shall only apply to disputes that arise in the future. Chile secured for Colombia the neutrality of Ecuador in the civil war that was raging in Colombia, and agreed to furnish Colombia with a second-class iron-clad cruiser. A treaty of friendship and a treaty of commerce and navigation were arranged between Chile and Colombia in January, 1902. In the protocol it was provided that the ports of each country should be free for the natural products of the other, subject to such limitations as should be stipulated in the treaty when finally concluded. This provision was of less value to Colombians than to Chileans, who desired a free entry for their wheat, flour, and vegetables, giving them an advantage over the products of the United States, which pay duty. A secret treaty is said to have been drawn up whereby Colombia agrees to the free passage of Chilean troops and armaments at any time across the Isthmus of Panama, Chile agreeing to provide money or help of any kind to remove difficulties that may arise from the use of the facilities granted and to indemnify Colombia for all loss or damage she may sustain therefor.

CHINA, an empire in eastern Asia. The system of Government, as laid down in the regulations of the Tsing dynasty, is based on the government of the family, and in theory the Emperor exercises supreme paternal authority. The official body which controls the administration is the Neiko, or Cabinet, composed of 2 Manchus and 2 Chinese, assisted by 2 members of the Hanlin College, who see that all edicts and proclamations conform in style and substance with the dynastic regulations and the Confucian precepts. Important questions are decided by the Chun-Chi-Chu, the Grand Council, composed of 5 or 6 of the highest officers of state, Manchus and Chinese, who have control over the Manchu army and, unless the Emperor is a strong and resolute ruler, wield the real authority, issuing decrees and orders in his name to the executive boards in Peking and to the provincial authorities. The executive boards act under the direct super-

intendence of the Neiko. The board called the Civil Office supervises the conduct and administration of the officials, confers titles, and grants rewards and precedence for meritorious conduct; the Board of Revenue manages the finances; the Board of Rites enforces the laws relating to the ceremonies of the court and all public functions ordered by the Emperor and regulates the rites called for by an eclipse or any public calamity; the War Board has charge of military affairs and directs the movement of troops; the fifth is the Board of Public Works; the Board of Punishments is the high court of criminal jurisdiction, which tries and judges official delinquencies; the Board of Admiralty, created in 1885, sits at Tientsin and directs naval affairs; the Board of Foreign Affairs directs the administration of subject countries. Each board has a Manchu and a Chinese president. The Board of Censors, which is independent of the Government, under the dual presidency of a Manchu and a Chinese, constitutes the final court of appeal and revision, and each of the 50 or 60 members has the right to address complaints to the Emperor regarding any branch of the administration. The Censors have also the right to criticize publicly the edicts of the Emperor. The Imperial Academy, or Hanlin College, is the official institution of learning. The Tsung-li-Yamen, or Foreign Office, which since 1861 conducted all negotiations with the representatives of Western nations, was abolished in July, 1901, in accordance with the demands of the Western powers which intervened in China to suppress the Boxer rebellion. In its place a Ministry of Foreign Affairs, called the Wai-Wu-Pu, was created in July, 1901, which has precedence of the other boards. A Council of the Empire, the Sheng-Wu-Shu, was created also, the members of which are Prince Ching, who is president of the Wai-Wu-Pu, Yung-Lu, Kun-Kang, Chu-Hung-Chi, Chang-Chi-Fung, Liu-Kun-Yi, and Wang-Wen-Shao, who is a member of the Wai-Wu-Pu, president of the Office of Railroads and Mines, and a member of the Council of State, the Kiun-Ki-Tshu, to which Yung-Lu and Chu-Hung-Chi likewise belong and of which Prince Li is president, as he is also of the Archives of the Imperial House, the Tsung-Yen-Fu. Kun-Kang and Yung-Lu are the members of the Grand Secretariat.

Area and Population.—China proper has an estimated area of 1,353,350 square miles and a population estimated at 383,253,000. The dependencies are Manchuria, with an area estimated at 362,310 square miles and about 7,500,000 inhabitants; Mongolia, with an area estimated at 1,288,000 square miles and an estimated population of 2,000,000; Tibet, which has an estimated area of 651,500 square miles and a population supposed to reach 6,000,000; Jungaria, with an area of 147,950 square miles and about 600,000 inhabitants; and Chinese Turkestan, the area of which is about 431,800 square miles and the population about 580,000. The total estimated area of the Chinese Empire is 4,234,910 square miles and the total population 399,680,000. The number of foreigners residing at the treaty ports in 1900 was 16,811, of whom 5,471 were British, 2,900 Japanese, 1,941 Russians, 1,908 Americans, 1,343 Germans, 1,175 Portuguese, 1,054 French, 221 Spanish, 204 Swedes and Norwegians, 156 Danes, 133 Italians, 108 Dutch, 100 Belgians, 91 Austrians, 42 Koreans, and 34 of other nationalities. About half of the foreigners are in Shanghai.

Each province has its army of Chinese troops under the command of the governor or governor-

general. These troops are called the Ying-Ping, the national army, known also as the Army of the Green Flags and as the Five Camps. Their nominal strength is 600,000, and about 200,000 are believed to be efficient. Their efficiency and armament vary greatly in the different provinces. The Tientsin army corps, with a nominal strength of 100,000, an actual strength of 35,000, is equipped and trained in the European manner. The Governor of Shantung has recently raised a force which is being similarly taught. In time of war or insurrection troops are enlisted. The Mongolian and other irregular cavalry are nominally 200,000 strong, but really only 20,000, and are useless in modern warfare. The total number of men kept under arms is about 300,000, and for war 1,000,000 are reckoned upon, though only a small fraction of these are schooled and disciplined and possess modern weapons. Large quantities of arms and ammunition were imported in the period preceding the Boxer outbreak, and during the peace negotiations the importations were continued. Since the treaty of Sept. 7, 1901, prohibits the importation of arms into China, the manufacture of field-guns, shells, rifles, and smokeless powder has been actively carried on in all the Chinese arsenals.

The Navy.—The naval forces of China are under the control of the provincial authorities. The Peiyang, or northern squadron, created for the defense of the capital province, was almost entirely destroyed or captured in the Japanese war of 1894. Two small protected cruisers were obtained in 1897 and 1898, the Hai-Chi and Hai-Tien, English-built, of 4,300 tons, having 6-inch shields and a 5-inch deck, armed with 2 8-inch guns and 10 4.7-inch and 12 three-pounder quick-firers, and capable of making 24 knots. From Germany were obtained in 1897 the Hai-Yung, Hai-Shen, and Hai-Shu, cruisers of 2,950 tons. Four destroyers were seized by the allied forces during the international occupation of Pechili in 1900 and were retained by Germany, England, France, and Russia. The gunboats Ngan-Lan, Chen-Tao, Tsing-Yuen, Chen-Hai, Hu-Wei, Lung-Liang, Fe-Ting, Tse-Tien, Hai-Chiang-Ching, Kwang-Heng, Kwang-Li, Kwang-Huran, and Kwang-Chen remain of the old squadron, and to these have been added the Kwang-Yen, launched in 1894, and the Kwang-Hsing, Kwang-Keng, Kwang-Wu, and Kwang-Chi, launched in 1895. These gunboats have an average displacement of 440 tons. The Nanyang, or southern squadron, at Fuchau and Canton, comprises the armored gunboat Tien-Sing, of 200 tons, the protected cruisers Yang-Pao and Ye-Sing, of 2,500 tons, the torpedo-gunboats Fei-Ying, Fei-Ting, and Kien-Wei, of 900 tons, the unarmored cruisers Fu-Tsing and Hi-Ying, 13 first-class torpedo-boats, 14 second-class torpedo-boats, 6 monitors, 14 small gunboats, and the schoolship Fuchau. Under the direction of a French engineer who was placed in charge of the Fuchau arsenal a destroyer and a torpedo-gunboat have been built.

Finances.—The revenue is estimated at 88,979,000 taels. The tax-collectors levy from 50 to 75 per cent. more than they account for to the Government, this surplus being absorbed in costs or given outright to the chief provincial officials. The land tax amounts to about 32,000,000 taels. The maritime customs revenue, of which reports are made public annually, amounted in 1900 to 22,873,986 haikwan taels, of which 3,961,423 taels were likin duties on imported opium.

The Chinese Government always refused to borrow money abroad for any purpose until the war with Japan compelled a resort to the Euro-

pean money markets. In 1894 a loan of £1,635,000 was contracted at 7 per cent.; in 1895, one of £3,000,000 at 6 per cent.; in 1895 one of £1,000,000 at 6 per cent. and one of £15,820,000 at 4 per cent.; £16,000,000 were borrowed at 5 per cent. in 1896 and £16,000,000 more at 4 per cent. in 1898 to pay the last instalment of the Japanese war indemnity. The whole war loan was secured on the maritime customs. In 1899 a railroad loan of £2,300,000 was contracted, to pay which the earnings of the railroad were pledged. The Boxer uprising and consequent invasion of Pechili by the powers resulted in more than doubling China's liabilities. An indemnity to be divided among the powers for the expenses of the occupation and damage done to foreign property and injury to foreigners from acts of the Boxers was agreed upon on May 29, 1901. China promised to pay the sum of 450,000,000 taels, which amounts to £64,000,000. It is a gold debt payable in 39 annual instalments on Jan. 1 of each year, with interest reckoned at 4 per cent. The interest and sinking-fund average 37,659,000 taels, or £5,120,000 per annum. The portion of the maritime customs not appropriated for other debts are pledged as security, and the powers agreed that these should be increased to 5 per cent. ad valorem, ultimately to be converted in specific duties. The native customs that are administered by the Maritime Customs, namely, the likin or transit duty within 16 miles of any of the open ports, are included in the guarantee, and also the salt gabel not otherwise appropriated. A commission at Shanghai receives the assigned revenues each month. The annual amount to be handed over for the payment of debts out of the proceeds of the maritime customs is £5,770,000. The indemnity debt is payable in gold at the exchange rate of 3s. to the tael. It is divided into 5 series: A, 75,000,000 taels, paying from 1902 interest and sinking-fund amounting to 3,829,500 taels; B, 60,000,000 taels, paying 2,400,000 taels interest and from 1911 till 1940 a sinking-fund which increases the annual payment to 3,469,800 taels; C, 150,000,000 taels, paying 6,000,000 taels interest, increased by a sinking-fund from 1915 to 9,384,000 taels; D, 50,000,000 taels, paying 2,000,000 taels interest, increased from 1916 to 3,200,500 taels; E, 115,000,000 taels, paying 4,600,000 taels interest and a sinking-fund from 1932 which increases the annual payment to 15,466,350 taels. For the first nine years the annual payments on all the series amount to 18,829,500 taels per annum; for the next four years, 19,899,300 taels; for the next year, 23,283,300 taels; for the next sixteen years, 24,483,800 taels; for the last nine years, 35,350,150 taels. The payments were so adjusted that the gold debt payments of China would be evenly distributed over the whole period of thirty-nine years, varying little from year to year. The debts incurred before the indemnity debt and secured on the imperial customs and likin required for 1902 the remittance of 23,600,000 taels, making with the indemnity debt a total payment of 42,429,500 taels. The payment of interest and sinking-fund on the existing debt decreases to 22,800,000 taels in 1911, to 19,400,000 taels in 1915, to 18,500,000 taels in 1916, to 7,500,000 taels in 1932, and will be 5,900,000 taels in 1940, when the last instalment of the indemnity is paid. The total annual charge for foreign debt in that year will be 41,250,150 taels. In no year does it reach 43,000,000 taels. This scheme was presented by the Chinese at the peace conference as the easiest for China to bear, and was accepted by the ministers of the allied powers. The ways

and means of finding gold for the payment of nearly 19,000,000 taels in addition to between 23,000,000 and 24,000,000 taels required each year for the existing debt the ministers did not suggest, except that in the commercial treaties to be concluded a revision of the tariff was promised. They insisted that the indemnity should be reckoned in gold at the current rate of 3s. to the tael. The immediate increase in the maritime customs duties under the treaty to an effective 5-per-cent. ad valorem was calculated by experts to give an increase of 2,500,000 taels in the yield. The salt gabel and the native customs, duties to be collected from the junk trade, were considered uncertain resources, capable of producing 11,000,000 taels a year if it could be collected. The provincial treasuries, however, would be deprived of a large proportion of their accustomed revenues, and the result would be either increased levies by the mandarins or reduced remittances to Peking. The Chinese Government notified the viceroys that till 1911 they would have to send additional annual remittances, distributed in fixed sums among the provinces, amounting to 18,700,000 taels a year. How these additional sums are to be obtained was not suggested. The Yangtse viceroys memorialized the throne, stating that their existing revenues were insufficient to meet the demands and asking for instructions as to fresh taxation. Chang-Chih-Tung requested a reduction of 30 per cent. in his quota, pointing out the unreasonableness of requiring the provinces to bear the entire burden of the new debt, inasmuch as part is provided for by increased import duties and the transfer of native customs to the imperial Maritime Customs. The Government resorted to sales of official rank throughout the empire as the readiest means of obtaining an immediate addition to the revenue, and efforts were made to collect arrears of the grain tax. Various schemes of taxation were discussed, but an increase of the foreign customs to 10 or 15 per cent. offered the only hope of ultimate relief. Meanwhile the viceroys and governors endeavored to screw additional revenues out of the provinces to satisfy the fresh demands, producing misery and discontent, encountering resistance and evasion, and provoking revolt. The immediate effect of the increased foreign debt was to cause a fall of 10 per cent. in the price of silver, increasing in that proportion the amount of the entire foreign debt and diminishing the normal means of paying it by checking foreign trade. There has been a steady balance of trade against China for a series of years, ranging from 10,000,000 to 35,000,000 taels, notwithstanding which the influx of silver bullion has been constantly going on at the rate of about 2,500,000 taels a year. Before the Japanese war a much larger amount of silver sycee was absorbed every year. The annual export of gold from China, according to official reports, is 7,000,000 or 8,000,000 taels. The export trade was depressed, rather than stimulated by the drop in silver. The cotton industry at the treaty ports collapsed. The disturbance of trade and exchange created alarm among international bankers and financiers. If the first pressure of the indemnity debt stopped imports, China would have to ship silver to pay the instalments. The silver market was unaccountably disturbed before such a movement had taken place, and when it did the effect would be disastrous.

Production and Industry.—The value of the imports for consumption in 1899 was reported by the Maritime Customs at 264,748,456 haiwan

taels, and that of domestic exports at 195,784,832 taels; imports in 1900 at 211,070,422 taels, and exports at 158,996,752 taels. These figures do not represent the entire foreign commerce of China because a great deal of merchandise is transported in native vessels which are not subject to the control of the Maritime Customs. The imports of cotton cloth in 1900 was 45,419,000 taels in value; of opium, 31,031,000 taels; of cotton yarns, 30,187,000 taels; of petroleum, 13,956,000 taels; of rice, 11,377,000 taels; of sugar, 6,424,000 taels; of coal, 6,338,000 taels; of iron, 3,455,000 taels; of fishery products, 3,391,000 taels; of flour, 3,330,000 taels; of woolen cloth, 3,036,000 taels; of matches, 2,235,000 taels; of tin, 2,197,000 taels. The exports of raw silk were 39,732,000 taels in value; of tea, 25,445,000 taels; of cotton, 9,861,000 taels; of silk goods, 9,712,000 taels; of skins, 6,522,000 taels; of beans and bean-cake, 5,468,000 taels; of straw braid, 4,371,000 taels; of matting, 3,305,000 taels; of sugar, 2,984,000 taels; of paper, 2,506,000 taels; of provisions, 2,496,000 taels; of coal, 2,291,000 taels; of clothing and shoes, 2,040,000 taels; of tobacco, 1,942,000 taels; of wool, 1,864,000 taels; of porcelain and pottery, 1,627,000 taels; of fireworks, 1,621,000 taels.

The values of imports from and exports to different foreign countries and ports in 1900 were in haikwan taels as follow:

COUNTRIES.	Imports.	Exports.
Hong-Kong.....	98,847,000	69,962,000
Great Britain.....	45,467,000	9,356,000
Japan.....	25,753,000	16,938,000
Straits Settlements.....	2,625,000	2,435,000
Macao.....	2,236,000	4,710,000
East India.....	16,216,000	2,865,000
Siberia.....	737,000	5,184,000
Russia in Europe.....	4,237,000	6,390,000
Rest of Europe.....	10,273,000	24,977,000
United States.....	16,724,000	14,752,000
British America.....	654,000	458,000
Other countries.....	3,360,000	6,170,000
Total.....	222,129,000	158,997,000

The reexports of foreign merchandise amounted to 11,059,000 taels. The shares of the different treaty ports in the import and export trade are given in taels in the following table:

PORTS.	Imports.	Exports.
Shanghai.....	125,990,000	78,139,000
Kaulun.....	20,769,000	20,558,000
Canton.....	13,691,000	18,892,000
Swatau.....	12,525,000	5,419,000
Amoy.....	11,076,000	1,429,000
Fuchau.....	4,828,000	5,861,000
Lappa.....	3,943,000	5,641,000
Chifu.....	4,738,000	2,018,000
Niuchuang.....	2,682,000	3,910,000
Mongtse.....	2,963,000	2,439,000
Hangchau.....	802,000	6,159,000
Tientsin.....	3,768,000	1,025,000
Wuchau.....	4,489,000	1,875,000
Pakhoi.....	2,043,000	1,794,000
Kibingchau.....	2,106,000	1,632,000
Other ports.....	5,716,000	1,912,000
Total.....	222,129,000	158,997,000

In northern China wheat, millet, corn, barley, peas, and beans are grown, and in the south rice, sugar, cotton, and indigo. Tea is raised in the southern and western parts, opium in the west, and silk in all the provinces, but especially in Szechuen, Kuangtung, Chehkiang, and Kiangsu. Coal is found in every province and has been mined for several years at Kaiping. At Poshan, in Shantung, are also productive mines. A company has been formed to work the anthracite fields of Shansi, which cover 13,500 square miles,

while in the western part of that province bituminous coal is equally abundant. Coal is mined already in Hunan, where there are 21,700 square miles of anthracite and bituminous deposits, and in Szechuen, where there are enormous beds. Iron is mined in Shansi and Manchuria, copper and some tin, silver, and lead in Yunnan. The quantity of tea exported in 1900 was 1,384,324 piculs of 133½ pounds, of which 665,267 piculs went to Russia, 255,156 piculs to the United States, 119,328 piculs to Hong-Kong, 135,139 piculs to Great Britain, and 45,582 piculs to Australia.

Navigation.—The number of vessels entered and cleared at Chinese ports during 1900 was 69,230, of 40,807,242 tons, of which 57,576, of 39,555,768 tons, were steamers. Of the total number 22,818, of 23,052,459 tons, were British; 34,129, of 7,864,217 tons, were Chinese; 3,527, of 4,032,147 tons, were German; 4,917, of 3,871,559 tons, were Japanese; 978, of 664,987 tons, were French; and 1,311, of 474,479 tons, were American.

Railroads and Telegraphs.—A railroad connecting Pekin with Tientsin and Tangku, and running along the coast to Shanhaikwan and thence to Chenchau, on the Liaotung Gulf, with branches to Tienchiao and to the Nan-Pao coal-mines, has a total length of 404 miles. This line is connected with the Russian line which terminates at Niuchuang and with the line to Port Arthur. The Russo-Chinese Manchurian railroad from Harbin to Port Arthur has a length of 650 miles. The line across Manchuria to Vladivostok, 950 miles, the eastern terminal section of the Russian Trans-Siberian Railroad, has been completed. A line runs southwest from Pekin to Patoting-Fu, 88 miles, and is being continued to the Yangtse river at Hankau. The Germans have built a railroad from Tsintau, near Kiaochau, to Tsinan, whence it will be continued to Yenchau to meet a line built from Kiaochau direct to the latter place. American engineers have undertaken to construct a railroad from Hankau to Canton, with a branch from Yochau to the Pinghsiang coal-mines in Honan. A railroad 12 miles in length connects Shanghai with Wusung. The French have received a concession for railroads from Tonquin into Yunnan, Kwangsi, and Kwangtung, running from Laokai to Yunnan-Fu, from Langson to Longchau, and from Nanning-Fu to Pakhoi. British concessionaires have undertaken to build lines from Shanghai to Suchau, Chinkiang, and Nankin, and to Hangchau and Ningpo and from Chingtu to Wuchau and Canton.

Telegraph-lines connect all the chief cities of China and join the Siberian overland line to Europe and the Indian system as well as the cable. Their total length is a little less than 14,000 miles.

Return of the Court to Pekin.—The imperial court entered the Forbidden City, restored and renovated so that outwardly there were no marks of the ruin and destruction wrought by the allies, on Jan. 7, 1902. Contrary to all precedents, foreigners were allowed to witness the royal entry, which was attended with gorgeous pageantry and elaborate ceremonial, and natives too, who have been forbidden by immemorial usage to view the passage of royal personages through the streets, were permitted to witness the spectacle and gaze on their rulers. Yuan-Shi-Kai, Viceroy of Pechili, with 12,000 trained troops restored and maintained order where under foreign control strife and confusion reigned. He added 6,000 to the force, and recruits of the best

physical and moral qualities offered themselves freely. The Chinese arsenals were kept busy turning out war material. The people as well as the Government were bent on repairing the military shortcomings of China. The foreign ministers were formally received in audience by the Emperor on Jan. 22, in the innermost of the great halls of the Forbidden City. Afterward the Empress-Dowager gave a reception to the ladies of the legations.

In the provinces where Tung-Fuh-Siang and Prince Tuan were still at large Belgian missionaries and native Christians were murdered. A royal edict was at once issued ordering that Tung-Fuh-Siang should be beheaded according to the terms of the protocol. The chief minister at court was Yung-Lu, whom the foreign diplomats, except the Russian representative, had tried to include in the list of proscribed officials, but who, although no friend of foreigners, had kept the antforeign movement under control and saved the foreigners in Peking from massacre and, when orders were issued for the extermination of foreigners throughout China, had by secret instructions sustained the Yangtse viceroy in their determination to disregard these edicts. The foreign military authorities still held Tientsin and administered the railroad between that city and Peking. This action determined the Russians to prolong their occupation of Niuchwang and the railroad leading to that port. An American and a British war-vessel went to Niuchwang, and disturbances occurred between American seamen and Russian soldiers, of which the Russian minister complained.

The indemnity claims of the powers amounted to 462,000,000 taels, 12,000,000 taels over the agreed sum. The American and Russian ministers proposed a pro rata reduction, to which the others agreed excepting the British and Japanese ministers, who stated that their claims had been reduced to a minimum after an official investigation of each item. An instalment of the indemnity was due, and was tendered by the Chinese officials to the bankers' commission in Shanghai, as provided in the protocol; but the commission would not accept it because the foreign governments were unable to agree upon the terms of division. At a meeting of military commanders in Tientsin on Jan. 25 it was agreed that the garrisons could be reduced in the spring. The Russian general declined to express an opinion, the Russian forces having been already withdrawn from Pechili in 1901. The German general refused to attend, regarding the question as a political one to be decided by the governments. The Japanese commander informed the others that Japan had already begun to withdraw her troops without regard to the action of other nations. The combined force at Tientsin had an effective strength of 4,000 men.

On Feb. 1 an imperial edict was issued legalizing marriages between Manchus and Chinese and forbidding the practise of binding the feet of girls. The imperial clan and the generals of the Eight Banners were ordered to select young Manchus to go abroad to study foreign branches of knowledge. Hundreds of students, coming from every province, were sent to Japan to obtain the military, administrative, and scientific knowledge which that nation had borrowed from the West, thereby winning an independent position among the powers that preyed upon China.

Anglo-Japanese Alliance.—An agreement between Great Britain and Japan was signed at London on Jan. 30, 1902, in the following terms:

The governments of Great Britain and Japan,

actuated solely by a desire to maintain the *status quo* and general peace in the extreme East, being moreover specially interested in maintaining the independence and territorial integrity of the Empire of China and the Empire of Korea, and in securing equal opportunities in those countries for the commerce and industry of all nations, hereby agree as follow:

I. The high contracting parties, having mutually recognized the independence of China and of Korea, declare themselves to be entirely uninfluenced by any aggressive tendencies in either country. Having in view, however, their special interests, of which those of Great Britain relate principally to China, while Japan, in addition to the interests which she possesses in China, is interested in a peculiar degree politically, as well as commercially and industrially, in Korea, the high contracting parties recognize that it will be admissible for either of them to take such measures as may be indispensable in order to safeguard those interests if threatened either by the aggressive action of any other power or by disturbances arising in China or Korea, and necessitating the intervention of either of the high contracting parties for the protection of the lives and property of its subjects.

II. If either Great Britain or Japan, in the defense of their respective interests as above described, should become involved in war with another power, the other high contracting party will maintain a strict neutrality, and use its efforts to prevent other powers from joining in hostilities against its ally.

III. If in the above event any other power or powers should join in hostilities against that ally, the other high contracting party will come to its assistance and will conduct the war in common, and make peace in mutual agreement with it.

IV. The high contracting parties agree that neither of them will, without consulting the other, enter into separate arrangements with another power to the prejudice of the interests above described.

V. Whenever, in the opinion of either Great Britain or Japan, the above-mentioned interests are in jeopardy, the two governments will communicate with one another fully and frankly.

VI. The present agreement shall come into effect immediately after the date of its signature, and remain in force for five years from that date. In case neither of the high contracting parties should have notified twelve months before the expiration of the said five years the intention of terminating it, it shall remain binding until the expiration of one year from the day on which either of the high contracting parties shall have denounced it. But if, when the date fixed for its expiration arrives, either ally is actually engaged in war, the alliance shall *ipso facto* continue until peace is concluded.

In a covering letter the Marquis of Lansdowne stated that the two powers had been in close and uninterrupted communication throughout the troubles and complications consequent upon the Boxer outbreak and the attack upon the legations, and each desired that the integrity and independence of the Chinese Empire should be preserved and that there should be no disturbance of the territorial *status quo* either in China or in the adjoining regions; that all nations should, within those regions as well as within the limits of the Chinese Empire, be afforded equal opportunities for the development of their commerce and industry; and that peace should not only be restored, but be maintained in

the future. Having discovered that their far Eastern policy was identical, each side expressed the desire that their common policy should find expression in an international contract of binding validity. The British Secretary of State for Foreign Affairs explained that his Government had been largely influenced in their decision to enter into this important contract by the conviction that it contains no provisions which can be regarded as an indication of aggressive or self-seeking tendencies in the regions to which it applies. It has been concluded purely as a measure of precaution, to be invoked, should occasion arise, in the defense of important British interests. It in no way threatens the present position or the legitimate interests of other powers.

The allied governments of France and Russia on March 18 sent an identical note to the powers which signed the Peking protocol of Sept. 7, 1901, wherein they expressed themselves fully satisfied with the Anglo-Japanese convention concluded with the object of insuring the *status quo* and general peace in the far East and of maintaining the independence of China and Korea, which are to remain open to the trade and industry of all nations, finding therein an affirmation of the essential principles which they themselves on more than one occasion have declared to constitute, and which remain, the basis of their policy. The two governments considered that respect for these principles is at the same time a guarantee for their special interests in the far East. All the same, obliged as they too, on their part, are to consider the case in which either aggressive action of third powers or fresh troubles in China, raising once more the question of the integrity and free development of that power, might become a menace to their own interests, the two allied governments reserve the right to consider eventually the means of insuring the defense of their interests.

The British Government suddenly changed its plans with regard to Wei-Hai-Wei. The work of fortification was stopped. Military and naval authorities pronounced the place valueless as a strategical base. The Government was transferred to the Colonial Office, with the intention of making it a sanatorium for officers of the army and navy.

The Manchurian Agreement.—Russia had 40,000 troops in Manchuria in the spring of 1902, and the Trans-Siberian Railroad was still kept busy transporting soldiers and military stores and munitions to the East. When the Tungus bandits, hunted out of Manchuria by the Russians, crossed into Mongolia and committed depredations in the vicinity of Jehol, the Russian troops pursued and dispersed them. The negotiations regarding the evacuation of Manchuria by Russia, discontinued when Li-Hung-Chang died, were resumed with Yung-Lu when the court returned to Peking. The Russo-Chinese Bank, which is the agent of the Russian Government in railroad and financial matters appertaining to Manchuria and China, negotiated for exclusive railroad and mining privileges in Manchuria. Secretary Hay on Feb. 1 sent a note to the Russian and Chinese governments protesting against such an arrangement as constituting a monopoly which violates treaties made by China with the foreign powers, affecting the rights of American citizens, restricting their rightful trade and exposing it to being discriminated against; moreover, impairing China's sovereign rights and interfering with her ability to meet her international obligations, which would be further diminished when other nations demand and obtain equal advantages in

other parts of the empire, wrecking the policy of equal treatment of all nations respecting commerce and navigation; and on the other hand, conflicting with the repeated assurances of the Russian Government that it intended to follow the policy of the open door, as advocated by the Government of the United States and accepted by all the treaty powers having commercial interests in China. The English and the Japanese made representations to the Chinese Government of similar purport. The Russian minister satisfied the United States Government with verbal assurances that the concessions were sought without the knowledge of his Government, and in so far as they conflicted with its avowed policy of an open door in Manchuria they would be vetoed.

The Chinese Government was said to have given a promise to Russia while Li-Hung-Chang was conducting negotiations that if any foreign military officers were to be employed to instruct and drill Chinese troops in northern China they should be Russian officers. The Germans urged that if any foreign instructors were needed they should be German officers. The Chinese statesmen were even more eager to build up an efficient Chinese army than they were before the Boxer uprising, but they were also more averse than before to have foreigners in actual command of any Chinese troops. Japanese military experts were therefore employed as translators and interpreters of Japanese treatises on modern military science, who were also so far as needful instructors and advisers of the Chinese officers. Japanese traders swarmed in Manchuria, who probably served their Government at times as secret agents and informers.

Russia was willing to give up the invidious privilege which the secret promise of Li-Hung-Chang conferred. Accordingly M. Lessar obtained from Prince Ching, as president of the Foreign Office, a written undertaking that in future no foreigners of any nationality should be employed in the Peiyang, or northern Chinese, naval or military forces. Yuan-Shih-Kai, who as Viceroy of Pechili is commander-in-chief of the Peiyang squadron and army, refused to be bound by this undertaking, given without his knowledge and consent. The negotiations for giving exclusive mining privileges to the Russo-Chinese Bank were broken off after the presentation of the American note. The Manchurian convention was finally concluded and signed by M. Lessar and Prince Ching and Wang-Wen-Shao on April 8. The objectionable features of the draft convention withdrawn by the Russian Government a year before were removed. The text of the new one was submitted to the American and the British and Japanese governments for approval. It was admitted that the sovereignty of China and the treaty rights of other nations were not infringed. The first article states that the Emperor of Russia, desirous of giving a new proof of his love of peace and sentiments of friendship for the Emperor of China, notwithstanding that from different points of Manchuria along the frontier first attacks were made against the peaceful Russian population, consents to the reestablishment of Chinese authority in Manchuria, which remains an integral portion of the Chinese Empire, and restores to China the right to exercise sovereign and administrative powers as before the occupation by Russian troops. The Chinese Government in the second article agrees to abide by the contract made with the Russo-Chinese Bank on Aug. 27, 1896, and in conformity therewith, on resuming possession of sover-

sign and administrative powers in Manchuria, to protect in every way the railroad and staff and safeguard all Russian subjects living in Manchuria, together with the enterprises established by them. Russia, in view of these obligations assumed by China, consents on its part, in the event of there being no trouble whatsoever and if the conduct of other powers should not oppose obstacles thereto, to withdraw gradually all Russian troops from Manchuria within six months from the signing of the convention from the southwestern part of Mukden province as far as the Liao river, at the same time restoring the Shanhaikwan, Niuchuang and Sinmin-tung Railroad subject to certain conditions; during the six months following from the rest of Mukden province and from the province of Kirin; and during the next six months from the province of Heihung-Kiang. Until the evacuation is completed the number of Chinese troops to be kept in Manchuria and the military stations must be arranged with the Russian commander, and in the fourth article China engages not to increase the garrisons beyond the agreed limit, which ought to be sufficient to exterminate brigands and pacify the country. After complete evacuation China will have the right to determine whether the number shall be increased or diminished, but must inform Russia, since the maintenance of an excessive number of Chinese troops would necessitate the augmentation of the Russian troops in the adjacent districts, causing an increase of military expenditure to the disadvantage of both countries. For the maintenance of order in the interior outside of the territory ceded to the Chinese Eastern Railroad Company the provincial military governors may raise a Chinese gendarmerie, mounted and foot, to consist exclusively of Chinese subjects. The conditions on which Russia consented to restore the Shanhaikwan Railroad, which had been occupied by Russian troops since the end of September, 1900, were that China should undertake the sole responsibility of guarding the railroad and not invite any other power to undertake or take part in the defense, construction, or working of the railroad, nor permit any power to occupy the territory restored by Russia; that the railroad shall be completed and worked according to the Anglo-Chinese agreement of April 16, 1899, and the contract of Sept. 28, 1898, with the company, China strictly observing the obligations of the company not to take possession of the railroad and undertaking not to part with it in any way whatsoever; that if China should seek to extend the railroads into southern Manchuria, or construct branch lines, or to build a bridge across the Liao river, or to transfer the Shanhaikwan station, a previous understanding must be reached with Russia. China agreed to reimburse Russia for the expenses of repairing and operating the railroad. The convention went into force on the day of signing. It was understood that Niuchuang would be restored to the Chinese authorities as soon as the powers withdrew from Tientsin, and the railroad as soon as the Shanhaikwan, Tientsin and Peking Railroad was handed over by the other powers.

The English delayed the restitution of the branch of the northern railroad held by them because Russia would not immediately surrender some workshops, whereupon Russia refused to ratify the Manchurian agreement or surrender the railroad beyond the Great Wall. Subsequently it was announced that the evacuation of Manchuria would begin on Oct. 8. Yuan-Shih-Kai

drew up a plan for the government of Manchuria by a viceroy and two governors, with Chinese officials associated with the Manchus. He proposed to create a new province of the Ordos country and parts of Kansu and Shensi with the object of strengthening the border. Russian influence and trade increased in Mongolia as rapidly as in Manchuria, and relations have been established between the Russian Government and the native authorities of Tibet.

Evacuation of Tientsin.—The great commercial city of northern China and official residence of the Viceroy of the capital province was still in the military occupation of the allied forces and governed by an international provisional Government. Lawlessness and brigandage were rife in the district. The 4,000 foreign troops were no better able to preserve order than the army of Count Waldersee had been in the city and district of Peking, which became quiet at once when the Chinese soldiery resumed the task. The provisional Government paid a part of the native customs over to the Maritime Customs, and these payments, 700,000 taels per annum, the Chinese authorities promised to continue and to increase when trade, which was stagnant under foreign military rule, revived sufficiently. The foreign officials made plans for the conservancy of the Peiho river, and these the Chinese promised to carry out faithfully. Yuan-Shih-Kai, the Viceroy, who as Governor of Shantung had checked the Boxer insurrection, was humiliated in Chinese eyes to be kept out of his yamen by the prolonged occupation of foreign troops.

Great Britain and Germany raised various objections to the withdrawal of the troops. After the Anglo-Japanese agreement Germany stood alone. Three-quarters of the foreign garrison were German troops. The Japanese withdrew their garrison gradually. During the foreign intervention Germany sent a garrison to Shanghai, where English and French garrisons were maintained, and this post the German Government determined to keep up permanently. By the Anglo-German convention of Oct. 16, 1900, Great Britain conceded to German commerce and navigation equal rights in the Yangtse valley. Germany also affirmed as to Shantung that her policy was that of the open door to all nations, there as well as in all parts of China. The ministers in Peking discussed inconclusively the withdrawal from Tientsin and referred the question back to the military commanders. The German representative objected to an earlier date than July 1. Germany was pressing at this time to obtain a concession for branch railroads from Shantung to Chengting-Fu and Kaifong-Fu to join the Peking and Hankau trunk line. Although professing to allow equal rights to all foreigners in Shantung, the Germans actively sought new concessions. By the text of the German-Chinese agreement of March 6, 1898, whenever the Chinese Government or any Chinese undertook enterprises for the development of Shantung and needed foreign capital they must in the first instance apply to German capitalists, and whatever machinery or materials are required may not be obtained elsewhere if German manufacturers are able and willing to supply them. In the Yangtse valley Great Britain early abandoned the principle of exclusive or preferential rights. British capitalists were not eager to embark in railroad or mining enterprises, in which the Belgians, French, and Russians were more venturesome. An American syndicate had a concession for a railroad from Hankau to Canton which the Continental group endeavored to fore-

stall by obtaining a similar concession from the provincial authorities, which, however, the Imperial Government disallowed. The military commanders at Tientsin decided that the continuance of the provisional Government was necessary to maintain communication with Peking. The ministers at Peking then had another conference and agreed in principle to the restoration of the city to the Chinese. On April 12 the allied commanders agreed on the conditions for abolishing the provisional Government as soon as the forts were destroyed or by July 1 at the latest. The Chinese Government must undertake not to restore the forts or build any new ones between Peking and Taku and Shanhaikwan, not to fortify the native city of Tientsin or rebuild the wall, and not to keep a garrison there or a police force exceeding 2,500 nor augment the garrisons within 30 kilometers of the railroad. Foreign troops may move freely within 30 kilometers of the native city, but no Chinese troops must enter within that radius. The Chinese authorities can not arrest foreign soldiers, who will be supervised by international police guards. The foreign troops retain possession of the private places and public buildings they occupy and may occupy the summer resorts at Peitaiho and in the hills west of Peking. Only one Chinese war-vessel shall be at Taku at a time, and no mines or torpedoes shall be placed in the Peiho river. For the restoration of the railroad no time was set. It was worked under British military control, having when the foreign forces entered Pechili been operated by the Russians, who arrived first, then taken over by the Germans, and finally transferred to the British, who claimed the right to guard and manage the line because British capital had built it and a British staff was on hand. Conditions for the transfer to the Chinese were negotiated with the British minister. The British and Chinese corporation applied to be made agents for the purchase of all railroad material for the northern railways, but the Chinese Government insisted on having liberty to buy by open tender. Yuan-Shih-Kai and Hu-Yu-Fen signed an agreement with Sir Ernest Satow for a British military director and Japanese and German assistant directors to be added to the Chinese board to supervise transport requirements of the foreign garrisons. It was further stipulated that any branch lines or extensions within 80 miles of the existing line shall be built only by the Imperial Chinese Railroad Administration. Railroads from Tungchau to Tongshan, from Peking to the Great Wall, and from Tientsin to Paoting-Fu were specially mentioned. The agreement required the ratification of the powers, nearly all of which objected strenuously. If the Chinese Government needed funds to build the branches and extensions it was stipulated that it could only apply to the British and Chinese corporation. The agreement was signed without the knowledge of the Foreign Office. The Belgians were the first to lodge a complaint, Li-Hung-Chang on April 9, 1901, having given an undertaking that the Tientsin and Paoting-Fu line, if built, should be constructed by the Peking and Hankau Railroad Syndicate. Americans and Frenchmen were interested in this project. Russia raised an objection to the construction of the railroad from Peking to the Great Wall under British auspices as a violation of engagements of the Chinese Government, as it was also of the Anglo-Russian railroad agreement of 1899. The Germans found their scheme for a line from Shantung to Tientsin thwarted. Russia announced that Manchuria would not be

evacuated if the British persisted in this plan to control the northern railways. The United States and the other powers joined in the protest. The Foreign Office memorialized the Throne, blaming Yuan-Shih-Kai and Hu-Yu-Fen, and the Board of Censors punished those officials by reducing their rank. The agreement, which the Chinese Government had duly signed, was presented to the foreign ministers for their assent. It was modified afterward by a concession made by Great Britain to Russia that, if the line from Peking to the Great Wall is built, it shall be done with Chinese capital only and shall not be mortgaged to foreigners. That there should be no military directors on the Tientsin Railroad Board was also demanded, and when England would not give way on this point the Russian minister notified the Chinese Government that if any military directors are appointed in the administration of any part of the northern railroads they shall in every case include a Russian. Confronted with this alternative, England gave way, and Germany and Japan consented that there should be no military directors.

The Peking, Tientsin and Shanhaikwan Railroad, as well as the other northern railroad from Shanhaikwan to Niuchwang, are nominally the property of the Chinese Government, but have been managed by English officials in the interest of the English bondholders. The dispute between England and Russia, which nearly led to a clash at arms in the spring of 1901, regarding a concession of land in Tientsin to the Russian trading community that was claimed by the British for a railroad siding, was referred to Herr Detring, the Commissioner of Customs, for arbitration.

The Chinese Government found it impossible to accept the conditions for the restoration of Tientsin. There were no Chinese garrisons nor soldiers in the area where the garrisons were forbidden to be increased. The commanders yielded to the demands of the Viceroy to the extent of allowing him a body-guard of 300 men; but with this force and the 2,500 police he could not undertake to preserve order in one of the wealthiest and most populous districts of China where foreign soldiers were at liberty to go to and fro at will and on a river crowded with boats and infested with pirates. Fresh armed intervention must necessarily ensue. The ministers conceded also the right of the Chinese authorities to arrest foreign lawbreakers within their jurisdiction and would allow more than one Chinese war-vessel at Peiho, and they agreed to restore the private property seized for the accommodation of the foreign soldiery. The rest of the conditions they persisted in maintaining, although it was a clear breach of the treaty of peace to impose any new conditions, as it was for the international troops to retain possession after Sept. 22, 1901, the date fixed for the evacuation. The Americans had already withdrawn from the military provisional Government. The Japanese wished to withdraw, but felt constrained to support the British commander, who as senior officer was chiefly responsible for the difficulty, although the German commander was even more insistent upon upholding the hard terms. On June 18 Russia announced her withdrawal from the Tientsin foreign Government, as she would not be a party to imposing new conditions. France this time did not follow the lead of Russia, and was left with England, Germany, Italy, and Japan to bear the onus. China on July 3 appealed to the United States to intercede with the other powers so as to secure a modification of the intolerable terms

and a restitution of the city and district. No salt was made, no banks were opened, little trade was done. The military commanders granted commercial concessions to members of their official staffs which will be binding on the Chinese Government for sixty years, and confiscated for the benefit of foreigners valuable lands and buildings, giving small remuneration to owners. The Japanese minister sought to remove the inhibition of Chinese troops in the Tientsin district, of which the British as well as the Russian minister had expressed disapproval, though all three originally voted with the three other ministers for the sake of unanimity. The United States used its good offices effectively, and, with the support of England, Japan, and Russia, obtained the elimination of the obnoxious conditions. The area of over 1,000 square miles in which the Chinese could have no military force was reduced to about 50 square miles, a circle with a radius of 6 miles, and there is no restriction to the number of police that can be employed in this smaller district. All the numerous concessions dealt out by the provisional Government were declared null and void. The provisional Government during its existence destroyed Taku and the forts on the coast as far as Shanhaikwan, replaced the wall of Tientsin with a boulevard, did much for the sanitation of the city, suppressed piracy on the Peiho to a great extent, and began and provided for the completion of the regulation of that river which will render it navigable for seagoing vessels. The English restored the Pekin and Shanhaikwan Railroad to the Chinese in the beginning of October, after the Russians had surrendered the railroad to Niuchwang and begun the evacuation of Manchuria south of the Liao river.

The Chinese Government and the Yangtse viceroys pressed for the withdrawal of the foreign garrisons at Shanghai. The British posted a garrison there during the Boxer troubles, and because they did so the French sent one, and then the Japanese, and lastly the Germans. Each garrison was about 200 strong. The Nankin Viceroy did not object, although their presence scarcely helped him in his efforts to hem the antiforeign movement and prevent a rising in the Yangtse valley. After the peace, and still more after the restitution of Tientsin, the center of the Boxer movement, the continuance of the foreign garrisons was a humiliating slight to the Yangtse viceroys. The French and the British and Japanese were willing to retire their troops at once, but the Germans were not inclined to move so quickly. The German military authorities planned to keep a brigade in China of 3,300 men, only 1,500 less than in 1901, and ordered 800 to be stationed at Shanghai, 400 at Tsingtau, 300 at Pekin, and 1,300 were kept at Tientsin until the evacuation. England, France, and Japan expressed willingness to leave Shanghai, and proposed a simultaneous withdrawal of the foreign forces. The Germans complained, when the board to manage the regulation of the Whangpu, or Shanghai, river was elected, that owing to an Anglo-Japanese coalition only one German was appointed, reducing them, notwithstanding the importance of their shipping and commerce in the Yangtse, to the same position as the Danes and Belgians, while the Americans, French, and Japanese had 2 members respectively and the English 5. The Nankin Viceroy, Liu-Kun-Yi, had to appoint a member, in addition to the Taotai of Shanghai and the commissioner of customs, but at first he declined, resenting the omission to consult him in the matter and be-

cause he considered that the conservancy scheme under international control was a violation of China's sovereign rights.

New Commercial Treaty.—The financial question resulting from the heavy indemnity exacted by the powers was the most difficult and pressing one that confronted Chinese statesmen. Among various expedients, mostly trivial or futile, the most important was a house tax, which could not be generally applied at once without provoking rebellion. In Shanghai, Wuchang, Canton, and other large cities the authorities attempted to introduce it gradually, levying it in the beginning on property paying high rents. Increased salt and land taxes were imposed sporadically and without sufficient sanction. All attempts to raise revenue failed. The United States Government repaid to China \$376,000, the value of silver bullion seized by United States troops in the salt yamen at Tientsin. The Russians returned the salt heaps they had seized, having at no time been able to sell any of the salt because the Chinese were forbidden by their Government to buy it from the Russians.

The negotiation of a new commercial treaty was undertaken by England, with which country the existing treaty and nearly all commercial arrangements with China were originally made. Sir James L. Mackay was appointed British commissioner, and Sheng-Ta-Jen and Lu-Hai-Huan were the Chinese commissioners. The subjects of negotiation included the registration and protection of trade-marks, a uniform national currency, extension of bonding privileges, the importation of foreign salt, free movement of native grain within the limits of the empire, the right of permanent residence in the interior for commercial purposes, the improvement of navigable waterways, increased transit facilities for exports, the definition of the area free of likin at treaty ports, reform of the Mixed Court at Shanghai, provision for a higher tribunal for civil suits, amendment of the inland navigation rules, definition of the liability of Chinese shareholders in foreign companies, amendment of the drawback system, equal treatment of cargoes carried by foreign vessels and by Chinese junks, complete exemption from duty and freedom of trade between all river ports, amendment of the railroad and mining regulations, extension of the postal and telegraph services, substitution of taxes for the likin duties on native opium, opening of new treaty ports, and general facilities for trade. American, Austrian, Belgian, Dutch, British, French, German, and Japanese commissioners studied the question of the new provisional customs tariff, while Sir J. L. Mackay was urging on the Chinese Government the advisability of abolishing likin barriers. Unexpected objections came from Manchester merchants and others in the China trade who have ceaselessly pressed for this reform, but now reckoned the difficulties and delays in carrying it out and the probable diminution of profits, as it was contingent on an increase of the import duties to 15 per cent. They also feared the competition of native yarns and piece goods and of other native manufactures if these were freed from likin. To abolish the whole system of likin barriers was a stupendous task, as an army of officials is employed in the collection and most of the public revenues are drawn from likin, collected from native as well as from foreign goods. It was likin that destroyed the tea trade of China. American and Russian merchants objected to trebling import duties for the sake of suppressing likin, which in north China, where

most of the American trade is, does not weigh heavily on commerce. The total collections of likin and kindred taxes on imports and exports were estimated by the Chinese commissioners at 40,000,000 taels, of which less than 17,000,000 taels reaches the Government. Likin is collected at innumerable barriers scattered without system on the chief trade routes of the interior, which may be set up at will by the local authorities. The abuses inseparable from the collection of likin are more onerous than the payment itself. At each barrier goods are delayed and examined, giving the officials an opportunity to squeeze bribes and fees in addition to the likin, or when no likin is due, as on imports that have paid 2½ per cent. in addition to customs duty at the port of entry, and are thereby free of likin under the treaty. Owing to the uncertainty and irregularity in the cost and time of transit the trade in foreign goods can not be developed in the interior, while the high duties paid on exports that pass many barriers are fatal to the export trade. There is a limit to the amount of tax payable at one barrier, but there is none to the number of barriers that may be set up. The revision of the existing provisional tariff so as to produce an effective 5 per cent. in accordance with the protocol of Sept. 7, 1901, was interrupted by the Chinese commissioners in consequence of the further fall in silver, which made the specific duties already agreed on not more than 4 per cent. ad valorem. The old duties, calculated on a basis of 5 per cent. ad valorem according to the prices current in 1858 yielded but little over 3 per cent. The sales of silver that the Chinese Government was compelled to make to raise gold for the indemnity caused a further break in the silver market. The gold value of the tael fell to 2s. 7d., increasing the burden of the indemnity by 20 per cent. The enhancement of the prices of foreign commodities in China was disastrous to the import trade. The Chinese Government of its own accord decided to reduce the duty on tea for export, which has been about 40 per cent. of the present value of tea, to a 5-per-cent. basis.

The International Commission to fix duties under the protocol concluded its labors and the provisional tariff was signed on Aug. 16, to go into force on Nov. 1, 1902. The specific duties agreed to represent an average rate of 4½ per cent. of the values current. Russia, Italy, Spain, and Portugal were not represented on the commission. Portugal, not being a signatory of the protocol of 1901, claimed a right to import goods under the old tariff, which she offered to relinquish if China would concede two small islands near Macao in fulfilment of an article in the treaty of 1888, together with the right to build a railroad from Macao to Canton.

On July 21 the Imperial Government gave its assent to the entire abolition of likin on all merchandise, native as well as foreign, throughout the empire. The Yangtse viceroys, who first resisted the reform for fiscal revenues, supported Sheng. Ancient recognized customs were to be scheduled, the stations to be fixed and not afterward increased, and the imperial Maritime Customs was to supervise the whole system of inland native customs. The likin taxes are not ancient. They were introduced to furnish means to cope with the Taiping rebellion and afterward extended for the purpose of regaining the revenues from foreign commerce sacrificed in the tariff imposed on China in 1858. The article in the draft treaty abolishing likin was submitted by the Chinese commissioners with the unconditional approval of their Government, but Sir

James L. Mackay could not agree to it, as he did to the other articles, until he obtained the approval of his Government. Instead of a 15-per-cent. duty on imports, as originally proposed by the Chinese Government, the British merchants were asked to consent to a total duty of 12½ per cent. The first seven articles of the treaty provided for registration of trade-marks, bonded warehouses, the navigation of the Yangtse and Canton rivers, equalization of dues on junks and steamers, facilities for drawbacks, the establishment of a national currency, and the liability of Chinese stockholders in foreign companies. The eighth article abolished likin and other dues at the place of production, in transit, or at destination in return for a surtax on foreign goods imported and Chinese produce destined for export abroad or coastwise, the surtax on imports not to exceed one and a half time the import duty leviable under the protocol of Sept. 7, 1901, and the total taxation leviable on native produce for export abroad not to exceed 7½ per cent. ad valorem. Export duties are to be fixed on a scale of 5 per cent. ad valorem, with a surtax of half that amount in lieu of internal taxation and likin. Silk and cocoons pay no surtax. Likin on salt is abolished, and the amount of the likin and other taxes is added to the salt duty collected at the place of production or in the province where the salt is to be consumed. Native produce transported in the interior pays the 2½ surtax at the first custom-house, and a certificate is given good for a year, which frees the goods from all further taxation, examination, delay, or stoppage. Junks, boats, and carts pay an annual license fee and are not liable to any other charges or tolls excepting port dues from junks. The duty and commutation of likin on foreign opium remain as before, a total of 7½ per cent., instead of the 12½ per cent. charged on other imports. For the taxation of native opium China may retain offices on the borders of each province, where all taxation that is leviable in the province is paid in a lump sum and the cakes are stamped in evidence of payment, but no goods except opium can be stopped or taxed at these offices. The loss of revenue from the abolition of likin and all other kinds of internal taxes on foreign goods imported and on native goods exported abroad and coastwise is only partly made good by the surtax, and therefore it is agreed that China is at liberty to impose a consumption tax on articles of Chinese origin not intended for export. This tax shall be levied only at places of consumption, and not on goods while in transit, and the Chinese Government undertakes not to interfere with foreign goods or native goods for export, and when foreign goods are similar to native goods the owner can demand on payment of the import duty and surtax a certificate of their foreign origin. This consumption duty may vary according as the articles are necessities of life or luxuries, but it shall be levied at a uniform rate on goods of the same description, whether carried by junks or steamers. Within foreign settlements or concessions the consumption tax can not be levied. Yarn and cloth manufactured by machinery in China by foreigners or Chinese pay an excise duty, collected by the imperial Maritime Customs, equal to double the import duty. On raw cotton imported from foreign countries there is a rebate of the import duty and two-thirds of the surtax, and it is exempt from the consumption tax and all other duties leviable on Chinese raw cotton used in mills. Having paid excise duty, Chinese machine-made yarn or cloth is

free of export or coast-trade duty and surtax and consumption duty. The same conditions apply to all other goods of foreign type made by machinery in China, except that the products of Government ironworks, arsenals, dockyards, etc., are exempt from all taxation. Members of the foreign staff of the imperial Maritime Customs, to be appointed by the viceroys or governors in consultation with the Inspector-General of Customs, will have a general supervision over native customs, the consumption tax, and salt and native opium taxes. Illegalities complained of will be investigated by a Chinese official in conjunction with an officer of the foreign Government concerned and an officer of the Maritime Customs; and if the complaint is found to be well founded compensation will be paid through the imperial Maritime Customs from the surtax funds and the high provincial officials will be held responsible for the punishment and dismissal of the officer guilty of the illegal action. The Chinese Government promised to open to foreign trade the following new treaty ports: Changsha in Hunan, Wanh sien in Szechuen, Nganking in Anhui, and Waichau and Kongmun in Kuangtung. After the edict is issued abolishing likin, likin barriers, and all descriptions of internal taxation on goods, any official disregarding the letter or the spirit of the injunction shall be severely punished and removed from his post, and the high provincial authorities will be held responsible that this is done. The surtax on imports and exports and the salt tax substituted for the salt likin will be divided between the provincial viceroys and governors and the Maritime Customs in such proportion for each viceroy or governor as may be arranged between him and the Board of Revenue. The surtaxes shall not be pledged as security for new foreign loans or for existing liabilities of China, but the interest and sinking-fund of the loan of 1898 for which the likin and salt likin were pledged are to be set aside out of the proceeds of the surtaxes on imports and exports and the new salt tax. In the ninth article of the treaty China agrees to recast mining regulations in such manner as to offer no impediment to the attraction of foreign capital. The tenth article contains regulations for the navigation of inland waters, which is made for the first time a treaty right, providing facilities for shipowners to build or lease wharves and warehouses. The eleventh article restricts the importation of morphia. In the twelfth article Great Britain engages herself to relinquish extraterritorial rights as soon as the reform of the Chinese judicial system and the establishment of an effective administration shall warrant her in so doing. In the thirteenth and last article Great Britain agrees to take part in a joint commission representing China and the treaty powers interested with the object of investigating the missionary question and devising means of securing peaceful relations between the Christian converts and the rest of the population of China. The treaty was signed by the British and Chinese plenipotentiaries on Sept. 7. It was subject to the acceptance of its conditions by all the powers entitled to most favored-nation treatment and to their making their assent neither directly nor indirectly dependent on the granting by China any political concession or of an exclusive commercial concession. If all the treaty powers accept the treaty all likin barriers shall be removed on Jan. 1, 1904, and all officials employed in the collection of taxes and dues prohibited by the treaty shall be removed from their posts.

Should the powers not agree before that date the treaty will go into force as soon as they have accepted its engagements. The new duties on imports, although nominally 12½ per cent., actually amount to between 10 and 11 per cent. on the system of valuation in force.

Great Britain and Japan receded from their determination not to join the other powers in a *pro rata* reduction of the indemnity claims to bring the total sum down to the stipulated 450,000,000 taels when the United States offered to abate its claim independently. When silver fell 20 per cent. below the exchange rate at which the indemnity was reckoned the Chinese Government claimed that the payments should be made in silver. The fall in silver already added 90,000,000 taels to the indemnity debt and 3,000,000 taels to the annual interest, and if China continued to sell silver for gold to meet the payments the rate would continue to fall, as there was little demand for silver outside of China. The Chinese Government proposed to collect the customs duties in gold at the exchange fixed by the treaty. The representatives of the powers peremptorily refused to allow this course. The Chinese then declared that they would pay in silver, and the July payment was tendered at the current rate of exchange. The commissioners refused to accept this amount. The Government then acknowledged that it was a gold debt and appealed to the powers to relieve it from conditions that would soon render it impossible to pay the interest or principal of the indemnity. The United States Government took the ground that the indemnity, expressed in taels, the only money available in China, was in equity a silver debt, intended to be equivalent to a gold debt at the rate stated in the protocol without regard to the fluctuations of silver. The American minister notified China that his Government was willing to accept payment of its part of the indemnity at the current rate of exchange. England then proposed that China should be permitted to pay the indemnity in silver until 1910. After an acknowledgment by the Chinese Government that it had agreed in the treaty to pay in gold the other powers agreed to the English proposal.

The native customs were handed over to the Maritime Customs department according to the protocol, but not without considerable resistance and delay in many places. In Canton the Manch collector of native customs was sustained in his reluctance to resign a lucrative post by the Imperial Government, which yielded grudgingly at last to the demands of the British minister. The powers have regarded with jealousy the imperial Maritime Customs since the establishment of this foreign branch of the Chinese Government on account of the peculiar control over the department by Great Britain. By arrangement between Great Britain and China the head of the Maritime Customs must be of British nationality so long as British commerce in China exceeds that of any other nation. The Maritime Customs in 1902 organized an imperial postal service and carried letters to all parts of China for the lowest rates in the world, only ½ cent per half-ounce. The German, French, and Japanese postal agencies reduced their rates, but were unable to compete. Registered letters are sent for 5 cents Mexican by the imperial post-office, and postal and money-order offices are established in all the large towns and provincial capitals. Chang-Chih-Tung and other viceroys interposed obstacles at first to the extension of the post-offices into their provinces,

but their opposition was only formal and temporary, Chang-Chih-Tung, while remaining Viceroy of Wuchang, became Imperial Commissioner of Commerce, an office first bestowed upon Li-Hung-Chang shortly before his death. When the United States Congress passed the new Chinese exclusion act the Chinese Government against the reenactment of the law, particularly against its extension to Hawaii and the Philippines, where the Chinese have acquired large interests and are connected by family ties with the population of the islands, for which reasons the repression of free intercourse would result in peculiar hardships.

The Imperial Government, in response to a memorial of Yuan-Shih-Kai, issued on Sept. 13 an edict intended to eradicate official squeezing and malversation. Considerable progress was made in this reform in Pechili. The edict announced that salaries would be fixed, and ordered that all fines and other revenues be accounted for and turned into the public treasury, with the exception of a certain percentage, until a scale of salaries is adopted by the Imperial Government which will render squeezing unnecessary.

Foreign Enterprise.—The British and Chinese Corporation in 1898 secured a concession for a railroad from Shanghai to Nankin and mining and railroad concessions in Shansi and Honan and applied for a concession for a trunk line between Pekin and Hankau. A Belgian syndicate with Russian and French backing secured the latter, whereupon the British minister demanded and obtained as compensation the privilege for British syndicates to build lines from Canton to Kaulung, from Shanghai through Nankin and Chinkiang to Sinyang, and from Hangehau to Suchau, with extension to Ningpo. The British held financial control over the Pekin-Tientsin-Niuchuang system of railroads built for the Chinese Government, and the British and Chinese Corporation possessed a third interest in the Tientsin and Chinkiang Railroad and was half-owner of the coal-mines at Nan-Piao, near Shanhaikwan. In the battle for concessions the British came out ahead. In actual enterprise they have fallen to the rear. Not a rod of the projected railroads has been built, though the concessions are still held by the British syndicates, which have failed to fulfil any part of their engagements. These concessions had no time limit, and when the concessionaires did nothing, although Belgian, French, American, and other British syndicates were willing to undertake their development, the Chinese Government decided to grant no more until work was begun on these and to cede no mines in future except on condition that operations be commenced in a given time. The coal- and iron-mines of Shansi and northern Honan could not be developed because the Chinese Government would not allow the Anglo-Italian company which has the concession to build a railroad to the Yangtse. The Belgian syndicate which constructed the Luhan Railroad, as the Pekin and Hankau line is called, successfully opposed its construction by the route finally chosen, fearing competition. In 1902 the mining company started to build a railroad from Tsechou to the Grand Canal at Weihui, to connect later with the Luhan Railroad running south to Kaifeng-Fu, and one from the Chingwha coal-fields of Honan to the Wei river.

The British syndicate that signed the contract for the Shanghai and Nankin Railroad in the beginning of 1902 proposed new conditions for that and its other railroad contracts which the Chinese Government would not even discuss. The

same syndicate, the British and Chinese Corporation, formed by the great mercantile and banking concerns in Shanghai, contracted to build the line from Canton to Hong-Kong and the one from Suchau to Hangehau, and with a German syndicate in the projected trunk line from Tientsin to Chinkiang; originally also with an American syndicate in the Hankau and Canton Railroad, which last has been begun, but with the aid of Belgian, not British, capital. The Germans are determined to build the Tientsin-Chinkiang line. An Anglo-French syndicate in 1902 obtained mining concessions covering a third of the province of Yunnan and comprising mines producing coal, copper, nickel, quicksilver, petroleum, tin, and precious metals. An English and a French syndicate in rivalry sought mining concessions in Szechuen. The Germans have pushed forward the Shantung railroads and have already done much to develop the mineral resources of that province. They have a right to mine coal, etc., within 10 miles on each side of the railroads. A German syndicate has obtained rights to mine diamonds and other precious stones, coal, gold, and other minerals in several districts. The activity of German enterprise excited the jealousy of others, who spread a rumor that Germany was pressing the Chinese Government to grant exclusive privileges in Shantung. The German Government denied, in answer to inquiries, that the industrial concessions granted established a German monopoly or were intended to shut the door to foreign competition in Shantung. A German firm proposed to farm the preparation and sale of opium throughout the empire, offering 50,000,000 taels a year for the monopoly, but the scheme was not favorably received by the Chinese Government. The terms of the last German mining rights in Shantung it is intended to apply to all mining concessions. The conditions are that the Government shall receive 25 per cent. of the profits and also a proportion of the product, which is 25 per cent. for precious stones, 15 per cent. for precious metals and quicksilver, 10 per cent. for copper, lead, and zinc, and 5 per cent. for iron and coal, besides a 5-per-cent. duty on exports and 2½ per cent. on products consumed in China.

A Japanese company placed a fleet of steamers on the Yangtse which ascend the river as far as Siangtan. Steamers belonging to European and Chinese companies are increasing in all Chinese waters. A French project for a railroad from Canton to Fatshan was not entertained because it conflicted with the rights acquired by the American syndicate in 1898.

The Manchurian Railroad was near enough to completion to carry freight and passengers from the beginning of 1902. The East Chinese and Siberian Railroads afford continuous rail communication from Port Arthur, or, by the line that runs through Tientsin, Taku, and Niuchuang and connects with the East Chinese line at Tash-chu, from Pekin to St. Petersburg and other European cities. The Russian Railroad guards in Manchuria number about 40,000, distributed in fortified posts, 10 or 15 miles apart, along the line and along the branch that runs from Harbin to Vladivostok.

Insurrectionary Disturbances.—The populous and productive provinces of the center and south, which had no part in the Boxer uprising and were unaffected by the foreign occupation, were stirred to the point of rebellion when the main part of the indemnity was levied on them. The provincial officials endeavored to raise the amounts assessed on them by whatever method

promised to yield their quota, but it was all extra taxation; they were in many cases unable to wring it from the people, and had to borrow money from bankers on their personal security to complete their remittances. In the more prosperous districts some of the mandarins squeezed much more out of the people than their quota, and thus disaffection and indignation against the foreigner and the Imperial Government spread throughout the purely Chinese provinces that have never been contended under the Manchu rule.

The taxes that had to be raised for the indemnity increased in the same proportion as the fall in the gold price of silver. This was felt to be a fresh extortion of the foreigners. In Chili province and throughout northern China the continued occupation of Tientsin and retention of the railroads in violation of the treaty of peace kept alive or revived the anti-European sentiment.

In February disturbances broke out in Kuangtung and Kuangsi along the French border. Two French officers were murdered. A German mission was destroyed. The Imperial Government enjoined the local officials to use every effort to suppress disorder and punish the offenders. Although foreigners were the first victims, the movement developed into an antidynastic rebellion. Su-Yuan-Chun, a general who had maintained order along the French frontier for many years, was sent back to the post with an army. He encountered and defeated a body of rebels at Langchau.

Gen. Ma led another army out from Canton, but had to retreat from Fangcheng, where the rebels put the mandarins to death. The movement spread rapidly and extended into Yunnan. The most active and troublesome of the rebels were discharged soldiers. The objects of the rebellion were the downfall of the Tartar dynasty, the establishment on the throne of a Chinese line of monarchs, and the relief of the suffering people. These objects are always cherished in the Kuang provinces and kept alive by the Triad and other secret societies. Robberies were frequent and countrymen joined the rebellion for food and plunder because drought prevented rice-planting. The imperial troops were checked at Seng-Chin in Kuangtung and at Popak in Kuangsi. The rebels captured Liuchau in Kuangsi, Yungning in Kweichau, and Fuchuen in Yunnan. Many of Su's troops deserted and joined the rebels. The Viceroy of Canton asked for reinforcements from Pechili. He could not save the town and arsenal of Kanchau from capture without exposing Canton to danger. Gen. Ma and Marshal Su joined their forces in Kuangsi and in the beginning of April fought a battle at Kongchuen, where the opportune arrival of Gen. Wong with quick-firing and machine-guns turned defeat into victory and compelled the rebels to retreat to their mountain strongholds. The imperial troops, however, were unable to make headway, and sat down at Lienchau and Kuchau until reinforcements arrived, a regiment of the foreign-drilled troops of Yuan-Shih-Kai with artillery and one of Black Flags for Nanning-Fu, which was protected by torpedo-boats, while gunboats were sent to protect Wuchau. The rebels obtained arms from outside and their ranks were strengthened daily. The antiforeign agitation at Ningpo led to the despatch of German war-ships. The rebels in their proclamations enjoined the people to spare and protect the foreigners and their commerce, but to drive out the mandarins who ground them down with

oppressive extortions. They charged Manchu nobles and corrupt mandarins in control of the Imperial Government with having sold parts of China to Occidental nations and with having declared war without the concurrence or knowledge of the true Chinese of the south, upon whom they now imposed increased taxes to pay the war debt. The revolutionary program set forth as the objects of the movement the overthrow of the Manchu dynasty, the founding of a new dynasty under a Chinese Emperor, relief for the oppressed; the introduction of reforms, protection of commerce, the establishment of 3 governments in Kuangsi, Kweichau, and Kuangtung with an emperor at Canton and viceroys in Kuangsi and Kweichau, and protection of Europeans and their trade. The center of the movement was the cradle of the Taiping Rebellion, and the revolutionists took the name of Hung from Hung-Sau-Chuen, the leader of that rebellion. The reformers Kang-Ju-Wei and Sun-Jat-Sen had no connection with the insurgents, who numbered about 10,000 armed men supplied with Mausers and revolvers by pretended opium merchants coming from Annam. The prefect of Nanning-Fu alienated the people of his district by destroying whole villages in his hunt for the rebel chief. All the country surrounding and beyond that city was dominated by the rebels. They held over 30 towns and villages, making prisoners of the mandarins.

In most places the people received the rebels with open arms. A force of 2,000 imperial troops sent by Marshal Su to dislodge the rebels from a village was ambushed and cut to pieces in a narrow defile. A sufficient force of imperial troops was sent into Kuangsi to hold the insurrection in check. A large body of rebels was dispersed near Wuchang, and Hung-Yung-Seng, their leader, was captured. Nanning-Fu was attacked by the rebels on April 27. A few days later a large insurgent force sustained a severe defeat. The political movement subsided, but well-armed predatory bands, largely composed of braves of Su's frontier force, who, receiving no pay, had deserted with their rifles and ammunition, and numbering hundreds and even a thousand in a band, continued to infest the mountainous districts near the West and Lanchau rivers and roam on the borders of Yunnan and Tongking, raiding and plundering villages, holding officials to ransom, and collecting salt and likin duties.

In southern Honan, exasperated by the collection of taxes for the indemnity and demands of the French missionaries for compensation for their converts, the people murdered some of the converts. The Government degraded the local officials, and then directed the Foreign Office to arrange with Bishop Favier and with the foreign ministers rules to control the interference of Catholic missionaries in litigation between converts and other Chinamen. Outrages on Christians in northern Kansu committed by Gen. Tung-Fuh-Siang's troops, who numbered 3,000 or 4,000, armed with modern rifles, compelled missionaries to flee. The Viceroy complained that he could not cope with the disturbance, his own troops having inferior arms. The French minister pressed for the capture and punishment of Prince Tuan and Gen. Tung-Fuh-Siang, and the Government promised energetic measures.

The inhabitants of Mongolia resisted the severe taxation levied in order to raise the indemnity. The troops of northern China betrayed an antiforeign feeling caused by the continued occupation of Tientsin, the imposition of the indemnity-

ties, the missionary claims, and intrigues of reactionary officials. In the central and southern provinces the proclamations of the officials levying the indemnity taxes were often couched in bitter and provocative phrases, commanding the people to pay in order to increase the wealth of the foreigners.

In parts of Chili the villages and market-towns formed leagues to resist the collection of foreign indemnities and armed the members with Mauser rifles for a conflict with Yuan-Shih-Kai's soldiery. The attempts of local officials at Taming-Fu to collect indemnities for losses of the missions and native Christians on which they had agreed with the Roman Catholic priests led to riots which resulted in great loss of life. Hundreds of villagers were killed, as they were armed only with spears and bows, and 60 of the troops, in consequence of which a brigade was sent to destroy the villages. The insurgents killed a missionary and threatened to drive them all out of the district. At Shunte-Fu a league of villagers led by a military mandarin and armed with rifles and cannon inflicted a defeat on the first body of troops sent to suppress the rising. A large force of Yuan-Shih-Kai's trained men dispersed the rebels, who numbered some thousands, and the leader, Ching-Ting-Ping, was captured in Honan and beheaded. He had killed the members of his family before embarking in the enterprise to prevent them from being punished in the event of its failure. In Szechuen a Boxer outbreak occurred during the summer in which converts were massacred and mission property destroyed. A conflict with the troops took place in Cheng-Tu-Fu, which resulted in the defeat of the insurgents, whose leaders were captured and beheaded. The American and French ministers made representations to the Government, which removed the viceroy and the other officials. In every place where disturbances occurred throughout the empire the local officials were punished. At Chenchau, in Hunan, missionaries were accused of introducing cholera. H. R. Lewis and J. R. Bruce, of the China Inland Mission, were beaten to death by a mob on Aug. 15.

CHRISTIAN CONNECTION. Under this head are embraced the American Christian Convention of the Northern United States and Canada, the Christian Church, South, and a number of affiliated colored churches. The quadrennial meeting of the American Christian Convention at Norfolk, Va., beginning Oct. 8, was attended by representatives of all these societies. The conference lists given in the Christian Annual for 1902 give the numbers of members as follow: American Christian Convention, 60 conferences, 71,395 members; Southern Christian Convention, 6 conferences, 13,595 members; 6 other conferences in the South, 12,217 members; in all, 72 conferences, with 97,207 members. The total number of churches in 1901 was 1,517, and that of ministers 1,151. The mission secretary reported, for 1901, in home missions, 6 churches and 7 Sunday-schools organized, 397 members received, and 298 conversions returned by the missionaries during the year. The report of the foreign missions (Japan and Porto Rico, with one to be established in China) for the year closing July 1, 1901, mentioned 7 organized churches with 148 members, 26 baptisms, and a net gain of 20 members during the year, 16 Sunday-schools with 725 pupils, 9 missionaries, and 13 native ministers and other helpers. The mission receipts had been in excess of those of any previous year in the history of the Church. Nine educational institutions of high grade are maintained, one of

which is a Biblical Institute, and another a college for colored people. Besides the publishing department of the General Convention, the Christian Publishing Association is composed of the same membership as the General Convention, and issues the denominational weekly newspaper and Sunday-school literature at Dayton, Ohio, and a missionary journal and local newspapers are published in New England and Canada.

The American Christian Convention met in quadrennial session at Norfolk, Va., Oct. 8, the Rev. O. W. Powers, D. D., presiding. The reports of the president and secretary represented the Church as in a condition of encouraging progress, with increase in every department of its work. The people had contributed nearly \$100,000 for education. The receipts of the missionary treasury during the past four years had been \$61,057, or \$18,865 more than in the previous four years, showing an increase of about 45 per cent. The expenditure had been \$42,495. The Woman's Board of Foreign Missions had received (during the four years) \$5,978, and the Woman's Board of Home Missions \$1,711. The Home for Aged Ministers, at Castile, N. Y., had an endowment yielding an income of \$600 a year, while the expenditures were more than \$900 a year, and had received additional gifts. A new constitution was adopted, during the discussion of which the word "denomination" was stricken out wherever it occurred, and the words "religious body" were inserted in its stead. A resolution was passed ratifying the acts of the old convention, as those of the new are under the new articles of incorporation, and provision was made for drawing up new laws, rules, and regulations for the convention, including order of business and parliamentary rules, which are to be printed and distributed among the people of the Church. A plan was approved for the establishment of a university, to be called Palmer University, for which property valued at \$200,000 was offered at Muncie, Ind., and \$100,000 were promised for endowment, contingent upon another \$100,000 being secured. Papers were presented requesting help for different interests of the colored people and asking that literature of the connection be furnished to colored colporteurs; and by resolution of the convention the Afro-American delegates were admitted. Four convention collections were authorized to be taken in the churches: for the convention, for foreign missions, for home missions, and for education. In a report on building and equipping a printing establishment, the Board of Trustees was advised to be cautious in making investments in fixed property, but to exercise greater vigor in publishing new matter. The educational report advised a raising of the standard of ministerial education, the fostering of industrial training in at least one of the white schools, and the federation of the colleges, in order to bring about uniformity in work and degrees. A report on moral reform took cognizance of such subjects as Sabbath observance, the settlement of labor difficulties "by Christians in harmony," legislation on marriage and divorce in harmony with biblical teachings, abstinence from tobacco and intoxicating drinks, and the restriction of the liquor traffic. Cooperation with the Antislavery League was continued.

The Southern Christian Convention maintains Elon College, North Carolina (Elon College post-office), and has a book depot and publishing interest at the same place, whence the periodical organ is issued. Its home mission work is in successful operation with one general missionary, and interest in foreign missions is represented as

increasing. Plans for the liquidation of the debt of Elon College, the establishment of an orphanage, and the raising of a twentieth-century offering of \$20,000 have been pushed with vigor.

COFFEE. Coffee forms the largest single item of our imports. For years the United States have been the largest coffee-importing country in the world, and our purchases have steadily increased. For the last crop year, ending June 30, 1902, the imports into the United States were 7,905,815 bags of 132 pounds each, or 1,043,567,580 pounds. It is now estimated that we consume a little more than 12 pounds of coffee per capita annually. While Great Britain consumes less than $\frac{1}{2}$ of a pound per capita annually, some of the other northern countries of Europe consume considerably more. Denmark

PERCY B. O'SULLIVAN, PRESIDENT OF THE NEW YORK COFFEE EXCHANGE.

is given by M. Lecombe, in his Geography for 1901, as the largest coffee-consuming country in proportion to its population, the average consumption being 5.07 kilograms, or 15.72 pounds to each inhabitant. Norway and Sweden are next on his list; their average consumption is 4.63 and 4 kilograms respectively; but, for some

unknown reason, Holland, which consumes more coffee than either, is not mentioned. A parliamentary paper recently issued contains an official document entitled Tea and Coffee in 1900, which gives the consumption of coffee in that country per capita as 16.57 pounds annually, which makes Holland the largest coffee-consuming country in proportion to its population.

The steady increase of our coffee consumption may be judged by our importations; those for the fiscal year 1898—\$36,528,352 pounds—were nearly 20 per cent. greater than our importations of the previous year, 50 per cent. greater than in 1893, about double those of 1880, and more than three times those of 1874. Our importations fell off in 1899 and 1900. The importations for 1899 fell off more than 38,500,000 pounds, and for 1900 they fell off 43,500,000 pounds from those of the previous year. The statistics of the Treasury Department for the fiscal year 1901 give the sum total of coffee imported into the United States as 967,969,585 pounds, valued at \$63,773,423. But in 1892 we paid a great deal more money for coffee; our importations for that year, though only 640,211,000 pounds, were worth \$128,042,000.

The years from 1888 to 1893 were prosperous for the coffee-growers; the average price, which was 7 and 10 cents a pound in 1886 and 1887, jumped to 20 cents in 1892, the highest price ever paid for coffee in our history. The price fluctuated between 7 and 9 cents in the fifties, rose to 12 cents in the sixties, took a sudden drop in 1865 to 6 cents, jumped again in 1866 to 11 cents, and then went down to 9 cents, fluctuating between these figures till the seventies, when it began to rise steadily, reaching 19 cents a pound in 1874. This stimulated the coffee-

growers all over the world, and with the increased production the price gradually fell till 1886, when it was down to about 7 $\frac{1}{2}$ cents. As it costs much more than this to grow and market coffee in many of the coffee-producing countries, the planters were obliged either to go out of business or to use their estates for some other crop. Consequently, with the ever-increasing demand, the price went up again till it reached 20 cents in 1892. The following year it fell to 14 cents, and then it rose to 16 cents, since which time it has been steadily going down till the present year, when coffee was sold on the exchange in New York as low as 5 $\frac{1}{2}$ cents.

In a paper before the Chamber of Commerce at Rio de Janeiro last year, on the consumption of coffee in the United States, by the Brazilian minister to this country, he says this fluctuation in the wholesale market affected the retail price of coffee but little. The price of a cup of coffee in the United States, he says, is the same as when a pound of the product cost in the wholesale market three times what it is sold for at the present time. He further said that the price of roasted coffee has remained about the same; that five-sixths of all the coffee consumed in the United States is imported from Brazil; and he intimated that it was sold to the consumer as Java and Mocha and brought the average price of 25 cents a pound. Thus the people of the United States, he says, pay \$165,000,000 yearly for Brazilian coffee, less than a quarter of which is paid for the coffee in the wholesale market. He further declared that Mocha coffee is scarcely more than a myth, as Brazil supplies nearly the whole of Arabia with coffee; and as for Java, the entire production of the Dutch East Indies for 1898 was but 430,901 bags.

This statement of the Brazilian minister regarding the substitution of Brazilian coffees for Mocha and Java has been denied by some of the coffee dealers in this country; but the official figures show that in 1900 we imported 133,182 bags of coffee direct from the Dutch East Indies, and from Holland 23,104 bags, making a total of 156,286 bags, while for the year 1901 we imported only 72,338 bags direct, and 12,198 bags via Holland, which was only a little more than half of the previous year's importations. From Aden we receive our Mocha coffee, and in 1901 we imported 12,276 bags. These figures show the relatively small quantity of Mocha and Java coffees received in this market, and form the basis of the Brazilian minister's statement to the effect that these coffees are hardly more than a myth. According to the official publication of our Commercial Relations with foreign countries (1902, Vol. I), of the coffee imports of 1901 nearly 80 per cent. (by weight) came from Brazil, about 8.8 per cent. from other South American countries, a little more than 6 per cent. from Central America, and more than 2 per cent. from Mexico. There remains, therefore, 1.3 per cent. representing the coffee bought by the United States in the rest of the world. The Coffee Exchange gives our imports of coffee from Brazil for the crop year 1902 as 6,738,656 bags, against 1,167,159 bags from all other countries. On July 1, 1902, the world's visible supply in this country and Europe and the chief primary markets had increased to 11,261,331 bags, a quantity sufficient for the world's consumption for one year.

The country that supplies us with coffee next to Brazil is Venezuela, our imports of the product from that country equaling about one-tenth the amount imported from Brazil. In 1899 we imported a little more than 28,000,000 pounds

from Colombia, which was less than half our imports for the corresponding year from Venezuela. Mexico came next on the list with nearly 27,250,000 pounds, and then Costa Rica with a little more than 16,500,000, and Guatemala with nearly 15,000,000 pounds. The average price of these coffees a pound was: Brazil, 5.6 cents; Venezuela, 7.7 cents; Colombia, 8.6 cents; Mexico, 9.8 cents; Costa Rica, 14.5 cents; Guatemala, 12.1 cents. These figures, taken from the Commerce and Navigation volumes of the United States, indicate that there is a good deal of truth in the statement made by the Brazilian minister.

Until the acquisition of the Hawaiian Islands, Porto Rico, and the Philippines no coffee was produced in any territory under the control of the United States. The fact that a superior quality of coffee has long been produced in these islands, and that their conditions are eminently favorable for its production, coupled with the fact that it has always been the policy of the United States to protect her own industries, whether agricultural or industrial, makes the question of coffee production doubly interesting. Porto Rico has produced coffee in large quantities, that being her principal export for many years, the bulk of it going to Spain, where it has long been considered the finest coffee in the world. Her exports of coffee have amounted to 30,000,000 pounds per annum for many years. The Statesman's Year-Book for 1902 gives 200,000 acres under coffee cultivation in the island, which now produce 60,000,000 pounds of coffee annually. The Division of Insular Affairs gives the exportation of coffee from the island from the date of our occupation in October, 1898, to the end of April, 1900, as a little more than 62,000,000 pounds, of which 23,500,000 went to France, 9,000,000 to Cuba, nearly as much to Spain, 7,500,000 to Italy, a little more than 5,000,000 to Austria-Hungary, and a little less than 5,000,000 to Germany, this country receiving only a little more than 2,250,000 pounds of the product.

The Philippine Islands are said to be peculiarly adapted for the production of coffee, but the Division of Insular Affairs gives for the years 1899, 1900, and 1901 but small amounts exported from Manila, the amount for 1899 being 73,500 pounds; in 1900 only 24,500 pounds left that port; but in 1901 the shipments rose to 65,000 pounds.

Coffee appears as a natural product in the Hawaiian group, growing in many of the islands in a wild state; but as yet it is not produced on an extensive scale. It is said that there are more than 200 small plantations in the islands, and the exports given for 1897 were 337,158 pounds, worth \$99,696. It is said that the area in these islands in which coffee can be successfully grown is small, but the quality of the product is excellent.

The Coffee Conference.—Owing to the low price obtainable for coffee in the producing countries, it was proposed by Mr. Lazo Arriaga, delegate for Guatemala at the Pan-American Congress held in the city of Mexico last winter, that a commission be convened within one year in the city of New York, to be composed of one or more delegates from each of the American republics, to study the causes of the low price, which was producing a crisis in the producing countries, and to devise some means of remedying it. He called attention to the fact that 15 of the nations represented at the congress were producers of the precious bean, while the 4 remaining nations were consumers of it. He further

said that the low price had affected the treasury receipts of some of the producing countries to such a degree that perhaps for this reason some of them were in a state of revolution, owing to the misery and poverty caused by the low price of their chief product. All the countries entered into the project through their delegates, who signed the resolution, with the exception of Chile, which declared itself as being exclusively a coffee-consuming country, with no interest in a congress the avowed object of which was to study a means of raising the price of a product which she purchased in considerable quantities at a price already sufficiently high.

Owing to the foresight of Mr. Lazo Arriaga, in placing the details of convening the proposed Coffee Conference in the hands of the Bureau of American Republics, it was one of the first, if not the first, of the many resolutions adopted by the Pan-American Congress to be acted upon. The conference met at the New York Coffee Exchange on Oct. 1, and was composed of delegates from all the producing countries with the exception of Colombia, Hayti, and Bolivia. Two of the non-producing countries—Ecuador and Uruguay—were represented at the conference, so that only 6 of the American republics were unrepresented at the conference. The sessions of the conference were presided over by Percy B. O'Sullivan, a delegate of the United States and president of the Coffee Exchange, and were held throughout October.

Papers were presented upon the production, distribution, consumption, and causes of the low price of coffee by representatives of the coffee-producing countries. It was generally agreed that the cause of the low price was overproduction, and to remedy the evil it was proposed by the committee charged with the study of the subject, of which Senhor J. F. de Assis, Brazilian minister at Washington, was chairman, that the coffee-producing countries enter into a combine to hold back a sufficient percentage of their entire crops to reduce the supply to the limit of consumption, and that in case no demand should be created for the surplus so held back by increased consumption, the surplus should be ultimately destroyed by fire. This proposition met with a vigorous protest from the delegate from Porto Rico, who demonstrated that his country was in no wise to blame for the overproduction, the cyclone of 1899 having destroyed more than half of the plantations on the island, and that the present Porto-Rican crop would hardly equal 40 per cent. of the crop of former years. He pointed to Brazil as the country responsible for the overproduction, and said there was where the remedy should be applied. Of course the United States could not enter into any such radical project to raise the price of any product in which it was interested either directly or indirectly, and consequently its delegation abstained from

ANTONIO LAZO ARRIAGA.

voting on this measure. Peru and the Dominican republic voted against it, while the other countries voted in its favor.

A second measure adopted by the conference was a recommendation to the coffee-producing countries that the exportation of refuse as coffee and to the consuming countries the importation of such refuse and the use of falsifications or substitutes for coffee be prohibited by the most efficacious means possible. It was also proposed to recommend to the consuming countries the abolition, or at least a reasonable reduction, of the import duties in those countries where the consumption of coffee is materially affected by them.

A third measure was a proposition to organize a permanent international union to watch the interests of the coffee industry, and especially to maintain a propaganda for the purpose of increasing the consumption of coffee throughout the world.

The surprise and consternation of some of the other delegates to the conference were evident at the attitude of the Porto-Rican delegate when he came out openly for protection for his island product by the United States. When it was proposed as one of the most practical measures for increasing the consumption of coffee that the producing countries should endeavor to secure suppression of the duties imposed upon coffee by European countries, he said that to accept this proposition in an absolute manner would be against the wishes of the Porto-Rican people, who, if not citizens of the United States at present, expected to be in the near future, and consequently expected protection in the United States for their coffee. But he favored a reduction of the exorbitant duties in some of the European countries. The conference adjourned on Oct. 31, with the adoption of a final resolution that the Government of Brazil be invited to convene a second conference as soon as possible, to meet in São Paulo, the center of the coffee-producing district of Brazil, the delegates to have full power to carry into effect by treaty such recommendations as may be made by that conference.

COLOMBIA, a republic in South America. The Congress consists of a Senate of 27 members, 3 from each department, and a House of Representatives containing 66 members, each department sending as many as its population numbers multiples of 50,000 persons. The members are elected for four years by universal male suffrage. The President is elected for six years by an electoral college. M. A. Sanclemente was elected for the term beginning Aug. 7, 1898, but since July 31, 1900, J. M. Marroquin has acted as President. Congress meets biennially. The Cabinet in the beginning of 1902 was composed as follows: Minister of State and Minister of the Interior, Gen. S. Quintero Calderon; Minister of Foreign Affairs, Dr. A. J. Uribe; Minister of Commerce and Communications, Dr. Abadia Mendez; Minister of War, Gen. J. V. Concha.

Area and Population.—The estimated area of Colombia is 513,938 square miles, and the population is estimated at 4,000,000. Bogotá, the capital, has about 120,000 inhabitants; Medellin, 40,000; Barranquilla, 40,000; Panama, 30,000; Cartagena, 20,000; Bucaramanga, 20,000.

Finances.—For the two years 1897 and 1898 the revenue was 37,461,000 pesos, and the expenditure 41,429,180 pesos. The preliminary estimate of revenue was 34,361,000 pesos, and of expenditure 35,771,013 pesos. The official estimate of revenue for 1899 and 1900 was 29,918,640 pesos, and expenditure was estimated at the same

figure. For 1901 and 1902 a revenue of 28,983,640 pesos was expected, while the estimate of expenditure was 40,427,575 pesos. Of the revenue 21,453,640 pesos are from customs. Heavy duties are imposed on exports of coffee, hides, rubber, gold, silver, and cattle as well as on imports. The expenditure for war in 1901-'02 was estimated at 13,317,088 pesos; for justice, 4,571,892 pesos; for finance, 4,336,238 pesos; for debt, 3,773,500 pesos. The departments obtain revenues mainly from monopolies of tobacco, salt, opium, and ice, and the privilege of keeping gambling-houses, which are farmed out to the highest bidders. The net revenues of the departments for 1899 and 1900 were estimated at 16,986,756 pesos and the expenditures at 17,346,040 pesos. The external debt, mostly held in England, amounted, with arrears of interest, to £3,514,442, when an arrangement was made with the bondholders, in the beginning of 1897, for its reduction and exchange for £2,700,000 of new bonds on which the interest should be 1½ per cent. for three years, 2 per cent. for the next three years, 2½ per cent. for a third period of three years, and after that 3 per cent. The insurrection interrupted the payments in 1899, and in July, 1901, the arrears of interest amounted to £101,250. The currency consists of depreciated paper, of which there were 350,000,000 pesos in circulation in 1901, worth only 4 per cent. of its face value. At Panama the paper does not circulate and the Peruvian sol is legal tender.

The Army.—Congress, at each session, fixes the strength of the standing army, which was 1,000 men for the biennial period 1898-'99. In the event of war the President has authority to raise the strength as he deems necessary and can impress every able-bodied citizen into the service.

Commerce and Production.—The average production of gold and silver is \$4,000,000 a year. Gold is washed in every department, and quartz-mines are worked in Antioquia, Cauca, Bolivar, Panama, and other departments. Copper, platinum, mercury, cinabar, manganese, and lead are also mined. The Government emerald-mines at Muzo and Cosquez were leased in 1901 to a French corporation. The total number of mines of all kinds on which license fees were paid in 1891 was 4,961, mostly gold-mines. Iron is smelted near Bogotá. The Government derives a considerable revenue from its salt-mines at Zipaquirá, and has reopened the coal-mines at San Jorge. The pearl fisheries have been worked with success by natives, but the Government proposes to lease them out. Coffee of fine quality is produced, and the cultivation is extending. The country is generally very fertile, but with primitive means of transportation agriculture can only be carried on for local wants. Cacao and tobacco are grown for export and rubber is gathered in the forests, as also is copaiba. Tolu balsam is a cultivated product. The number of cattle is estimated at 3,465,000, and many are exported. Vegetable ivory and dyewoods are minor exports. The chief imports are cotton goods, woollens, flour, rice, petroleum, wine, brandy, and salt. The value of the coffee exported in 1900 was £270,876; of gold in bars and dust, £99,266; of silver ore and bars, £49,149; of hides, £59,451; of cattle, £84,092; of tobacco, £58,204; of rubber, £14,063; of precious stones, £7,835; of tolu, £4,030; of divi-divi, £2,271. The share of the United States in the export trade is about 27 per cent., while Great Britain takes 25 per cent., France 17 per cent.,

and Germany 16 per cent., leaving 15 per cent. for other countries. The Panama Railroad in 1900 carried westward across the isthmus 153,758 tons of goods, of which 60,518 tons were from New York and 54,905 tons from European ports, and eastward 203,619 tons, of which 118,670 tons were for New York and 77,219 tons for Europe.

Navigation.—The number of vessels entered at Barranquilla and Sabanilla in 1898 was 266, of 441,673 tons; cleared, 263, of 442,777 tons. The number entered in 1897 at Panama, Colon, Santa Maria, and Cartagena was 923, of 1,213,110 tons; cleared, 919, of 1,210,629 tons. The merchant navy in 1898 consisted of 7 sailing vessels, of 1,770 tons, and 1 steamer, of 457 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1901 was 400 miles, while 76 miles were unfinished and 330 miles were projected.

The post-office during the two years ending in 1898 carried 2,794,069 letters and postal cards, 1,233,313 newspapers and circulars, and 161,217 packets.

The telegraph-lines had a length of 8,600 miles in 1898. The number of messages in two years was 1,388,388, besides 9,887 cablegrams.

The Panama Canal.—The company formed by Ferdinand de Lesseps in 1881 to construct a tide-level ship-canal across the Isthmus of Panama from Panama to Colon, 46 miles, raised 772,545,412 francs before the middle of 1886, but was forced to go into liquidation and suspend the work on March 15, 1889. An extension was obtained in March, 1893, to enable a new company to be formed, and in 1894 the company was organized and agreed to complete the canal in ten years. The term was, in 1900, extended for six years longer, till March 31, 1910. It was estimated that the canal might be completed with locks, the tide-water level having been abandoned, at a further cost of 512,000,000 francs. The directors, who at first demanded \$109,000,000, when the Isthmian Canal Commission recommended the Nicaraguan route to Congress, estimating that the work done on the Panama excavation was not worth over \$43,000,000 and that it could not be worked with profit if a higher price were paid, made an offer on Jan. 4, 1902, to sell the unfinished canal and all its franchises and rights for \$40,000,000. The matter was referred to the Isthmian Canal Commission, which now recommended the purchase and the completion of the Panama Canal in preference to one through Nicaragua, estimating that the canal could be completed in ten years and that it would cost \$45,630,700 less to complete it than to construct the projected Nicaragua Canal. The French company excavated for 10 miles on the Atlantic side and 15 miles on the Pacific side, the sections at tide-level. Considerable work was done also in the Culebra cut, the highest point above tide-water, which will be cut down to something over 100 feet above the sea. There were 2,500 men at work there in 1902. The advantages of the Panama over the Nicaragua route are, that although the latter is shorter to ports on the Atlantic and Gulf coasts and those of the Pacific coasts of the United States, the Panama route is the shorter one to South American ports and more direct between Europe and all Pacific ports; that the more tortuous Nicaragua route would probably not be navigable at night and vessels would take thirty-three hours to pass through, whereas they could go through the Panama Canal in twelve hours; that the cost of maintenance of the Panama Canal would be only \$2,500,000, a saving of

\$1,000,000 a year over the Nicaragua route, with a saving too of interest on \$5,630,700, the difference in the cost of construction. The damming of the San Juan river is a difficult engineering problem on the Panama route, and on the other side offers difficulties and there is some question of possible volcanic disturbances. Both routes are unhealthful and demand much attention to sanitation. Besides the property and franchise of the Panama Canal Company, the title of which is clear, having been transferred to the new company by the receiver of the original company, it was considered necessary to acquire a strip of land 6 miles wide, in order that the canal may be policed and protected from unsanitary conditions. To obtain this it was necessary to have a new concession from the Colombian Government. After having concluded a contract with the existing Panama Canal Company to pay \$40,000,000 in cash for the surrender of its perpetual lease and all right and title to the canal, all contracts and machinery, and the railroad running from ocean to ocean, subject to the title being valid and to ratification by the United States Congress, Secretary Hay entered into negotiations with Señor Concha, the Colombian minister. He agreed in behalf of the United States Government to pay \$7,000,000 in cash and an annuity of \$600,000 to the Government of Colombia for the absolute surrender to the United States of 3 miles of land on either side of the canal for its entire length and authority over 5 leagues of the sea at either entrance. The United States Government undertook to expend immediately at least \$15,000,000 to install proper machinery and appliances to complete the canal and to employ an increased force of American laborers to do the work. A great part of the work already done will have to be reconstructed. The plans of the French engineers have been much enlarged to provide for a canal accommodating three times as great a tonnage as the Suez Canal carries now. The waterway is to be 47 miles long and to have a depth of 35 feet and a width at bottom of 150 feet, instead of 30 feet of depth and 70 feet of width as originally designed. It will be possible for 4 steamships of 30 feet beam to pass one another at any spot without danger. A traffic of 7,000 vessels a year is expected; 12,000 vessels can be taken care of. Between European ports and those of the Orient the saving of distance by the Panama route is 4,000 miles. Between American ports on the Atlantic and the Pacific the voyage can be made, in most cases, in one-fifth of the time now consumed. Experts calculate that the canal will return a net profit on the capital expended of 6 per cent. The Panama Railroad, acquired with the canal, is valued at \$7,000,000. During the work of construction it will be useful in carrying men and materials, and when the canal is completed in transporting passengers from one port to the other. The total cost of the canal, including the purchase money, is estimated at \$130,000,000. The Panama Canal Company could not transfer its rights to the United States Government without first obtaining the consent of the Colombian Government. In the negotiations with Nicaragua and Costa Rica respecting the Nicaragua Canal, Nicaragua stipulated for a payment of \$6,000,000 and Costa Rica for \$1,000,000, with a nominal rent of \$25,000 a year to Nicaragua and \$5,000 to Costa Rica, serving as evidence of their sovereignty over the land traversed by the canal transferred by a perpetual lease to the United States. Colombia, for \$7,000,000 and an annual rental of \$600,000,

offered the same thing as a perpetual lease of the 6-mile strip and the interests in the canal reserved in the contract with the company. A lease in perpetuity was illegal under the Colombian Constitution, but a lease for the term of one hundred years, renewable after each term at the option of the United States, answers the same purpose. Attorney-General Knox examined the title of the Panama Canal Company and its power under the French law to transfer its property and rights to the United States Government. The new company when constituted assumed an obligation to pay 60 per cent. of the profits of the canal to the stockholders of the old company. Since the entire assets of the old company were turned over to the new company the latter can dispose of this claim of 60 per cent. of the profits. The new company was found to be solvent, with full power to sell with the consent of the French court, which was given. The United States Government can take title to the shares of the canal company in the Panama Railroad. It can take and hold any kind of property it may have need of in the same manner that an individual can. The Colombian Government raised difficulties regarding the policing of the canal strip and the terminal ports. A joint jurisdiction was proposed, the administration of justice to be by mixed tribunals, with American and Colombian police both employed, having the right to pursue persons charged with crimes committed within the limits of the belt into any part of Colombia. A treaty was concluded between Secretary Hay and Señor Concha on May 18, but further arrangements were necessary to provide for these questions of sovereignty and jurisdiction. When the United States naval authorities stopped the transport of Colombian troops by the Panama Railroad the Colombian minister delayed negotiations. The canal is to be completed in six years.

The Civil War.—The armed conflict, begun on Oct. 17, 1899, between the Liberals and the Conservatives, who have been entrenched in power for seventeen years, was mostly confined, in the early part of 1902, to the Department of Panama. The people of the isthmus, who originally joined the Republic of New Granada of their own free will, have always felt more or less detached in political sentiment, as they are geographically and racially, and in an increasing degree economically detached from the natives of the interior parts of the republic, who provide their administrators and subject them to taxes and monopolies that they consider unequal. They sympathized generally with the Liberal cause, and in other parts of the republic the common people, on whom the stress of the war taxation and the conscription mainly fell, sympathized more and more with the Liberals, who began the war, and blamed the Government for not making peace. Duties on all imported merchandise were raised, in some cases doubled. The effect in Panama was more marked than elsewhere. The once lively commerce was paralyzed; prosperous industries went out of existence. The necessities of life were hard to get. Hundreds of suspected Liberals filled the prisons. At the opening of the year an insurgent force of 2,000 men camped within 6 miles of the city of Panama. Risings occurred from time to time in various parts of the republic. The struggle grew fiercer and subsided intermittently, but was the most exhausting and disastrous in the history of the country. Sometimes the revolutionists had 35,000 men under arms. The Government raised now and then a total force of 75,000 men, im-

pressing boys of ten and twelve years, who served as foragers for the soldiers. The peso, which was worth 25 cents in gold at the beginning of the war, fell with every new emission of inconvertible paper, until, when 250,000,000 pesos were in circulation, it was worth only 2 cents, and subsequently it sank below 1½ cent. The Liberals charged the Conservatives with having established a despotic government in which the President can legislate by executive decrees and enforce these by administrative process. The Cabinet officers, the governors of states, the whole administrative *personnel*, being his nominees, are his political creatures and agents. The favors shown to the clergy in exempting them from trial in the ordinary courts and from the payment of taxes and import duties, and the political influence that they wield, are specially repugnant to the Liberals, and the secularist principle that they seek to establish offends the religious sentiment of the Conservatives, who accuse them of wishing to destroy the Church and sweep away the moral foundations of the social fabric.

A new Cabinet was constituted at Bogotá on Jan. 19, as follows: Minister of State and Minister of the Interior, Señor Veles, afterward replaced by Señor Laforest; Minister of War, Gen. Fernandez; Minister of Finance, Señor Cordoba; Minister of Foreign Affairs, Dr. Mendez. On the following day a naval battle took place in the Bay of Panama, where the Liberals tried to force a landing near Sabina from their vessels, the Padilla, Darien, and Gaitan. The Government forces entrenched themselves to oppose them, while the guns from the fortifications of Las Bovedas fired at the ships. The Government vessels Lautaro and Chicuito were brought into the action. The Padilla went after the Lautaro, and a battle ensued at close quarters while the Lautaro was sinking. Dr. Alban, Governor of Panama, was killed and 9 others were hit on the Government side, while the revolutionists had 17 casualties. Gen. Garcia was made military commander in succession to Dr. Alban, and Señor Amaya Civil Governor. The attempt to capture Panama failed. A sharp battle occurred within 20 miles of Bogotá, at Facacativa, where the insurgents were driven back, leaving 360 dead, while 90 were killed on the Government side. The capital city was disturbed and business suspended. The new Minister of War sent to Antioquia and other provinces for troops. At La Cruz the Liberals, under Gen. Soto, captured cannon, rifles, and ammunition from a Government detachment after a spirited engagement. Gen. Benjamin Herrera, the revolutionary commander in Panama, proposed to the foreign consuls that the railroad line, though not the ports of Panama and Colon, should be declared neutral. The consuls approved the suggestion, but the Government would not agree. On Feb. 20 Gen. Herrera attacked Aguadulce. After repeated assaults, in which his force was said to have lost 550 men, he forced the town, and Gen. Castro retreated with the Government troops, breaking through the line of besiegers and reaching Bocas del Toro with 400 men left out of 1,000. This place was taken some weeks afterward by insurgents brought by steamers, and later was recaptured by the Government. Gen. Uribe Uribe made a fresh advance on Bogotá, and was met and thoroughly defeated at Medina, and forced to retire over the Venezuelan border. Gen. Salazar was appointed Governor of Panama, and the forces on the isthmus were largely reinforced with the object of

attacking the insurgents by land and sea, their forces in other parts of the republic having been reduced to guerrilla bands. At David and Aguadulce the Liberals suffered much from disease. The town of Aguadulce, which had been reoccupied by the Conservatives, was invested by the rebels, and Government troops were sent to the relief of the garrison. The Government troops landed there were soon in worse case than the rebels, without shelter and short of provisions and unused to the climate. Severe fighting began on July 29, continuing two days, and beginning again after a short armistice to allow both sides to care for the wounded and bury the dead. The insurgent gunboat Padilla cut off the communications of the Government troops, which had to depend on a sea base, and were therefore practically surrounded. The Government steamers Boyaca and Chicuito on July 30 attempted to enter the river with supplies and reinforcements, but retired after some firing, the Chicuito returning to Panama, while the Boyaca was chased and captured with 300 soldiers, besides the crew, stores of provisions and ammunition, and two fine new guns. Gen. Salazar made ready to seize a British merchant steamer, there being no British war-vessel at Panama, but, under instructions from Washington, Capt. Potter of the Ranger interfered by the courtesy of nations when requested by the British consul. Most of the Liberal troops on the isthmus were sent to the siege of Aguadulce, where Gen. Morales Berti with 2,200 men was held by 2,500. Gen. Herrera at the same time made a demonstration against Colon, where the Government troops improved their entrenchments. They held both terminal ports in strength, while the rebels occupied the line. The mortality among the Government troops from bad food, exposure, and lack of sanitary regulations was excessive, not less than 25 per cent. of the reinforcements. American marines were landed to guard the railroad and the stations at Panama and Colon. While the siege of Aguadulce was going on peace negotiations were begun in Washington between the Colombian minister and Gen. Soto y Vargas-Santos, the supreme chief of the revolutionists. Peace commissioners went to Aguadulce to arrange a truce, but were unable to communicate with Gen. Herrera. Dr. Concha was sent from Washington with more definite instructions. After a siege lasting over a month Gen. Berti surrendered with honor. This victory not only released the besiegers for operations against Colon, held by 1,000 Government troops, and Panama, held by 2,500, but it stimulated the rebels to fresh exertions in other parts of the republic. At Santa Marta the Government troops were suddenly attacked and routed with a loss of 100 by revolutionists who committed barbarities in revenge for the execution of rebel officers at Panama. Gen. Uribe Uribe and Gen. Castillo appeared on the Magdalena river with fresh forces. Gen. Herrera sent arms and ammunition to the rebels in Cauca. Gen. Perdomo was sent with 4,000 men to reinforce the Government troops on the isthmus, but he waited at Barranquilla until he could complete arrangements for commissariat and sanitation. At the prospect of active operations at the isthmian ports United States war-ships were ordered to the isthmus, the Wisconsin to Panama and the Cincinnati to Colon, to enforce the treaty stipulations by preventing any interference of traffic, even by the bombardment of Panama. The steamer Panther carried a battalion of marines to Colon. Capt. McLean of the Cincinnati on arrival noti-

fied both parties that neither army would be allowed to obstruct traffic, and landed a force of bluejackets. He allowed an exchange of Government troops between Colon and Panama, their arms being taken in a separate train and guarded by a naval force. Before the end of September 2,000 United States marines and sailors were landed in spite of the protest of Gen. Salazar, who had forbidden the continued employment of Liberals on the railroad, but was overruled by his Government. When the Pacific Steam Navigation Company declined to transport troops to the isthmus an order exempting foreign vessels from tonnage dues was revoked. The main revolutionary force operating on the great plains east of Bogotá, under Gen. Carreazo, surrendered in the middle of September. An attempt of rebels to take a Government gunboat on the Magdalena river failed. After the arrival of Gen. Perdomo's reinforcements the military situation became more critical. Capt. McLean had notified the opposing commanders that the United States navy had taken the direction of the railroad from sea to sea and would not permit any fighting along the line. By the treaty of 1846 between the United States and New Granada Colombia guarantees the right of way for transit across the isthmus to the Government and citizens of the United States and their property, and the United States guarantees the neutrality of the isthmus and undertakes to protect free transit from sea to sea so that it shall not be interrupted or embarrassed. The instructions of the United States Navy Department were not to allow any transportation of troops which might contravene these provisions of the treaty, nor to sanction any use of the road which might convert the line of transit into a theater of hostility. Capt. McLean had permitted Government troops to go by special train. When Rear-Admiral Casey arrived on the Wisconsin he ordered that no more Colombian officers, troops, arms, or ammunition be permitted unless by special permission. The Colombian Government, through its minister at Washington, protested against being prevented from transporting troops at will by any route or means of transit within its territory. The withdrawal of Government troops from the Magdalena river was followed by such renewed activity of the insurgents that some of them were sent back from Panama. Gen. Uribe held Tenerife, near Santa Marta, and with quick-firing guns cut communications on the river. The Government was reduced to such financial straits that its ability to continue the war was in question. All classes endured severe hardship and the poor were reduced to pitiable destitution. The troops sent out from the interior, now including boys eight years of age, were half starved. Already over 50,000 men had fallen in the 400 engagements that had been fought, or died in the camps. The misery and privation attending the war had decimated the population. Much valuable property belonging to foreign nations had been destroyed, and several times the United States had interfered to protect the property of its own citizens and those of European countries, although, as a rule, both sides spared and protected foreigners. The blockade of the Magdalena river ceased when the Government sent a sufficient force to cause Gen. Uribe to retire. Later Gen. Uribe surrendered at Rio Frio. Gen. Castillo's force was beaten at La Ciénaga by troops under Gen. Marjarres. In accordance with the proposal of the Government, at a peace parley a general amnesty was proclaimed, and this helped

to pacify the interior and encouraged the people to resume their peaceful occupations. The President called upon each department to raise 2,000 men to clear the rebels from the isthmus. The Government had bought a steamer in the United States and expected to get an armored cruiser from Chile. The peace negotiations were to be resumed on board the battle-ship Wisconsin by representatives of the Government and of the revolutionary party. The Government, however, after the latest successes declined to discuss anything but the acceptance of the decree of amnesty. Gen. Vargas-Santos thereupon refused to attend the conference, which he had arranged with Gen. Santo Domingo with the object of bringing about an effective and lasting peace by harmonizing the interests of the several political parties concerned in the revolutionary contest. Gen. Uribe Uribe's condemnation to death after he had capitulated further decided him to withdraw from the conference and issue orders to the revolutionary army to continue the warfare until the Government should recognize the civil and political rights for which the Liberals had taken up arms.

COLORADO. (See under UNITED STATES.)

CONGO, INDEPENDENT STATE OF THE, a sovereign, monarchical, neutral, and independent state in central Africa, created out of the Congo International Association, which was founded in 1883 by King Leopold of Belgium, and exercised sovereign power recognized by the powers. The general act of Berlin, signed on Feb. 25, 1885, recognized the Independent State with Leopold II, King of the Belgians, as its sovereign. A convention was signed on July 3, 1890, between Belgium and the Congo State, which provided for the annexation of the territories of the Independent State to Belgium after the expiration of ten years, King Leopold having by a will dated Aug. 2, 1889, bequeathed his sovereign rights in the Congo territories to the Belgian state after his death. In the convention the Belgian Government agreed to advance to the Congo Independent State the sum of 25,000,000 francs, 5,000,000 francs to be paid immediately and 2,000,000 francs a year for ten years. The loans were to bear no interest during the period of ten years, at the end of which the Belgian Government would have the option of annexing the territories of the Independent State, with all the rights, appurtenances, and advantages attaching to the sovereignty of that State, in which case a law would be made to determine the special *régime* under which the territories should then be placed. If the Belgian Government should decide against annexation the sums advanced were to bear 3½ per cent. interest thenceforth and be redeemed after a further period of ten years, the sums accruing from concessions of State lands or mines being set aside for the payments. The Belgian Chambers on Aug. 10, 1901, passed a law reserving the option of annexation for a further period of ten years in consideration of the remission of all claims for interest and the repayment of the loan during this period. An additional loan was made for the purpose of repaying one obtained from an Antwerp bank and to cover a deficit caused by an expedition into the Nile valley and a revolt of the Arabs. This increased to 32,000,000 francs the indebtedness of the Congo State to the Belgian Government.

The seat of the Central Government is at Brussels, where the Secretary of State, Baron Edmond van Eetvelde, directs the administration with the assistance of secretaries in the various depart-

ments. The headquarters of the local Government is at Boma, where E. Wangermée, Vice-Governor-General, directs the administration with the assistance of Secretary-General van Damme and a consultative committee composed of the chief officials and non-official members, not exceeding 5, appointed annually. The territories are divided into 14 districts: Banana, Boma, Matadi, the Cataracts, Stanley Pool, the district of the Equator, the Eastern Province, Lualaba-Kasai, Eastern Kwango, Lake Leopold II, Bangala, Ubangi, Welle, Aruwimi. The public force consists of 12,800 trained native soldiers under 116 European commissioned officers and 348 sergeants.

Area and Population.—The area of the Congo State is estimated at 900,000 square miles, and the population at 30,000,000. There were 2,204 Europeans on Jan. 1, 1901, comprising 1,187 Belgians, 170 Italians, 115 British, 114 Dutch, 107 Swedes, 91 Portuguese, 62 Germans, 58 French, 43 Danes, 30 Americans, 19 Swiss, 19 Norwegians, 14 Russians, 11 Spaniards, 9 Austrians, and 141 others. These include the white officers in the Congo service, the traders of various nationalities, and 180 Catholic and 120 Protestant missionaries. The missionaries teach mostly in the Swahili language of the Arabs rather than in the numerous Bantu dialects. The Government aids their schools and has established schools of its own in 3 agricultural colonies.

Finances.—The revenue for 1900 was estimated at 26,256,500 francs and the expenditure at 27,731,254 francs; the revenue for 1901 at 30,751,054 francs and the expenditure at 31,256,054 francs. For 1902 the estimate of revenue was 28,709,000 francs, of which 6,055,000 francs were derived from customs, 4,160,000 francs from transport, 15,452,000 francs from domains, 1,703,000 francs from loans, 580,000 francs from direct taxation, and 759,000 francs from various sources. The expenditures for 1902 were estimated at 32,405,492 francs, of which 647,460 francs were for administration in Europe, 3,630,545 francs for administration in Africa, 7,865,132 francs for the public force, 2,118,036 francs for marine, 2,300,000 francs for transport, 1,137,755 francs for public works, 1,466,462 francs for agriculture, 5,752,905 francs for domains, 3,630,705 francs for various expenses, and 3,856,494 francs for extraordinary purposes.

The debts of the Congo State consist of 422,220 francs of 2½-per-cent. bonds given in 1887 to the original subscribers for the exploration of the Congo region; 70,000,000 francs of bonds issued under a decree of Feb. 7, 1888, authorizing the issue of 150,000,000 francs; 14,000,000 francs of 4-per-cent. bonds issued under the decrees of Oct. 17, 1896, and June 14, 1898; 25,000,000 francs advanced by Belgium under the convention ratified by the Belgian Chambers on July 25, 1890; 6,804,415 francs advanced by the Belgian Government under a convention of June 10, 1895; and 50,000,000 francs of 4-per-cent. bonds issued in October, 1901, for railroads and other public works.

Commerce and Production.—The chief product of the Congo basin is rubber. Ivory is a diminishing article of export. Palm-nuts and palm-oil are less important than they are on the Guinea coast. Coffee and cacao are grown with success. The natives cultivate tobacco for their own use, and an export trade has begun. The Government has planted the Havana and Sumatra varieties for an experiment. All land belongs to the Government except the districts expressly reserved for native occupancy and the registered private estates.

The general commerce for 1900, including products brought down from beyond the confines of the State for export and imported merchandise sent beyond the borders, amounted to 31,803,214 francs for imports and 51,775,978 francs for exports. The special imports were 24,724,109 francs in value, and the special exports were 47,377,401 francs. The special imports of textile fabrics and clothing were 6,673,563 francs; of articles of food, 4,316,158 francs; of machinery, 1,939,653 francs; of beverages, 1,803,125 francs; of steamers and parts of steamers, 1,783,302 francs; of hardware and metals, 1,355,148 francs; of arms and ammunition, 761,804 francs. The special exports of rubber were 39,874,005 francs in value; of ivory, 5,253,300 francs; of palm-nuts, 1,318,810 francs; of palm-oil, 813,300 francs; of woods, 39,886 francs; of coffee, 27,825 francs; of skins, 2,811 francs. Of the total value of the special imports Belgium furnished 17,270,483 francs; Great Britain, 2,959,590 francs; Netherlands, 1,507,490 francs; Germany, 1,302,336 francs. Of the special exports Belgium received 42,694,998 francs; Netherlands, 2,604,617 francs; Portuguese Africa, 1,565,352 francs; Great Britain, 270,090 francs. The general commerce was distributed as follows:

COUNTRIES.	Imports.	Exports.
Belgium.....	18,527,000	44,741,000
Netherlands.....	2,990,000	4,703,000
Great Britain.....	4,223,000	364,000
France.....	3,114,000	33,000
Germany.....	1,798,000	219,000
Portuguese possessions.....	464,000	1,633,000
Portugal.....	123,000	7,000
Other countries.....	564,000	76,000
Total.....	31,803,000	51,775,000

The special imports in 1901 amounted to 23,100,000 francs; special exports, 50,500,000 francs, including 43,900,000 francs for rubber, 5,700,000 francs for palm-kernels, 3,900,000 francs for ivory, 300,000 francs for copal. Coffee, earthnuts, cacao, and tobacco are represented by petty sums.

Navigation.—The number of ocean vessels that were entered at the ports of Banana and Boma during 1900 was 230, of 465,674 tons; cleared, 227, of 458,562 tons. Of the tonnage entered 273,059 tons and of that cleared 270,111 tons were Belgian, while 81,842 tons entered and 80,330 cleared were British and 62,394 tons entered and cleared were German. There were entered coastwise 408 vessels, of 18,232 tons, and cleared 428, of 18,746 tons.

Communications.—The Congo and its tributaries have 3,000 miles of navigable water. The Congo itself is navigable for 1,000 miles above Stanley Pool. On the lower Congo the State had 7 steamers plying from Banana to Matadi. The Congo railroad transports goods and passengers from this point to Leopoldville, 200 miles above. The railroad has a length of 250 miles. On the upper river the Government transport service comprises 28 steamers. A railroad is under construction in Mayumbe, of which 20 miles were completed at the beginning of 1902. A Belgian syndicate has obtained a concession for ninety-nine years for railroads from Stanleyville, on the upper Congo, to Lake Albert, and from Nyangwe to Lake Tanganyika. The head of navigation on the Lualaba will be connected with the southern frontier of the Free State by a line 350 miles long which is destined to form part of the Cape to Cairo line planned by Cecil Rhodes, and in the meantime will open up the metalliferous district of Katanga. There are 744

miles of telegraph connecting Leopoldville with Boma and with Equator, and 51 miles of short lines in Mayumbe and between Lisala and Umangi.

The post-office in 1900 forwarded 138,788 pieces of mail-matter in the internal and 358,451 in the external service.

Internal Affairs.—The Manyema district was pacified before the middle of 1902 by Major Malfait, and in the Belgian portion of the Bahr el Ghazal the Ababuas and other tribes that had been troublesome were quiet. Posts on the Nile and in the Makraka region were reinforced. A joint commission surveyed the territory in dispute between Germany and the Congo State in the region of Lake Kivu. In the autumn disturbances occurred in the region of the Welle, necessitating the reinforcement of the native troops stationed there. When an English philanthropic society appealed to the British Government to draw the attention of the powers responsible for the general act of the Berlin conference of 1885 and the Brussels conference of 1892 to the violation of the provisions as regards protection of the native populations and improvement of their conditions of life, as well as those prohibiting monopolies and other restraints on freedom of trade, and at a public meeting called attention to grievous wrongs to which native populations were said to be subjected, the King of the Belgians telegraphed that the Government of the Congo Free State would open an inquiry into any specific charges brought before it. A representative of the Congo Government denied that any official or soldier had committed atrocities, such as cutting off the hands of natives who failed to collect a certain quantity of rubber in a given time, but persons calling themselves agents of the State were reputed to have done such things. By a decree of the sovereign of the Free State 50 per cent. of all personal and direct taxes payable by religious, charitable, and scientific societies in the Congo State is remitted from July 1, 1902.

CONGREGATIONALISTS. The statistical tables published in the Congregational Year-Book for 1902 give the following total numbers for the American Congregational churches: Of churches, 5,753, of which 1,045 were "vacant"; of ministers, 5,717, of whom 1,814 were "without charge"; of members, 645,994; of members added during the year on confession, 28,398; of baptisms during the year, 11,740 of adults and 12,355 of infants; of families, 449,555; of members of Sunday-schools, 658,405, with an average attendance of 394,905; of Young People's Societies of Christian Endeavor, 3,655, with 178,407 members. These figures show an increase during the year of 43 churches, 149 ministers, and 10,356 members, and a decrease of 13,934 pupils in Sunday-schools and 12,041 members of Christian Endeavor Societies. The contributions of the churches for the year were: For foreign missions, \$490,024; for education, \$164,082; for church building, \$100,877; for home missions, \$508,866; for the American Missionary Association, \$126,020; for Sunday-schools, \$52,180; for ministerial aid, \$20,876; other contributions, \$770,797; total contributions (according to the footings of the table) for benevolent objects, \$2,233,722; legacies, \$461,718; contributions for home expenditures, \$7,580,665. The 8 theological seminaries at Andover, Atlanta, Bangor, Chicago, Hartford, Oberlin, Oakland, Cal. (Pacific), and New Haven, Conn. (Yale), return 61 professors, 27 instructors or lecturers, 13 resident licentiates or fellows, 45 in the advanced or graduate class, and 320 undergraduates.

A table of the Congregational churches for the world published in the Year-Book gives:

	Churches, chapels, and stations.	Members.	In Sunday- schools.
In Australia.....	292	10,478	20,990
Tasmania.....	52	829	2,001
New Zealand.....	22	1,083	2,216
Jamaica.....	61	3,502	1,298
British Guiana.....	50	4,882	4,608
South Africa.....	308	11,343	6,783
Channel Islands.....		359	472
Ireland.....	4,873	2,298	3,425
Scotland.....		30,270	48,473

American Board.....	...	50,572	66,601
Total.....	17,063	1,175,788	1,426,649

Church Building Society.—The forty-ninth annual report of the Congregational Church Building Society, presented at the annual meeting in January, gave the total receipts of the year as having been \$251,668. Loans and grants amounting to \$253,195 had been paid to 93 churches to aid in building houses of worship, and parsonage loans amounting to \$22,510 had been paid to 47 churches. By the aid of these sums church property valued at \$979,207 had been secured. Grants amounting to \$42,352 had been voted to 69 churches; church building loans of \$79,300 to 39 churches; and loans on parsonages of \$30,005 to 61 churches. A considerable number of contributions on the annuity plan had been received.

Home Missionary Society.—The seventy-sixth annual meeting of the Congregational Home Missionary Society was held at Syracuse, N. Y., June 3 to 6. In the absence of the president, the Rev. Newell Dwight Hillis, D. D., Mr. William H. Wanamaker presided. Eighteen hundred and forty-five missionaries had been employed during the year in 47 States and Territories, of whom 1,262 had been pastors or stated supplies of single congregations and 586 had ministered to two or three or more congregations each. Under their labors the Gospel had been preached regularly or at stated intervals to 2,484 congregations or missions. Two hundred and eighteen missionaries had preached in foreign languages to German, Scandinavian, Bohemian, Polish, French, Mexican, Italian, Spanish, Finnish, Armenian, Greek, and Welsh congregations. The missionaries returned 2,018 Sunday-schools under their special care with about 133,378 pupils, 166 new schools organized, 4,321 additions on confession of faith, 65 churches organized, 42 churches assumed self-support, and many new church buildings, parsonages, and improvements. The total receipts of the National Society for the year had been \$346,849, and its expenditures \$293,064. The debt at the beginning of the year had been \$63,698, and at the close \$9,912, having been reduced \$53,785. The auxiliary societies had raised and expended on their own fields during the year \$255,612. Adding this sum to the receipts and expenditures of the National Society, the total of receipts for home missions during the year was \$602,462, and of expenditures \$548,676. The woman's department had completed twenty years of organized activity. It had been conducted during the past year as a part of the general executive office. Besides the continued publication of its

periodical, the Home Missionary, now monthly, the society had added much to its department of junior literature. The invested funds, registered under seven heads and including funds temporarily in the hands of trustees and "temporary investments," amounted to \$207,599. At the business meeting of the society, the Committee of Fifteen, appointed in the previous year to consider some plan for perfecting the relations between the auxiliaries and the National Society, reported, proposing changes in the constitution intended to substitute for the present voting membership a corporate body elected for a term of years by the churches, to read as follows:

"ARTICLE III. MEMBERSHIP.

"The members of this society shall consist of honorary life members, life members, members elected by the churches, and the officials of the society during their respective terms of office. 1. Any person chosen as president, vice-president, recording secretary, treasurer, corresponding secretary, auditor, or member of the Executive Committee, shall be a voting member during his term of service. 2. Life members appearing on the roll at the date of the passage of this article shall retain their voting right unless it be voluntarily surrendered. 3. The churches shall be represented in the voting membership of this society by members elected in number and manner as follows: Each State association or conference of churches may elect three members, and in addition, one member for every 5,000 church-members; at the first election by the State associations or conferences, one-third of the members shall be elected for one year, one-third for two years, and one-third for three years; and thereafter one-third shall be elected each for a term of three years. In any year the State bodies may elect members to fill vacancies. It is recommended that the number of members be in all cases divided between ministers and laymen as nearly equally as is practicable. 4. Honorary life members. Any person on whose behalf \$50 shall be paid into the treasury of this society at any one time, or into the treasury of any of its auxiliaries at any one time, accompanied by a request for honorary life membership, shall be an honorary life member, with all the privileges of membership except voting.

"ARTICLE VI. VOTERS.

"All members elected by the churches through their State associations or conferences as herein provided, bringing proper credentials, and life members and officers of the society, who shall be present and cause their names to be registered upon a roll to be made at each annual or other meeting of this society by the recording secretary, and no other persons, shall have the right to vote at the annual election and in annual or other meetings of the society, upon questions there arising."

The committee further recommended that an annual conference be held at the place of the annual meeting of the society, and at an hour preceding its opening session, in which the representatives of the auxiliary societies and the officers and Executive Committee of the Congregational Home Missionary Society shall confer with regard to the condition and problems of home missionary work in all parts of the land. The report was adopted unanimously. It was also resolved that hereafter the president of the society should not hold office for two successive years.

Education Society.—The annual meeting of the Congregational Education Society was held in Boston, Mass., June 11. The receipts of the

society for the year had been \$135,288, or \$35,612 more than those of the previous year, and it was free from debt, with a small balance in its treasury. It had aided 22 academies and 3 colleges. Five of its 6 schools in Utah were in centers entirely Mormon.

American Missionary Association.—The fifty-sixth annual meeting of the American Missionary Association was held at New London, Conn., Oct. 21 to 23, the Rev. Washington Gladden, D. D., presiding. The total receipts for the year, including those on account of the Daniel Hand fund, had been \$464,291, and the expenditures \$368,347. The Daniel Hand Educational fund for colored people was credited with \$66,636 on income and \$14,440 on endowment account; and other endowment funds of \$10,000 had been received. A balance of \$73,907 was shown in the reserve legacy account.

The religious and educational work of the association was carried on in 22 States and Territories of the United States, and among people of 6 different races. The educational work in the South included 6 chartered institutions for the higher learning, having classes also in the preparatory grades; 43 normal and graded schools, with nearly 8,000 pupils; and 30 common schools, with 5,465 pupils; having in all 480 instructors, and showing a total of 14,048 pupils. Of these pupils 95 were in theological, 271 in collegiate, 365 in collegiate preparatory, and 1,597 in normal departments. Much attention was given in most of the schools to manual and industrial training. Eleven of the schools were "mountain schools", among the white people of the Appalachian range, and returned 68 instructors and 2,198 pupils. Two schools, with 10 instructors and 343 pupils, were in Porto Rico. The Church work in the South included 230 churches, with 139 ministers and missionaries, and 12,155 church-members, who had contributed \$2,813 for benevolences and raised \$39,398 for church purposes, 17,311 pupils in Sunday-schools, and 1,190 members added on profession during the year. A larger number of new churches had been enrolled during the past year than in any year since 1895. In the Indian missions, 20 churches and 10 out-stations were returned, with 47 white and 41 Indian teachers and missionaries, 1,453 church-members, 2,661 pupils in Sunday-schools, and contributions for benevolence and church support of \$2,681. Six Indian schools, in Nebraska, the Dakotas, and Alaska, returned 342 pupils. While the number of churches in these missions remained the same as in the previous year and the number of substations and workers and the benevolent contributions had decreased, substantial gains had been made in church-membership and in the attendance at the 6 schools. An unexpected development was mentioned in Alaska, in that Eskimos from the islands of Bering's Straits, and even from Siberia, were finding their way to the American islands and coming in touch with the spirit and power of Christianity. At the business meeting of the association, the question of the election of salaried officers by the Executive Committee rather than at the annual meeting was referred; the president of the association was made *ex officio* a member of the Executive Committee. It was reported that no plan had been matured for holding one annual meeting of all the Congregational benevolent societies, nor for publishing one magazine in cooperation with the other societies, and that the proposition to have but one treasurer for the three societies whose headquarters were in New York had not been found feasible. A plan was substituted providing

for a limited corporate and responsible membership of the association. Being, in effect, a notice of a proposed amendment to the constitution, its consideration was deferred for one year.

The American Board.—The ninety-third annual meeting of the American Board of Commissioners for Foreign Missions was held at Oberlin, Ohio, Oct. 14 to 17, Mr. Samuel Capen presiding. The Prudential Committee reported that the receipts for the year, not including moneys for the debt, had been \$741,454, an increase from the previous year of \$44,083. After paying the debt of \$102,341, largely through a collection taken at the previous meeting (see Annual Cyclopaedia for 1901, p. 139) an overplus remained of \$1,310. Counting in these sums, the grand total of receipts from all sources was \$845,105. While the receipts from regular unconditional donations, individuals, churches, and societies (\$505,935) had fallen off \$4,262, those contributed through the Woman's Boards (\$214,710) had increased \$16,055, and those from legacies \$49,810. The special gifts amounted to \$42,717. The expenditures had been \$741,303. The Twentieth Century fund, contemplated to be of \$250,000, now amounted to \$115,796. It had not been pressed during the past year. Fifty thousand dollars had been raised in behalf of the National Armenian Relief Committee and the Orphans' Homes in India. Relations were maintained with the Congregational Foreign Mission Board of Canada, whose contributions went largely to the support of the work in the West Central African Mission. The Yale Foreign Missionary Society, connected with Yale University, had been organized to be independent of denominational control, but would cooperate with the board, and was to establish a mission in China.

From the 20 mission fields, with 101 stations, 1,301 out-stations, and 1,679 places for stated preaching, were returned 168 ordained missionaries (15 being physicians), 15 other men physicians, and 360 woman missionaries (12 of them physicians), making, with 6 other assistants, the whole number of 549 laborers sent from the United States; 268 native pastors and, including also native preachers and catechists, school-teachers, Bible women, and others, totals of 3,581 native laborers and of 4,130 Americans and natives; 524 churches, with 55,645 members, 5,609 having been added during the year, and 60,321 members of Sunday-schools. The whole number of church-members from the first, as nearly as could be learned, was 163,267. The educational department included 14 theological seminaries and station classes, with 167 students for the ministry and 916 students in collegiate training, 118 boarding and high schools, with 10,895 pupils, and 1,134 common schools, with 46,149 pupils; making the whole number under instruction, 60,964. The native contributions, so far as reported, amounted to \$167,512. An additional college at Smyrna had been formally recognized, making 3 colleges in the Western Turkey mission. Central Turkey College, having completed twenty-six years of work, was beginning to pass gradually into the hands of the native constituency. In the Marshall Islands the church-membership had almost trebled in ten years, and the German Government was friendly. The devastated missions in northern China had been largely reestablished. A headquarters building had been completed for the mission at Hong-Kong, without expense to the board. Advances were mentioned in the African missions. A unique incident in the European Turkey mission was the capture of Miss Ellen M. Stone and a native assistant by brigands and

their retention for six months, when their release was secured on payment of a ransom of \$68,200. Notwithstanding this disturbance, good progress was reported. The missions in India and Ceylon had been visited by a deputation sent out by the Prudential Committee, a full report of whose observations had been published, and there had been a marked growth in the churches. A union evangelistic movement, in which all the evangelical denominations except one were cooperating, was the most notable event in Japan. The Doshisha was now firmly established on a Christian basis, and its diplomas were recognized by the Government.

"The Forward Movement," as a plan is called under which individuals and local churches contribute to the support of special missions or missionaries, was approved, and the Prudential Committee was directed to provide for its maintenance. A proposition made by the Committee of the National Congregational Council that the appointment of paid secretaries be vested in the Executive or Prudential Committee was referred. In view of certain legal questions arising in connection with a proposition to make some changes in the composition of the membership of the board, the Prudential Committee was given permission to seek to obtain modifications in its charter to meet the case. In view of the extension of German sovereignty and the German language over that region, the Prudential Committee was empowered to transfer the missions in Micronesia, except in Guam, when that can be done advantageously, to societies of other nations. During the period of the meetings the corner-stone was dedicated for a memorial arch of the missionaries of the board in China who lost their lives during the "Boxer" troubles. The arch will stand in the grounds of the university at Oberlin.

Deputation to India and Ceylon.—A deputation which had been appointed by the American Board to visit the missions in India and Ceylon presented the report of its visitation to the Prudential Committee Feb. 4. Besides investigating the specific work of the board, the deputation was commissioned to look into the general religious conditions in the country, the progress of Christianity, and the work of Christian missions. Its report related principally to the Ceylon, Madura, and Marathi (Bombay) missions. The deputation found that the Christian movement in India was gaining in momentum with every decade. In the forty years from 1851 to 1891 the number of Protestant Christians had increased 145 per cent., while the population had increased only 20 per cent. But the entire Christian force now in the country, though larger than it had ever been before, was far too small to reach all parts of the empire. The attention of the deputation was frequently called by educated Hindus and by English Government officials to the need of industrial education. A false sentiment prevailed against students who had advanced as far as entrance to college engaging in manual labor, and it had created a class of educated idlers. The large proportion of Christian converts were from the lower castes, although there were many devout Christians from among the Brahmins. Every year new castes were reached, and the work was broadening among the old castes. In one school children of 18 different castes lived and studied together. The Government of India was in sympathy with mission work, and the rulers of the native states were not hostile to it. Every large Protestant missionary society in the world had its representatives in the field. The mission

in Ceylon would probably not call for a mission force larger than it now possessed. In it a more extensive work was conducted at less relative cost than in any other mission of the board. The Madura mission, lying in a field in which the American Board worked exclusively, was compact, and marked by the number and prosperity of its educational enterprises and hospitals, and the efficiency of the Young People's Society of Christian Endeavor. In the Marathi mission the stations covered more territory and were farther separated. A proposition had been made to the other evangelical mission boards which use the Marathi language to unite in the conduct of the theological seminary at Ahmednagar upon a union basis, and some of them had responded favorably. The deputation made a number of recommendations, among which was one that the missionaries so modify their courses of instruction that all male pupils aided through the mission should have some practical instruction in productive manual labor adapted to the conditions and needs of the country, and the female pupils also, with necessary modifications; and that such a course be entered upon systematically, so that it should be operative alike in all parts of the field. The organization of self-supporting and even lucrative enterprises, having at the same time a distinct educational value, was suggested. The report further advised that the missions should plan to provide as much English education as is practicable for carefully selected candidates for the position of pastors and preachers. "In the effort to carry the Gospel to the needy, no caste should be overlooked. A Christian community drawn from various existing castes will necessarily be stronger than if confined to any single class, trade, or caste. The time has passed when missions should provide free education to all who are willing to attend mission schools. As the course of study rises so as to include English, which already has a recognized commercial value, the fees demanded should be increased so as to cover, in a large measure, the increased expense of the higher courses."

Woman's Societies.—The thirty-fourth annual meeting of the Woman's Board of Missions of the Interior was held in Chicago, Oct. 28. The receipts for the year had been \$81,220, a larger sum than had been received in any former year, but which still fell short more than \$8,000 of the sum actually expended. Contributions were made during the meeting of \$2,365 toward paying the debt of \$5,500. Accounts were given of enterprises in which the society is interested in Turkey, India, China, Japan, West Africa, Spain, and Micronesia.

Reports made at the annual meeting of the Woman's Home Missionary Association, in Boston, Mass., Oct. 29, showed that it had stations in 20 different States and Alaska, and in Cuba, and was laboring among Americans and foreigners.

The thirty-fifth annual meeting of the Woman's Board of Missions was held in Washington, D. C., Nov. 4 to 6.

Congregational Union of Ontario and Quebec.—The meeting of the Congregational Union of Ontario and Quebec was held at Ottawa in June. The Rev. J. P. Gerrie was elected chairman. The statistical reports showed that there were 82 churches connected with the union, with 7,705 members and 21,000 persons under pastoral care. The total value of church property was \$850,000. Forty-three churches were free from debt. The sum of \$100,000 had been raised during the year. The figures show an in-

crease of 518 members and \$9,500 in contributions. Sixty-two of the churches, with 5,659 members, are in Ontario.

The Canadian Congregational churches were visited in September by a deputation of representatives of the Congregational Union of England and Wales, who were despatched in the interests of the Colonial Missionary Society to inquire into the condition and prospects of the Congregationalists of the Dominion, with a view to ascertaining what responsibilities rested upon English Congregationalists for the evangelization of the new townships in the far West.

English Congregationalists.—The English Congregational Year-Book for 1902 gives the number of Congregational churches, chapels, and mission stations in England and Wales as 4,873, with 1,743,583 sittings; of ministers as 3,121, of whom 572 were out of service and 118 were in professional, secretarial, or other work; of lay preachers as 5,128, besides 227 evangelists; of church-members as 436,279, showing an increase of 4,762 over the previous year; of members of Sunday-schools, 684,747, showing a decrease of 8,600. The theological seminaries returned 395 students and 62 professors. Fourteen new churches and 66 new chapels and halls had been built during the year. Fifty ministers had been ordained. In 1900 1,184 churches and mission stations were returned as being on the Continent of Europe and in the British colonies. Of the latter, 143 were in Canada, 283 in Australasia, and 288 in South Africa. The ministers abroad comprised 473 in the British colonies and on the Continent of Europe, and 273 English missionaries in the service of the London Missionary Society. The colleges were attended by 401 students, and the 10 institutions of the London Missionary Society in heathen lands by 300 students.

Congregational Union of England and Wales.—The Congregational Union of England and Wales met in its annual assembly in London, May 12. In the absence of the chairman, Principal Caleb Scott, who was seriously ill, the Rev. Dr. G. S. Barrett, of Norwich, presided. In his opening address the chairman, referring to the question of the "United Congregational Church," which was to come before the meeting, said that whatever might be the result of the discussions of the subject, he thought that the mind of the Church was clear upon the point that the time had come for their churches when, without sacrificing any of their independence, they might be drawn together in a closer federation that should reveal their common brotherhood.

The report of the committee opened with a brief survey of the work achieved by the union since its formation seventy years before. During this period it had established the Colonial, Evangelical Continental, English Chapel-Building, Church Aid, Pastors' Insurance Aid, and Total Abstinence Societies; had created the Memorial Hall Trust, the Pastors' Retiring Fund, the Pastors' Widows' Fund, the Young People's Union, and other societies; had published the Congregational Lectures, the Year-Book, and hymnals; had given substantial aid to Congregational societies through its earnings in the publication department; and had given stimulus to churches from its platform and engendered friendly feeling among them. An important step in the evolution of Congregational affairs had been taken in the creation of an incorporated society by means of which the business of the union might be transacted without the intervention of trustees and without necessitating the acceptance of personal liability by its officers

and members. The new corporate society would hold the property intended for the use of the union and act as trustee to hold and deal with property of any particular Congregational church. The Committee of the Union would be the executive of the incorporated body. The report of the Special Committee on Ministerial Settlements and Removals recommended that provision be made for the adoption of the same rules by all the county unions. The Committee on Superannuation reported a scheme which was referred back to it with instructions to bring it up at a subsequent assembly. The general account of the publication business showed total receipts of £14,172, and an expenditure of £16,585. Certain recommendations submitted to the colleges by the assembly of the spring of 1901 had been approved by them. A special committee was ordered to inquire into the inner working of the colleges, to make recommendations as to ways in which the union can best cooperate with the college authorities, and to consider whether it is desirable to form a Central College Board. The Church Aid Society had during the year distributed a little more than £4,000 in grants, and had aided 368 churches and 148 mission stations, while 218 pastors and 62 evangelists had received aid from the fund. The report of the replies received to the circular letter sent out with Dr. Joseph Parker's Addresses to the Churches and County Unions concerning his United Congregational Church scheme embraced many details. No union had declared absolute agreement with Dr. Parker's proposal of a federation of churches on lines suggested in his letters; 6 unions, representing 82,714 members, had expressed general approval of it; 10, representing 54,000 members, had asked for closer federation without committing themselves to any scheme; and 7, with 72,000 members, had declared for organic association with the county unions.

Two hundred and fifty-two churches, with a total of 28,748 members, had voted for Dr. Parker's proposal; 168 churches, with 30,419 members, opposed it; 75 churches, with 11,623 members, gave it general approval; 80 churches, with 18,310 members, approved closer federation without committing themselves to any scheme; 60 churches, with 12,946 members, favored amalgamation of the county unions with the Union of England and Wales; 149 churches, with 31,256 members, were for closer federation; and the replies in general indicated that the larger churches lean in that direction. Forty-six churches, with 8,990 members, advised the Congregational Union, in various forms of expression, to seek larger powers. With respect to Dr. Parker's proposed title, "The United Congregational Church," 164 churches, with 17,832 members, had voted "Yes"; 352 churches, with 63,891 members, had voted "No"; and 161 churches, with 33,769 members, had declared their positive preference for the present title, "The Congregational Union of England and Wales." Twenty-two other titles had been suggested. Replies in like manner various had been received from a number of churches not in the union and of aided churches, to which the questions had been sent. Several of the unions and churches had prepared draft constitutions embodying the changes which they approved. The replies as a whole were regarded by the committee on the subject as emphasizing the duty devolving upon the union "to continue its work for the common service of the churches, and to provide opportunity for such changes as may commend themselves to a majority of the most earnest men among them."

The proposals of Dr. Parker, as they had been summarized in the circular sent out by the committee to the churches and county unions, embodied the following features:

I. The name. The United Congregational Church.

II. Constitution. To be the Confederation of the Congregational Churches of England and Wales.

III. Administration. The churches thus confederated shall appoint a general council, in whom shall be vested full powers of administration. This council might consist of representatives nominated by the churches and elected either annually or triennially by the county unions in such proportions as may hereafter be determined. The general council may consist of not less than 600 members.

IV. This general council shall meet at least once in each year, and the business entrusted to it by the United Congregational Church shall be transacted.

While it was conceded that there are certain prerogatives, responsibilities, and privileges which belong to the individual churches, it was maintained that there are other great questions, such as the introduction of proper men into the ministry, the administration and management of the Congregational societies and institutions, the conduct of missions at home and abroad, etc., which concern all the churches of the Congregational faith and order. It was with the latter questions that the general council would have to do.

The churches were asked to answer certain questions: 1, If they approved the federation; 2, if they did not like it, what plan they had to suggest; 3, if they approved the name.

Upon hearing the report of the answers to the circular of the committee, the assembly resolved "that the General Committee of the union, having already carefully considered various branches of Congregational reform, and having consulted the churches on Dr. Parker's proposal, is hereby requested to prepare a scheme which may serve to unite Congregational churches more closely for common purposes. And to this end, the General Committee is authorized to appoint a special committee of 24, not more than 16 of whom shall be members of its own body, to draft proposals for its consideration. The General Committee shall report its recommendations to the assembly as early as practicable." Resolutions were adopted unreservedly condemning the education bill and recording the sense of the assembly "not only of the public damage to religion in the bill proposed, but far more of the wound to Christ's body and the grief to the Holy Spirit. We see in it one section of his true flock using an accidental political advantage to compel from the other's conscience the support of teaching which we think (rightly or wrongly) that he has led us to regard as unscriptural and not merely as inadequate. And not only so, but we are forced to support teaching which unchurches us; and yet worse, which invades our hearths by instructing our children to deny their fathers' faith and despise the religion of their homes. The safeguards proposed are, have been, and must be, illusory in practise." Copies of these resolutions were ordered sent to the Archbishops of Canterbury and York and the Bishops of London, Durham, and Hereford. The final statement of the Twentieth Century fund showed that the total amount contributed had been £710,123; of which £83,121 had been for the central fund, £407,811 for supplemental funds, and £219,791 (incomplete) for affiliated funds. The sum of £82,

492 had been disbursed on account of the central fund, while the supplemental and affiliated funds were shown as having been disbursed by the reporting churches and unions. Some churches having made promises, which at present they were unable to fulfil, arrangements had been made to keep the fund open so as to receive their contributions. Of whatever came in half would be forwarded to the London Missionary Society, and the remainder would be divided equally between the Church Aid Society and the Colonial Missionary Society. The Special Committee on a Uniform Code of Rules regarding Ministerial Removals reported concerning the answers of the unions to the propositions sent them, showing a variety of views and action on the subject. The General Committee was instructed to summon a conference of representatives of the county unions to promote the adoption by all of them of the same code of rules. A Sunday-school conference and the annual meeting of the Young People's Union were held in connection with the assembly. The Rev. Dr. R. F. Horton was elected chairman of the union for the ensuing year.

The autumnal meetings of the Union were held at Glasgow jointly with the Congregational Unions of Scotland and Ireland, beginning Sept. 23. The most prominent subject of the discussions was the education bill, against which the assembly protested most strongly, because, as its resolution reads: "1. It sacrifices educational efficiency to sectarian and priestly ends. 2. By the summary abolition of the school boards of England and Wales, which have powerfully promoted the education of the people, while they have enlarged religious liberty for parents, teachers, and scholars, it has seriously impaired the direct control of the people over schools supported by public funds, while it also tends to withdraw the schools out of the range of their immediate interests. 3. It has not only been introduced without mandate from the constituents, but it is also being forced through Parliament in the face of direct indications that the opinion of the country is opposed to its main provisions. 4. It violates the principle of civil and religious liberty (a) by placing the entire support of denominational schools on public funds without providing for public control in all respects of such schools, and (b) by confining the appointment of teachers in denominational schools to members of the denomination. This assembly therefore calls upon his Majesty's Government to withdraw the bill or forthwith to appeal to the country upon it. And if the act is forced upon the nation, the assembly is prepared to advise its members to refuse to pay the rates." Only six votes were cast against the resolution as a whole, but about 20 dissentients were recorded against the final clause advising refusal to pay the rates in the event of the enactment of the bill. The officers of the London Missionary Society represented that £14,000 were still required to clear off the deficiency of the past three years, amounting to £63,000; and that an increase of from 20 to 25 per cent. on the present income was needed to meet the annual expenditure of £151,000, which the board was pledged not to exceed for the next five years. Eighty new missionaries had been sent into the field, but the income had not been proportionately increased. At a meeting of the Congregational Historical Society mention was made of the mass of unedited manuscripts in certain libraries which might afford valuable information upon the subjects with which the society was concerned, and a paper was read on Historical Points of Contact of English and Scottish Con-

gregationalism. Papers were read on Difficulties in the Way of Belief which beset the Young, Free Church Life in Rural England, and The Relation of the Evangelical Basis of our Church Life to Social Questions. Meetings were held representative of the Young People, the Women, Congregational Settlements, and the Total Abstinence Association.

The report of the subcommittee appointed to draft a superannuation scheme for ministers embodied a plan resting on a basis of equal contributions by ministers and churches, the amount to be determined by the age when each contribution is paid, the amount of the contributions, and the age at which superannuation begins. A minister's contributions are to cease on his attaining the age of sixty-five, after which, on his retirement, the full amount will be payable. Each separate annual contribution will provide a corresponding annuity beginning at the retiring age, the total annuity being the aggregate secured by the several annual payments. Any minister, or any church on his behalf, may at any time pay a lump sum in order to secure for him an annuity or an increased annuity. A minister may be assured under either of two tables, viz., (1) with no return of contribution, or (2) with a lower rate of annuity, but with return of the amount of his own paid contributions in the event of his death or of his retirement through failure of health or other approved cause before the age of sixty-five years.

The English Chapel-Building Society had considered 50 cases during the year, and had made grants to 40 of them, amounting to £8,566. Contributions had fallen off, having been received from only 187 churches. The receipts, apart from interest and dividends on investments and a loan from bank, had amounted to £3,589, of which £3,000 were from the return of advances.

The report of the Congregational Total Abstinence Association showed that while twenty-five years before out of 2,000 Congregational ministers there were 700 abstainers, at the present time out of 2,887 pastors in England and Wales the number of total abstainers was 2,551.

The income of the Colonial Missionary Society, including a grant of £4,100 from the Twentieth Century fund, had been £9,500. The society had worked during the year in 12 colonies, and had sent out 5 young men to the colonial field.

From the Pastors' Retiring fund £6,690 had been paid in annuities to 185 annuitants. On account of the Pastors' Widows' fund £1,221 had been paid to 101 annuitants.

In the third volume of the Transactions of the Congregational Historical Society, published in 1902, is a paper by Dr. F. J. Powicke giving lists of the early separatists compiled from the records of arrests and prosecutions. The striking facts are remarked that the great majority of the number were very young, that they were mostly of the tradesman or artisan class, and that very few of them drew back or wavered.

London Missionary Society.—The one hundred and seventh annual meeting of the London Missionary Society was held in London, May 12. The report showed that the total income from all sources had been £121,000, while the expenditure had risen to £153,700. This left a deficit of £23,000 on the year's working, to be added to the deficit of \$36,000 accumulated from previous years. Toward removing this debt £17,845 had been received from the Twentieth Century fund, and more than £20,000 had been already promised by friends of the society. The alternative was presented of abandoning some field of labor or in-

creasing the income. The statistics as to the staff of the society and facts in its mission work showed that it employed 206 men and 70 women as missionaries, with 940 ordained native pastors, 3,474 native preachers, 1,208 Christian men and 310 Christian women as teachers, and 271 Bible women, and had 64,716 church-members and 194,777 native adherents. The mission Sunday-schools numbered 1,283 and returned 54,249 pupils, while there were 1,642 boys' day-schools, with 59,966 pupils, and 190 girls' day-schools, with 30,467 pupils. The local contributions amounted to £22,116, the school fees to £5,964, and the receipts of the medical missions to £3,343; making a total of £31,414 raised and locally appropriated at mission stations. The report reviewed the condition of the missions in China, where restoration was going on, the Theological College at Hankow had been opened, and education seemed to have received a great impetus from the change in the political situation; in India, where progress was slow but steady; and represented that the reports from Madagascar showed that the troubles of past days were apparently over, and that the missionaries of the society were no longer victims of suspicion and mistrust. The resumption of responsibility for the elementary schools contributed largely to the financial difficulty. The conditions of work in Africa and New Guinea, where the mission was understaffed in consequence of the murder of Messrs. James Chalmers and Oliver Tomkins and the prevalence of exceptional sickness among missionaries and natives, were noticed. The work in Tahiti and the Loyalty Islands and part of that in Madagascar, those regions being now French possessions, had been transferred to the Paris Missionary Society. The secretary of this society was present at the meeting with a fraternal message from the directory. He said that in ten years, although there were only 600,000 Protestants in France, the number of missionaries of the Paris society had increased from 37 to 97 and its income from £13,000 to £45,000.

The Gainsborough Tercentenary.—The tercentenary of the Congregational church at Gainsborough, of which John Robinson was pastor, and where the separatists, or American Pilgrims, worshiped previously to their flight to Holland, was celebrated June 8 with commemorative services at the John Robinson Memorial Church, which had been built in 1897 by the aid of the contributions of English and American Congregationalists. Officials and other delegates of the Congregational churches in the United States were present, and brought with them the contributions which had been made in the United States for the liquidation of the debt of the new church. A sermon was preached on Sunday by Prof. Duff, of the United College, Bradford, who made allusions to the events which gave the memorial services their importance. A Free Church meeting was held on Sunday afternoon, when the American delegates spoke in behalf of the Congregationalists of the United States. The tercentenary sermon was preached on Tuesday evening, May 10, by the Rev. Dr. Fairbairn, of Oxford, who spoke of the share of John Robinson and the Pilgrims in spreading the Gospel of Christ. At a public meeting held in the Gainsborough "Old Hall" a paper was read by Mr. Edward McKnight, of Chorley Public Library, on the historic associations of the Old Hall and its connection with the New England Pilgrims. A bronze tablet to the memory of the Pilgrims, placed in the vestibule of the church and commemorating the cooperation of English and

American Congregationalists in the erection of the John Robinson Memorial, was unveiled by Mr. George Spicer, of Enfield.

Welsh Congregational Union.—The Welsh Congregational Union, at its annual meeting, held in Carnarvon in June, returned 1,068 incorporated churches, 197 mission rooms, 148,818 full members, 153,511 pupils and 15,197 teachers in Sunday-schools, 651 ministers with and 98 without pastoral charges, 22 ministers ordained during the year, 222 ministerial students, and 274 lay preachers. During the year £56,575 of chapel debts had been paid, leaving outstanding debts to the amount of £239,058, of which £45,735 represented the cost of new buildings. The voluntary contributions had amounted to £204,858, showing an increase of £40,755. A resolution recommending closer relations with the Congregational Union of England and Wales was passed. Other resolutions welcomed the licensing bill and recommended the use of unfermented wine in the sacrament of the Lord's Supper. The treasurer of the Twentieth Century fund represented that the total receipts had been £22,443, nearly half of which had been collected by the secretaries since the last meeting. A connectional publication department had been established, and a Welsh Independent Year-Book was to be issued.

Irish Congregational Union.—The seventy-third annual meeting of the Irish Congregational Union was held at New Row, Coleraine, May 25. The report of the Irish Evangelical Society and Congregational Home Mission showed that there were 12 self-supporting Congregational churches in Ireland, while the remaining 16 churches, with 60 out-stations, were dependent on contributions raised by the society. Contributions from England had decreased in past years, but nearly £1,200 had been paid during the last twelve months in grants to the mission stations. The executive of the union has addressed a memorial to the Royal Commission on Education in Ireland, calling their attention to the fact that there were 123,000 of the population of the country who did not belong to the Roman Catholic, Episcopal, or Presbyterian Church, and asking equal rights for them with these bodies in any legislation that may be proposed, to representation on governing bodies, professorial staff, and students' roll. "Speaking as Congregationalists only," the memorial says, "we desire a university system which shall make no inquiry as regards religious opinion."

CONGRESS. The Fifty-seventh Congress, beginning March 4, 1901, and to close March 4, 1903, was composed as follows:

THE SENATE.

William P. Frye, of Maine, President *pro tempore*; Charles G. Bennett, of New York, secretary.

Senators by States, with the expiration of term and party affiliation indicated:

Alabama.	Connecticut.
1903. Edmund W. Pettus, D.	1903. Orville H. Platt, R.
1907. John T. Morgan, D.	1905. Joseph R. Hawley, R.
Arkansas.	Delaware.
1903. James K. Jones, D.	1905. Vacancy.
1907. James H. Berry, D.	1907. Vacancy.
California.	Florida.
1903. George C. Perkins, R.	1903. Stephen R. Mallory, D.
1905. Thomas R. Bard, R.	1905. J. P. Taliaferro, D.
Colorado.	Georgia.
1903. Henry M. Teller, D.	1903. Alexander S. Clay, D.
1907. T. MacD. Patterson, D.	1907. Augustus O. Bacon, D.

Idaho.	New Jersey.
1903. Henry Heitfeld, D.	1905. John Kean, R.
1907. Fred. T. Dubois, D.	1907. John F. Dryden, R.
Illinois.	New York.
1903. William E. Mason, R.	1903. Thomas C. Platt, R.
1907. Shelby M. Cullom, R.	1905. C. M. Depew, R.
Indiana.	North Carolina.
1903. Chas. W. Fairbanks, R.	1903. Jeter C. Pritchard, R.
1905. Albert J. Beveridge, R.	1907. F. M. Simmons, D.
Iowa.	North Dakota.
1903. William B. Allison, R.	1903. H. C. Hensbrough, R.
1907. Jona. P. Dolliver, R.	1905. P. J. McCumber, R.
Kansas.	Ohio.
1903. William A. Harris, P.	1903. Joseph B. Foraker, R.
1907. Joseph R. Burton, R.	1905. Marcus A. Hanna, R.
Kentucky.	Oregon.
1903. William J. Deboe, R.	1903. Joseph Simon, R.
1907. J. C. S. Blackburn, D.	1907. John H. Mitchell, R.
Louisiana.	Pennsylvania.
1903. Samuel D. McEnery, D.	1903. Boies Penrose, R.
1907. Murphy J. Foster, D.	1905. Matthew S. Quay, R.
Maine.	Rhode Island.
1905. Eugene Hale, R.	1905. Nelson W. Aldrich, R.
1907. William P. Frye, R.	1907. George P. Wetmore, R.
Maryland.	South Carolina.
1903. Geo. L. Wellington, R.	1903. John L. McLaurin, D.
1905. Louis E. McComas, R.	1907. Benjamin R. Tillman, D.
Massachusetts.	South Dakota.
1905. Henry C. Lodge, R.	1903. A. B. Kittredge, R.
1907. George F. Hoar, R.	1907. Robert J. Gamble, R.
Michigan.	Tennessee.
1905. Julius C. Burrows, R.	1905. William B. Bate, D.
1907. James McMillan, R.	1907. Edw. W. Carmack, D.
Minnesota.	Texas.
1905. Moses E. Clapp, R.	1905. C. A. Culberson, D.
1907. Knute Nelson, R.	1907. Joseph W. Bailey, D.
Mississippi.	Utah.
1905. H. D. Money, D.	1903. Joseph L. Rawlins, D.
1907. A. J. McLaurin, D.	1905. Thomas Kearns, R.
Missouri.	Vermont.
1903. George G. Vest, D.	1903. W. P. Dillingham, R.
1905. F. M. Cockrell, D.	1905. Redfield Proctor, R.
Montana.	Virginia.
1905. Paris Gibson, D.	1905. John W. Daniel, D.
1907. William A. Clark, D.	1907. Thomas S. Martin, D.
Nebraska.	Washington.
1905. Charles H. Dietrich, R.	1903. George Turner, D.
1907. Joseph S. Millard, R.	1905. Addison G. Foster, R.
Nevada.	West Virginia.
1903. John P. Jones, R.	1905. Nathan B. Scott, R.
1905. William M. Stewart, R.	1907. Stephen B. Elkins, R.
New Hampshire.	Wisconsin.
1903. Jacob H. Gallinger, R.	1903. John C. Spooner, R.
1907. H. E. Burnham, R.	1905. Joseph V. Quarles, R.
Wyoming.	
1905. Clarence D. Clark, R.	
1907. Francis E. Warren, R.	

Republicans, 56; Democrats, 29; Populist, 1; Independent, 1; Fusionist, 1.

James H. Kyle died July 1, 1901; and Alfred B. Kittridge was appointed by the Governor of South Dakota.

William J. Sewell died Dec. 27, 1901; and John F. Dryden was elected to succeed him.

James McMillan died after the close of the first session of the Congress.

THE HOUSE OF REPRESENTATIVES.

David B. Henderson, of Iowa, Speaker; Alexander McDowell, of Pennsylvania, clerk.

Members by States, with the districts and political affiliations indicated:

Alabama.

- George W. Taylor, D.
- Ariosto A. Wiley, D.
- Henry D. Clayton, D.
- S. J. Bowie, D.
- Charles W. Thompson, D.
- J. H. Bankhead, D.
- John L. Burnett, D.
- William Richardson, D.
- O. W. Underwood, D.

Arkansas.

Republicans, 198; Democrats, 153; Populists, 4.

Henry H. Aplin, Michigan, was elected in place of Rousseau O. Crump, deceased. The seat of J. J. Butler, Missouri, was declared vacant, June 28, 1902; H. Burd Cassel, Pennsylvania, was elected in place of Marriott Brosius, deceased; Amos J. Cummings died May 2, 1902; Charles L. Knapp, New York, was elected in place of Albert D. Shaw, deceased; Montague Lessler, New York, was elected in place of Nicholas Muller, resigned; Asbury F. Lever, South Carolina, was elected in place of J. M. Stokes, deceased; William H.

Moody, Massachusetts, resigned to become Secretary of the Navy, May 1, 1902; T. McKenzie Moss, Kentucky, took the place of John S. Rhea, unseated March 25, 1902; Peter J. Otey, Virginia, died May 4, 1902; Rufus K. Polk, Pennsylvania, died March 5, 1902; Llewellyn Powers, Maine, was elected in place of Charles A. Boutelle, resigned; Joshua S. Salmon, New Jersey, died May 6, 1902; Dudley G. Wooten, Texas, was elected in place of Robert E. Burke, deceased.

The Congress met for its first session, Monday Dec. 2, 1902. The House of Representatives organized by electing David B. Henderson, of Iowa, speaker by a vote of 192 out of 355; there were 152 votes cast for John D. Richardson, of Tennessee. Alexander McDowell, of Pennsylvania, was chosen clerk; Henry Casson, of Wisconsin, sergeant-at-arms; William J. Glenn, of New York, doorkeeper; Joseph C. McElroy, of Ohio, postmaster; and Henry N. Conden, of Michigan, chaplain.

On assuming the chair Mr. Henderson said: "Gentlemen of the House of Representatives, this high honor which you have conferred upon me I profoundly appreciate. All the more do I appreciate it coming, as it does, with this generous expression from both sides of the Chamber. There is yet left another method for a presiding officer to express his appreciation of such an honor; that is, by a kindly, firm, and faithful administration of the law and the rules that govern this body. It will be my aim to discharge impartially the duties of this office.

"As I said at the opening of the last Congress, no presiding officer can successfully administer the duties of his office unless he has the support of the body over which he presides. I asked for it then; you gave it to me throughout the entire Congress. Permit me once more to invoke that patience, kind consideration, and splendid support which was accorded to me in the last Congress.

"The maker of laws should not be a breaker of laws. We proceed under law and rules; and the duties devolving upon each and all of the membership of this House will be far better conserved if this principle is kept in mind and acted upon."

The rules of the Fifty-sixth Congress were then adopted for the conduct of business in the House, with the following modifications:

1. That the special orders adopted March 8 and March 14, 1900, providing a method for the consideration of pension bills, claim bills, and other private bills, shall be continued during the Fifty-seventh Congress.

2. That the place of the Select Committee on the Twelfth Census in the rules of the Fifty-sixth Congress shall be filled in the rules of the Fifty-seventh Congress by a standing Committee on the Census, to consist of 13 members, and have jurisdiction of all proposed legislation concerning the census and the apportionment of Representatives.

Resolved further, That there shall be appointed to serve during the Fifty-seventh Congress a Select Committee on Industrial Arts and Expositions, to consist of 9 members, which shall have jurisdiction of all matters (excepting those relating to the revenue and appropriations) referring to the Centennial of the Louisiana Purchase and to proposed expositions.

Resolved further, That the Select Committee on the Examination and Disposition of Documents of the Fifty-sixth Congress shall be continued during the Fifty-seventh Congress as a select committee.

THE PRESIDENT'S MESSAGE.

Dec. 3, after due notification from the Senate and the House, that they were organized and ready to receive any communication from the President, the annual message was sent in as follows:

To the Senate and House of Representatives:

The Congress assembles this year under the shadow of a great calamity. On the 6th of September President McKinley was shot by an anarchist while attending the Pan-American Exposition at Buffalo, and died in that city on the 14th of that month.

Of the last seven elected Presidents, he is the third who has been murdered, and the bare recital of this fact is sufficient to justify grave alarm among all loyal American citizens. Moreover, the circumstances of this, the third assassination of an American President, have a peculiarly sinister significance. Both President Lincoln and President Garfield were killed by assassins of types unfortunately not uncommon in history; President Lincoln falling a victim to the terrible passions aroused by four years of civil war, and President Garfield to the revengeful vanity of a disappointed office-seeker. President McKinley was killed by an utterly depraved criminal belonging to that body of criminals who object to all governments, good and bad alike, who are against any form of popular liberty if it is guaranteed by even the most just and liberal laws, and who are as hostile to the upright exponent of a free people's sober will as to the tyrannical and irresponsible despot.

It is not too much to say that at the time of President McKinley's death he was the most widely loved man in all the United States; while we have never had any public man of his position who has been so wholly free from the bitter animosities incident to public life. His political opponents were the first to bear the heartiest and most generous tribute to the broad kindness of nature, the sweetness and gentleness of character which so endeared him to his close associates. To a standard of lofty integrity in public life he united the tender affections and home virtues which are all-important in the make-up of national character. A gallant soldier in the great war for the Union, he also shone as an example to all our people because of his conduct in the most sacred and intimate of home relations. There could be no personal hatred of him, for he never acted with aught but consideration for the welfare of others. No one could fail to respect him who knew him in public or private life. The defenders of those murderous criminals who seek to excuse their criminality by asserting that it is exercised for political ends, inveigh against wealth and irresponsible power. But for this assassination even this base apology can not be urged.

President McKinley was a man of moderate means, a man whose stock sprang from the sturdy tillers of the soil, who had himself belonged among the wage-workers, who had entered the army as a private soldier. Wealth was not struck at when the President was assassinated, but the honest toil which is content with moderate gains after a lifetime of unremitting labor, largely in the service of the public. Still less was power struck at in the sense that power is irresponsible or centered in the hands of any one individual. The blow was not aimed at tyranny or wealth. It was aimed at one of the strongest champions the wage-worker has ever had; at one of the most faithful representatives

of the system of public rights and representative government who has ever risen to public office. President McKinley filled that political office for which the entire people vote, and no President—not even Lincoln himself—was ever more earnestly anxious to represent the well-thought-out wishes of the people; his one anxiety in every crisis was to keep in closest touch with the people—to find out what they thought and to endeavor to give expression to their thought, after having endeavored to guide that thought aright. He had just been reelected to the presidency because the majority of our citizens, the majority of our farmers and wage-workers, believed that he had faithfully upheld their interests for four years. They felt themselves in close and intimate touch with him. They felt that he represented so well and so honorably all their ideals and aspirations that they wished him to continue for another four years to represent them.

And this was the man at whom the assassin struck! That there might be nothing lacking to complete the Judas-like infamy of his act, he took advantage of an occasion when the President was meeting the people generally; and advancing as if to take the hand outstretched to him in kindly and brotherly fellowship, he turned the noble and generous confidence of the victim into an opportunity to strike the fatal blow. There is no baser deed in all annals of crime.

The shock, the grief of the country, are bitter in the minds of all who saw the dark days, while the President yet hovered between life and death. At last the light was stilled in the kindly eyes and the breath went from the lips that even in mortal agony uttered no words save of forgiveness to his murderer, of love for his friends, and of unfaltering trust in the will of the Most High. Such a death, crowning the glory of such a life, leaves us with infinite sorrow, but with such pride in what he had accomplished and in his own personal character, that we feel the blow not as struck at him, but as struck at the nation. We mourn a good and great President who is dead; but while we mourn we are lifted up by the splendid achievements of his life and the grand heroism with which he met his death.

When we turn from the man to the nation, the harm done is so great as to excite our gravest apprehensions and to demand our wisest and most resolute action. This criminal was a professed anarchist, inflamed by the teachings of professed anarchists, and probably also by the reckless utterances of those who, on the stump and in the public press, appeal to the dark and evil spirits of malice and greed, envy and sullen hatred. The wind is sowed by the men who preach such doctrines, and they can not escape their share of responsibility for the whirlwind that is reaped. This applies alike to the deliberate demagogue, to the exploiter of sensationalism, and to the crude and foolish visionary who, for whatever reason, apologizes for crime or excites aimless discontent.

The blow was aimed not at this President, but at all Presidents: at every symbol of government. President McKinley was as emphatically the embodiment of the popular will of the nation expressed through the forms of law as a New England town-meeting is in similar fashion the embodiment of the law-abiding purpose and practise of the people of the town. On no conceivable theory could the murder of the President be accepted as due to protest against "inequalities in the social order," save as the murder of all the freemen engaged in a town-meeting could be ac-

cepted as a protest against that social inequality which puts a malefactor in jail. Anarchy is no more an expression of "social discontent" than picking pockets or wife-beating.

The anarchist, and especially the anarchist in the United States, is merely one type of criminal, more dangerous than any other because he represents the same depravity in a greater degree. The man who advocates anarchy directly or indirectly, in any shape or fashion, or the man who apologizes for anarchists and their deeds, makes himself morally accessory to murder before the fact. The anarchist is a criminal whose perverted instincts lead him to prefer confusion and chaos to the most beneficent form of social order. His protest of concern for working men is outrageous in its impudent falsity; for if the political institutions of this country do not afford opportunity to every honest and intelligent son of toil, then the door of hope is forever closed against him. The anarchist is everywhere not merely the enemy of system and of progress, but the deadly foe of liberty. If ever anarchy is triumphant, its triumph will last for but one red moment, to be succeeded for ages by the gloomy night of despotism.

For the anarchist himself, whether he preaches or practises his doctrines, we need not have one particle more concern than for any ordinary murderer. He is not the victim of social or political injustice. There are no wrongs to remedy in his case. The cause of his criminality is to be found in his own evil passions and in the evil conduct of those who urge him on, not in any failure by others or by the state to do justice to him or his. He is a malefactor and nothing else. He is in no sense, in no shape or way, a "product of social conditions," save as a highwayman is "produced" by the fact that an unarmed man happens to have a purse. It is a travesty upon the great and holy names of liberty and freedom to permit them to be invoked in such a cause. No man or body of men preaching anarchistic doctrines should be allowed at large any more than if preaching the murder of some specified private individual. Anarchistic speeches, writings, and meetings are essentially seditious and treasonable.

I earnestly recommend to the Congress that in the exercise of its wise discretion it should take into consideration the coming to this country of anarchists or persons professing principles hostile to all government and justifying the murder of those placed in authority. Such individuals as those who not long ago gathered in open meeting to glorify the murder of King Humbert of Italy perpetrate a crime, and the law should insure their rigorous punishment. They and those like them should be kept out of this country; and if found here they should be promptly deported to the country whence they came; and far-reaching provision should be made for the punishment of those who stay. No matter calls more urgently for the wisest thought of the Congress.

The Federal courts should be given jurisdiction over any man who kills or attempts to kill the President or any man who by the Constitution or by law is in line of succession for the presidency, while the punishment for an unsuccessful attempt should be proportioned to the enormity of the offense against our institutions.

Anarchy is a crime against the whole human race; and all mankind should band against the anarchist. His crime should be made an offense against the law of nations, like piracy and that form of manstealing known as the slave-trade;

for it is of far blacker infamy than either. It should be so declared by treaties among all civilized powers. Such treaties would give to the Federal Government the power of dealing with the crime.

A grim commentary upon the folly of the anarchist position was afforded by the attitude of the law toward this very criminal who had just taken the life of the President. The people would have torn him limb from limb if it had not been that the law he defied was at once invoked in his behalf. So far from his deed being committed on behalf of the people against the Government, the Government was obliged at once to exert its full police power to save him from instant death at the hands of the people. Moreover, his deed worked not the slightest dislocation in our governmental system, and the danger of a recurrence of such deeds, no matter how great it might grow, would work only in the direction of strengthening and giving harshness to the forces of order. No man will ever be restrained from becoming President by any fear as to his personal safety. If the risk to the President's life became great, it would mean that the office would more and more come to be filled by men of a spirit which would make them resolute and merciless in dealing with every friend of disorder. This great country will not fall into anarchy; and if anarchists should ever become a serious menace to its institutions, they would not merely be stamped out, but would involve in their own ruin every active or passive sympathizer with their doctrines. The American people are slow to wrath, but when their wrath is once kindled it burns like a consuming flame.

During the last five years business confidence has been restored, and the nation is to be congratulated because of its present abounding prosperity. Such prosperity can never be created by law alone, although it is easy enough to destroy it by mischievous laws. If the hand of the Lord is heavy upon any country, if flood or drought comes, human wisdom is powerless to avert the calamity. Moreover, no law can guard us against the consequences of our own folly. The men who are idle or credulous, the men who seek gains not by genuine work with head or hand, but by gambling in any form, are always a source of menace not only to themselves, but to others. If the business world loses its head, it loses what legislation can not supply. Fundamentally the welfare of each citizen, and therefore the welfare of the aggregate of citizens which makes the nation, must rest upon individual thrift and energy, resolution and intelligence. Nothing can take the place of this individual capacity; but wise legislation and honest and intelligent administration can give it the fullest scope, the largest opportunity to work to good effect.

The tremendous and highly complex industrial development which went on with ever accelerated rapidity during the latter half of the nineteenth century brings us face to face, at the beginning of the twentieth, with very serious social problems. The old laws, and the old customs which had almost the binding force of law, were once quite sufficient to regulate the accumulation and distribution of wealth. Since the industrial changes which have so enormously increased the productive power of mankind, they are no longer sufficient.

The growth of cities has gone on beyond comparison faster than the growth of the country, and the upbuilding of the great industrial centers has meant a startling increase, not merely in the aggregate of wealth, but in the number of very large individual, and especially of very large

corporate, fortunes. The creation of these great corporate fortunes has not been due to the tariff nor to any other governmental action, but to natural causes in the business world, operating in other countries as they operate in our own.

The process has aroused much antagonism, a great part of which is wholly without warrant. It is not true that as the rich have grown richer the poor have grown poorer. On the contrary, never before has the average man, the wage-worker, the farmer, the small trader, been so well off as in this country and at the present time. There have been abuses connected with the accumulation of wealth; yet it remains true that a fortune accumulated in legitimate business can be accumulated by the person specially benefited only on condition of conferring immense incidental benefits upon others. Successful enterprise, of the type which benefits all mankind, can only exist if the conditions are such as to offer great prizes as the rewards of success.

The captains of industry, who have driven the railway systems across this continent, who have built up our commerce, who have developed our manufactures, have on the whole done great good to our people. Without them the material development of which we are so justly proud could never have taken place. Moreover, we should recognize the immense importance to this material development of leaving as unhampered as is compatible with the public good the strong and forceful men upon whom the success of business operation inevitably rests. The slightest study of business conditions will satisfy any one capable of forming a judgment that the personal equation is the most important factor in a business operation; that the business ability of the man at the head of any business concern, big or little, is usually the factor which fixes the gulf between striking success and hopeless failure.

An additional reason for caution in dealing with corporations is to be found in the international commercial conditions of to-day. The same business conditions which have produced the great aggregations of corporate and individual wealth have made them very potent factors in international commercial competition. Business concerns which have the largest means at their disposal and are managed by the ablest men are naturally those which take the lead in the strife for commercial supremacy among the nations of the world. America has only just begun to assume that commanding position in the international business world which we believe will more and more be hers. It is of the utmost importance that this position be not jeopardized, especially at a time when the overflowing abundance of our own natural resources and the skill, business energy, and mechanical aptitude of our people make foreign markets essential. Under such conditions it would be most unwise to cramp or to fetter the youthful strength of our nation.

Moreover, it can not too often be pointed out that to strike with ignorant violence at the interests of one set of men almost inevitably endangers the interests of all. The fundamental rule in our national life—the rule which underlies all others—is that, on the whole, and in the long run, we shall go up or down together. There are exceptions; and in times of prosperity some will prosper far more, and in times of adversity some will suffer far more, than others; but speaking generally, a period of good times means that all share more or less in them, and in a period of hard times all feel the stress to a greater or less degree. It surely ought not

to be necessary to enter into any proof of this statement; the memory of the lean years which began in 1893 is still vivid, and we can contrast them with the conditions in this very year which is now closing. Disaster to great business enterprises can never have its effects limited to the men at the top. It spreads throughout, and while it is bad for everybody, it is worst for those farthest down. The capitalist may be shorn of his luxuries; but the wage-worker may be deprived of even bare necessities.

The mechanism of modern business is so delicate that extreme care must be taken not to interfere with it in a spirit of rashness or ignorance. Many of those who have made it their vocation to denounce the great industrial combinations which are popularly, although with technical inaccuracy, known as "trusts," appeal especially to hatred and fear. These are precisely the two emotions, particularly when combined with ignorance, which unfit men for the exercise of cool and steady judgment. In facing new industrial conditions, the whole history of the world shows that legislation will generally be both unwise and ineffective unless undertaken after calm inquiry and with sober self-restraint. Much of the legislation directed at the trusts would have been exceedingly mischievous had it not also been entirely ineffective. In accordance with a well-known sociological law, the ignorant or reckless agitator has been the really effective friend of the evils which he has been nominally opposing. In dealing with business interests, for the Government to undertake by crude and ill-considered legislation to do what may turn out to be bad, would be to incur the risk of such far-reaching national disaster that it would be preferable to undertake nothing at all. The men who demand the impossible or the undesirable serve as the allies of the forces with which they are nominally at war, for they hamper those who would endeavor to find out in rational fashion what the wrongs really are and to what extent and in what manner it is practicable to apply remedies.

All this is true; and yet it is also true that there are real and grave evils, one of the chief being overcapitalization because of its many baleful consequences; and a resolute and practical effort must be made to correct these evils.

There is a wide-spread conviction in the minds of the American people that the great corporations known as trusts are in certain of their features and tendencies hurtful to the general welfare. This springs from no spirit of envy or uncharitableness, nor lack of pride in the great industrial achievements that have placed this country at the head of the nations struggling for commercial supremacy. It does not rest upon a lack of intelligent appreciation of the necessity of meeting changing and changed conditions of trade with new methods, nor upon ignorance of the fact that combination of capital in the effort to accomplish great things is necessary when the world's progress demands that great things be done. It is based upon sincere conviction that combination and concentration should be, not prohibited, but supervised and within reasonable limits controlled; and in my judgment this conviction is right.

It is no limitation upon property rights or freedom of contract to require that when men receive from Government the privilege of doing business under corporate form, which frees them from individual responsibility, and enables them to call into their enterprises the capital of the public, they shall do so upon absolutely truth-

ful representations as to the value of the property in which the capital is to be invested. Corporations engaged in interstate commerce should be regulated if they are found to exercise a license working to the public injury. It should be as much the aim of those who seek for social betterment to rid the business world of crimes of cunning as to rid the entire body politic of crimes of violence. Great corporations exist only because they are created and safeguarded by our institutions; and it is therefore our right and our duty to see that they work in harmony with these institutions.

The first essential in determining how to deal with the great industrial combinations is knowledge of the facts—publicity. In the interest of the public, the Government should have the right to inspect and examine the workings of the great corporations engaged in interstate business. Publicity is the only sure remedy which we can now invoke. What further remedies are needed in the way of governmental regulation, or taxation, can only be determined after publicity has been obtained, by process of law, and in the course of administration. The first requisite is knowledge, full and complete—knowledge which may be made public to the world.

Artificial bodies, such as corporations and joint-stock or other associations, depending upon any statutory law for their existence or privileges, should be subject to proper governmental supervision, and full and accurate information as to their operations should be made public regularly at reasonable intervals.

The large corporations, commonly called trusts, though organized in one State, always do business in many States, often doing very little business in the State where they are incorporated. There is utter lack of uniformity in the State laws about them; and as no State has any exclusive interest in or power over their acts, it has in practise proved impossible to get adequate regulation through State action. Therefore, in the interest of the whole people, the nation should, without interfering with the power of the States in the matter itself, also assume power of supervision and regulation over all corporations doing an interstate business. This is especially true where the corporation derives a portion of its wealth from the existence of some monopolistic element or tendency in its business. There would be no hardship in such supervision; banks are subject to it, and in their case it is now accepted as a simple matter of course. Indeed, it is probable that supervision of corporations by the National Government need not go so far as is now the case with the supervision exercised over them by so conservative a State as Massachusetts, in order to produce excellent results.

When the Constitution was adopted, at the end of the eighteenth century, no human wisdom could foretell the sweeping changes, alike in industrial and political conditions, which were to take place by the beginning of the twentieth century. At that time it was accepted as a matter of course that the several States were the proper authorities to regulate, so far as was then necessary, the comparatively insignificant and strictly localized corporate bodies of the day. The conditions are now wholly different and wholly different action is called for. I believe that a law can be framed which will enable the National Government to exercise control along the lines above indicated; profiting by the experience gained through the passage and administration of the interstate commerce act. If, however, the judgment of the Congress is that it lacks the con-

stitutional power to pass such an act, then a constitutional amendment should be submitted to confer the power.

There should be created a Cabinet officer, to be known as Secretary of Commerce and Industries, as provided in the bill introduced at the last session of the Congress. It should be his province to deal with commerce in its broadest sense; including among many other things whatever concerns labor and all matters affecting the great business corporations and our merchant marine.

The course proposed is one phase of what should be a comprehensive and far-reaching scheme of constructive statesmanship for the purpose of broadening our markets, securing our business interests on a safe basis, and making firm our new position in the international industrial world; while scrupulously safeguarding the rights of wage-worker and capitalist, of investor and private citizen, so as to secure equity as between man and man in this republic.

With the sole exception of the farming interest, no one matter is of such vital moment to our whole people as the welfare of the wage-workers. If the farmer and the wage-worker are well off, it is absolutely certain that all others will be well off, too. It is therefore a matter for hearty congratulation that on the whole wages are higher to-day in the United States than ever before in our history, and far higher than in any other country. The standard of living is also higher than ever before. Every effort of legislator and administrator should be bent to secure the permanency of this condition of things and its improvement wherever possible. Not only must our labor be protected by the tariff, but it should also be protected so far as it is possible from the presence in this country of any laborers brought over by contract, or of those who, coming freely, yet represent a standard of living so depressed that they can undersell our men in the labor market and drag them to a lower level. I regard it as necessary, with this end in view, to reenact immediately the law excluding Chinese laborers and to strengthen it wherever necessary in order to make its enforcement entirely effective.

The National Government should demand the highest quality of service from its employees; and in return it should be a good employer. If possible legislation should be passed, in connection with the interstate commerce law, which will render effective the efforts of different States to do away with the competition of convict contract labor in the open labor market. So far as practicable under the conditions of Government work, provision should be made to render the enforcement of the eight-hour law easy and certain. In all industries carried on directly or indirectly for the United States Government women and children should be protected from excessive hours of labor, from night work, and from work under unsanitary conditions. The Government should provide in its contracts that all work should be done under "fair" conditions, and in addition to setting a high standard should uphold it by proper inspection, extending if necessary to the subcontractors. The Government should forbid all night work for women and children, as well as excessive overtime. For the District of Columbia a good factory law should be passed; and, as a powerful indirect aid to such laws, provision should be made to turn the inhabited alleys, the existence of which is a reproach to our capital city, into minor streets, where the inhabitants can live under conditions favorable to health and morals.

American wage-workers work with their heads as well as their hands. Moreover, they take a keen pride in what they are doing; so that, independent of the reward, they wish to turn out a perfect job. This is the great secret of our success in competition with the labor of foreign countries.

The most vital problem with which this country, and for that matter the whole civilized world, has to deal, is the problem which has for one side the betterment of social conditions, moral and physical, in large cities, and for another side the effort to deal with that tangle of far-reaching questions which we group together when we speak of "labor." The chief factor in the success of each man—wage-worker, farmer, and capitalist alike—must ever be the sum total of his own individual qualities and abilities. Second only to this comes the power of acting in combination or association with others. Very great good has been and will be accomplished by associations or unions of wage-workers, when managed with forethought, and when they combine insistence upon their own rights with law-abiding respect for the rights of others. The display of these qualities in such bodies is a duty to the nation no less than to the associations themselves. Finally, there must also in many cases be action by the Government in order to safeguard the rights and interests of all. Under our Constitution there is much more scope for such action by the State and the municipality than by the nation. But on points such as those touched on above the National Government can act.

When all is said and done, the rule of brotherhood remains as the indispensable prerequisite to success in the kind of national life for which we strive. Each man must work for himself, and unless he so works no outside help can avail him; but each man must remember also that he is indeed his brother's keeper, and that while no man who refuses to walk can be carried with advantage to himself or any one else, yet that each at times stumbles or halts, that each at times needs to have the helping hand outstretched to him. To be permanently effective, aid must always take the form of helping a man to help himself; and we can all best help ourselves by joining together in the work that is of common interest to all.

Our present immigration laws are unsatisfactory. We need every honest and efficient immigrant fitted to become an American citizen, every immigrant who comes here to stay, who brings here a strong body, a stout heart, a good head, and a resolute purpose to do his duty well in every way and to bring up his children as law-abiding and God-fearing members of the community. But there should be a comprehensive law enacted with the object of working a threefold improvement over our present system. First, we should aim to exclude absolutely not only all persons who are known to be believers in anarchistic principles or members of anarchistic societies, but also all persons who are of a low moral tendency or of unsavory reputation. This means that we should require a more thorough system of inspection abroad and a more rigid system of examination at our immigration ports, the former being especially necessary.

The second object of a proper immigration law ought to be to secure by a careful and not merely perfunctory educational test some intelligent capacity to appreciate American institutions and act sanely as American citizens. This would not keep out all anarchists, for many of them belong to the intelligent criminal class. But it

would do what is also in point, that is, tend to decrease the sum of ignorance, so potent in producing the envy, suspicion, malignant passion, and hatred of order, out of which anarchistic sentiment inevitably springs. Finally, all persons should be excluded who are below a certain standard of economic fitness to enter our industrial field as competitors with American labor. There should be proper proof of personal capacity to earn an American living and enough money to insure a decent start under American conditions. This would stop the influx of cheap labor, and the resulting competition which gives rise to so much of bitterness in American industrial life; and it would dry up the springs of the pestilential social conditions in our great cities, where anarchistic organizations have their greatest possibility of growth.

Both the educational and economic tests in a wise immigration law should be designed to protect and elevate the general body politic and social. A very close supervision should be exercised over the steamship companies which mainly bring over the immigrants, and they should be held to a strict accountability for any infraction of the law.

There is general acquiescence in our present tariff system as a national policy. The first requisite to our prosperity is the continuity and stability of this economic policy. Nothing could be more unwise than to disturb the business interests of the country by any general tariff change at this time. Doubt, apprehension, uncertainty are exactly what we most wish to avoid in the interest of our commercial and material well-being. Our experience in the past has shown that sweeping revisions of the tariff are apt to produce conditions closely approaching panic in the business world. Yet it is not only possible, but eminently desirable, to combine with the stability of our economic system a supplementary system of reciprocal benefit and obligation with other nations. Such reciprocity is an incident and result of the firm establishment and preservation of our present economic policy. It was specially provided for in the present tariff law.

Reciprocity must be treated as the handmaiden of protection. Our first duty is to see that the protection granted by the tariff in every case where it is needed is maintained, and that reciprocity be sought for so far as it can safely be done without injury to our home industries. Just how far this is must be determined according to the individual case, remembering always that every application of our tariff policy to meet our shifting national needs must be conditioned upon the cardinal fact that the duties must never be reduced below the point that will cover the difference between the labor cost here and abroad. The well-being of the wage-worker is a prime consideration of our entire policy of economic legislation.

Subject to this proviso of the proper protection necessary to our industrial well-being at home, the principle of reciprocity must command our hearty support. The phenomenal growth of our export trade emphasizes the urgency of the need for wider markets and for a liberal policy in dealing with foreign nations. Whatever is merely petty and vexatious in the way of trade restrictions should be avoided. The customers to whom we dispose of our surplus products in the long run, directly or indirectly, purchase those surplus products by giving us something in return. Their ability to purchase our products should as far as possible be secured by so arranging our

tariff as to enable us to take from them those products which we can use without harm to our own industries and labor, or the use of which will be of marked benefit to us.

It is most important that we should maintain the high level of our present prosperity. We have now reached the point in the development of our interests where we are not only able to supply our own markets, but to produce a constantly growing surplus for which we must find markets abroad. To secure these markets we can utilize existing duties in any case where they are no longer needed for the purpose of protection, or in any case where the article is not produced here and the duty is no longer necessary for revenue, as giving us something to offer in exchange for what we ask. The cordial relations with other nations which are so desirable will naturally be promoted by the course thus required by our own interests.

The natural line of development for a policy of reciprocity will be in connection with those of our productions which no longer require all of the support once needed to establish them upon a sound basis, and with those others where either because of natural or of economic causes we are beyond the reach of successful competition.

I ask the attention of the Senate to the reciprocity treaties laid before it by my predecessor.

The condition of the American merchant marine is such as to call for immediate remedial action by the Congress. It is discreditable to us as a nation that our merchant marine should be utterly insignificant in comparison to that of other nations which we overtop in other forms of business. We should not longer submit to conditions under which only a trifling portion of our great commerce is carried in our own ships. To remedy this state of things would not merely serve to build up our shipping interests, but it would also result in benefit to all who are interested in the permanent establishment of a wider market for American products, and would provide an auxiliary force for the navy. Ships work for their own countries just as railroads work for their terminal points. Shipping lines, if established to the principal countries with which we have dealings, would be of political as well as commercial benefit. From every standpoint it is unwise for the United States to continue to rely upon the ships of competing nations for the distribution of our goods. It should be made advantageous to carry American goods in American-built ships.

At present American shipping is under certain great disadvantages when put in competition with the shipping of foreign countries. Many of the fast foreign steamships, at a speed of 14 knots or above, are subsidized; and all our ships, sailing-vessels and steamers alike, cargo carriers of slow speed and mail-carriers of high speed, have to meet the fact that the original cost of building American ships is greater than is the case abroad; that the wages paid American officers and seamen are very much higher than those paid the officers and seamen of foreign competing countries; and that the standard of living on our ships is far superior to the standard of living on the ships of our commercial rivals.

Our Government should take such action as will remedy these inequalities. The American merchant marine should be restored to the ocean.

The act of March 14, 1900, intended unequivocally to establish gold as the standard money and to maintain at a parity therewith all forms of money medium in use with us, has been

shown to be timely and judicious. The price of our Government bonds in the world's market, when compared with the price of similar obligations issued by other nations, is a flattering tribute to our public credit. This condition it is evidently desirable to maintain.

In many respects the national banking law furnishes sufficient liberty for the proper exercise of the banking function; but there seems to be need of better safeguards against the deranging influence of commercial crises and financial panics. Moreover, the currency of the country should be made responsive to the demands of our domestic trade and commerce.

The collections from duties on imports and internal taxes continue to exceed the ordinary expenditures of the Government, thanks mainly to the reduced army expenditures. The utmost care should be taken not to reduce the revenues so that there will be any possibility of a deficit; but, after providing against any such contingency, means should be adopted which will bring the revenues more nearly within the limit of our actual needs. In his report to the Congress the Secretary of the Treasury considers all these questions at length, and I ask your attention to the report and recommendations.

I call special attention to the need of strict economy in expenditures. The fact that our national needs forbid us to be niggardly in providing whatever is actually necessary to our well-being should make us doubly careful to husband our national resources, as each of us husbands his private resources, by scrupulous avoidance of anything like wasteful or reckless expenditure. Only by avoidance of spending money on what is needless or unjustifiable can we legitimately keep our income to the point required to meet our needs that are genuine.

In 1887 a measure was enacted for the regulation of interstate railways, commonly known as the interstate commerce act. The cardinal provisions of that act were that railway rates should be just and reasonable and that all shippers, localities, and commodities should be accorded equal treatment. A commission was created and endowed with what were supposed to be the necessary powers to execute the provisions of this act.

That law was largely an experiment. Experience has shown the wisdom of its purposes, but has also shown, possibly that some of its requirements are wrong, certainly that the means devised for the enforcement of its provisions are defective. Those who complain of the management of the railways allege that established rates are not maintained; that rebates and similar devices are habitually resorted to; that these preferences are usually in favor of the large shipper; that they drive out of business the smaller competitor; that while many rates are too low, many others are excessive; and that gross preferences are made, affecting both localities and commodities. Upon the other hand, the railways assert that the law by its very terms tends to produce many of these illegal practices by depriving carriers of that right of concerted action which they claim is necessary to establish and maintain non-discriminating rates.

The act should be amended. The railway is a public servant. Its rates should be just to and open to all shippers alike. The Government should see to it that within its jurisdiction this is so and should provide a speedy, inexpensive, and effective remedy to that end. At the same time it must not be forgotten that our railways are the arteries through which the commercial

life-blood of this nation flows. Nothing could be more foolish than the enactment of legislation which would unnecessarily interfere with the development and operation of these commercial agencies. The subject is one of great importance and calls for the earnest attention of the Congress.

The Department of Agriculture during the past fifteen years has steadily broadened its work on economic lines, and has accomplished results of real value in upbuilding domestic and foreign trade. It has gone into new fields until it is now in touch with all sections of our country and with two of the island groups that have lately come under our jurisdiction, whose people must look to agriculture as a livelihood. It is searching the world for grains, grasses, fruits, and vegetables specially fitted for introduction into localities in the several States and Territories where they may add materially to our resources. By scientific attention to soil survey and possible new crops, to breeding of new varieties of plants, to experimental shipments, to animal industry and applied chemistry, very practical aid has been given our farming and stock-growing interests. The products of the farm have taken an unprecedented place in our export trade during the year that has just closed.

Public opinion throughout the United States has moved steadily toward a just appreciation of the value of forests, whether planted or of natural growth. The great part played by them in the creation and maintenance of the national wealth is now more fully realized than ever before.

Wise forest protection does not mean the withdrawal of forest resources, whether of wood, water, or grass, from contributing their full share to the welfare of the people, but, on the contrary, gives the assurance of larger and more certain supplies. The fundamental idea of forestry is the perpetuation of forests by use. Forest protection is not an end of itself; it is a means to increase and sustain the resources of our country and the industries which depend upon them. The preservation of our forests is an imperative business necessity. We have come to see clearly that whatever destroys the forest, except to make way for agriculture, threatens our well-being.

The practical usefulness of the national forest reserves to the mining, grazing, irrigation, and other interests of the regions in which the reserves lie has led to a wide-spread demand by the people of the West for their protection and extension. The forest reserves will inevitably be of still greater use in the future than in the past. Additions should be made to them whenever practicable, and their usefulness should be increased by a thoroughly business-like management.

At present the protection of the forest reserves rests with the General Land Office, the mapping and description of their timber with the United States Geological Survey, and the preparation of plans for their conservative use with the Bureau of Forestry, which is also charged with the general advancement of practical forestry in the United States. These various functions should be united in the Bureau of Forestry, to which they properly belong. The present diffusion of responsibility is bad from every standpoint. It prevents that effective cooperation between the Government and the men who utilize the resources of the reserves, without which the interests of both must suffer. The scientific bureaus generally should be put under the Department of Agriculture. The President should have by law

the power of transferring lands for use as forest reserves to the Department of Agriculture. He already has such power in the case of lands needed by the Departments of War and the Navy.

The wise administration of the forest reserves will be not less helpful to the interests which depend on water than to those which depend on wood and grass. The water-supply itself depends upon the forest. In the arid region it is water, not land, which measures production. The western half of the United States would sustain a population greater than that of our whole country to-day if the waters that now run to waste were saved and used for irrigation. The forest and water problems are perhaps the most vital internal questions of the United States.

Certain of the forest reserves should also be made preserves for the wild forest creatures. All of the reserves should be better protected from fires. Many of them need special protection because of the great injury done by live stock, above all by sheep. The increase in deer, elk, and other animals in the Yellowstone Park shows what may be expected when other mountain forests are properly protected by law and properly guarded. Some of these areas have been so denuded of surface vegetation by overgrazing that the ground-breeding birds, including grouse and quail, and many mammals, including deer, have been exterminated or driven away. At the same time the water-storing capacity of the surface has been decreased or destroyed, thus promoting floods in times of rain and diminishing the flow of streams between rains.

In cases where natural conditions have been restored for a few years, vegetation has again carpeted the ground, birds and deer are coming back, and hundreds of persons, especially from the immediate neighborhood, come each summer to enjoy the privilege of camping. Some at least of the forest reserves should afford perpetual protection to the native fauna and flora, safe havens of refuge to our rapidly diminishing wild animals of the larger kinds, and free camping-grounds for the ever-increasing numbers of men and women who have learned to find rest, health, and recreation in the splendid forests and flower-clad meadows of our mountains. The forest reserves should be set apart forever for the use and benefit of our people as a whole and not sacrificed to the short-sighted greed of a few.

The forests are natural reservoirs. By restraining the streams in flood and replenishing them in drought they make possible the use of waters otherwise wasted. They prevent the soil from washing, and so protect the storage-reservoirs from filling up with silt. Forest conservation is therefore an essential condition of water conservation.

The forests alone can not, however, fully regulate and conserve the waters of the arid region. Great storage-works are necessary to equalize the flow of streams and to save the flood waters. Their construction has been conclusively shown to be an undertaking too vast for private effort. Nor can it be best accomplished by the individual States acting alone. Far-reaching interstate problems are involved; and the resources of single States would often be inadequate. It is properly a national function, at least in some of its features. It is as right for the National Government to make the streams and rivers of the arid region useful by engineering works for water storage as to make useful the rivers and harbors of the humid region by engineering

works of another kind. The storing of the floods in reservoirs at the head waters of our rivers is but an enlargement of our present policy of river control, under which levees are built on the lower reaches of the same streams.

The Government should construct and maintain these reservoirs as it does other public works. Where their purpose is to regulate the flow of streams, the water should be turned freely into the channels in the dry season to take the same course under the same laws as the natural flow.

The reclamation of the unsettled arid public lands presents a different problem. Here it is not enough to regulate the flow of streams. The object of the Government is to dispose of the land to settlers who will build homes upon it. To accomplish this object water must be brought within their reach.

The pioneer settlers on the arid public domain chose their homes along streams from which they could themselves divert the water to reclaim their holdings. Such opportunities are practically gone. There remain, however, vast areas of public land which can be made available for homestead settlement, but only by reservoirs and main-line canals impracticable for private enterprise. These irrigation works should be built by the National Government. The lands reclaimed by them should be reserved by the Government for actual settlers, and the cost of construction should so far as possible be repaid by the land reclaimed. The distribution of the water, the division of the streams among irrigators, should be left to the settlers themselves in conformity with State laws and without interference with those laws or with vested rights. The policy of the National Government should be to aid irrigation in the several States and Territories in such manner as will enable the people in the local communities to help themselves, and as will stimulate needed reforms in the State laws and regulations governing irrigation.

The reclamation and settlement of the arid lands will enrich every portion of our country, just as the settlement of the Ohio and Mississippi valleys brought prosperity to the Atlantic States. The increased demand for manufactured articles will stimulate industrial production, while wider home markets and the trade of Asia will consume the larger food supplies and effectually prevent Western competition with Eastern agriculture. Indeed, the products of irrigation will be consumed chiefly in upbuilding local centers of mining and other industries, which would otherwise not come into existence at all. Our people as a whole will profit, for successful home-making is but another name for the upbuilding of the nation.

The necessary foundation has already been laid for the inauguration of the policy just described. It would be unwise to begin by doing too much, for a great deal will doubtless be learned, both as to what can and what cannot be safely attempted, by the early efforts, which must of necessity be partly experimental in character. At the very beginning the Government should make clear, beyond shadow of doubt, its intention to pursue this policy on lines of the broadest public interest. No reservoir or canal should ever be built to satisfy selfish personal or local interests, but only in accordance with the advice of trained experts, after long investigation has shown the locality where all the conditions combine to make the work most needed and fraught with the greatest usefulness to the community

as a whole. There should be no extravagance, and the believers in the need of irrigation will most benefit their cause by seeing to it that it is free from the least taint of excessive or reckless expenditure of the public moneys.

Whatever the nation does for the extension of irrigation should harmonize with, and tend to improve, the condition of those now living on irrigated land. We are not at the starting-point of this development. Over \$200,000,000 of private capital has already been expended in the construction of irrigation works, and many million acres of arid land reclaimed. A high degree of enterprise and ability has been shown in the work itself; but as much can not be said in reference to the laws relating thereto. The security and value of the homes created depend largely on the stability of titles to water; but the majority of these rest on the uncertain foundation of court decisions rendered in ordinary suits at law. With a few creditable exceptions, the arid States have failed to provide for the certain and just division of streams in times of scarcity. Lax and uncertain laws have made it possible to establish rights to water in excess of actual uses or necessities, and many streams have already passed into private ownership, or a control equivalent to ownership.

Whoever controls a stream practically controls the land it renders productive, and the doctrine of private ownership of water apart from land can not prevail without causing enduring wrong. The recognition of such ownership, which has been permitted to grow up in the arid regions, should give way to a more enlightened and larger recognition of the rights of the public in the control and disposal of the public water-supplies. Laws founded upon conditions obtaining in humid regions, where water is too abundant to justify hoarding it, have no proper application in a dry country.

In the arid States the only right to water which should be recognized is that of use. In irrigation this right should attach to the land reclaimed and be inseparable therefrom. Granting perpetual water rights to others than users, without compensation to the public, is open to all the objections which apply to giving away perpetual franchises to the public utilities of cities. A few of the Western States have already recognized this, and have incorporated in their constitutions the doctrine of perpetual State ownership of water.

The benefits which have followed the unaided development of the past justify the nation's aid and cooperation in the more difficult and important work yet to be accomplished. Laws so vitally affecting homes as those which control the water-supply will only be effective when they have the sanction of the irrigators; reforms can only be final and satisfactory when they come through the enlightenment of the people most concerned. The larger development which national aid insures should, however, awaken in every arid State the determination to make its irrigation system equal in justice and effectiveness that of any country in the civilized world. Nothing could be more unwise than for isolated communities to continue to learn everything experimentally, instead of profiting by what is known elsewhere. We are dealing with a new and momentous question, in the pregnant years while institutions are forming, and what we do will affect not only the present but future generations.

Our aim should be not simply to reclaim the largest area of land and provide homes for the

largest number of people, but to create for this new industry the best possible social and industrial conditions; and this requires that we not only understand the existing situation, but avail ourselves of the best experience of the time in the solution of its problems. A careful study should be made, both by the nation and the States, of the irrigation laws and conditions here and abroad. Ultimately it will probably be necessary for the nation to cooperate with the several arid States in proportion as these States by their legislation and administration show themselves fit to receive it.

In Hawaii our aim must be to develop the territory on the traditional American lines. We do not wish a region of large estates tilled by cheap labor; we wish a healthy American community of men who themselves till the farms they own. All our legislation for the islands should be shaped with this end in view; the well-being of the average home-maker must afford the true test of the healthy development of the islands. The land policy should as nearly as possible be modeled on our homestead system.

It is a pleasure to say that it is hardly more necessary to report as to Porto Rico than as to any State or Territory within our continental limits. The island is thriving as never before, and it is being administered efficiently and honestly. Its people are now enjoying liberty and order under the protection of the United States, and upon this fact we congratulate them and ourselves. Their material welfare must be as carefully and jealously considered as the welfare of any other portion of our country. We have given them the great gift of free access for their products to the markets of the United States. I ask the attention of the Congress to the need of legislation concerning the public lands of Porto Rico.

In Cuba such progress has been made toward putting the independent government of the island upon a firm footing that before the present session of the Congress closes this will be an accomplished fact. Cuba will then start as her own mistress; and to the beautiful Queen of the Antilles, as she unfolds this new page of her destiny, we extend our heartiest greetings and good wishes. Elsewhere I have discussed the question of reciprocity. In the case of Cuba, however, there are weighty reasons of morality and of national interest why the policy should be held to have a peculiar application, and I most earnestly ask your attention to the wisdom, indeed to the vital need, of providing for a substantial reduction in the tariff duties on Cuban imports into the United States. Cuba has in her Constitution affirmed what we desired, that she should stand, in international matters, in closer and more friendly relations with us than with any other power; and we are bound by every consideration of honor and expediency to pass commercial measures in the interest of her material well-being.

In the Philippines our problem is larger. They are very rich tropical islands, inhabited by many varying tribes, representing widely different stages of progress toward civilization. Our earnest effort is to help these people upward along the stony and difficult path that leads to self-government. We hope to make our administration of the islands honorable to our nation by making it of the highest benefit to the Filipinos themselves; and as an earnest of what we intend to do, we point to what we have done. Already a greater measure of material prosperity and of governmental honesty and efficiency has been at-

tained in the Philippines than ever before in their history.

It is no light task for a nation to achieve the temperamental qualities without which the institutions of free government are but an empty mockery. Our people are now successfully governing themselves, because for more than a thousand years they have been slowly fitting themselves, sometimes consciously, sometimes unconsciously, toward this end. What has taken us thirty generations to achieve, we can not expect to see another race accomplish out of hand, especially when large portions of that race start very far behind the point which our ancestors had reached even thirty generations ago. In dealing with the Philippine people we must show both patience and strength, forbearance and steadfast resolution. Our aim is high. We do not desire to do for the islanders merely what has elsewhere been done for tropic peoples by even the best foreign governments. We hope to do for them what has never before been done for any people of the tropics—to make them fit for self-government after the fashion of the really free nations.

History may safely be challenged to show a single instance in which a masterful race such as ours, having been forced by the exigencies of war to take possession of an alien land, has behaved to its inhabitants with the disinterested zeal for their progress that our people have shown in the Philippines. To leave the islands at this time would mean that they would fall into a welter of murderous anarchy. Such desertion of duty on our part would be a crime against humanity. The character of Gov. Taft and of his associates and subordinates is a proof, if such be needed, of the sincerity of our effort to give the islanders a constantly increasing measure of self-government exactly as fast as they show themselves fit to exercise it. Since the civil government was established not an appointment has been made in the islands with any reference to considerations of political influence, or ought else save the fitness of the man and the needs of the service.

In our anxiety for the welfare and progress of the Philippines, it may be that here and there we have gone too rapidly in giving them local self-government. It is on this side that our error, if any, has been committed. No competent observer, sincerely desirous of finding out the facts and influenced only by a desire for the welfare of the natives, can assert that we have not gone far enough. We have gone to the very verge of safety in hastening the process. To have taken a single step farther or faster in advance would have been folly and weakness, and might well have been crime. We are extremely anxious that the natives shall show the power of governing themselves. We are anxious first, for their sakes, and next, because it relieves us of a great burden. There need not be the slightest fear of our not continuing to give them all the liberty for which they are fit.

The only fear is lest in our overanxiety we give them a degree of independence for which they are unfit, thereby inviting reaction and disaster. As fast as there is any reasonable hope that in a given district the people can govern themselves, self-government has been given in that district. There is not a locality fitted for self-government which has not received it. But it may well be that in certain cases it will have to be withdrawn because the inhabitants show themselves unfit to exercise it; such instances have already occurred. In other words, there is not the slightest chance of our failing to show a

sufficiently humanitarian spirit. The danger comes in the opposite direction.

There are still troubles ahead in the islands. The insurrection has become an affair of local banditti and marauders, who deserve no higher regard than the brigands of portions of the Old World. Encouragement, direct or indirect, to these insurrectos stands on the same footing as encouragement to hostile Indians in the days when we still had Indian wars. Exactly as our aim is to give to the Indian who remains peaceful the fullest and amplest consideration, but to have it understood that we will show no weakness if he goes on the war-path, so we must make it evident, unless we are false to our own traditions and to the demands of civilization and humanity, that while we will do everything in our power for the Filipino who is peaceful, we will take the sternest measures with the Filipino who follows the path of the insurrecto and the ladrone.

The heartiest praise is due to large numbers of the natives of the islands for their steadfast loyalty. The Macabebes have been conspicuous for their courage and devotion to the flag. I recommend that the Secretary of War be empowered to take some systematic action in the way of aiding those of these men who are crippled in the service and the families of those who are killed.

The time has come when there should be additional legislation for the Philippines. Nothing better can be done for the islands than to introduce industrial enterprises. Nothing would benefit them so much as throwing them open to industrial development. The connection between idleness and mischief is proverbial, and the opportunity to do remunerative work is one of the surest preventives of war. Of course no business man will go into the Philippines unless it is to his interest to do so; and it is immensely to the interest of the islands that he should go in. It is therefore necessary that the Congress should pass laws by which the resources of the islands can be developed; so that franchises (for limited terms of years) can be granted to companies doing business in them, and every encouragement be given to the incoming of business men of every kind.

Not to permit this is to do a wrong to the Philippines. The franchises must be granted and the business permitted only under regulations which will guarantee the islands against any kind of improper exploitation. But the vast natural wealth of the islands must be developed, and the capital willing to develop it must be given the opportunity. The field must be thrown open to individual enterprise, which has been the real factor in the development of every region over which our flag has flown. It is urgently necessary to enact suitable laws dealing with general transportation, mining, banking, currency, homesteads, and the use and ownership of the lands and timber. These laws will give free play to industrial enterprise; and the commercial development which will surely follow will afford to the people of the islands the best proofs of the sincerity of our desire to aid them.

I call your attention most earnestly to the crying need of a cable to Hawaii and the Philippines, to be continued from the Philippines to points in Asia. We should not defer a day longer than necessary the construction of such a cable. It is demanded not merely for commercial but for political and military considerations.

Either the Congress should immediately provide for the construction of a Government cable,

or else an arrangement should be made by which like advantages to those accruing from a Government cable may be secured to the Government by contract with a private cable company.

No single great material work which remains to be undertaken on this continent is of such consequence to the American people as the building of a canal across the isthmus connecting North and South America. Its importance to the nation is by no means limited merely to its material effects upon our business prosperity; and yet with view to these effects alone it would be to the last degree important for us immediately to begin it. While its beneficial effects would perhaps be most marked upon the Pacific coast and the Gulf and South Atlantic States, it would also greatly benefit other sections. It is emphatically a work which it is for the interest of the entire country to begin and complete as soon as possible; it is one of those great works which only a great nation can undertake with prospects of success, and which when done are not only permanent assets in the nation's material interests, but standing monuments to its constructive ability.

I am glad to be able to announce to you that our negotiations on this subject with Great Britain, conducted on both sides in a spirit of friendliness and mutual good-will and respect, have resulted in my being able to lay before the Senate a treaty which if ratified will enable us to begin preparations for an isthmian canal at any time, and which guarantees to this nation every right that it has ever asked in connection with the canal. In this treaty, the old Clayton-Bulwer treaty, so long recognized as inadequate to supply the base for the construction and maintenance of a necessarily American ship-canal, is abrogated. It specifically provides that the United States alone shall do the work of building and assume the responsibility of safeguarding the canal and shall regulate its neutral use by all nations on terms of equality without the guaranty or interference of any outside nation from any quarter. The signed treaty will at once be laid before the Senate, and if approved the Congress can then proceed to give effect to the advantages it secures us by providing for the building of the canal.

The true end of every great and free people should be self-respecting peace; and this nation most earnestly desires sincere and cordial friendship with all others. Over the entire world, of recent years, wars between the great civilized powers have become less and less frequent. Wars with barbarous and semibarbarous peoples come in an entirely different category, being merely a most regrettable but necessary international police duty which must be performed for the sake of the welfare of mankind. Peace can only be kept with certainty where both sides wish to keep it; but more and more the civilized peoples are realizing the wicked folly of war and are attaining that condition of just and intelligent regard for the rights of others which will in the end, as we hope and believe, make world-wide peace possible. The peace conference at The Hague gave definite expression to this hope and belief and marked a stride toward their attainment.

The same peace conference acquiesced in our statement of the Monroe doctrine as compatible with the purposes and aims of the conference.

The Monroe doctrine should be the cardinal feature of the foreign policy of all the nations of the two Americas, as it is of the United States. Just seventy-eight years have passed since Presi-

dent Monroe in his annual message announced that "the American continents are henceforth not to be considered as subjects for future colonization by any European power." In other words, the Monroe doctrine is a declaration that there must be no territorial aggrandizement by any non-American power at the expense of any American power on American soil. It is no wise intended as hostile to any nation in the Old World. Still less is it intended to give cover to any aggression by one New World power at the expense of any other. It is simply a step, and a long step, toward assuring the universal peace of the world by securing the possibility of permanent peace on this hemisphere.

During the past century other influences have established the permanence and independence of the smaller states of Europe. Through the Monroe doctrine we hope to be able to safeguard like independence and secure like permanence for the lesser among the New World nations.

This doctrine has nothing to do with the commercial relations of any American power, save that it in truth allows each of them to form such as it desires. In other words, it is really a guaranty of the commercial independence of the Americas. We do not ask under this doctrine for any exclusive commercial dealings with any other American state. We do not guarantee any state against punishment if it misconducts itself, provided that punishment does not take the form of the acquisition of territory by any non-American power.

Our attitude in Cuba is a sufficient guaranty of our own good faith. We have not the slightest desire to secure any territory at the expense of any of our neighbors. We wish to work with them hand in hand, so that all of us may be uplifted together, and we rejoice over the good fortune of any of them, we gladly hail their material prosperity and political stability, and are concerned and alarmed if any of them fall into industrial or political chaos. We do not wish to see any Old World military power grow up on this continent, or to be compelled to become a military power ourselves. The peoples of the Americas can prosper best if left to work out their own salvation in their own way.

The work of upbuilding the navy must be steadily continued. No one point of our policy, foreign or domestic, is more important than this to the honor and material welfare, and above all to the peace, of our nation in the future. Whether we desire it or not, we must henceforth recognize that we have international duties no less than international rights. Even if our flag were hauled down in the Philippines and Porto Rico, even if we decided not to build the isthmian canal, we should need a thoroughly trained navy of adequate size, or else be prepared definitely and for all time to abandon the idea that our nation is among those whose sons go down to the sea in ships. Unless our commerce is always to be carried in foreign bottoms, we must have war craft to protect it.

Inasmuch, however, as the American people have no thought of abandoning the path upon which they have entered, and especially in view of the fact that the building of the isthmian canal is fast becoming one of the matters which the whole people are united in demanding, it is imperative that our navy should be put and kept in the highest state of efficiency, and should be made to answer to our growing needs. So far from being in any way a provocation to war, an adequate and highly trained navy is the best guaranty against war, the cheapest and most ef-

fective peace insurance. The cost of building and maintaining such a navy represents the very lightest premium for insuring peace which this nation can possibly pay.

Probably no other great nation in the world is so anxious for peace as we are. There is not a single civilized power which has anything whatever to fear from aggressiveness on our part. All we want is peace; and toward this end we wish to be able to secure the same respect for our rights from others which we are eager and anxious to extend to their rights in return, to insure fair treatment to us commercially, and to guarantee the safety of the American people.

Our people intend to abide by the Monroe doctrine and to insist upon it as the one sure means of securing the peace of the Western Hemisphere. The navy offers us the only means of making our insistence upon the Monroe doctrine anything but a subject of derision to whatever nation chooses to disregard it. We desire the peace which comes as of right to the just man armed; not the peace granted on terms of ignominy to the craven and the weakling.

It is not possible to improvise a navy after war breaks out. The ships must be built and the men trained long in advance. Some auxiliary vessels can be turned into makeshifts which will do in default of any better for the minor work, and a proportion of raw men can be mixed with the highly trained, their shortcomings being made good by the skill of their fellows; but the efficient fighting force of the navy when pitted against an equal opponent will be found almost exclusively in the war-ships that have been regularly built and in the officers and men who through years of faithful performance of sea duty have been trained to handle their formidable but complex and delicate weapons with the highest efficiency. In the late war with Spain the ships that dealt the decisive blows at Manila and Santiago had been launched from two to fourteen years, and they were able to do as they did because the men in the conning towers, the gun turrets, and the engine-rooms had through long years of practise at sea learned how to do their duty.

Our present navy was begun in 1882. At that period our navy consisted of a collection of antiquated wooden ships, already almost as out of place against modern war-vessels as the galleys of Alcibiades and Hamilear—certainly as the ships of Tromp and Blake. Nor at that time did we have men fit to handle a modern man-of-war. Under the wise legislation of the Congress and the successful administration of a succession of patriotic Secretaries of the Navy, belonging to both political parties, the work of upbuilding the navy went on, and ships equal to any in the world of their kind were continually added; and what was even more important, these ships were exercised at sea singly and in squadrons until the men aboard them were able to get the best possible service out of them. The result was seen in the short war with Spain, which was decided with such rapidity because of the infinitely greater preparedness of our navy than of the Spanish navy.

While awarding the fullest honor to the men who actually commanded and manned the ships which destroyed the Spanish sea forces in the Philippines and in Cuba, we must not forget that an equal meed of praise belongs to those without whom neither blow could have been struck. The congressmen who voted years in advance the money to lay down the ships, to build the guns, to buy the armor-plate; the department officials

and the business men and wage-workers who furnished what the Congress had authorized; the Secretaries of the Navy who asked for and expended the appropriations; and finally the officers who, in fair weather and foul, on actual sea service, trained and disciplined the crews of the ships when there was no war in sight—all are entitled to a full share in the glory of Manila and Santiago, and the respect accorded by every true American to those who wrought such signal triumph for our country. It was forethought and preparation which secured us the overwhelming triumph of 1898. If we fail to show forethought and preparation now, there may come a time when disaster will befall us instead of triumph; and should this time come, the fault will rest primarily, not upon those whom the accident of events puts in supreme command at the moment, but upon those who have failed to prepare in advance.

There should be no cessation in the work of completing our navy. So far ingenuity has been wholly unable to devise a substitute for the great war craft whose hammering guns beat out the mastery of the high seas. It is unsafe and unwise not to provide this year for several additional battle-ships and heavy armored cruisers, with auxiliary and lighter craft in proportion; for the exact numbers and character I refer you to the report of the Secretary of the Navy. But there is something we need even more than additional ships, and this is additional officers and men. To provide battle-ships and cruisers and then lay them up, with the expectation of leaving them unmanned until they are needed in actual war, would be worse than folly; it would be a crime against the nation.

To send any war-ship against a competent enemy unless those aboard it have been trained by years of actual sea service, including incessant gunnery practise, would be to invite not merely disaster, but the bitterest shame and humiliation. Four thousand additional seamen and 1,000 additional marines should be provided; and an increase in the officers should be provided by making a large addition to the classes at Annapolis. There is one small matter which should be mentioned in connection with Annapolis. The pretentious and unmeaning title of "naval cadet" should be abolished; the title of "midshipman," full of historic association, should be restored.

Even in time of peace a war-ship should be used until it wears out, for only so can it be kept fit to respond to any emergency. The officers and men alike should be kept as much as possible on blue water, for it is there only they can learn their duties as they should be learned. The big vessels should be maneuvered in squadrons containing not merely battle-ships, but the necessary proportion of cruisers and scouts. The torpedo-boats should be handled by the younger officers in such manner as will best fit the latter to take responsibility and meet the emergencies of actual warfare.

Every detail ashore which can be performed by a civilian should be so performed, the officer being kept for his special duty in the sea service. Above all, gunnery practise should be unceasing. It is important to have our navy of adequate size, but it is even more important that ship for ship it should equal in efficiency any navy in the world. This is possible only with highly drilled crews and officers, and this in turn imperatively demands continuous and progressive instruction in target practise, ship handling, squadron tactics, and general disci-

pline. Our ships must be assembled in squadrons actively cruising away from harbors and never long at anchor. The resulting wear upon engines and hulls must be endured; a battle-ship worn out in long training of officers and men is well paid for by the results, while, on the other hand, no matter in how excellent condition, it is useless if the crew be not expert.

We now have 17 battle-ships appropriated for, of which 9 are completed and have been commissioned for actual service. The remaining 8 will be ready in from two to four years, but it will take at least that time to recruit and train the men to fight them. It is of vast concern that we have trained crews ready for the vessels by the time they are commissioned. Good ships and good guns are simply good weapons, and the best weapons are useless save in the hands of men who know how to fight with them. The men must be trained and drilled under a thorough and well-planned system of progressive instruction, while the recruiting must be carried on with still greater vigor. Every effort must be made to exalt the main function of the officer—the command of men. The leading graduates of the Naval Academy should be assigned to the combatant branches, the line and marines.

Many of the essentials of success are already recognized by the General Board, which, as the central office of a growing staff, is moving steadily toward a proper war efficiency and a proper efficiency of the whole navy, under the Secretary. This General Board, by fostering the creation of a general staff, is providing for the official and then the general recognition of our altered conditions as a nation and of the true meaning of a great war fleet, which meaning is, first, the best men, and, second, the best ships.

The naval militia forces are State organizations, and are trained for coast service, and in event of war they will constitute the inner line of defense. They should receive hearty encouragement from the General Government.

But in addition we should at once provide for a national navy reserve, organized and trained under the direction of the Navy Department, and subject to the call of the Chief Executive whenever war becomes imminent. It should be a real auxiliary of the naval seagoing peace establishment, and offer material to be drawn on at once for manning our ships in time of war. It should be composed of graduates of the Naval Academy, graduates of the naval militia, officers and crews of coast-line steamers, longshore schooners, fishing vessels, and steam-yachts, together with the coast population about such centers as life-saving stations and lighthouses.

The American people must either build and maintain an adequate navy or else make up their minds definitely to accept a secondary position in international affairs, not merely in political, but in commercial matters. It has been well said that there is no surer way of courting national disaster than to be "opulent, aggressive, and unarmed."

It is not necessary to increase our army beyond its present size at this time. But it is necessary to keep it at the highest point of efficiency. The individual units who as officers and enlisted men compose this army are, we have good reason to believe, at least as efficient as those of any other army in the entire world. It is our duty to see that their training is of a kind to insure the highest possible expression of power to these units when acting in combination.

The conditions of modern war are such as to

make an infinitely heavier demand than ever before upon the individual character and capacity of the officer and the enlisted men, and to make it far more difficult for men to act together with effect. At present the fighting must be done in extended order, which means that each man must act for himself and at the same time act in combination with others with whom he is no longer in the old-fashioned elbow-to-elbow touch. Under such conditions a few men of the highest excellence are worth more than many men without the special skill which is only found as the result of special training applied to men of exceptional physique and morale. But nowadays the most valuable fighting man and the most difficult to perfect is the rifleman who is also a skilful and daring rider.

The proportion of our cavalry regiments has wisely been increased. The American cavalryman, trained to maneuver and fight with equal facility on foot and on horseback, is the best type of soldier for general purposes now to be found in the world. The ideal cavalryman of the present day is a man who can fight on foot as effectively as the best infantryman, and who is in addition unsurpassed in the care and management of his horse and in his ability to fight on horseback.

A general staff should be created. As for the present staff and supply departments, they should be filled by details from the line, the men so detailed returning after a while to their line duties. It is very undesirable to have the senior grades of the army composed of men who have come to fill the positions by the mere fact of seniority. A system should be adopted by which there shall be an elimination grade by grade of those who seem unfit to render the best service in the next grade. Justice to the veterans of the civil war who are still in the army would seem to require that in the matter of retirements they be given by law the same privileges accorded to their comrades in the navy.

The process of elimination of the least fit should be conducted in a manner that would render it practically impossible to apply political or social pressure on behalf of any candidate, so that each man may be judged purely on his own merits. Pressure for the promotion of civil officials for political reasons is bad enough, but it is tenfold worse where applied on behalf of officers of the army or navy. Every promotion and every detail under the War Department must be made solely with regard to the good of the service and to the capacity and merit of the man himself. No pressure, political, social, or personal, of any kind, will be permitted to exercise the least effect in any question of promotion or detail; and if there is reason to believe that such pressure is exercised at the instigation of the officer concerned, it will be held to militate against him. In our army we can not afford to have rewards or duties distributed save on the simple ground that those who by their own merits are entitled to the rewards get them, and that those who are peculiarly fit to do the duties are chosen to perform them.

Every effort should be made to bring the army to a constantly increasing state of efficiency. When on actual service no work save that directly in the line of such service should be required. The paper work in the army, as in the navy, should be greatly reduced. What is needed is proved power of command and capacity to work well in the field. Constant care is necessary to prevent dry rot in the transportation and commissary departments.

Our army is so small and so much scattered that it is very difficult to give the higher officers (as well as the lower officers and the enlisted men) a chance to practise maneuvers in mass and on a comparatively large scale. In time of need no amount of individual excellence would avail against the paralysis which would follow inability to work as a coherent whole, under skilful and daring leadership. The Congress should provide means whereby it will be possible to have field exercises by at least a division of regulars, and if possible also a division of National Guardsmen once a year. These exercises might take the form of field maneuvers; or, if on the Gulf coast or the Pacific or Atlantic seaboard, or in the region of the Great Lakes, the army corps when assembled could be marched from some inland point to some point on the water, there embarked, disembarked after a couple of days' journey at some other point, and again marched inland. Only by actual handling and providing for men in masses while they are marching, camping, embarking, and disembarking, will it be possible to train the higher officers to perform their duties well and smoothly.

A great debt is owing from the public to the men of the army and navy. They should be so treated as to enable them to reach the highest point of efficiency, so that they may be able to respond instantly to any demand made upon them to sustain the interests of the nation and the honor of the flag. The individual American enlisted man is probably on the whole a more formidable fighting man than the regular of any other army. Every consideration should be shown him, and in return the highest standard of usefulness should be exacted from him. It is well worth while for the Congress to consider whether the pay of enlisted men upon second and subsequent enlistments should not be increased to correspond with the increased value of the veteran soldier.

Much good has already come from the act reorganizing the army, passed early in the present year. The three prime reforms, all of them of literally inestimable value, are, first, the substitution of four-year details from the line for permanent appoints in the so-called staff divisions; second, the establishment of a corps of artillery with a chief at the head; third, the establishment of a maximum and minimum limit for the army. It would be difficult to overestimate the improvement in the efficiency of our army which these three reforms are making, and have in part already effected.

The reorganization provided for by the act has been substantially accomplished. The improved conditions in the Philippines have enabled the War Department materially to reduce the military charge upon our revenue and to arrange the number of soldiers so as to bring this number much nearer to the minimum than to the maximum limit established by law. There is, however, need of supplementary legislation. Thorough military education must be provided, and in addition to the regulars the advantages of this education should be given to the officers of the National Guard and others in civil life who desire intelligently to fit themselves for possible military duty. The officers should be given the chance to perfect themselves by study in the higher branches of this art. At West Point the education should be of the kind most apt to turn out men who are good in actual field service; too much stress should not be laid on mathematics, nor should proficiency therein be held to establish the right of entry to a corps

d'élite. The typical American officer of the best kind need not be a good mathematician; but he must be able to master himself, to control others, and to show boldness and fertility of resource in every emergency.

Action should be taken in reference to the militia and to the raising of volunteer forces. Our militia law is obsolete and worthless. The organization and armament of the National Guard of the several States, which are treated as militia in the appropriations by the Congress, should be made identical with those provided for the regular forces. The obligations and duties of the guard in time of war should be carefully defined, and a system established by law under which the method of procedure of raising volunteer forces should be prescribed in advance. It is utterly impossible in the excitement and haste of impending war to do this satisfactorily if the arrangements have not been made long beforehand. Provision should be made for utilizing in the first volunteer organizations called out the training of those citizens who have already had experience under arms, and especially for the selection in advance of the officers of any force which may be raised; for careful selection of the kind necessary is impossible after the outbreak of war.

That the army is not at all a mere instrument of destruction has been shown during the last three years. In the Philippines, Cuba, and Porto Rico it has proved itself a great constructive force, a most potent implement for the upbuilding of a peaceful civilization.

No other citizens deserve so well of the republic as the veterans, the survivors of those who saved the Union. They did the one deed which if left undone would have meant that all else in our history went for nothing. But for their steadfast prowess in the greatest crisis of our history, all our annals would be meaningless, and our great experiment in popular freedom and self-government a gloomy failure. Moreover, they not only left us a united nation, but they left us also as a heritage the memory of the mighty deeds by which the nation was kept united. We are now indeed one nation, one in fact as well as in name; we are united in our devotion to the flag which is the symbol of national greatness and unity; and the very completeness of our union enables us all, in every part of the country, to glory in the valor shown alike by the sons of the North and the sons of the South in the times that tried men's souls.

The men who in the last three years have done so well in the East and the West Indies and on the mainland of Asia have shown that this remembrance is not lost. In any serious crisis the United States must rely for the great mass of its fighting men upon the volunteer soldiery who do not make a permanent profession of the military career; and whenever such a crisis arises the deathless memories of the civil war will give to Americans the lift of lofty purpose which comes to those whose fathers have stood valiantly in the forefront of the battle.

The merit system of making appointments is in its essence as democratic and American as the common-school system itself. It simply means that in clerical and other positions where the duties are entirely non-political, all applicants should have a fair field and no favor, each standing on his merits as he is able to show them by practical test. Written competitive examinations offer the only available means in many cases for applying this system. In other cases, as where laborers are employed, a system of

registration undoubtedly can be widely extended. There are, of course, places where the written competitive examination can not be applied, and others where it offers by no means an ideal solution, but where under existing political conditions it is, though an imperfect means, yet the best present means of getting satisfactory results.

Wherever the conditions have permitted the application of the merit system in its fullest and widest sense, the gain to the Government has been immense. The navy-yards and postal service illustrate, probably better than any other branches of the Government, the great gain in economy, efficiency, and honesty due to the enforcement of this principle.

I recommend the passage of a law which will extend the classified service to the District of Columbia, or will at least enable the President thus to extend it. In my judgment all laws providing for the temporary employment of clerks should hereafter contain a provision that they be selected under the civil-service law.

It is important to have this system obtain at home, but it is even more important to have it applied rigidly in our insular possessions. Not an office should be filled in the Philippines or Porto Rico with any regard to the man's partizan affiliations or services, with any regard to the political, social, or personal influence which he may have at his command; in short, heed should be paid to absolutely nothing save the man's own character and capacity and the needs of the service.

The administration of these islands should be as wholly free from the suspicion of partizan politics as the administration of the army and navy. All that we ask from the public servant in the Philippines or Porto Rico is that he reflect honor on his country by the way in which he makes that country's rule a benefit to the people who have come under it. This is all that we should ask, and we can not afford to be content with less.

The merit system is simply one method of securing honest and efficient administration of the Government; and in the long run the sole justification of any type of government lies in its proving itself both honest and efficient.

The consular service is now organized under the provisions of a law passed in 1856, which is entirely inadequate to existing conditions. The interest shown by so many commercial bodies throughout the country in the reorganization of the service is heartily commended to your attention. Several bills providing for a new consular service have in recent years been submitted to the Congress. They are based upon the just principle that appointments to the service should be made only after a practical test of the applicant's fitness, that promotions should be governed by trustworthiness, adaptability, and zeal in the performance of duty, and that the tenure of office should be unaffected by partizan considerations.

The guardianship and fostering of our rapidly expanding foreign commerce, the protection of American citizens resorting to foreign countries in lawful pursuit of their affairs, and the maintenance of the dignity of the nation abroad, combine to make it essential that our consuls should be men of character, knowledge, and enterprise. It is true that the service is now, in the main, efficient, but a standard of excellence can not be permanently maintained until the principles set forth in the bills heretofore submitted to the Congress on this subject are enacted into law.

In my judgment the time has arrived when

we should definitely make up our minds to recognize the Indian as an individual and not as a member of a tribe. The general allotment act is a mighty pulverizing engine to break up the tribal mass. It acts directly upon the family and the individual. Under its provisions some 60,000 Indians have already become citizens of the United States. We should now break up the tribal funds, doing for them what allotment does for the tribal lands; that is, they should be divided into individual holdings. There will be a transition period during which the funds will in many cases have to be held in trust. This is the case also with the lands. A stop should be put upon the indiscriminate permission to Indians to lease their allotments. The effort should be steadily to make the Indian work like any other man on his own ground. The marriage laws of the Indians should be made the same as those of the whites.

In the schools the education should be elementary and largely industrial. The need of higher education among the Indians is very, very limited. On the reservations care should be taken to try to suit the teaching to the needs of the particular Indian. There is no use in attempting to induce agriculture in a country suited only for cattle-raising, where the Indian should be made a stock-grower. The ration system, which is merely the corral and the reservation system, is highly detrimental to the Indians. It promotes beggary, perpetuates pauperism, and stifles industry. It is an effectual barrier to progress. It must continue to a greater or less degree as long as tribes are herded on reservations and have everything in common. The Indian should be treated as an individual—like the white man. During the change of treatment inevitable hardships will occur; every effort should be made to minimize these hardships; but we should not because of them hesitate to make the change. There should be a continuous reduction in the number of agencies.

In dealing with the aboriginal races few things are more important than to preserve them from the terrible physical and moral degradation resulting from the liquor traffic. We are doing all we can to save our own Indian tribes from this evil. Wherever by international agreement this same end can be attained as regards races where we do not possess exclusive control, every effort should be made to bring it about.

I bespeak the most cordial support from the Congress and the people for the St. Louis Exposition to Commemorate the One Hundredth Anniversary of the Louisiana Purchase. This purchase was the greatest instance of expansion in our history. It definitely decided that we were to become a great continental republic, by far the foremost power in the Western Hemisphere. It is one of three or four great landmarks in our history—the great turning points in our development. It is eminently fitting that all our people should join with heartiest good-will in commemorating it, and the citizens of St. Louis, of Missouri, of all the adjacent region, are entitled to every aid in making the celebration a noteworthy event in our annals. We earnestly hope that foreign nations will appreciate the deep interest our country takes in this exposition, and our view of its importance from every standpoint, and that they will participate in securing its success. The National Government should be represented by a full and complete set of exhibits.

The people of Charleston, with great energy and civic spirit, are carrying on an exposition which will continue throughout most of the

present session of the Congress. I heartily commend this exposition to the good-will of the people. It deserves all the encouragement that can be given it. The managers of the Charleston Exposition have requested the Cabinet officers to place thereat the Government exhibits which have been at Buffalo, promising to pay the necessary expenses. I have taken the responsibility of directing that this be done, for I feel that it is due to Charleston to help her in her praiseworthy effort. In my opinion the management should not be required to pay all these expenses. I earnestly recommend that the Congress appropriate at once the small sum necessary for this purpose.

The Pan-American Exposition at Buffalo has just closed. Both from the industrial and the artistic standpoint this exposition has been in a high degree creditable and useful, not merely to Buffalo but to the United States. The terrible tragedy of the President's assassination interfered materially with its being a financial success. The exposition was peculiarly in harmony with the trend of our public policy, because it represented an effort to bring into closer touch all the peoples of the Western Hemisphere, and give them an increasing sense of unity. Such an effort was a genuine service to the entire American public.

The advancement of the highest interests of national science and learning and the custody of objects of art and of the valuable results of scientific expeditions conducted by the United States have been committed to the Smithsonian Institution. In furtherance of its declared purpose—for the "increase and diffusion of knowledge among men"—the Congress has from time to time given it other important functions. Such trusts have been executed by the institution with notable fidelity. There should be no halt in the work of the institution, in accordance with the plans which its secretary has presented, for the preservation of the vanishing races of great North American animals in the National Zoological Park. The urgent needs of the National Museum are recommended to the favorable consideration of the Congress.

Perhaps the most characteristic educational movement of the past fifty years is that which has created the modern public library and developed it into broad and active service. There are now over 5,000 public libraries in the United States, the product of this period. In addition to accumulating material they are also striving by organization, by improvement in method, and by cooperation, to give greater efficiency to the material they hold, to make it more widely useful, and by avoidance of unnecessary duplication in process to reduce the cost of its administration.

In these efforts they naturally look for assistance to the Federal library, which, though still the Library of Congress, and so entitled, is the one national library of the United States. Already the largest single collection of books on the Western Hemisphere, and certain to increase more rapidly than any other through purchase, exchange, and the operation of the copyright law, this library has a unique opportunity to render to the libraries of this country—to American scholarship—service of the highest importance. It is housed in a building which is the largest and most magnificent yet erected for library uses. Resources are now being provided which will develop the collection properly, equip it with the apparatus and service necessary to its effective use, render its bibliographic work widely avail-

able, and enable it to become, not merely a center of research, but the chief factor in great cooperative efforts for the diffusion of knowledge and the advancement of learning.

For the sake of good administration, sound economy, and the advancement of science, the Census Office as now constituted should be made a permanent Government bureau. This would insure better, cheaper, and more satisfactory work, in the interest not only of our business but of statistic, economic, and social science.

The remarkable growth of the postal service is shown in the fact that its revenues have doubled and its expenditures have nearly doubled within twelve years. Its progressive development compels constantly increasing outlay, but in this period of business energy and prosperity its receipts grow so much faster than its expenses that the annual deficit has been steadily reduced from \$11,411,779 in 1897 to \$3,923,727 in 1901. Among recent postal advances the success of rural free delivery wherever established has been so marked, and actual experience has made its benefits so plain, that the demand for its extension is general and urgent.

It is just that the great agricultural population should share in the improvement of the service. The number of rural routes now in operation is 6,009, practically all established within three years, and there are 6,000 applications awaiting action. It is expected that the number in operation at the close of the current fiscal year will reach 8,600. The mail will then be daily carried to the doors of 5,700,000 of our people who have heretofore been dependent upon distant offices, and one-third of all that portion of the country which is adapted to it will be covered by this kind of service.

The full measure of postal progress which might be realized has long been hampered and obstructed by the heavy burden imposed on the Government through the entrenched and well-understood abuses which have grown up in connection with second-class mail-matter. The extent of this burden appears when it is stated that while the second-class matter makes nearly three-fifths of the weight of all the mail, it paid for the last fiscal year only \$4,294,445 of the aggregate postal revenue of \$111,631,193. If the pound-rate of postage, which produces the large loss thus entailed, and which was fixed by the Congress with the purpose of encouraging the dissemination of public information, were limited to the legitimate newspapers and periodicals actually contemplated by the law, no just exception could be taken. That expense would be the recognized and accepted cost of a liberal public policy deliberately adopted for a justifiable end. But much of the matter which enjoys the privileged rate is wholly outside of the intent of the law, and has secured admission only through an evasion of its requirements or through lax construction. The proportion of such wrongly included matter is estimated by postal experts to be one-half of the whole volume of second-class mail. If it be only one-third or one-quarter, the magnitude of the burden is apparent. The Post-Office Department has now undertaken to remove the abuses so far as is possible by a stricter application of the law; and it should be sustained in its effort.

Owing to the rapid growth of our power and our interests on the Pacific, whatever happens in China must be of the keenest national concern to us.

The general terms of the settlement of the questions growing out of the antiforeign uprisings in China of 1900, having been formulated in a joint

note addressed to China by the representatives of the injured powers in December last, were promptly accepted by the Chinese Government. After protracted conferences the plenipotentiaries of the several powers were able to sign a final protocol with the Chinese plenipotentiaries on the 7th of last September, setting forth the measures taken by China in compliance with the demands of the joint note, and expressing their satisfaction therewith. It will be laid before the Congress with a report of the plenipotentiary on behalf of the United States, Mr. William Woodville Rockhill, to whom high praise is due for the tact, good judgment, and energy he has displayed in performing an exceptionally difficult and delicate task.

The agreement reached disposes in a manner satisfactory to the powers of the various grounds of complaint, and will contribute materially to better future relations between China and the powers. Reparation has been made by China for the murder of foreigners during the uprising, and punishment has been inflicted on the officials, however high in rank, recognized as responsible for or having participated in the outbreak. Official examinations have been forbidden for a period of five years in all cities in which foreigners have been murdered or cruelly treated, and edicts have been issued making all officials directly responsible for the future safety of foreigners and for the suppression of violence against them.

Provisions have been made for insuring the future safety of the foreign representatives in Peking by setting aside for their exclusive use a quarter of the city which the powers can make defensible and in which they can if necessary maintain permanent military guards; by dismantling the military works between the capital and the sea; and by allowing the temporary maintenance of foreign military posts along this line. An edict has been issued by the Emperor of China prohibiting for two years the importation of arms and ammunition into China. China has agreed to pay adequate indemnities to the states, societies, and individuals for the losses sustained by them and for the expenses of the military expeditions sent by the various powers to protect life and restore order.

Under the provisions of the joint note of December, 1900, China has agreed to revise the treaties of commerce and navigation and to take such others steps for the purpose of facilitating foreign trade as the foreign powers may decide to be needed.

The Chinese Government has agreed to participate financially in the work of bettering the water approaches to Shanghai and to Tientsin, the centers of foreign trade in central and northern China, and an international conservancy board, in which the Chinese Government is largely represented, has been provided for the improvement of the Shanghai river and the control of its navigation. In the same line of commercial advantages a revision of the present tariff on imports has been assented to for the purpose of substituting specific for ad valorem duties, and an expert has been sent abroad on the part of the United States to assist in this work. A list of articles to remain free of duty, including flour, cereals, and rice, gold and silver coin and bullion, has also been agreed upon in the settlement.

During these troubles our Government has unwaveringly advocated moderation, and has materially aided in bringing about an adjustment which tends to enhance the welfare of China

and to lead to a more beneficial intercourse between the empire and the modern world; while in the critical period of revolt and massacre we did our full share in safeguarding life and property, restoring order, and vindicating the national interest and honor. It behooves us to continue in these paths, doing what lies in our power to foster feelings of good-will, and leaving no effort untried to work out the great policy of full and fair intercourse between China and the nations, on a footing of equal rights and advantages to all. We advocate the "open door" with all that it implies; not merely the procurement of enlarged commercial opportunities on the coasts, but access to the interior by the waterways with which China has been so extraordinarily favored. Only by bringing the people of China into peaceful and friendly community of trade with all the peoples of the earth can the work now auspiciously begun be carried to fruition. In the attainment of this purpose we necessarily claim parity of treatment, under the conventions, throughout the empire for our trade and our citizens with those of all other powers.

We view with lively interest and keen hopes of beneficial results the proceedings of the Pan-American Congress, convoked at the invitation of Mexico, and now sitting at the Mexican capital. The delegates of the United States are under the most liberal instructions to cooperate with their colleagues in all matters promising advantage to the great family of American commonwealths, as well in their relations among themselves as in their domestic advancement and in their intercourse with the world at large.

My predecessor communicated to the Congress the fact that the Weil and La Abra awards against Mexico have been adjudged by the highest courts of our country to have been obtained through fraud and perjury on the part of the claimants, and that in accordance with the acts of the Congress the money remaining in the hands of the Secretary of State on these awards has been returned to Mexico. A considerable portion of the money received from Mexico on these awards has been paid by this Government to the claimants before the decision of the courts was rendered. My judgment is that the Congress should return to Mexico an amount equal to the sums thus already paid to the claimants.

The death of Queen Victoria caused the people of the United States deep and heartfelt sorrow, to which the Government gave full expression. When President McKinley died, our nation in turn received from every quarter of the British Empire expressions of grief and sympathy no less sincere. The death of the Empress-Dowager Frederick of Germany also aroused the genuine sympathy of the American people; and this sympathy was cordially reciprocated by Germany when the President was assassinated. Indeed, from every quarter of the civilized world we received, at the time of the President's death, assurances of such grief and regard as to touch the hearts of our people. In the midst of our affliction we reverently thank the Almighty that we are at peace with the nations of mankind; and we firmly intend that our policy shall be such as to continue unbroken these international relations of mutual respect and good-will.

THEODORE ROOSEVELT.

EXECUTIVE MANSION, Dec. 5, 1901.

The Philippine Islands.—Dec. 17 the House of Representatives took up the consideration of a measure, "temporarily to provide revenue for the Philippine Islands, and other purposes," and

two days were allowed, under special order, for debate. Mr. Payne, of New York, who was in charge of the measure, made the opening argument in its favor. Among other things, he said:

"It becomes necessary at this time because of the recent decision of the Supreme Court of the United States holding 'the Philippine Islands not being foreign territory, and the existing law for the collection of tariff duties including only those articles imported' from foreign countries, that it does not apply to imports from the Philippine Islands, and that no collection of duties upon such imports can be made.

"But the bill goes further than that. It gives the force of an act of Congress to the tariff act already enacted by the Philippine Commission. That act depends for its force upon the war power of the Government and also upon the legislation of Congress on what is known as the Spooner amendments, giving the Executive authority to legislate, to execute the laws, and to exercise judicial functions in the Philippine Islands. The war power arose from the fact that within ten days of the cession of these islands by Spain—on Feb. 15—a conspiracy was formed to overthrow the power of the United States—in the language of the conspirators, to massacre the army, and after they were out of the way to massacre the inhabitants of Manila who were not Filipinos. This made the Philippine Islands hostile territory. This, under the law of nations, and under the repeated decisions of the Supreme Court, gave the war power to the Executive of this country to govern those islands with a military government, or, at his discretion, to govern them by appointing persons from civil life to execute the offices.

"The organized opposition to the Government of the United States was overthrown in March, 1900, and since then the war on the part of the Filipinos has been a guerrilla warfare—sporadic, spasmodic, and at times carried on with great cruelty and without any regard on the part of some of these men to the rules of civilized warfare. As the insurgent forces were dispersed the President of the United States thought it best to send out to these islands the Philippine Commission, known as the Taft Commission, which was appointed March 16, 1900, and which reached the islands about Sept. 1 of that year. These commissioners were instructed generally by the President.

"Those instructions are varied in their character. They provided for separating the judicial, the executive, and the legislative power; for the establishment of government where it could be done in the different cities and towns and provinces of the island. They provided generally for giving to the Filipinos a good and, for the time being, a stable and honest and equitable government throughout all the islands, and for levying such taxes and imports as, in the judgment of the commission, should be right and necessary.

"Afterward, on March 2, 1901, the Spooner amendments were passed, amplifying the power of the President of the United States, enforcing the authority which the President already had under the military power of the Government by the legislative arm of the Government, and legislating to him the full authority, which he already perhaps possessed under the military power. Under this power the Taft Commission was authorized to impose taxes. We found when we went there a tariff law in force under the old Spanish *régime*.

"Some of the duties imposed by that law were

very high, especially the duties upon the necessities of life. The commission went to work almost immediately to gather information, to amend the old Spanish tariff code, and to make it more suitable to American ideas, American possession, and American government.

"A great deal of care was exercised by this commission in fixing these rates. In the first place, they made what they called a tentative bill, which was published and widely distributed in the Philippine Islands and criticisms invited. Then this bill was amended, due regard being given to the criticisms which were offered. Then the bill came here and was published by the War Department in several hundred trade journals throughout the United States, criticisms being invited and received. The War Department recommended some amendments, and sent all these criticisms and all the other information obtained to the commission. After the bill had been considered, back and forth, with such light as was thrown upon it in this public way, for more than a year, the commission finally enacted their tariff.

"Now, this tariff is not only a duty upon imports into the Philippine Islands, but embraces also a small duty upon some exports from the Philippine Islands, such as hemp, sugar, tobacco, and so forth—a continuation of the Spanish method of taxation. The entire sum realized from these export duties since the occupation of the islands by the United States is \$1,700,000, while the total tariff receipts for the whole period of occupation down to June 30 last amounts to \$15,525,000. So that the export tax was not comparatively large, and the export tax is nearly the only direct tax that is collected in the Philippine Islands.

"Mr. Chairman, in addition to this we found that by the decision of the court and the ruling of the Treasury the ports of Porto Rico as well as the ports of the Philippine Islands and the ports of the United States were in such relation that the coastwise laws applied, and that under the law no vessel carrying a foreign flag could bring goods from the Philippine Islands to any port in the United States. We take care of that in this bill; but we hope the time will soon come, and we are assured that it will soon come, when American citizens will furnish American vessels, to be sailed under the American flag, fully equal to the demand, to carry all the commerce coming from the Philippine Islands to ports of the United States. When that time comes, this side of the House will see to it that these coastwise laws are extended to the ports of the Philippine Islands, as well as to all other ports that are under the flag of the United States.

"Mr. Chairman, in addition to this, in the last section of the bill we have endeavored to apply the drawback laws, providing for drawbacks in duties and in internal-revenue collections, and also to apply the exemption laws for goods manufactured in bonded warehouses, to the shipment of goods from United States ports to the ports of the Philippine Islands.

"Then we have provided, as in the Porto Rican bill, that all these taxes collected in the Philippine Islands, and all duties collected in the United States upon goods brought from the Philippine Islands into the United States, shall not be covered into the general fund of the Treasury, but be paid into the treasury of the Philippine Islands for the use and benefit of the Philippine Islands."

Mr. Payne did not accept the commission tariff as an ideal one; but he defended it as a good

working measure, to meet an emergency, and he went on to describe in detail the work carried on and to be carried on under American rule in the Philippines, for which ample revenue is needed.

Mr. Swanson, of Virginia, led the discussion in opposition to the measure. He said:

"Mr. Chairman, the Republican party of this country has definitely determined to enter into a system of colonial conquest and government. When this question was last up for debate in this House we of the opposition contended that such a policy was not only unwise and dangerous to the continued liberty and prosperity of our people, but also not permissible under the plain provisions of our Federal Constitution. Recently the Supreme Court of the United States, by a decision reversing former decisions, has seen proper to amend the Federal Constitution and declare that Congress can govern acquired territory outside the prohibitions and requirements of the Constitution. It has specifically decided that that clause in the Constitution which declares that 'all duties, imposts, and excises shall be uniform throughout the United States' applies to the States only and not to the Territories and other possessions.

"By this decision it declares that Congress has power to impose duties upon goods coming from the Territories into the States and also from the States into the Territories. It confers upon Congress absolute power of taxation in the Territories, unrestrained by any provision in the Federal Constitution. By a more recent decision the court has declared that the Philippine Islands and other possessions are not foreign but domestic territory, and, as the Dingley bill, by its terms, limits its collection of duties to importations from foreign countries, it does not apply to the Philippines; hence no duty can be collected on importations from those islands until Congress shall so direct. Ever since we have had control of these islands, until this decision, the duties imposed by the Dingley bill have been collected on all goods brought into this country from them. This bill proposes to continue the rates of the Dingley bill upon all importations into this country from the Philippine Islands.

"In this respect it proposes to treat those islands and their inhabitants absolutely as foreigners. Their commerce, their trade, and their importations are to be subjected to the same heavy exactions, the same rigorous restrictions, that are applied to strangers. Another provision of this bill fixes absolutely all customs duties to be collected on importations into the Philippines, and, in addition, an export duty on certain goods when shipped from there. This feature of the bill treats the inhabitants of the Philippine Islands as subjects of this country, to be governed absolutely by the will of Congress. Thus, by this bill, when concessions and trade benefits are needed by the unfortunate inhabitants of the Philippine Islands, they are treated as strangers and foreigners, but when exactions and taxations are to be imposed, they are treated as subjects. This irreconcilable, dual position of subject and stranger is created by this bill and illustrates the policy of the Republican party in the formulation of its colonial system. The principles upon which such a bill is founded are repugnant to every principle of justice and right and antagonistic to all our traditions and institutions.

"By this bill Congress assumes the right and does exercise the power to fix the rates and the conditions upon which the goods of the Philippines can be sold in the markets of the United

States and also the rates and conditions upon which our goods can be sold in the markets of those islands. In other words, we practically fix the price at which they must sell their goods to us and also the price at which they must purchase ours. This is precisely the same power that was claimed by the British Parliament when we were colonies. The British Parliament then contended that the power of Parliament was absolute in the American colonies and that Parliament had the right to impose taxes here and to fix the duty on importations from the colonies into Great Britain and also the duty on importations from Great Britain into the colonies.

"Our fathers denounced this assumption of power as tyranny and despotism. When it was sought to be exercised they rebelled, separated themselves from Great Britain, and established this Union. Our fathers contended that the vast power to control absolutely the trade and commerce, all the buying and the selling of the commodities of one nation by another, is such a dangerous power, so liable to abuse, that no just nation would ever try to exercise it, and that it should never be conceded. Yet by this bill this Congress will exercise, in a more aggravated form, precisely the same power claimed and sought to be exercised against us by the British Parliament when we were colonies. Great Britain could not have succeeded in the Revolutionary War without destroying British institutions and ultimately the liberty and freedom of her people. We can not enact this bill without destroying our institutions, without abandoning all our glorious traditions and perverting our principles of justice and liberty, which have been the foundations of our governmental structure."

Mr. Swanson, after considering the provisions of the bill in detail, denounced its injustice and harshness as compared to the policy of reciprocity proposed for foreign countries.

"The President in his annual message says that we are under moral obligations to give Cuban imports into the United States a substantial reduction from present tariff duties. The Secretary of War is even more insistent upon this than the President. The two chief products of Cuba, like those of the Philippines, are sugar and tobacco. This administration favors a great reduction from the Dingley rates on sugar and tobacco when imported from Cuba, and yet sustains this bill, which collects the entire Dingley rates on sugar and tobacco imported from the Philippines, and in addition an export duty. The American people will not sanction this. Our obligations to Cuba have been fully and completely discharged when they have established a free and independent government and we have withdrawn from the island. This will soon happen. They owe us a boundless debt of gratitude. When they were oppressed by Spain and their cause was hopeless, at a great expense and sacrifice to ourselves we espoused their cause, drove their oppressors from the island, and gave to them freedom and independence.

"At much expense we have kept peace and order there and administered the government pending the formation by them of a safe and stable government. No other nation has ever bestowed upon another more generous, substantial, and disinterested favors than we have bestowed upon Cuba. With the Filipinos the case is reversed. The Filipinos had overthrown Spanish authority, except in Manila, before our troops arrived. They could have driven their oppressors from the islands without our aid. They were our valuable allies in a war that we had undertaken for

the liberation of Cuba. They desired to establish an independent government under our guidance, which would have made to us generous trade concessions. We denied this request, and by war and conquest extended our dominion over them. We now hold them as colonies and as a part and parcel of this country. We have granted to Cuba, and she has decided to become, a state free and independent of us.

"I can see no moral obligations on our part to make any concessions to Cuba except such as our own interest may demand. If reductions in tariff duties are to be made for the introduction of sugar and tobacco into our markets, the claims of the Philippine Islands are vastly superior to those of Cuba. The profits to be derived from the sale of these two products in the markets of this country should certainly go, if possible, to our own people instead of to foreigners. I can not understand the wisdom of a policy that urges such generous concessions to Cuba and imposes such heavy exactions and restrictions upon the Philippines. So long as the Philippine Islands are a part of this country, justice and wisdom both demand that their sugar and tobacco interests should be encouraged and developed rather than the sugar and tobacco interests of Cuba.

"But, Mr. Chairman, the hostility of the Republican party and of those in power to the Philippine Islands is further exemplified, and in a manner that can admit of no excuse, no defense. As I have previously said, this bill imposes on the sugar of the Philippines the high rates of the Dingley bill. Our Government has already signed treaties with Great Britain for the Barbados, for British Guiana, for Jamaica, and for Bermuda, which have been sent to the Senate and are being pressed by the present administration and the Republican party for ratification, and all provide for a reduction of 12½ per cent. from the duties imposed by the Dingley bill upon all sugar imported from them into the United States. A treaty has also been signed with Argentina, which has been sent to the Senate and is likewise urged for ratification, that provides for a reduction of 20 per cent. from the rates of the Dingley bill on sugar imported into the United States from Argentina.

"The Republican party places itself squarely before the people and the country as favoring that sugar shall be imported into this country from British possessions and from Argentina at more greatly reduced rates than it shall be imported from our own possessions in the Philippine Islands. No moral obligation can be urged for the extension of the extension of these rebates and privileges to foreigners while they are denied to our own people. If this policy is to prevail, in order to obtain trade advantages with the United States, it is better to be a British subject than to be a citizen of the United States. History will fail to furnish another such example where a government has so wantonly and openly ignored the rights and privileges of its own people in order to subserve foreigners and strangers. I believe the American people will repudiate a discrimination so suicidal, so unjust as this. They would greatly prefer consuming sugar raised by the unfortunate inhabitants of the Philippine Islands than sugar raised by British subjects.

"Mr. Chairman, I appeal to this Congress, to its sense of justice and right, to its prudence and its wisdom, not to inflict upon these defenseless and helpless people such hardships and such inequalities. Do not teach them that dependence

on America means spoliation. Let them feel that we are their friends, not their foes; that our purposes are to aid them, not to despoil them; to encourage, and not to retard them."

Mr. Littlefield, of Maine, opposed the measure, but he made his argument against the soundness of the recent Supreme Court decision in the island cases. The debate tended, among other speakers on both sides, toward the discussion of the policy of a colonial system.

Dec. 18 the bill was passed by the following vote:

YEAS—Adams, Alexander, Allen of Maine, Babcock, Ball of Delaware, Bartholdt, Bates, Beidler, Bishop, Blackburn, Blakeney, Boring, Boutell, Bowersock, Brick, Bristow, Bromwell, Broussard, Brownlow, Burk of Pennsylvania, Burke of South Dakota, Burkett, Burleigh, Burton, Butler of Pennsylvania, Calderhead, Cannon, Capron, Cassel, Connell, Coombs, Corliss, Cousins, Currier, Curtis, Cushman, Dazell, Darragh, Davey of Louisiana, Davidson, Dayton, Dick, Douglas, Dovener, Draper, Driscoll, Emerson, Esch, Evans, Fletcher, Foerderer, Fordney, Foss, Foster of Vermont, Fowler, Gaines of West Virginia, Gardner of Michigan, Gardner of New Jersey, Gibson, Gill, Gillet of New York, Gillett of Massachusetts, Graff, Graham, Greene of Massachusetts, Grosvenor, Grow, Hamilton, Haskins, Hemenway, Henry of Connecticut, Hepburn, Hildebrandt, Hill, Hitt, Holliday, Hopkins, Howell, Hughes, Irwin, Jackson of Maryland, Jenkins, Jones of Washington, Joy, Kahn, Ketcham, Knapp, Knox, Kyle, Landis, Lawrence, Lewis of Pennsylvania, Long, Loudenslager, Lovering, McCleary, McLachlan, Mahon, Mann, Marshall, Martin, Mercer, Metcalf, Miller, Minor, Mondell, Moody of Massachusetts, Moody of North Carolina, Moody of Oregon, Morgan, Morrell, Morris, Mudd, Needham, Nevin, Olmsted, Otjen, Overstreet, Palmer, Parker, Patterson of Pennsylvania, Payne, Pearre, Perkins, Powers of Maine, Powers of Massachusetts, Prince, Ray of New York, Reeder, Reeves, Roberts, Robertson of Louisiana, Rumble, Russell, Schirm, Scott, Shattue, Sheldon, Showalter, Sibley, Skiles, Smith of Illinois, S. W. Smith, William Alden Smith, Southard, Southwick, Sperry, Stewart of New Jersey, Stewart of New York, Storm, Sulloway, Sutherland, Tawney, Taylor of Ohio, Thomas of Iowa, Tompkins of New York, Tompkins of Ohio, Van Voorhis, Vreeland, Wadsworth, Wanger, Warner, Warnock, Watson, Woods, Wright, Young—167.

NAYS—Adamson, Allen of Kentucky, Ball of Texas, Bell, Bellamy, Belmont, Benton, Brundidge, Burgess, Burleson, Burnett, Butler of Missouri, Caldwell, Candler, Cassingham, Clayton, Cochran, Conry, Cooper of Texas, Cowherd, Creamer, Cummings, Davis of Florida, De Armond, De Graffenreid, Dinsmore, Dougherty, Eddy, Edwards, Elliott, Finley, Fitzgerald, Fleming, Flood, Fox, Gaines of Tennessee, Gilbert, Gooch, Gordon, Green of Pennsylvania, Hall, Hay, Heatwole, Henry of Mississippi, Henry of Texas, Hooker, Howard, Jackson of Kansas, Jett, Johnson, Jones of Virginia, Kehoe, Kern, Claude Kitchin, William W. Kitchin, Kleberg, Kluttz, Lamb, Lanham, Lester, Lever, Lindsay, Little, Littlefield, Livingston, Lloyd, McAndrews, McCall, McClellan, McCulloch, McDermott, McLain, Mahony, Maynard, Mickey, Miers of Indiana, Moon, Mutchler, Naphe, Neville, Newlands, Otey, Padgett, Patterson of Tennessee, Pierce, Pou, Randall of Texas, Ransdell of Louisiana, Rhea of Kentucky, Rhea of Virginia, Richardson of Alabama, Richardson of Tennessee, Rixey, Robb, Robinson of Indiana, Robinson of Nebraska, Rucker, Ryan, Salmon, Scarborough,

Selby, Shafroth, Shallenberger, Sheppard, Sims, Slayden, Small, Smith of Kentucky, Snodgrass, Snook, Spight, Stark, Stephens of Texas, Stevens of Minnesota, Sulzer, Swanson, Tate, Thayer, Thomas of North Carolina, Trimble, Underwood, Vandiver, Wheeler, Wiley, Williams of Illinois, Williams of Mississippi, Wooten, Zenor—128.

NOT VOTING—Acheson, Aplin, Bankhead, Barney, Bartlett, Bingham, Bowie, Brantley, Breazeale, Brown, Bull, Clark, Conner, Cooney, Cooper of Wisconsin, Cromer, Crowley, Crumpacker, Dahle, Deemer, Feeley, Foster of Illinois, Glenn, Goldfogle, Griggs, Hanbury, Haugen, Hull, Jack, Lacey, Lassiter, Latimer, Lewis of Georgia, Litaue, Loud, McRae, Maddox, Meyer of Louisiana, Norton, Polk, Pugsley, Reid, Shackelford, Sherman, Smith of Iowa, H. C. Smith, Sparkman, Steele, Talbert, Taylor of Alabama, Thompson, Tirrell, Tongue, Wachter, Weeks, White, Wilson—57.

ANSWERED "PRESENT"—Griffith, Hedge, Rupert—3.

The measure was reported to the Senate with amendments, Jan. 20, 1902, and debated at some length, amended and passed, Feb. 24, by the following vote:

YEAS—Aldrich, Allison, Bard, Burnham, Burrows, Burton, Clapp, Clark of Wyoming, Cullom, Deboe, Dietrich, Dolliver, Dryden, Fairbanks, Foraker, Foster of Washington, Frye, Gallinger, Gamble, Hanna, Hansbrough, Hawley, Hoar, Jones of Nevada, Kean, Kearns, Kittredge, Lodge, McComas, McCumber, Mason, Millard, Mitchell, Nelson, Perkins, Platt of Connecticut, Pritchard, Proctor, Quarles, Scott, Simon, Spooner, Stewart, Warren, Wetmore—45.

NAYS—Bacon, Bailey, Bate, Berry, Carmack, Clark of Montana, Clay, Cockrell, Culberson, Dubois, Foster of Louisiana, Gibson, Heitfeld, McLaurin of Mississippi, Mallory, Martin, Money, Patterson, Pettus, Rawlins, Simmons, Taliaferro, Teller, Turner, Vest, Wellington—26.

NOT VOTING—Beveridge, Blackburn, Daniel, Depew, Dillingham, Elkins, Hale, Harris, Jones of Arkansas, McEnery, McLaurin of South Carolina, McMillan, Morgan, Penrose, Platt of New York, Quay, Tillman—17.

The discussion in the Senate took a wide range, going so far afield that no little time was spent in reviewing the record of various colonies in the Revolutionary War. The main attack on the measure, however, was in regard to the transfer of the powers of Congress to the Executive, and through him to the Philippine Commission, made the previous year in an amendment to an appropriation bill. The Senate amendments to this tariff act reduced the duty on goods from the Philippine Islands imported into the United States 25 per cent. on the regular rates; allowed a rebate on goods paying export duty from the islands to the extent of that duty, regulated the coast-trade, and provided safeguards for individual rights. The House non-concurred on these amendments, a conference committee was appointed, and its report was adopted, March 1 and March 3. The measure was approved by the President March 8, 1902. The text of it is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the provisions of an act entitled 'An Act to revise and amend the tariff laws of the Philippine Archipelago,' enacted by the United States Philippine Commission on the 17th day of September, 1901, shall be and remain in full force and effect, and there shall be levied, collected, and paid upon all articles

coming into the Philippine Archipelago from the United States the rates of duty which are required by the said act to be levied, collected, and paid upon like articles imported from foreign countries into said archipelago.

"SEC. 2. That on and after the passage of this act there shall be levied, collected, and paid upon all articles coming into the United States from the Philippine Archipelago the rates of duty which are required to be levied, collected, and paid upon like articles imported from foreign countries. *Provided*, That upon all articles the growth and product of the Philippine Archipelago coming into the United States from the Philippine Archipelago there shall be levied, collected, and paid only 75 per cent. of the rates of duty aforesaid: *And provided further*, That the rates of duty which are required hereby to be levied, collected, and paid upon products of the Philippine Archipelago coming into the United States shall be less any duty or taxes levied, collected, and paid thereon upon the shipment thereof from the Philippine Archipelago, as provided by the act of the United States Philippine Commission referred to in section 1 of this act, under such rules and regulations as the Secretary of the Treasury may prescribe, but all articles, the growth and product of the Philippine Islands, admitted into the ports of the United States free of duty under the provisions of this act and coming directly from said islands to the United States for use and consumption therein, shall be hereafter exempt from any export duties imposed in the Philippine Islands.

"SEC. 3. That on and after the passage of this act the same tonnage taxes shall be levied, collected, and paid upon all foreign vessels coming into the United States from the Philippine Archipelago which are required by law to be levied, collected, and paid upon vessels coming into the United States from foreign countries: *Provided, however*, That until July 1, 1904, the provisions of law restricting to vessels of the United States the transportation of passengers and merchandise directly or indirectly from one port of the United States to another port of the United States shall not be applicable to foreign vessels engaging in trade between the Philippine Archipelago and the United States, or between ports in the Philippine Archipelago: *And provided further*, That the Philippine Commission shall be authorized and empowered to issue licenses to engage in lighterage or other exclusively harbor business to vessels or other craft actually engaged in such business at the date of the passage of this act, and to vessels or other craft built in the Philippine Islands or in the United States and owned by citizens of the United States or by inhabitants of the Philippine Islands.

"SEC. 4. That the duties and taxes collected in the Philippine Archipelago in pursuance of this act, and all duties and taxes collected in the United States upon articles coming from the Philippine Archipelago and upon foreign vessels coming therefrom, shall not be covered into the general fund of the Treasury of the United States, but shall be held as a separate fund and paid into the treasury of the Philippine Islands, to be used and expended for the government and benefit of said islands.

"SEC. 5. That when duties prescribed by this act are based upon the weight of merchandise deposited in any public or private bonded warehouse, said duties shall be levied and collected upon the weight of such merchandise at the time of its entry.

"SEC. 6. That all articles manufactured in bonded manufacturing warehouses in whole or in part of imported materials, or of materials subject to internal-revenue tax and intended for shipment from the United States to the Philippine Islands, shall, when so shipped, under such regulations as the Secretary of the Treasury may prescribe, be exempt from internal-revenue tax, and shall not be charged with duty except the duty levied under this act upon imports into the Philippine Islands.

"That all articles subject under the laws of the United States to internal-revenue tax, or on which the internal-revenue tax has been paid, and which may under existing laws and regulations be exported to a foreign country without the payment of such tax, or with benefit of drawback, as the case may be, may also be shipped to the Philippine Islands with like privilege, under such regulations and the filing of such bonds, bills of lading, and other security as the Commissioner of Internal Revenue may, with the approval of the Secretary of the Treasury, prescribe. And all taxes paid upon such articles shipped to the Philippine Islands since Nov. 15, 1901, under the decision of the Secretary of the Treasury of that date, shall be refunded to the parties who have paid the same, under such rules and regulations as the Secretary of the Treasury may prescribe, and a sum sufficient to make such payment is hereby appropriated, out of any money in the Treasury not otherwise appropriated.

"That where materials on which duties have been paid are used in the manufacture of articles manufactured or produced in the United States, there shall be allowed on the shipment of said articles to the Philippine Archipelago a drawback equal in amount to the duties paid on the materials used, less 1 per cent. of such duties, under such rules and regulations as the Secretary of the Treasury may prescribe.

"SEC. 7. That merchandise in bonded warehouse or otherwise in the custody and control of the officers of the customs, upon which duties have been paid, shall be entitled, on shipment to the Philippine Islands within three years from the date of the original arrival, to a return of the duties paid less 1 per cent., and merchandise upon which duties have not been paid may be shipped without the payment of duties to the Philippine Islands within said period, under such rules and regulations as may be prescribed by the Secretary of the Treasury.

"SEC. 8. That the provisions of the act entitled 'An Act to simplify the laws in relation to the collection of revenues,' approved June 10, 1890, as amended by an act entitled 'An Act to provide for the government and to encourage the industries of the United States,' approved July 24, 1897, shall apply to all articles coming into the United States from the Philippine Archipelago.

"SEC. 9. That no person in the Philippine Islands shall, under the authority of the United States, be convicted of treason by any tribunal, civil or military, unless on the testimony of two witnesses to the same overt act, or on confession in open court."

March 31, 1902, there was reported from the Senate Committee on the Philippines, with amendments, "An Act temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes." April 18 the discussion of the measure in the Senate began; and it continued at intervals until June 3, various Senators en-

tering into elaborate and interesting discussion of the provisions of the measure, the policy of holding the islands as a colony, the conduct of the war there, and kindred matters. Mr. Rawlins, of Utah, speaking in opposition to the bill, denounced it as the establishment of a despotism. He said:

"Across the water there are more than 10,000,000 suffering people silent and unheard, but whose souls doubtless cry out against wrongs, cruel, unspeakable, beyond the ken of mortal language to describe. There are more than 70,000,000 people on this side of the water wanting to know the truth hitherto stifled and suppressed:

"Mr. President, it seems to me that it is a time when it is a patriotic duty to give utterance to the truth, that the American people may be advised, and that we may intelligently deal with the important questions which confront us.

"Friends of justice, champions of liberty, have ever been jealous of the encroachment of executive or kingly power, and those who, irrespective of consequences to themselves, have resisted its aggression and refused to be seduced by its blandishments have gone into history with enduring and honorable fame, while those who have catered to it and sought to profit by the favors which it had to bestow have sunk into oblivion, or if remembered, are only remembered to be despised.

"What is this bill? The Senator who introduced it has not explained it; but upon its examination we find that it continues if it does not establish in perpetuity a presidential despotism—not a benevolent despotism, but a cruel, a remorseless, and a predatory despotism.

"For this they have no warrant in our history or our traditions. To do this they must trample under foot the precepts of our Constitution and the axioms of our liberty. This bill reaches backward as well as forward. It strikes its roots into and receives its support from that excrescence upon the army appropriation bill of 1901 known as the 'Spooner amendment.' The qualification of the absolute power therein conferred, adopted at the instance of the Senator from Massachusetts, by this bill is eliminated. After the bill shall have passed, this absolute power will stand forth stripped of every qualification and limitation. In order to comprehend this bill, therefore, it is necessary to read into it as a part of it that grant of absolute authority."

Discussing more in detail the scope of the measure, he said:

"You will see an outline here of wonderfully complicated machinery. These various departments and bureaus, covering every conceivable subject of administration, are to be supported by the taxes derived from the people of the Philippine Islands. The heads of these bureaus and all the subordinates and employees connected with them are dependent for the tenure of their office and the amount and payment of their salaries upon the United States Philippine Commission. They are subservient in all respects to the edicts and behests of that commission. The persons now in office, so far as we are enabled to determine from an inspection of the law and from anything in the bill which we now have under consideration, are to continue to hold those offices during life; and that is true of the membership of the United States Philippine Commission. They are selected by the President, and now constitute the sole depository of power in the islands. They are to hold their positions during life, nothing being said about good behavior. The concurrence of the Senate is only required as to future appointments, and the bill

is very careful to prevent the possibility of the Senate passing upon the fitness of the persons who are, during their lives it may be, to exercise these unusual and arbitrary powers to which I have already made reference.

"When we come to consider the judiciary, which is provided for in the next section, we shall find that that, too, is absolutely dependent upon the will of the United States Philippine Commission and will be subservient to its purposes. When we proceed further to ascertain if there be any limitations circumscribing the authority mentioned in the Spooner amendment which I have read, we look in vain. They have control of the courts. They have control of the salaries and the tenure of judges. The extent of the jurisdiction which any one of them may exercise, if any, is dependent wholly upon the action of the commission. All property and rights—rights in the generic sense, without qualification, as distinguished from property, embracing thereby, as it does, according to every reasonable implication, the sovereignty, if any, that we acquired from Spain by the peace treaty—are by one section of the bill turned over absolutely and unqualifiedly to this oligarch, the United States Philippine Commission. To what end? To be administered, distributed, disposed of.

"Mr. President, the feet of the archipelago rest near the equator. Twelve hundred miles to the north its head is bathed by the waters of the Chinese Sea. It is said there are more than 600 islands; more than 76,000,000 acres of land, embracing mountains, volcanoes, valleys, lakes, rivers, and swamps, timber resources, whatever they may be—and all these things are turned over absolutely to the control and the disposition of the United States Philippine Commission. Of the 76,000,000 acres of land to-day, according to the reports, there are but 5,000,000 acres subject to private ownership, and this bill is not content to leave that inviolable in the hands of the people who have acquired it, because there is a provision in the bill authorizing the same United States Philippine Commission to appropriate it in the exercise of the power of eminent domain and to dispose of it, to sell it, or give it away, as they may deem proper. In order to acquire it they are given authority to issue bonds in payment therefor, mortgaging the future of the islands and their people.

"All these lands, every acre and every foot of land within the archipelago, including all appurtenances, all rights of every description, under the provisions of this bill are to be disposed of absolutely without limitation, according to the rules and regulations which may be enacted or prescribed by the United States Philippine Commission. I said 'without limitation.' Practically so. This limitation is provided in one of the sections of the bill. When the rules of the United States Philippine Commission are passed, they are to be submitted to the President, and are not to take effect until approved by him. They are to be submitted to Congress, and if not disapproved by Congress before the expiration of the next session of Congress, then they become effective and go into operation.

"The despotic power conferred upon the President of the United States and the United States Philippine Commission is therefore in no degree limited with respect to the rules and regulations providing for the disposition of the public lands in the islands, except to the extent that Congress may be able, after the rules are submitted for its consideration, to disapprove of those rules within the time limited. Either House may prevent such

disapproval, and delay may prevent such disapproval, although a majority of each house may so desire.

"In this cursory review of the general powers of the commission it follows, it seems to me, without possibility of controversy, that the commission, under the direction of the President, may declare war and make peace. The President and such person or persons as he may designate and under his direction possess all civil, judicial, and military power necessary to govern the islands. That covers and includes every conceivable power. They may declare war and make peace, because the Constitution does not restrict them. That reservation to Congress is of no potency when we step beyond the shores of the continental republic. That is the theory of the friends and supporters of this bill.

"The same oligarchy can raise armies and provide navies. It can regulate commerce among the islands and with foreign countries, with any sort of discrimination as to islands and ports. It may lay taxes to the extent of the destruction of the subjects of taxation, without justice and without uniformity, because there is no such limit circumscribing its authority. It may coin money and regulate the value thereof, and it has already set up a bureau relating to coinage and currency as well as banking. It may pass ex-post facto laws and bills of attainder, working corruption of the blood to the remotest generation, with incidental confiscation and things evil to the victim of such legislation. It may take the property of one man and give it to another, and that express authority is given in the pending bill. It can destroy freedom of speech and of the press; make the thought as well as the word and the thought and word as well as the act punishable capitally.

"Mr. President, I might go on and enumerate the various things that may be done under the authority which we have conferred and which will be conferred under this bill, but these are sufficient to illustrate it.

"Now, I invite attention specifically to the judiciary, because, as against encroachments of power and acts of tyranny, an independent judiciary in every country has usually been the main, the best safeguard. The second section provides:

"SEC. 2. That the supreme court, courts of first instance, and municipal courts of said islands shall possess and exercise jurisdiction as heretofore provided by said commission, subject in all matters to such alteration and amendment as may be hereafter enacted by the commission or otherwise enacted by law; and the chief justice and associate justices of the supreme court shall hereafter be appointed by the President, by and with the advice and consent of the Senate. The judges of the court of first instance shall be appointed by the civil governor, by and with the advice and consent of the Philippine Commission. *Provided*, That the admiralty jurisdiction of the supreme court and courts of first instance shall not be changed except by act of Congress."

"The judges of the supreme court are to be appointed with the concurrence of the Senate. They are, however, to have only such jurisdiction as may have been conferred upon them by the Philippine Commission, and that may be regulated, altered, and amended in any way in which the commission may hereafter enact. While these judges are not dependent upon the commission for the tenure of their office, they are for the amount and payment of their sal-

aries, and they are wholly dependent upon the commission as to the extent of the jurisdiction which they may exercise.

"It will be noted that there is no appeal provided in any case in this statute from the decisions of the judges of first instance to the supreme court herein referred to. When we look to the judges of the courts of first instance, we find that they are to be appointed by the civil governor, by and with the advice and consent of the Philippine Commission. The same commission fixes the compensation of the judges and their terms of office. The extent of their jurisdiction is to be defined by laws which the commission is expressly authorized to enact. It is competent for the commission to make final every decision of these judges, dependent in every way upon the commission, allowing no appeal from their decision to the supreme court which is provided for in this act. Thus we see how absolutely dependent both these courts are upon the United States Philippine Commission.

"We turn to the provision relating to appeals. There is no provision regulating appeals from the courts of first instance to the supreme court, but section 67 relates to appeals to the Supreme Court of the United States, and is as follows:

"SEC. 67. That the Supreme Court of the United States shall have jurisdiction to review, revise, reverse, modify, or affirm the final judgments and decrees of the supreme court of the Philippine Islands in all actions, cases, causes, and proceedings now pending therein or hereafter determined thereby in which the Constitution or any statute, treaty, title, right, privilege, or obligation of the United States is involved, or in causes in which the value in controversy exceeds \$5,000, or in which the title or possession of real estate exceeding in value the sum of \$5,000, to be ascertained by the oath of either party or of other competent witnesses, is involved or brought in question; and such final judgments or decrees may and can be reviewed, revised, reversed, modified, or affirmed by said Supreme Court of the United States on appeal or writ of error by the party aggrieved, in the same manner, under the same regulations, and by the same procedure, as far as applicable, as the final judgments and decrees of the circuit courts of the United States.

"Mr. President, it will be noted that there is no jurisdiction given the Supreme Court of the United States except such as the Philippine Commission may see fit to allow to be exercised. Having absolute control of the jurisdiction of the supreme court of the islands, that commission can cut off any case from reaching the Supreme Court of the United States which they do not wish to have come before that tribunal for determination. So we have the courts constructed upon such a plan as to be subject absolutely to the control of the United States Philippine Commission; and those courts are, therefore, no safeguard against the exercise of any power which that commission may undertake to employ, and the victim of its oppression, if it shall practise oppression, can have no remedy except such remedy as the commission may see fit to provide.

"If it is desired by the commission to appropriate lands to subserve purposes which they may wish to subserve, and to employ the judiciary to that end, they have a subservient tool to carry out that wish. If they want to deprive of liberty any man who becomes obnoxious to them or dares to assert a policy which may be antagonistic to that which they desire, they have

the courts as subservient tools for his suppression. Section 10 reads as follows:

"SEC. 10. That all the property and rights which may have been acquired in the Philippine Islands by the United States under the treaty of peace with Spain, 1898, are hereby placed under the control of the government of the Philippine Islands to be administered for the benefit of the inhabitants of the islands, except as hereinafter provided."

"The purpose of that is self-evident. I have already made sufficient comment upon it. The next section is as follows:

"SEC. 11. That the government of the Philippines, subject to the provisions of this act and except as hereinafter provided, shall make rules and regulations for the lease, sale, or other disposition of the public lands other than timber or mineral lands, but such rules and regulations shall not go into effect or have the force of law until they have received the approval of the President, by and through the Secretary of War, and they shall also be submitted to Congress, and unless disapproved or amended by Congress at the next ensuing session after their submission they shall at the close of such session have the force and effect of law in the Philippine Islands, when they shall have received the approval of the President, as hereinbefore provided."

"Those two sections put together place lands of every description within the islands subject to these rules and regulations for lease, sale, or other disposition. The power which this section confers upon the President and the commission may be employed to any conceivable iniquitous end, depending wholly upon the honor, the disposition, or the integrity of the men who may happen to constitute the government."

"We already know the ends really to which these powers are to be employed. They have been pointed out to us by the civil governor of the islands. It is designed that leases may be made to cover a period in the neighborhood of a hundred years. The nature or terms of those leases of course may be prescribed by the commission. The tenure under which those lands may be held may be of a feudal nature. The right to hold the lands, the privilege of holding the lands, may be made dependent upon the rendition of service to the government, upon whom is conferred this authority to make leases."

"In other words, the Philippine Commission is made the lord paramount of all the lands and property in the islands, and they may be leased or they may be sold or they may be otherwise disposed of without any reference to the quantity and without any reference to the purposes for which they may be used. They may be turned over to syndicates or to corporations, or it is possible they may be confined to those who may be seeking homes. But we know that the main purpose of the commission, which seeks to have conferred upon it this power, is to dispose of those lands in large quantities, as large as 20,000 acres, if not more, to syndicates and corporations, with a view to their exploitation."

Mr. Rawlins subsequently took up the origin of the war in the Philippine Islands, which he described as without justification, and he attacked the method in which it had been carried on as barbarous and cruel, citing general orders and reported instances of military outrage to sustain the charge.

Mr. Lodge, of Massachusetts, who was in charge of the measure, said, in the way of general explanation and defense:

"Mr. President, I think there has been a

marked improvement in this debate over the last debate which was held upon the question of Philippine affairs, because in this debate, so far as it has proceeded, there has been more or less said about the pending measure. I am aware that we devoted one afternoon to a discussion of politics and election methods in North Carolina, but possibly it was not amiss to consider the quality of mercy exhibited in certain parts of our common country as well as in the Philippines. It is true also that we devoted one afternoon to trying to decide whether Aguinaldo caused the assassination of Gen. Luna, whether he had him assassinated in self-defense, or whether Luna was merely killed by the guard because the guard did not like his manners. But all these things, Mr. President, have more connection with the matter before us than the discussions about the revolutionary history and the character of a judge at Nome, in which we before indulged. I think, Mr. President, I am not too optimistic, therefore, if I express the hope and the belief that the time will come, and come before long, when we shall discuss measures in regard to the Philippines as we discussed the Chinese-exclusion bill, with a view to getting the best legislation possible in the interests of the people of the islands and the people of the United States, and when we shall cease to make the affairs of the Philippine Islands a field for the investment of political capital by a party whose ventures in other directions have not of late been very successful."

"The Senator from Tennessee, with the grace of phrase characteristic of his eloquence, asked if any one would have the effrontery to defend the pending bill. In all humility, Mr. President, I will say that I have the effrontery not only to defend the bill, but in my feeble way to advocate it. I believe it to be a well-considered measure, dealing with subjects of great difficulty, to which the committee have given careful attention, over which they have labored assiduously, and to parts of which the minority of the committee have made valuable contribution, for which I am happy to make acknowledgment."

"The minor provisions of this bill occupy 28 pages. The mining law on which the provisions of the bill are founded was prepared by the Philippine Commission with great labor and attention. It has been revised by a subcommittee of the Committee on the Philippines, and I believe, speaking as a layman in regard to mining laws, that we have embodied in this bill as excellent a mining law as stands on any statute-book. I think the obligation for it is due to the subcommittee of the Committee on the Philippines, and in a large measure to the Senator from Utah, who brought to the work an expert knowledge which was of great value. I shall not detain the Senate by discussing the details of those mining provisions. That is a task which I leave to the better instructed members who prepared it."

"The coinage sections of the bill occupy 6 pages and provide for coinage in the Philippine Islands. I will only say in regard to the coinage provisions that the committee were satisfied after a careful investigation of the subject, unanimously, with one possible exception, that no greater mistake could be made than to change the system of currency now in existence in those islands and to alter the standard to which the people have been accustomed for many years. It is always a dangerous thing to change the money standard of a people; and it seemed to the committee that at this time it would be exceedingly perilous. They are now, and have long been,

upon the single silver standard, with the free coinage of Mexican dollars as the unit of value and the current coin of the islands. We make no change in the standard. We simply substitute for the Mexican dollar an American Filipino dollar, to be coined at the mint of Manila and at the mints in the United States, following in that respect the example of Great Britain in Hong-Kong, Singapore, and the Straits Settlements, for which she has coined what is known as the Bombay dollar, which has been of very great advantage to her and to her trade in the commerce of the East. I shall not go further into this question. The sections were prepared by the Senator from Iowa, and I shall leave him, abler and more skilled than any other man in public life to deal with such a question as this, to explain these provisions fully and in detail to the Senate.

"The remainder of the bill occupies 19 pages. We begin by continuing the present Philippine Commission. The only change we make in the existing conditions is to require that the commissioners shall be appointed by the President and confirmed by the Senate, and we apply the confirmation of the Senate also to the judges of the supreme court. That, Mr. President, is necessarily a temporary and tentative arrangement. It is designed to leave the government of the islands in the hands of the present commission until the provisions of the succeeding sections may be carried into effect. Those sections provide for taking a census of the islands, which shall give not only the numbers of the people, but all the information that can possibly be desired, in order to enable us to establish there 'permanent, popular, representative government.'

"It will require, in the nature of things, some time to take such a census, and it is impossible, as it seemed to the committee, to enter suddenly upon the establishment of representative government until we know the numbers of the people, until we have differentiated the wild tribes, who are said to number nearly a million, from the Christianized Filipinos, and also to determine our relations with the Mohammedan tribes of the south. The object of the census sections is to enable Congress to legislate intelligently with a view to giving those people a "popular representative government"; in the meantime, while we take the census to which I refer, the bill instructs the commission to continue, and to extend as far as possible the municipal and provincial governments, to be chosen by the people, with the suffrage to be enlarged as rapidly as they think it safe; and to continue to build up in that way the self-government of the people of the islands.

"We provide also for the public lands. That, again, is a temporary provision. There is a vast body of public land in the Philippine Islands. The total area of the islands is estimated at 72,000,000 acres, and it is believed that not more than 5,000,000 of those 72,000,000 acres are now in private ownership. That leaves in the hands of the United States, as the heir of Spain, some 67,000,000 acres of public land. The committee felt that it was necessary to have a proper land law—one adapted to the conditions of the islands. It has been left to the commission to prepare such a law, to be transmitted to Congress for its consideration and approval. Until that land law is enacted, we give to the commission power only to make leases of the public lands.

"We also provide that they shall give good titles to the occupiers of public lands, of whom there are a great many among the natives, who have never been able to secure from Spain any

title to the little homesteads or farms which they live on and cultivate, and which, in many cases, they have lived on and cultivated for generations. I think that that is one of the most necessary and beneficent provisions of the bill.

"There are also sections which provide and give authority for the issuance of municipal loans, intended for municipal improvements, which are greatly needed, especially in the city of Manila.

"We also have provisions in the bill in regard to timber lands, and we have followed the same careful policy in regard to those lands that we have pursued in regard to the public lands generally. We permit the commission only to issue licenses to cut timber, and not to sell any more land than is necessary for the establishment of a sawmill or the opening of a road to give access to the forests.

"We have also made provision for the purchase of the friars' lands, as they are called. That is a difficult and unusual question. We authorize the commission to buy the lands of the friars for the purpose of selling them immediately to the people who now occupy them. However witnesses or experts may differ in regard to the affairs in the Philippine Islands, there is but one opinion as to the necessity of taking these friars' lands and giving them over to the people who actually live upon them and cultivate them. The possession of the lands by the friars was one of the bitterest grievances of the Filipino people against Spain. The testimony is universal as to their desire to have those lands restored to them. The sections in regard to these lands, of course, in the nature of things, give a large power to the commission, but there is no other way that I have seen suggested to get those lands out of the hands of these religious corporations and back into the hands of the people who cultivate them.

"We have also clauses in the bill providing for franchises. They are guarded with the utmost care. I can not now undertake to read, and I shall not detain the Senate by reading, those franchise clauses, but I invite Senators to examine them with the utmost care. They are guarded in every possible way compatible with giving any reasonable opening to capital to enter into the islands with the hope of profitable investment.

"The main object of the bill, Mr. President, is, in a word, to replace military by civil government—to advance self-government; and yet it is delayed in this chamber and opposed by those who proclaim themselves the especial foes of military rule.

"The second object of the bill is to help the development of the islands, and yet, as the committee felt, to help that development only by taking the utmost pains that there should be no opportunity given for undue or selfish exploitation. The opponents of this legislation have dwelt almost continuously, when they have spoken on this bill, on the point that it is intended to open the islands to exploiters, to syndicates, and to carpetbaggers. Why, Mr. President, if we go on the proposition that it is a crime for an American to make money, undoubtedly there is opportunity in this bill for men or associations of men to enter into the islands and to make money in a legitimate way. I am aware, after many years of experience, of the hostility of the Democratic party to any man who has made money or to any man making money, and it was that one of their principles, the only one, I think, which was carried out

with complete success during their last tenure of power. Few, if any, Americans at that time made money. But these exploiters, these syndicates, these carpetbaggers, who march back and forth through the speeches of Democratic Senators like the scene-shifters' army, have as little reality as the air-drawn dagger of Macbeth. It is continually reiterated that they are to be brought into the Philippines by this bill; and while Senators in opposition are declaiming against this bill as throwing the islands open to improper exploitation and speculation I have had many gentlemen come to me who desire to invest money in the Philippine Islands who say that the bill is so drawn that it is impossible for capital to go in there to any large amount. When gentlemen who desire to invest take that view and the Democratic party takes the view that the bill is simply for purposes of exploitation my own conclusion is that we have got a pretty good bill.

"We are also told that the Chinese are to be poured in there. Mr. President, as we have excluded the Chinese from the Philippines by legislation already passed, how absurd that proposition is. Passing lightly from the proposition that the Chinese are to be poured into the Philippines, from which our laws expressly exclude them, the dismal picture is then drawn of what will happen to the islands if we do not let the Chinese in. The testimony is very clear to my mind that the Filipino people, if they have an opportunity to earn good wages and to have them regularly paid—something which has never happened to them under Spanish rule—will be found quite capable of doing all the work that is needed in the islands. They are skilful workers in the factories they have there, such as the cigarette factories; they are noted as good machinists; they are deft and ingenious with their hands; they work in the rice-fields under a sun which is too much even for Chinamen, and they carry on all the cultivation of the islands. If we once give them an opportunity to perform this new work and receive regular wages and be properly paid, I am sure we shall find that the labor is there, so that the Filipino people can develop their own territory. It may be a slower process than if we should throw the islands open now to sudden exploitation in large masses of territory, with great bodies of capital and with Chinese labor; but that it is simple justice to the people of those islands, and that it is infinitely better to give them the arrangement that we have given them is, to my mind, too clear for argument."

The great part of Mr. Lodge's speech, however, was devoted to an argument in vindication of the conduct of the army rather than a discussion of the policy of the bill. In conclusion he said, after the presentation of much evidence on the subject:

"Now, Mr. President, I do not seek to defend any cruelty, but I do want to have justice done to the American army. I want the people of the country to know when they read of cruelties to the hostile Filipino what the provocation has been; I want them to think of what our men have suffered and endured; I want, and we can afford to give, absolute justice to the American army. I do not wish to be put in a position of being the defender of cruelties; but if I must take my choice between men, then I am for the friendly native, the friend of America, against the men in arms against the United States. I am for the American army against the insurgents. I do not like to hear that army assailed

as it has been assailed. It is our army; its glory is our glory. We can not tarnish that glory without tarnishing the glory and the fame of the country abroad. When we heap obloquy upon them on account of these cruelties, I say again, remember the provocation, remember the faces of the dead boys under the sands of Luzon—not dead by battle, but dead by murder; remember the dead and the treatment of captured prisoners, and let us show some little understanding of the trials which those officers and those soldiers have had to undergo."

Preliminary to the final vote on the passage of the bill in the Senate several important amendments were proposed and rejected.

Mr. Patterson, of Colorado, proposed to amend the measure by inserting the provision: "The trial of all crimes except in cases of impeachment shall be by jury; and such trial shall be held in the province where the said crime shall have been committed." The amendment was defeated by a vote of 47 to 28.

Mr. Teller, of Colorado, proposed the following amendment:

"It is not the intention of the Government of the United States to harass or oppress the inhabitants of the Philippine Islands, or to deprive them of their liberty, but, on the contrary, to assist them to establish a government of their own that shall secure to them all privileges, advantages, and blessings enjoyed by a free people, and ultimate independence under the protection of the United States against foreign powers and domestic violence. And to secure these ends as speedily as possible, the Government of the United States invites and urges the people of said islands to aid the United States authorities now exercising power in the islands to secure peace and order."

This was defeated by a vote of 47 to 30.

Mr. Carmack, of Tennessee, proposed the following amendment:

"That the United States regard with extreme disfavor any movement having for its object the early or ultimate admission of the Philippine Islands as a State or States of the Union; and any action on the part of persons holding office under the authority of the United States that gives sanction or encouragement to such movement is hereby condemned.

"That to confer the rights and privileges of citizens upon the inhabitants of the Philippine Islands would tend to destroy the integrity of the citizenship and to degrade the character of the Government of the United States.

"That to maintain the relation of sovereign and subject between the Government of the United States and a people under its dominion would be repugnant to the principles of the Constitution."

The first clause alone was defeated by a vote of 46 to 28, and the second and third clauses by a vote of 49 to 23.

Mr. Culberson, of Texas, proposed as an amendment in the way of a substitute to strike out all after the enacting clause of the bill and insert the following:

"That subject to the provisions hereinafter set forth the United States of America hereby relinquish all claim of sovereignty over and title to the archipelago known as the Philippine Islands."

"SEC. 2. That the United States shall continue to occupy and govern said archipelago until the people thereof have established a government in accordance with the provisions of this act, with sufficient guaranties for the performance of our treaty obligations with Spain and for the safety

of those inhabitants who have adhered to the United States, and for the maintenance and protection of all rights which have accrued under the authority thereof, as hereinafter provided.

"SEC. 3. That upon the cessation of organized armed opposition to the temporary sovereignty of the United States Government the President of the United States shall proclaim the fact, and within ninety days after the issuance of such proclamation the United States Philippine Commission shall make and promulgate rules and regulations for the holding of an election in the various provinces of said Philippine Archipelago for members of a house of representatives and a senate, to constitute a temporary congress, which shall be vested with full legislative power and also with the power of appointing such judges as may to them seem proper and necessary. The said Philippine congress shall prescribe rules and regulations for the election or appointment of all other officers, provincial or municipal, as may to them seem proper or necessary. The members of the said senate and house shall hold their offices for the term of four years from and after their election and qualification, unless said terms of office are sooner terminated by the inauguration of the permanent government hereinafter provided for, and all other officers shall hold office for such terms as may be prescribed by such congress. Senators and representatives in congress are to receive compensation at the rate of — dollars per annum and other officers shall receive such compensation as may be prescribed by the congress.

"The chief executive shall be appointed by the President of the United States, by and with the advice and consent of the Senate of the United States, and shall be vested with a veto power over all acts of the Philippine congress having relation to their foreign affairs, but shall have no veto power with respect to other legislation, nor shall he be empowered to appoint any officer unless authorized to do so by the Philippine congress. He shall exercise such other executive powers as shall be vested in him by the Philippine congress, and shall hold his office for a term of four years unless the temporary government shall within that time be superseded by the inauguration of the permanent government herein provided for, and said president shall receive a compensation of \$10,000 per annum, to be paid out of the Philippine treasury. There shall be such other executive officers receiving such compensation and performing such duties as may be prescribed by the Philippine congress, and they shall be appointed or elected in such manner as may be prescribed by law.

"During the period of the existence of the temporary government herein provided for, which shall in no event extend beyond four years from and after the date of its inauguration, the United States guarantee to the people of said Philippine Archipelago their independence and a republican form of government, and shall protect them against invasion and, upon application by the congress thereof, against domestic violence.

"That all male inhabitants of said archipelago twenty-one years of age and over who can speak and write either the English or Spanish language, or any of the native languages of the said archipelago, and who shall have resided therein for one year, shall be qualified to vote for members of congress and other elective officers, and any person so qualified as an elector shall be qualified to become a member of said congress or to hold any elective office.

"The house of representatives shall be composed of 100 members and the senate of 30 members, and shall be apportioned by the United States Philippine Commission among the several provinces of said archipelago, so that the distribution of membership in the house of representatives shall be in proportion to their population, as near as may be, and so that the membership of the senate shall be as nearly representative of separate provinces as may be; and when said apportionment has been determined upon, the said commission shall by proclamation order an election of the members of said congress to be held throughout the said archipelago, at such time as shall be fixed by the said commission, which election shall be held not more than one hundred and twenty days from the date of the proclamation by the President of the United States hereinbefore provided for, and ample time shall be given before said election to circulate said proclamation throughout the archipelago and arrange for the holding of said election.

"SEC. 4. That the members of the congress thus elected shall meet at the city of Manila on a day to be fixed by the United States Philippine Commission, not more than ninety days subsequent to the day of election, the time for which meeting shall be stated in the proclamation aforesaid, and after organization the said congress and president, constituting the temporary government herein provided for, shall proceed to the performance of their duties as the temporary government of the Philippine Archipelago: *Provided*, That said congress shall provide by legislation and treaty, irrevocable without the consent of the United States—

"First. That there shall belong to the United States, and continue to be the property thereof, such lands and waters as the President of the United States shall designate to the Philippine government, and shall be agreed to by it, for naval, military, and coaling stations, and terminal facilities for submarine cables, the same to continue under the control and sovereignty of the United States.

"Second. To carry into effect the treaty obligations of the United States with the Kingdom of Spain and for the maintenance and protection of all rights and property acquired under the authority of the United States.

"Third. That no inhabitant of said archipelago shall ever be molested in person or property on account of his or her adherence to the United States.

"SEC. 5. That when the election herein provided for shall have taken place and the congress thereby elected shall have convened, in compliance with the provisions of the act, the said United States Philippine Commission shall certify the fact to the President of the United States, whereupon it shall be the duty of the President to issue his proclamation declaring the independence of the people of said archipelago and that they constitute an independent state and nation; subject, however, to the control and regulation by the United States of their intercourse with foreign nations during the period of the existence of the temporary government herein provided for.

"SEC. 6. That immediately after the President shall have proclaimed that all organized armed resistance to the United States has ceased in said archipelago, he is requested to proclaim full amnesty to all inhabitants thereof for and on account of political offenses and the bearing of arms against the United States, and all Filipinos

or inhabitants of said archipelago who have been deported shall be returned to the place whence they were so deported; *Provided*, That such amnesty shall not apply to any who have violated the rules of civilized warfare or who have been guilty of murder or torture; that the latter, if any, shall be afforded a speedy trial for their offenses in the civil courts of said archipelago and be punished or acquitted, as the facts and law may warrant.

"SEC. 7. That within sixty days from the election of officers under the temporary government to be formed by the people of the Philippine Archipelago, in accordance with the provisions of this act, and the inauguration of said officers, the President shall cause the armed forces of the United States to be withdrawn from said archipelago as speedily as may be, except such forces as may be maintained in such parts thereof as have been retained by the United States for naval, military, and coaling stations and terminal facilities for cables, and the President of the United States and the Secretary of War shall make all needful regulations to carry into effect the provisions of this section.

"SEC. 8. That it shall be the duty of the Philippine congress herein provided for to prescribe rules and regulations and qualifications for electors for the election and holding of a constitutional convention which shall be charged with the duty of framing a permanent government for the people of the Philippine Archipelago. Said constitutional convention shall be called to meet at such place and at such time, not later than the first Monday of January, 1905, as may be prescribed by said Philippine congress. Upon the completion of the labors of said convention and the inauguration of the government consequent thereupon, it shall be the duty of the President of the United States to issue his proclamation declaring the absolute and unqualified independence of the people of the Philippine Archipelago and that they constitute an independent state and nation, and upon the issuance of said proclamation the United States Government and the Philippine government shall become and be as fully separate and independent as any other separate and independent nations are: *Provided, however*, That if the Philippine government request it, the United States Government hereby agrees to assume a protectorate over the Philippine Archipelago for a period additional to the period of the temporary government herein provided for, said additional period of protectorate not to exceed, however, the period of sixteen years: *Provided further*, That the said Philippine government agree during the said period of additional protectorate to surrender to the keeping of the United States Government the regulation and control of the foreign affairs of the Philippine Archipelago.

"SEC. 9. That all terms of office of legislative, executive, and judicial officers of the temporary government hereinbefore provided for, including the term of office of the president, and the terms of office of the senators and representatives in congress hereinbefore prescribed, shall terminate with the existence of the temporary government herein provided for, and said temporary government shall *ipso facto* cease to exist upon the inauguration of the permanent government to be called into existence by the constitutional convention herein provided for; and nothing herein contained shall be so construed as to prevent the congress of the Philippine Archipelago from calling the said constitutional convention at a date earlier than the date herein fixed."

The substitute was rejected by a vote of 48 to 28.

Mr. McLaurin, of Mississippi, proposed the following amendment:

"It is the policy of the Government to preserve the agricultural public lands in the archipelago for homes for the people of the archipelago, and no part of said agricultural lands shall be sold under this act except for such homes, nor to any except a natural person, a citizen of said archipelago."

It was beaten by a vote of 47 to 28.

The vote on the passage of the measure was as follows:

YEAS—Allison, Bard, Beveridge, Burnham, Burrows, Burton, Clapp, Clark of Wyoming, Culom, Deboe, Dietrich, Dillingham, Dolliver, Elkins, Fairbanks, Foraker, Foster of Washington, Frye, Gallinger, Gamble, Hanna, Hawley, Jones of Nevada, Kean, Kearns, Kittredge, Lodge, McComas, McCumber, McLaurin of South Carolina, McMillan, Millard, Mitchell, Nelson, Penrose, Perkins, Platt of Connecticut, Platt of New York, Pritchard, Proctor, Quarles, Quay, Scott, Simon, Spooner, Stewart, Warren, Wetmore—48.

NAYS—Bacon, Bailey, Bate, Berry, Blackburn, Carmack, Clark of Montana, Clay, Cockrell, Culberson, Dubois, Foster of Louisiana, Gibson, Harris, Heitfeld, Hoar, McEnery, McLaurin of Mississippi, Mallory, Martin, Mason, Money, Morgan, Patterson, Simmons, Taliaferro, Teller, Tillman, Vest, Wellington—30.

NOT VOTING—Aldrich, Daniel, Depew, Dryden, Hale, Hansbrough, Jones of Arkansas, Pettus, Rawlins, Turner—10.

In the House of Representatives the usual device of a special rule, under which that body has become, in recent years, executive rather than deliberative, was adopted, June 16, to bring the bill to a prompt vote. It was ordered that it should be considered in Committee of the Whole, Wednesday, June 25, reported to the House with amendments at four o'clock, Thursday, June 26, and then put to passage under the previous question. It was amended and passed that day by a vote of 140 to 97.

The amendment, in the way of a substitute, reported by the Republican majority of the Committee on Insular Affairs, and adopted by the majority of the House, was radical in its changes, and their character may be best understood by the report of the managers appointed to represent the House on a conference committee, after the Senate had non-concurred in the amendment. The differences are thus stated, in reporting the substitute measure of the Conference Committee:

"There were three important points of difference between the two Houses, namely, provisions in the House bill for a legislature; another in relation to lands; and another in relation to coinage. The Senate recedes from its disagreement to the provision for a legislature, and agrees to it with an amendment providing that within two years after the census, provided for in the House bill, has been completed, if, in the meanwhile, a condition of general peace and good order shall have prevailed, the President shall order the Philippine Commission to call, and the commission shall call, a general election for the choice of delegates to a popular assembly of the people of that portion of the islands not inhabited by Moros and pagan tribes, which shall be known as the Philippine assembly. As to the qualification of voters, the power of the assembly, and of the legislature, and the qualification of the members of the assembly, the Senate has agreed substantially to the House provisions."

This also provides for two commissioners, to be elected by the legislature.

"The Senate further recedes from its disagreement to the provisions of the House bill relating to public lands, and agrees to the same with an amendment reducing the amount of land to be held by corporations from 2,000 hectares to 1,024 hectares. The Senate has further agreed to the House provisions restricting the ownership and control by members of corporations, and corporations, of mining and agricultural lands, with additional stringent provisions limiting these holdings.

"In the coinage provision reported, the Senate recedes from its provision for the coinage of a Philippine silver dollar, and the House recedes from its provision for the establishment of a gold standard. The report agrees upon the provisions for subsidiary coins and minor coins, the names of which are to be those contained in the House bill, and substantially as provided for in the House bill.

"The provisions relating to banks are eliminated from the bill.

"The bill contains the legislative limitations and bill of rights, complete, as in the House bill.

"The mining provisions of the bill reported are a combination of the provisions of the mining features of the two bills."

The President approved the bill in its final form, July 1, 1902. Its text is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the action of the President of the United States in creating the Philippine Commission and authorizing said commission to exercise the powers of government to the extent and in the manner and form and subject to the regulation and control set forth in the instructions of the President to the Philippine Commission, dated April 17, 1900, and in creating the offices of civil governor and vice-governor of the Philippine Islands, and authorizing said civil governor and vice-governor to exercise the powers of government to the extent and in the manner and form set forth in the Executive order dated June 21, 1901, and in establishing four executive departments of government in said islands as set forth in the act of the Philippine Commission, entitled, 'An Act providing an organization for the departments of the interior, of commerce and police, of finance and justice, and of public instruction,' enacted Sept. 6, 1901, is hereby approved, ratified, and confirmed, and, until otherwise provided by law, the said islands shall continue to be governed as thereby and herein provided, and all laws passed hereafter by the Philippine Commission shall have an enacting clause as follows: 'By authority of the United States be it enacted by the Philippine Commission.'

"The provisions of section 1891 of the Revised Statutes of 1878 shall not apply to the Philippine Islands.

"Future appointments of civil governor, vice-governor, members of said commission, and heads of executive departments shall be made by the President, by and with the advice and consent of the Senate.

"SEC. 2. That the action of the President of the United States heretofore taken by virtue of the authority vested in him as Commander-in-Chief of the Army and Navy, as set forth in his order of July 12, 1898, whereby a tariff of duties and taxes as set forth by said order was to be levied and collected at all ports and places in the Philippine Islands upon passing into the

occupation and possession of the forces of the United States, together with the subsequent amendments of said order, are hereby approved, ratified, and confirmed, and the actions of the authorities of the government of the Philippine Islands, taken in accordance with the provisions of said order and subsequent amendments, are hereby approved: *Provided*, That nothing contained in this section shall be held to amend or repeal an act entitled 'An Act temporarily to provide revenue for the Philippine Islands, and for other purposes,' approved March 8, 1902.

"SEC. 3. That the President of the United States, during such time as and whenever the sovereignty and authority of the United States encounter armed resistance in the Philippine Islands, until otherwise provided by Congress, shall continue to regulate and control commercial intercourse with and within said islands by such general rules and regulations as he, in his discretion, may deem most conducive to the public interest and the general welfare.

"SEC. 4. That all inhabitants of the Philippine Islands continuing to reside therein who were Spanish subjects on April 11, 1899, and then resided in said islands, and their children born subsequent thereto, shall be deemed and held to be citizens of the Philippine Islands and as such entitled to the protection of the United States, except such as shall have elected to preserve their allegiance to the Crown of Spain in accordance with the provisions of the treaty of peace between the United States and Spain signed at Paris, Dec. 10, 1898.

"SEC. 5. That no law shall be enacted in said islands which shall deprive any person of life, liberty, or property without due process of law, or deny to any person therein the equal protection of the laws.

"That in all criminal prosecutions the accused shall enjoy the right to be heard by himself and counsel, to demand the nature and cause of the accusation against him, to have a speedy and public trial, to meet the witnesses face to face, and to have compulsory process to compel the attendance of witnesses in his behalf.

"That no person shall be held to answer for a criminal offense without due process of law; and no person for the same offense shall be twice put in jeopardy of punishment, nor shall be compelled in any criminal case to be a witness against himself.

"That all persons shall before conviction be bailable by sufficient sureties, except for capital offenses.

"That no law impairing the obligation of contracts shall be enacted.

"That no person shall be imprisoned for debt.

"That the privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion, insurrection, or invasion the public safety may require it, in either of which events the same may be suspended by the President, or by the governor, with the approval of the Philippine Commission, wherever during such period the necessity for such suspension shall exist.

"That no *ex post facto* law or bill of attainder shall be enacted.

"That no law granting a title of nobility shall be enacted, and no person holding any office of profit or trust in said islands, shall, without the consent of the Congress of the United States, accept any present, emolument, office, or title of any kind whatever from any king, queen, prince, or foreign State.

"That excessive bail shall not be required, nor

excessive fines imposed, nor cruel and unusual punishment inflicted.

"That the right to be secure against unreasonable searches and seizures shall not be violated.

"That neither slavery, nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist in said islands.

"That no law shall be passed abridging the freedom of speech or of the press, or the right of the people peaceably to assemble and petition the Government for redress of grievances.

"That no law shall be made respecting an establishment of religion or prohibiting the free exercise thereof, and that the free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever be allowed.

"That no money shall be paid out of the treasury except in pursuance of an appropriation by law.

"That the rule of taxation in said islands shall be uniform.

"That no private or local bill which may be enacted into law shall embrace more than one subject, and that subject shall be expressed in the title of the bill.

"That no warrant shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the person or things to be seized.

"That all money collected on any tax levied or assessed for a special purpose shall be treated as a special fund in the treasury and paid out for such purpose only.

"SEC. 6. That whenever the existing insurrection in the Philippine Islands shall have ceased and a condition of general and complete peace shall have been established therein and the fact shall be certified to the President by the Philippine Commission, the President, upon being satisfied thereof, shall order a census of the Philippine Islands to be taken by said Philippine Commission; such census in its inquiries relating to the population shall take and make so far as practicable full report for all the inhabitants, of name, age, sex, race, or tribe, whether native or foreign born, literacy in Spanish, native dialect or language, or in English, school attendance, ownership of homes, industrial and social statistics, and such other information separately for each island, each province, and municipality, or other civil division, as the President and said commission may deem necessary: *Provided*, That the President may, upon the request of said commission, in his discretion, employ the service of the Census Bureau in compiling and promulgating the statistical information above provided for, and may commit to such bureau any part or portion of such labor as to him may seem wise.

"SEC. 7. That two years after the completion and publication of the census, in case such condition of general and complete peace with recognition of the authority of the United States shall have continued in the territory of said islands not inhabited by Moros or other non-Christian tribes and such facts shall have been certified to the President by the Philippine Commission, the President upon being satisfied thereof shall direct said commission to call, and the commission shall call, a general election for the choice of delegates to a popular assembly of the people of said territory in the Philippine Islands, which shall be known as the Philippine Assembly. After said assembly shall have convened and organized, all the legislative

power heretofore conferred on the Philippine Commission in all that part of said islands not inhabited by Moros or other non-Christian tribes shall be vested in a legislature consisting of two houses—the Philippine Commission and the Philippine Assembly. Said assembly shall consist of not less than 50 nor more than 100 members to be apportioned by said commission among the provinces as nearly as practicable according to population: *Provided*, That no province shall have less than one member: *And provided further*, That provinces entitled by population to more than one member may be divided into such convenient districts as the said commission may deem best.

"Public notice of such division shall be given at least ninety days prior to such election, and the election shall be held under rules and regulations to be prescribed by law. The qualification of electors in such election shall be the same as is now provided by law in case of electors in municipal elections. The members of assembly shall hold office for two years from the 1st day of January next following their election, and their successors shall be chosen by the people every second year thereafter. No person shall be eligible to such election who is not a qualified elector of the election district in which he may be chosen, owing allegiance to the United States, and twenty-five years of age.

"The legislature shall hold annual sessions, commencing on the first Monday of February in each year and continuing not exceeding ninety days thereafter (Sundays and holidays not included): *Provided*, That the first meeting of the legislature shall be held upon the call of the governor within ninety days after the first election: *And provided further*, That if at the termination of any session the appropriations necessary for the support of government shall not have been made, an amount equal to the sums appropriated in the last appropriation bills for such purposes shall be deemed to be appropriated; and until the legislature shall act in such behalf the treasurer may, with the advice of the governor, make the payments necessary for the purposes aforesaid.

"The legislature may be called in special session at any time by the civil governor for general legislation, or for action on such specific subjects as he may designate. No special session shall continue longer than thirty days, exclusive of Sundays.

"The assembly shall be the judge of the elections, returns, and qualifications of its members. A majority shall constitute a quorum to do business, but a smaller number may adjourn from day to day and may be authorized to compel the attendance of absent members. It shall choose its speaker and other officers, and the salaries of its members and officers shall be fixed by law. It may determine the rule of its proceedings, punish its members for disorderly behavior, and with the concurrence of two-thirds expel a member. It shall keep a journal of its proceedings, which shall be published, and the yeas and nays of the members on any question shall, on the demand of one-fifth of those present, be entered on the journal.

"SEC. 8. That at the same time with the first meeting of the Philippine legislature, and biennially thereafter, there shall be chosen by said legislature, each house voting separately, two resident commissioners to the United States, who shall be entitled to an official recognition as such by all departments upon presentation to the President of a certificate of election by the

civil governor of said islands, and each of whom shall be entitled to a salary payable monthly by the United States at the rate of \$5,000 per annum, and \$2,000 additional to cover all expenses: *Provided*, That no person shall be eligible to such election who is not a qualified elector of said islands, owing allegiance to the United States, and who is not thirty years of age.

"SEC. 9. That the supreme court and the courts of first instance of the Philippine Islands shall possess and exercise jurisdiction as heretofore provided and such additional jurisdiction as shall hereafter be prescribed by the government of said islands, subject to the power of said government to change the practise and method of procedure. The municipal courts of said islands shall possess and exercise jurisdiction as heretofore provided by the Philippine Commission, subject in all matters to such alteration and amendment as may be hereafter enacted by law; and the chief justice and associate justices of the supreme court shall hereafter be appointed by the President, by and with the advice and consent of the Senate, and shall receive the compensation heretofore prescribed by the commission until otherwise provided by Congress. The judges of the court of first instance shall be appointed by the civil governor, by and with the advice and consent of the Philippine Commission: *Provided*, That the admiralty jurisdiction of the supreme court and courts of first instance shall not be changed except by act of Congress.

"SEC. 10. That the Supreme Court of the United States shall have jurisdiction to review, revise, reverse, modify, or affirm the final judgments and decrees of the supreme court of the Philippine Islands in all actions, cases, causes, and proceedings now pending therein or hereafter determined thereby in which the Constitution or any statute, treaty, title, right, or privilege of the United States is involved, or in causes in which the value in controversy exceeds \$25,000, or in which the title or possession of real estate exceeding in value the sum of \$25,000, to be ascertained by the oath of either party or of other competent witnesses, is involved or brought in question; and such final judgments or decrees may and can be reviewed, revised, reversed, modified, or affirmed by said Supreme Court of the United States, on appeal or writ of error by the party aggrieved, in the same manner, under the same regulations, and by the same procedure, as far as applicable, as the final judgments and decrees of the circuit courts of the United States.

"SEC. 11. That the government of the Philippine Islands is hereby authorized to provide for the needs of commerce by improving the harbors and navigable waters of said islands and to construct and maintain in said navigable waters and upon the shore adjacent thereto bonded warehouses, wharves, piers, lighthouses, signal and life-saving stations, buoys, and like instruments of commerce, and to adopt and enforce regulations in regard thereto, including bonded warehouses wherein articles not intended to be imported into said islands nor mingled with the property therein, but brought into a port of said islands for reshipment to another country, may be deposited in bond and reshipped to another country without the payment of customs duties or charges.

"SEC. 12. That all the property and rights which may have been acquired in the Philippine Islands by the United States under the treaty of peace with Spain, signed Dec. 10, 1898, except such land or other property as shall be design-

nated by the President of the United States for military and other reservations of the Government of the United States, are hereby placed under the control of the government of said islands to be administered for the benefit of the inhabitants thereof, except as provided in this act.

"SEC. 13. That the government of the Philippine Islands, subject to the provisions of this act and except as herein provided, shall classify according to its agricultural character and productiveness, and shall immediately make rules and regulations for the lease, sale, or other disposition of the public lands other than timber or mineral lands, but such rules and regulations shall not go into effect or have the force of law until they have received the approval of the President, and when approved by the President they shall be submitted by him to Congress at the beginning of the next ensuing session thereof and unless disapproved or amended by Congress at said session they shall at the close of such period have the force and effect of law in the Philippine Islands: *Provided*, That a single homestead entry shall not exceed 16 hectares in extent.

"SEC. 14. That the government of the Philippine Islands is hereby authorized and empowered to enact rules and regulations and to prescribe terms and conditions to enable persons to perfect their title to public lands in said islands, who, prior to the transfer of sovereignty from Spain to the United States, had fulfilled all or some of the conditions required by the Spanish laws and royal decrees of the Kingdom of Spain for the acquisition of legal title thereto yet failed to secure conveyance of title; and the Philippine Commission is authorized to issue patents, without compensation, to any native of said islands, conveying title to any tract of land not more than 16 hectares in extent, which were public lands and had been actually occupied by such native or his ancestors prior to and on Aug. 13, 1898.

"SEC. 15. That the government of the Philippine Islands is hereby authorized and empowered, on such terms as it may prescribe, by general legislation, to provide for the granting or sale and conveyance to actual occupants and settlers and other citizens of said islands such parts and portions of the public domain, other than timber and mineral lands, of the United States in said islands as it may deem wise, not exceeding 16 hectares to any one person and for the sale and conveyance of not more 1,024 hectares to any corporation or association of persons: *Provided*, That the grant or sale of such lands, whether the purchase price be paid at once or in partial payments, shall be conditioned upon actual and continued occupancy, improvement, and cultivation of the premises sold for a period of not less than five years, during which time the purchaser or grantee can not alienate or encumber said land or the title thereto; but such restriction shall not apply to transfers of rights and title of inheritance under the laws for the distribution of the estates of decedents.

"SEC. 16. That in granting or selling any part of the public domain under the provisions of the last preceding section, preference in all cases shall be given to actual occupants and settlers; and such public lands of the United States in the actual possession or occupancy of any native of the Philippine Islands shall not be sold by said government to any other person without the consent thereto of said prior occupant or settler first had and obtained: *Provided*, That the prior right hereby secured to an occupant of land, who can

show no other proof of title than possession, shall not apply to more than 16 hectares in any one tract.

"SEC. 17. That timber, trees, forests, and forest products on lands leased or demised by the government of the Philippine Islands under the provisions of this act shall not be cut, destroyed, removed, or appropriated except by special permission of said government and under such regulations as it may prescribe.

"All moneys obtained from lease or sale of any portion of the public domain or from licenses to cut timber by the government of the Philippine Islands shall be covered into the insular treasury and be subject only to appropriation for insular purposes according to law.

"SEC. 18. That the forest laws and regulations now in force in the Philippine Islands, with such modifications and amendments as may be made by the government of said islands, are hereby continued in force, and no timber lands forming part of the public domain shall be sold, leased, or entered until the government of said islands, upon the certification of the forestry bureau that said lands are more valuable for agriculture than for forest uses, shall declare such lands so certified to be agricultural in character: *Provided*, That the said government shall have the right and is hereby empowered to issue licenses to cut, harvest, or collect timber or other forest products on reserved or unreserved public lands in said islands in accordance with the forest laws and regulations hereinbefore mentioned and under the provisions of this act, and the said government may lease land to any person or persons holding such licenses, sufficient for a mill-site, not to exceed 4 hectares in extent, and may grant rights of way to enable such person or persons to get access to the lands to which such licenses apply.

"SEC. 19. That the beneficial use shall be the basis, the measure, and the limit of all rights to water in said islands, and the government of said islands is hereby authorized to make such rules and regulations for the use of water, and to make such reservations of public lands for the protection of the water-supply, and for other public purposes not in conflict with the provisions of this act, as it may deem best for the public good.

"MINERAL LANDS.

"SEC. 20. That in all cases public lands in the Philippine Islands valuable for minerals shall be reserved from sale, except as otherwise expressly directed by law.

"SEC. 21. That all valuable mineral deposits in public lands in the Philippine Islands, both surveyed and unsurveyed, are hereby declared to be free and open to exploration, occupation, and purchase, and the land in which they are found to occupation and purchase, by citizens of the United States, or of said islands: *Provided*, That when on any lands in said islands entered and occupied as agricultural lands under the provisions of this act, but not patented, mineral deposits have been found, the working of such mineral deposits is hereby forbidden until the person, association, or corporation who or which has entered and is occupying such lands shall have paid to the government of said islands such additional sum or sums as will make the total amount paid for the mineral claim or claims in which said deposits are located equal to the amount charged by the government for the same as mineral claims.

"SEC. 22. That mining claims upon land containing veins or lodes of quartz or other rock in place bearing gold, silver, cinnabar, lead, tin, copper, or other valuable deposits, located after

the passage of this act, whether located by one or more persons qualified to locate the same under the preceding section, shall be located in the following manner and under the following conditions: Any person so qualified desiring to locate a mineral claim shall, subject to the provisions of this act with respect to land which may be used for mining, enter upon the same and locate a plot of ground measuring, where possible, but not exceeding, 1,000 feet in length by 1,000 feet in breadth, in as nearly as possible a rectangular form; that is to say: All angles shall be right angles, except in cases where a boundary-line of a previously surveyed claim is adopted as common to both claims, but the lines need not necessarily be meridional. In defining the size of a mineral claim, it shall be measured horizontally, irrespective of inequalities of the surface of the ground.

"SEC. 23. That a mineral claim shall be marked by two posts placed as nearly as possible on the line of the ledge or vein, and the posts shall be numbered one and two, and the distance between posts numbered one and two shall not exceed 1,000 feet, the line between posts numbered one and two to be known as the location line; and upon posts numbered one and two shall be written the name given to the mineral claim, the name of the locator, and the date of the location. Upon post numbered one there shall be written, in addition to the foregoing, 'Initial post,' the approximate compass bearing of post numbered two, and a statement of the number of feet lying to the right and to the left of the line from post numbered one to post numbered two, thus: 'Initial post. Direction of post numbered two. — feet of this claim lie on the right and — feet on the left of the line from number one to number two post.' All the particulars required to be put on number one and number two posts shall be furnished by the locator to the provincial secretary, or such other officer as by the Philippine government may be described as mining recorder, in writing, at the time the claim is recorded, and shall form a part of the record of such claim.

"SEC. 24. That when a claim has been located the holder shall immediately mark the line between posts numbered one and two so that it can be distinctly seen. The locator shall also place a post at the point where he has found minerals in place, on which shall be written 'Discovery post': *Provided*, That when the claim is surveyed the surveyor shall be guided by the records of the claim, the sketch plan on the back of the declaration made by the owner when the claim was recorded, posts numbered one and two, and the notice on number one, the initial post.

"SEC. 25. That it shall not be lawful to move number one post, but number two post may be moved by the deputy mineral surveyor when the distance between posts numbered one and two exceeds 1,000 feet, in order to place number two post 1,000 feet from number one post on the line of location. When the distance between posts

numbered one and two is less than 1,000 feet the deputy mineral surveyor shall have no authority to extend the claim beyond number two.

"SEC. 26. That the 'location line' shall govern the direction of one side of the claim, upon which the survey shall be extended according to this act.

"SEC. 27. That the holder of a mineral claim shall be entitled to all minerals which may lie within his claim, but he shall not be entitled to mine outside the boundary-lines of his claim continued vertically downward: *Provided*, That this act shall not prejudice the rights of claim owners nor claim holders whose claims have been located under existing laws prior to this act.

"SEC. 28. That no mineral claim of the full size shall be recorded without the application being accompanied by an affidavit made by the applicant or some person on his behalf cognizant of the facts—that the legal notices and posts have been put up; that mineral has been found in place on the claim proposed to be recorded; that the ground applied for is unoccupied by any other person. In the said declaration shall be set out the name of the applicant and the date of the location of the claim. The words written on the number one and number two posts shall be set out in full, and as accurate a description as possible of the position of the claim given with reference to some natural object or permanent monuments.

"SEC. 29. That no mineral claim which at the date of its record is known by the locator to be less than a full-sized mineral claim shall be recorded without the word 'fraction' being added to the name of the claim, and the application being accompanied by an affidavit or solemn declaration made by the applicant or some person on his behalf cognizant of the facts: That the legal posts and notices have been put up; that mineral has been found in place on the fractional claim proposed to be recorded; that the ground applied for is unoccupied by any other person. In the said declaration shall be set out the name of the applicant and the date of the location of the claim. The words written on the posts numbered one and two shall be set out in full, and as accurate a description as possible of the position of the claim given. A sketch plan shall be drawn by the applicant on the back of the declaration, showing as near as may be the position of the adjoining mineral claims and the shape and size, expressed in feet, of the claim or fraction desired to be recorded: *Provided*, That the failure on the part of the locator of a mineral claim to comply with any of the foregoing provisions of this section shall not be deemed to invalidate such location, if upon the facts it shall appear that such locator has actually discovered mineral in place on said location, and that there has been on his part a *bona fide* attempt to comply with the provisions of this act, and that the non-observance of the formalities hereinbefore referred to is not of a character calculated to mislead other persons desiring to locate claims in the vicinity.

"SEC. 30. That in cases where, from the nature or shape of the ground, it is impossible to mark the location line of the claim as provided by this act, then the claim may be marked by placing posts as nearly as possible to the location line, and noting the distance and direction such posts may be from such location line, which distance and direction shall be set out in the record of the claim.

"SEC. 31. That every person locating a mineral claim shall record the same with the provincial secretary or such other officer as by the government of the Philippine Islands may be described as mining recorder of the district within which

the same is situate, within thirty days after the location thereof. Such records shall be made in a book to be kept for the purpose in the office of the said provincial secretary or such other office as by said government described as mining recorder, in which shall be inserted the name of the claim, the name of each locator, the locality of the mine, the direction of the location line, the length in feet, the date of location, and the date of the record. A claim which shall not have been recorded within the prescribed period shall be deemed to have been abandoned.

"SEC. 32. That in case of any dispute as to the location of a mineral claim the title to the claim shall be recognized according to the priority of such location, subject to any question as to the validity of the record itself and subject to the holder having complied with all the terms and conditions of this act.

"SEC. 33. That no holder shall be entitled to hold in his, its, or their own name or in the name of any other person, corporation, or association more than one mineral claim on the same vein or lode.

"SEC. 34. That a holder may at any time abandon any mineral claim by giving notice, in writing, of such intention to abandon, to the provincial secretary or such other officer as by the government of the Philippine Islands may be described as mining recorder; and from the date of the record of such notice all his interest in such claim shall cease.

"SEC. 35. That proof of citizenship under the clauses of this act relating to mineral lands may consist, in the case of an individual, of his own affidavit thereof; in the case of an association of persons unincorporated, of the affidavit of their authorized agent, made on his own knowledge or upon information and belief; and in the case of a corporation organized under the laws of the United States, or of any State or Territory thereof, or of the Philippine Islands, by the filing of a certified copy of their charter or certificate of incorporation.

"SEC. 36. That the United States Philippine Commission or its successors may make regulations, not in conflict with the provisions of this act, governing the location, manner of recording, and amount of work necessary to hold possession of a mining claim, subject to the following requirements:

"On each claim located after the passage of this act, and until a patent has been issued therefor, not less than \$100 worth of labor shall be performed or improvements made during each year: *Provided*, That upon a failure to comply with these conditions the claim or mine upon which such failure occurred shall be open to relocation in the same manner as if no location of the same had ever been made, provided that the original locators, their heirs, assigns, or legal representatives have not resumed work upon the claim after failure and before such location. Upon the failure of any one of several coowners to contribute his proportion of the expenditures required thereby, the coowners who have performed the labor or made the improvements may, at the expiration of the year, give such delinquent co-owner personal notice in writing, or notice by publication in the newspaper published nearest the claim, and in two newspapers published at Manila, one in the English language and the other in the Spanish language, to be designated by the chief of the Philippine insular bureau of public lands, for at least once a week for ninety days, and if, at the expiration of ninety days after such notice in writing or by publication such de-

linquent shall fail or refuse to contribute his proportion of the expenditure required by this section his interest in the claim shall become the property of his coowners who have made the required expenditures. The period within which the work required to be done annually on all unpatented mineral claims shall commence on the 1st day of January succeeding the date of location of such claim.

"SEC. 37. That a patent for any land claimed and located for valuable mineral deposits may be obtained in the following manner: Any person, association, or corporation authorized to locate a claim under this act, having claimed and located a piece of land for such purposes, who has or have complied with the terms of this act, may file in the office of the provincial secretary, or such other officer as by the government of said islands may be described as mining recorder of the province wherein the land claimed is located, an application for a patent, under oath, showing such compliance, together with a plat and field-notes of the claim or claims in common, made by or under the direction of the chief of the Philippine insular bureau of public lands, showing accurately the boundaries of the claim, which shall be distinctly marked by monuments on the ground, and shall post a copy of such plat, together with a notice of such application for a patent, in a conspicuous place on the land embraced in such plat previous to the filing of the application for a patent, and shall file an affidavit of at least two persons that such notice has been duly posted, and shall file a copy of the notice in such office, and shall thereupon be entitled to a patent for the land, in the manner following: The provincial secretary, or such other officer as by the Philippine government may be described as mining recorder, upon the filing of such application, plat, field-notes, notices, and affidavits, shall publish a notice that such an application has been made, once a week for the period of sixty days, in a newspaper to be by him designated as nearest to such claim and in two newspapers published at Manila, one in the English language and one in the Spanish language, to be designated by the chief of the Philippine insular bureau of public lands; and he shall also post such notice in his office for the same period. The claimant at the time of filing this application, or at any time thereafter within the sixty days of publication, shall file with the provincial secretary or such other officer as by the Philippine government may be described as mining recorder a certificate of the chief of the Philippine insular bureau of public lands that \$500 worth of labor has been expended for improvements made upon the claim by himself or grantors; that the plat is correct, with such further description by such reference to natural objects or permanent monuments as shall identify the claim, and furnish an accurate description to be incorporated in the patent. At the expiration of the sixty days of publication the claimant shall file his affidavit, showing that the plat and notice have been posted in a conspicuous place on the claim during such period of publication. If no adverse claim shall have been filed with the provincial secretary or such other officer as by the government of said islands may be described as mining recorder at the expiration of the sixty days of publication, it shall be assumed that the applicant is entitled to a patent upon the payment to the provincial treasurer or the collector of internal revenue of \$5 per acre and that no adverse claim exists, and thereafter no objection from third parties to the issuance of a patent shall be heard, except it be shown that the ap-

plicant has failed to comply with the terms of this act: *Provided*, That where the claimant for a patent is not a resident of or within the province wherein the land containing the vein, ledge, or deposit sought to be patented is located, the application for patent and the affidavits required to be made in this section by the claimant for such patent may be made by his, her, or its authorized agent where said agent is conversant with the facts sought to be established by said affidavits.

"SEC. 38. That applicants for mineral patents, if residing beyond the limits of the province or military department wherein the claim is situated, may make the oath or affidavit required for proof of citizenship before the clerk of any court of record, or before any notary public of any province of the Philippine Islands, or any other official in said islands authorized by law to administer oaths.

"SEC. 39. That where an adverse claim is filed during the period of publication it shall be upon the oath of the person or persons making the same, and shall show the nature, boundaries, and extent of such adverse claim, and all proceedings, except the publication of notice and making and filing of the affidavits thereof, shall be stayed until the controversy shall have been settled or decided by a court of competent jurisdiction or the adverse claim waived. It shall be the duty of the adverse claimant, within thirty days after filing his claim, to commence proceedings in a court of competent jurisdiction to determine the question of the right of possession, and prosecute the same with reasonable diligence to final judgment, and a failure so to do shall be a waiver of his adverse claim. After such judgment shall have been rendered the party entitled to the possession of the claim, or any portion thereof, may, without giving further notice, file a certified copy of the judgment roll with the provincial secretary or such other officer as by the government of the Philippine Islands may be described as mining recorder, together with the certificate of the chief of the Philippine insular bureau of public lands that the requisite amount of labor has been expended or improvements made thereon, and the description required in other cases, and shall pay to the provincial treasurer or the collector of internal revenue of the province in which the claim is situated, as the case may be, \$5 per acre for his claim, together with the proper fees, whereupon the whole proceedings and the judgment roll shall be certified by the provincial secretary or such other officer as by said government may be described as mining recorder to the secretary of the interior of the Philippine Islands, and a patent shall issue thereon for the claim, or such portion thereof as the applicant shall appear, from the decision of the court, rightly to possess. The adverse claim may be verified by the oath of any duly authorized agent or attorney in fact of the adverse claimant cognizant of the facts stated; and the adverse claimant, if residing or at the time being beyond the limits of the province wherein the claim is situated, may make oath to the adverse claim before the clerk of any court of record, or any notary public of any province or military department of the Philippine Islands, or any other officer authorized to administer oaths where the adverse claimant may then be. If it appears from the decision of the court that several parties are entitled to separate and different portions of the claim, each party may pay for his portion of the claim, with the proper fees, and file the certificate and description by the chief of the Philippine insular bureau of public lands, whereupon the provincial secretary or such other officer as

by the government of said islands may be described as mining recorder shall certify the proceedings and judgment roll to the secretary of the interior for the Philippine Islands, as in the preceding case, and patents shall issue to the several parties according to their respective rights. If in any action brought pursuant to this section title to the ground in controversy shall not be established by either party, the court shall so find, and judgment shall be entered accordingly. In such case costs shall not be allowed to either party, and the claimant shall not proceed in the office of the provincial secretary or such other officer as by the government of said islands may be described as mining recorder or be entitled to a patent for the ground in controversy until he shall have perfected his title. Nothing herein contained shall be construed to prevent the alienation of a title conveyed by a patent for a mining claim to any person whatever.

"SEC. 40. That the description of mineral claims upon surveyed lands shall designate the location of the claim with reference to the lines of the public surveys, but need not conform therewith; but where a patent shall be issued for claims upon unsurveyed lands the chief of the Philippine insular bureau of public lands in extending the surveys shall adjust the same to the boundaries of such patented claim according to the plat or description thereof, but so as in no case to interfere with or change the location of any such patented claim.

"SEC. 41. That any person authorized to enter lands under this act may enter and obtain patent to lands that are chiefly valuable for building-stone under the provisions of this act relative to placer mineral claims.

"SEC. 42. That any person authorized to enter lands under this act may enter and obtain patent to lands containing petroleum or other mineral oils and chiefly valuable therefor under the provisions of this act relative to placer mineral claims.

"SEC. 43. That no location of a placer claim shall exceed 64 hectares for any association of persons, irrespective of the number of persons composing such association, and no such location shall include more than 8 hectares for an individual claimant. Such locations shall conform to the laws of the United States Philippine Commission, or its successors, with reference to public surveys, and nothing in this section contained shall defeat or impair any *bona fide* ownership of land for agricultural purposes or authorize the sale of the improvements of any *bona fide* settler to any purchaser.

"SEC. 44. That where placer claims are located upon surveyed lands and conform to legal subdivisions no further survey or plat shall be required, and all placer mining claims located after the date of passage of this act shall conform as nearly as practicable to the Philippine system of public-land surveys and the regular subdivisions of such surveys; but where placer claims can not be conformed to legal subdivisions, survey and plat shall be made as on unsurveyed lands; and where by the segregation of mineral lands in any legal subdivision a quantity of agricultural land less than 16 hectares shall remain, such fractional portion of agricultural land may be entered by any party qualified by law for homestead purposes.

"SEC. 45. That where such person or association, they and their grantors, have held and worked their claims for a period equal to the time prescribed by the statute of limitations of the Philippine Islands, evidence of such posses-

sion and working of the claims for such period shall be sufficient to establish a right to a patent thereto under this act, in the absence of any adverse claim; but nothing in this act shall be deemed to impair any lien which may have attached in any way whatever prior to the issuance of a patent.

"SEC. 46. That the chief of the Philippine insular bureau of public lands may appoint competent deputy mineral surveyors to survey mining claims. The expenses of the survey of vein or lode claims and of the survey of placer claims, together with the cost of publication of notices, shall be paid by the applicants, and they shall be at liberty to obtain the same at the most reasonable rates, and they shall also be at liberty to employ any such deputy mineral surveyor to make the survey. The chief of the Philippine insular bureau of public lands shall also have power to establish the maximum charges for surveys and publication of notices under this act; and in case of excessive charges for publication he may designate any newspaper published in a province where mines are situated, or in Manila, for the publication of mining notices and fix the rates to be charged by such paper; and to the end that the chief of the bureau of public lands may be fully informed on the subject such applicant shall file with the provincial secretary, or such other officer as by the government of the Philippine Islands may be described as mining recorder, a sworn statement of all charges and fees paid by such applicant for publication and surveys, and of all fees and money paid the provincial treasurer or the collector of internal revenue, as the case may be, which statement shall be transmitted, with the other papers in the case, to the secretary of the interior for the Philippine Islands.

"SEC. 47. That all affidavits required to be made under this act may be verified before any officer authorized to administer oaths within the province or military department where the claims may be situated, and all testimony and proofs may be taken before any such officer, and, when duly certified by the officer taking the same, shall have the same force and effect as if taken before the proper provincial secretary or such other officer as by the government of the Philippine Islands may be described as mining recorder. In cases of contest as to the mineral or agricultural character of land the testimony and proofs may be taken as herein provided on personal notice of at least ten days to the opposing party; or if such party can not be found, then by publication at least once a week for thirty days in a newspaper to be designated by the provincial secretary or such other officer as by said government may be described as mining recorder published nearest to the location of such land and in two newspapers published in Manila, one in the English language and one in the Spanish language, to be designated by the chief of the Philippine insular bureau of public lands; and the provincial secretary or such other officer as by said government may be described as mining recorder shall require proofs that such notice has been given.

"SEC. 48. That where non-mineral land not contiguous to the vein or lode is used or occupied by the proprietor of such vein or lode for mining or milling purposes, such non-adjacent surface ground may be embraced and included in an application for a patent for such vein or lode, and the same may be patented therewith, subject to the same preliminary requirements as to survey and notice as are applicable to veins or lodes;

but no location of such non-adjacent land shall exceed 2 hectares, and payment for the same must be made at the same rate as fixed by this act for the superficies of the lode. The owner of a quartz-mill or reduction-works not owning a mine in connection therewith may also receive a patent for his mill site as provided in this section.

"SEC. 49. That as a condition of sale the government of the Philippine Islands may provide rules for working, policing, and sanitation of mines, and rules concerning easements, drainage, water rights, right of way, right of government survey and inspection, and other necessary means to their complete development not inconsistent with the provisions of this act, and those conditions shall be fully expressed in the patent. The Philippine Commission or its successors are hereby further empowered to fix the bonds of deputy mineral surveyors.

"SEC. 50. That whenever by priority of possession rights to the use of water for mining, agricultural, manufacturing, or other purposes have vested and accrued and the same are recognized and acknowledged by the local customs, laws, and the decisions of courts, the possessors and owners of such vested rights shall be maintained and protected in the same, and the right of way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed, but whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage.

"SEC. 51. That all patents granted shall be subject to any vested and accrued water rights, or rights to ditches and reservoirs used in connection with such water rights as may have been acquired under or recognized by the preceding section.

"SEC. 52. That the government of the Philippine Islands is authorized to establish land districts and provide for the appointment of the necessary officers wherever they may deem the same necessary for the public convenience, and to further provide that in districts where land-offices are established proceedings required by this act to be had before provincial officers shall be had before the proper officers of such land-offices.

"SEC. 53. That every person above the age of twenty-one years who is a citizen of the United States, or of the Philippine Islands, or who has acquired the rights of a native of said islands under and by virtue of the treaty of Paris, or any association of persons severally qualified as above, shall, upon application to the proper provincial treasurer, have the right to enter any quality of vacant coal lands of said islands not otherwise appropriated or reserved by competent authority, not exceeding 64 hectares to such individual person, or 128 hectares to such association, upon payment to the provincial treasurer or the collector of internal revenue, as the case may be, of not less than \$25 per hectare for such lands, where the same shall be situated more than 15 miles from any completed railroad or available harbor or navigable stream, and not less than \$50 per hectare for such lands as shall be within 15 miles of such road, harbor, or stream: *Provided*, That such entries shall be taken in squares of 16 or 64 hectares, in conformity with the rules and regulations governing the public-land surveys of the said islands in plotting legal subdivisions.

"SEC. 54. That any person or association of

persons, severally qualified as above provided, who have opened and improved, or shall hereafter open and improve, any coal-mine or mines upon the public lands, and shall be in actual possession of the same, shall be entitled to a preference right of entry under the preceding section of the mines so opened and improved.

"SEC. 55. That all claims under the preceding section must be presented to the proper provincial secretary within sixty days after the date of actual possession and the commencement of improvements on the land by the filing of a declaratory statement therefor; and where the improvements shall have been made prior to the expiration of three months from the date of the passage of this act, sixty days from the expiration of such three months shall be allowed for the filing of a declaratory statement; and no sale under the provisions of this act shall be allowed until the expiration of six months from the date of the passage of this act.

"SEC. 56. That the three preceding sections shall be held to authorize only one entry by the same person or association of persons; and no association of persons, any member of which shall have taken the benefit of such sections either as an individual or as a member of any other association, shall enter or hold any other lands under the provisions thereof; and no member of any association which shall have taken the benefit of such section shall enter or hold any other lands under their provisions; and all persons claiming under section 58 shall be required to prove their respective rights and pay for the lands filed upon within one year from the time prescribed for filing their respective claims; and upon failure to file the proper notice or to pay for the land within the required period, the same shall be subject to entry by any other qualified applicant.

"SEC. 57. That in case of conflicting claims upon coal lands where the improvements shall be commenced after the date of the passage of this act, priority of possession and improvement, followed by proper filing and continued good faith, shall determine the preference right to purchase. And also where improvements have already been made prior to the passage of this act, division of the land claimed may be made by legal subdivisions, which shall conform as nearly as practicable with the subdivisions of land provided for in this act, to include as near as may be the valuable improvements of the respective parties. The government of the Philippine Islands is authorized to issue all needful rules and regulations for carrying into effect the provisions of this and preceding sections relating to mineral lands.

"SEC. 58. That whenever it shall be made to appear to the secretary of any province or the commander of any military department in the Philippine Islands that any lands within the province are saline in character, it shall be the duty of said provincial secretary or commander, under the regulations of the government of the Philippine Islands, to take testimony in reference to such lands, to ascertain their true character, and to report the same to the secretary of the interior for the Philippine Islands; and if, upon such testimony, the secretary of the interior shall find that such lands are saline and incapable of being purchased under any of the laws relative to the public domain, then and in such case said lands shall be offered for sale at the office of the provincial secretary or such other officers as by the said government may be described as mining recorder of the province or department in which the same shall be situ-

ated, as the case may be, under such regulations as may be prescribed by said government and sold to the highest bidder, for cash, at a price of not less than \$3 per hectare; and in case such lands fail to sell when so offered, then the same shall be subject to private sale at such office, for cash, at a price not less than \$3 per hectare, in the same manner as other lands in the said islands are sold. All executive proclamations relating to the sales of public saline lands shall be published in only two newspapers, one printed in the English language and one in the Spanish language, at Manila, which shall be designated by said secretary of the interior.

"SEC. 59. That no act granting lands to provinces, districts, or municipalities to aid in the construction of roads, or for other public purposes, shall be so construed as to embrace mineral lands, which, in all cases, are reserved exclusively, unless otherwise specially provided in the act or acts making the grant.

"SEC. 60. That nothing in this act shall be construed to affect the rights of any person, partnership, or corporation having a valid, perfected mining concession granted prior to April 11, 1899, but all such concessions shall be conducted under the provisions of the law in force at the time they were granted, subject at all times to cancellation by reason of illegality in the procedure by which they were obtained, or for failure to comply with the conditions prescribed as requisite to their retention in the laws under which they were granted: *Provided*, That the owner or owners of every such concession shall cause the corners made by its boundaries to be distinctly marked with permanent monuments within six months after this act has been promulgated in the Philippine Islands, and that any concessions the boundaries of which are not so marked within this period shall be free and open to explorations and purchase under the provisions of this act.

"SEC. 61. That mining rights on public lands in the Philippine Islands shall, after the passage of this act, be acquired only in accordance with its provisions.

"SEC. 62. That all proceedings for the cancellation of perfected Spanish concessions shall be conducted in the courts of the Philippine Islands having jurisdiction of the subject-matter and of the parties, unless the United States Philippine Commission, or its successors, shall create special tribunals for the determination of such controversies.

"AUTHORITY FOR THE PHILIPPINE ISLANDS GOVERNMENT TO PURCHASE LANDS OF RELIGIOUS ORDERS AND OTHERS AND ISSUE BONDS FOR PURCHASE PRICE.

"SEC. 63. That the government of the Philippine Islands is hereby authorized, subject to the limitations and conditions prescribed in this act, to acquire, receive, hold, maintain, and convey title to real and personal property, and may acquire real estate for public uses by the exercise of the right of eminent domain.

"SEC. 64. That the powers hereinbefore conferred in section 63 may also be exercised in respect of any lands, easements, appurtenances, and hereditaments which on the 13th of August, 1898, were owned or held by associations, corporations, communities, religious orders, or private individuals in such large tracts or parcels and in such manner as in the opinion of the commission injuriously to affect the peace and welfare of the people of the Philippine Islands. And for the purpose of providing funds to ac-

quire the lands mentioned in this section said government of the Philippine Islands is hereby empowered to incur indebtedness, to borrow money, and to issue, and to sell at not less than par value, in gold coin of the United States of the present standard value or the equivalent in value in money of said islands, upon such terms and conditions as it may deem best, registered or coupon bonds of said government for such amount as may be necessary, said bonds to be in denominations of \$50 or any multiple thereof, bearing interest at a rate not exceeding 4½ per centum per annum, payable quarterly, and to be payable at the pleasure of said government after dates named in said bonds not less than five nor more than thirty years from the date of their issue, together with interest thereon, in gold coin of the United States of the present standard value or the equivalent in value in money of said islands; and said bonds shall be exempt from the payment of all taxes or duties of said government, or any local authority therein, or of the Government of the United States, as well as from taxation in any form by or under state, municipal, or local authority in the United States or the Philippine Islands. The moneys which may be realized or received from the issue and sale of said bonds shall be applied by the government of the Philippine Islands to the acquisition of the property authorized by this section, and to no other purposes.

"SEC. 65. That all lands acquired by virtue of the preceding section shall constitute a part and portion of the public property of the government of the Philippine Islands, and may be held, sold, and conveyed, or leased temporarily for a period not exceeding three years after their acquisition by said government on such terms and conditions as it may prescribe, subject to the limitations and conditions provided for in this act: *Provided*, That all deferred payments and the interest thereon shall be payable in the money prescribed for the payment of principal and interest of the bonds authorized to be issued in payment of said lands by the preceding section and said deferred payments shall bear interest at the rate borne by the bonds. All moneys realized or received from sales or other disposition of said lands or by reason thereof shall constitute a trust fund for the payment of principal and interest of said bonds, and also constitute a sinking-fund for the payment of said bonds at their maturity. Actual settlers and occupants at the time said lands are acquired by the government shall have the preference over all others to lease, purchase, or acquire their holdings within such reasonable time as may be determined by said government.

"MUNICIPAL BONDS FOR PUBLIC IMPROVEMENTS.

"SEC. 66. That for the purpose of providing funds to construct sewers, to furnish adequate sewer and drainage facilities, to secure a sufficient supply of water, and to provide all kinds of municipal betterments and improvements in municipalities, the government of the Philippine Islands, under such limitations, terms, and conditions as it may prescribe, with the consent and approval of the President and the Congress of the United States, may permit any municipality of said islands to incur indebtedness, borrow money, and to issue and sell (at not less than par value in gold coin of the United States) registered or coupon bonds in such amount and payable at such time as may be determined by the government of said islands, with interest thereon not to exceed 5 per centum per annum: *Provided*, That the entire indebtedness of any municipality under

this section shall not exceed 5 per centum of the assessed valuation of the property in said municipality, and any obligation in excess of such limit shall be null and void.

"SEC. 67. That all municipal bonds shall be in denominations of \$50, or any multiple thereof, bearing interest at a rate not exceeding 5 per centum per annum, payable quarterly, such bonds to be payable at the pleasure of the government of the Philippine Islands, after dates named in said bonds not less than five nor more than thirty years from the date of their issue, together with the interest thereon, in gold coin of the United States of the present standard value, or its equivalent in value in money of the said islands; and said bonds shall be exempt from the payment of all taxes or duties of the government of the Philippine Islands, or any local authority therein, or the Government of the United States.

"SEC. 68. That all moneys which may be realized or received from the issue and sale of said bonds shall be utilized under authorization of the government of the Philippine Islands in providing the municipal improvements and betterment which induced the issue and sale of said bonds, and for no other purpose.

"SEC. 69. That the government of the Philippine Islands shall, by the levy and collection of taxes on the municipality, its inhabitants and their property, or by other means, make adequate provision to meet the obligation of the bonds of such municipality, and shall create a sinking-fund sufficient to retire them and pay the interest thereon in accordance with the terms of issue: *Provided*, That if said bonds or any portion thereof shall be paid out of the funds of the government of said islands, such municipality shall reimburse said government for the sum thus paid, and said government is hereby empowered to collect said sum by the levy and collection of taxes on such municipality.

"SEC. 70. That for the purpose of providing funds to construct sewers in the city of Manila and to furnish it with an adequate sewer and drainage system and supply of water the government of the Philippine Islands, with the approval of the President of the United States first had, is hereby authorized to permit the city of Manila to incur indebtedness, to borrow money, and to issue and sell (at not less than par value in gold coin of the United States), upon such terms and conditions as it may deem best, registered or coupon bonds of the city of Manila to an amount not exceeding \$4,000,000 lawful money of the United States, payable at such time or times as may be determined by said government, with interest thereon not to exceed 5 per centum per annum.

"SEC. 71. That said coupon or registered bonds shall be in denominations of \$50 or any multiple thereof, bearing interest at a rate not exceeding 5 per centum per annum, payable quarterly, such bonds to be payable at the pleasure of the government of the Philippine Islands, after dates named in said bonds not less than five nor more than thirty years from the date of their issue, together with the interest thereon in gold coin of the United States of the present standard value, or the equivalent in value in money of the said islands; and said bonds shall be exempt from the payment of all taxes or duties of the government of the said islands, or of any local authority therein, or of the Government of the United States.

"SEC. 72. That all moneys which may be realized or received from the issue and sale of said bonds shall be utilized under authorization of

said government of the Philippine Islands in providing a suitable sewer and drainage system and adequate supply of water for the city of Manila and for no other purpose.

"SEC. 73. That the government of the Philippine Islands shall, by the levy and collection of taxes on the city of Manila, its inhabitants and their property, or by other means, make adequate provision to meet the obligation of said bonds and shall create a sinking-fund sufficient to retire them and pay the interest thereon in accordance with the terms of issue: *Provided*, That if said bonds or any portion thereof shall be paid out of the funds of the government of said islands, said city shall reimburse said government for the sum thus paid, and said government is hereby empowered to collect said sum by the levy and collection of taxes on said city.

"FRANCHISES.

"SEC. 74. That the government of the Philippine Islands may grant franchises, privileges, and concessions, including the authority to exercise the right of eminent domain for the construction and operation of works of public utility and service, and may authorize said works to be constructed and maintained over and across the public property of the United States, including streets, highways, squares, and reservations, and over similar property of the government of said islands, and may adopt rules and regulations under which the provincial and municipal governments of the islands may grant the right to use and occupy such public property belonging to said provinces or municipalities: *Provided*, That no private property shall be taken for any purpose under this section without just compensation paid or tendered therefor, and that such authority to take and occupy land shall not authorize the taking, use, or occupation of any land except such as is required for the actual necessary purposes for which the franchise is granted, and that no franchise, privilege, or concession shall be granted to any corporation except under the conditions that it shall be subject to amendment, alteration, or repeal by the Congress of the United States, and that lands or rights of use and occupation of lands thus granted shall revert to the governments by which they were respectively granted upon the termination of the franchises and concessions under which they were granted or upon their revocation or repeal. That all franchises, privileges, or concessions granted under this act shall forbid the issue of stock or bonds except in exchange for actual cash, or for property at a fair valuation, equal to the par value of the stock or bonds so issued; shall forbid the declaring of stock or bond dividends, and, in the case of public-service corporation, shall provide for the effective regulation of the charges therefor, for the official inspection and regulation of the books and accounts of such corporations, and for the payment of a reasonable percentage of gross earnings into the treasury of the Philippine Islands or of the province or municipality within which such franchises are granted and exercised: *Provided further*, That it shall be unlawful for any corporation organized under this act, or for any person, company, or corporation receiving any grant, franchise, or concession from the government of said islands, to use, employ, or contract for the labor of persons claimed or alleged to be held in involuntary servitude; and any person, company, or corporation so violating the provisions of this act shall forfeit all charters, grants, franchises, and concessions for doing business in said islands, and in addition shall be

deemed guilty of an offense, and shall be punished by a fine of not less than \$10,000.

"SEC. 75. That no corporation shall be authorized to conduct the business of buying and selling real estate or be permitted to hold or own real estate except such as may be reasonably necessary to enable it to carry out the purposes for which it is created, and every corporation authorized to engage in agriculture shall by its charter be restricted to the ownership and control of not to exceed 1,024 hectares of land; and it shall be unlawful for any member of a corporation engaged in agriculture or mining and for any corporation organized for any purpose except irrigation to be in any wise interested in any other corporation engaged in agriculture or in mining. Corporations, however, may loan funds upon real-estate security and purchase real estate when necessary for the collection of loans, but they shall dispose of real estate so obtained within five years after receiving the title. Corporations not organized in the Philippine Islands, and doing business therein, shall be bound by the provisions of this section so far as they are applicable.

"COINAGE.

"SEC. 76. That the government of the Philippine Islands is hereby authorized to establish a mint at the city of Manila, in said islands, for coinage purposes, and the coins hereinafter authorized may be coined at said mint. And the said government is hereby authorized to enact laws necessary for such establishment: *Provided*, That the laws of the United States relating to mints and coinage, so far as applicable, are hereby extended to the coinage of said islands.

"SEC. 77. That the government of the Philippine Islands is authorized to coin, for use in said islands, a coin of the denomination of 50 centavos and of the weight of 192 $\frac{3}{10}$ grains, a coin of the denomination of 20 centavos and of the weight of 77 $\frac{1}{10}$ grains, and a coin of the denomination of 10 centavos and of the weight of 38 $\frac{5}{10}$ grains, and the standard of said silver coins shall be such that of 1,000 parts by weight 900 shall be of pure metal and 100 of alloy, and the alloy shall be of copper.

"SEC. 78. That the subsidiary silver coins authorized by the preceding section shall be coined under the authority of the government of the Philippine Islands in such amounts as it may determine, with the approval of the Secretary of War of the United States, from silver bullion purchased by said government, with the approval of the Secretary of War of the United States: *Provided*, That said government may in addition and in its discretion recoin the Spanish Filipino dollars and subsidiary silver coins issued under the authority of the Spanish Government for use in said islands into the subsidiary coins provided for in the preceding section at such rate and under such regulations as it may prescribe, and the subsidiary silver coins authorized by this section shall be legal tender in said islands to the amount of \$10.

"SEC. 79. That the government of the Philippine Islands is also authorized to issue minor coins of the denominations of $\frac{1}{2}$ centavo, 1 centavo, and 5 centavos, and such minor coins shall be legal tender in said islands for amounts not exceeding \$1. The alloy of the 5-centavo piece shall be of copper and nickel, to be composed of $\frac{3}{4}$ copper and $\frac{1}{4}$ nickel. The alloy of the 1-centavo and $\frac{1}{2}$ -centavo pieces shall be 95 per centum of copper and 5 per centum of tin and zinc, in such proportions as shall be determined by said government. The weight of the 5-centavo piece shall be 77 $\frac{1}{10}$

grains troy, and of the 1-centavo piece 80 grains troy, and of the $\frac{1}{2}$ -centavo piece 40 grains troy.

"SEC. 80. That for the purchase of metal for the subsidiary and minor coinage, authorized by the preceding sections, an appropriation may be made by the government of the Philippine Islands from its current funds, which shall be reimbursed from the coinage under said sections; and the gain or seigniorage arising therefrom shall be paid into the treasury of said islands.

"SEC. 81. That the subsidiary and minor coinage hereinbefore authorized may be coined at the mint of the government of the Philippine Islands at Manila, or arrangements may be made by the said government with the Secretary of the Treasury of the United States for their coinage at any of the mints of the United States, at a charge covering the reasonable cost of the work.

"SEC. 82. That the subsidiary and minor coinage hereinbefore authorized shall bear devices and inscriptions to be prescribed by the government of the Philippine Islands and such devices and inscriptions shall express the sovereignty of the United States, that it is a coin of the Philippine Islands, the denomination of the coin, and the year of the coinage.

"SEC. 83. That the government of the Philippine Islands shall have the power to make all necessary appropriations and all proper regulations for the redemption and reissue of worn or defective coins and for carrying out all other provisions of this act relating to coinage.

"SEC. 84. That the laws relating to entry, clearance, and manifests of steamships and other vessels arriving from or going to foreign ports shall apply to voyages each way between the Philippine Islands and the United States and the possessions thereof, and all laws relating to the collection and protection of customs duties not inconsistent with the act of Congress of March 8, 1902, 'temporarily to provide revenue for the Philippine Islands,' shall apply in the case of vessels and goods arriving from said islands in the United States and its aforesaid possessions.

"The laws relating to seamen on foreign voyages shall apply to seamen on vessels going from the United States and its possessions aforesaid to said islands, the customs officers there being for this purpose substituted for consular officers in foreign ports.

"The provisions of chapters vi and vii, title 48, Revised Statutes, so far as now in force, and any amendments thereof, shall apply to vessels making voyages either way between ports of the United States or its aforesaid possessions and ports in said islands; and the provisions of law relating to the public health and quarantine shall apply in the case of all vessels entering a port of the United States or its aforesaid possessions from said islands, where the customs officers at the port of departure shall perform the duties required by such law of consular officers in foreign ports.

"Section 3005, Revised Statutes, as amended, and other existing laws concerning the transit of merchandise through the United States, shall apply to merchandise arriving at any port of the United States destined for any of its insular and continental possessions, or destined from any of them to foreign countries.

"Nothing in this act shall be held to repeal or alter any part of the act of March 8, 1902, aforesaid, or to apply to Guam, Tutuila, or Manua, except that section 8 of an act entitled 'An Act to revise and amend the tariff laws of the Philippine Archipelago,' enacted by the Philippine Commission on the 17th of September, 1901,

and approved by an act entitled 'An Act temporarily to provide revenues for the Philippine Islands, and for other purposes,' approved March 8, 1902, is hereby amended so as to authorize the civil governor thereof in his discretion to establish the equivalent rates of the money in circulation in said islands with the money of the United States as often as once in ten days.

"SEC. 85. That the treasury of the Philippine Islands and such banking associations in said islands with a paid-up capital of not less than \$2,000,000 and chartered by the United States or any State thereof as may be designated by the Secretary of War and the Secretary of the Treasury of the United States shall be depositories of public money of the United States, subject to the provisions of existing law governing such depositories in the United States: *Provided*, That the treasury of the government of said islands shall not be required to deposit bonds in the Treasury of the United States, or to give other specific securities for the safe-keeping of public money except as prescribed, in his discretion, by the Secretary of War.

"SEC. 86. That all laws passed by the government of the Philippine Islands shall be reported to Congress, which hereby reserves the power and authority to annul the same, and the Philippine Commission is hereby directed to make annual report of all its receipts and expenditures to the Secretary of War.

"BUREAU OF INSULAR AFFAIRS.

"SEC. 87. That the Division of Insular Affairs of the War Department, organized by the Secretary of War, is hereby continued until otherwise provided, and shall hereafter be known as the Bureau of Insular Affairs of the War Department. The business assigned to said bureau shall embrace all matters pertaining to civil government in the island possessions of the United States subject to the jurisdiction of the War Department; and the Secretary of War is hereby authorized to detail an officer of the army whom he may consider especially well qualified, to act under the authority of the Secretary of War as the chief of said bureau; and said officer while acting under said detail shall have the rank, pay, and allowances of a colonel.

"SEC. 88. That all acts and parts of acts inconsistent with this act are hereby repealed."

Repeal of War-Revenue Taxation.—Feb. 17, 1902, the bill for the repeal of the taxes levied to meet war expenditure was taken up in the House of Representatives and passed by a vote of 288 yeas, there being no nays. The only discussion of the subject-matter of the measure was with reference to the special rule, brought in to hasten its passage. This rule was designed to force the House to act on the reduction of taxation, a policy as to which there was no difference of opinion, and yet avoid any discussion of the method of reduction, as to which the Republican majority was not unanimous. The rule ordered the immediate consideration of the measure in committee of the whole, that the committee rise the next day at four o'clock, after general debate, report the bill with amendments recommended by the Committee of Ways and Means; and that the House act immediately on these amendments without intervening motions or debate, and then vote on the final passage of the bill. Under the rule, therefore, no amendment could come before the House, save those reported from the Committee on Ways and Means. During the hour's debate allowed on the

adoption of the rule, Mr. Dalzell, of Pennsylvania, who was in charge of it, said:

"The effect of this resolution, if it pass, will be to bring before the House for consideration the bill which repeals all of the war-revenue taxation. The rule provides for the discussion of that measure until four o'clock to-morrow afternoon. It excludes all amendments, except those that have been recommended by the Committee on Ways and Means, and these are merely formal.

"This measure is the redemption of a pledge made by the Republican majority at the time that the war-revenue measure was passed. It was then said that when the necessity that called for the passage of that act ceased to exist the taxes would be repealed. In pursuance of that pledge, in the last Congress a portion of those taxes were repealed, and now, in entire fulfillment of the pledge, all the war-taxes are to be repealed.

"It is a measure about which, I take it, there is a unanimity of opinion in this House, and there is therefore little necessity for any protracted debate. It is a simple repeal measure, and therefore it has been thought wise that it should be submitted to the House in the shape in which it comes from the committee, and so that its success may not be hazarded by any extraneous matter."

Mr. Ball, of Texas, said in opposition to the rule:

"Mr. Speaker, the effect of this drastic rule, if adopted, will be not only to cut off all amendments to this bill, but to prevent even a motion to recommit with instructions in order that the will of this House may be ascertained. This is but another step in the parliamentary evolution which has effaced individualism in this House and enthroned with autocratic power a few men who dominate not only the legislation which is passed, but that which is suppressed. It is but another step in the backward path which has caused the popular-branch of the national Legislature to abdicate its functions as a deliberative body. It is but another step in seeking yet a lower depth in public opinion, if it is possible to find a depth which the House of Representatives has not already reached.

"It is but another step in bringing us into contempt with the body at the other end of the Capitol, which has no respect for the membership of this House as a whole, not individually, because in patriotism, legislative ability, and fidelity to duty we are the equal of the members there, but disdain for a legislative body whose individual members are without power to obtain recognition except by the grace of one man and without the power to offer an amendment to pending legislation except by the grace of three men.

"Now, Mr. Speaker, if this rule is adopted, \$75,000,000 of taxes will be removed at one swoop. Nobody believes that the Senate of the United States is going to permit this to become a law without proper consideration. Everybody who is informed knows that the reason why this rule has been adopted is to gag two Republican members of the Ways and Means Committee, to gag a number of Republicans on that side of the Chamber and all of the Democratic members of this House. Every one who is informed knows that the object of this rule is to prevent the hand of taxation from being laid upon the sugar trust, the steel trust, and other bloated corporations."

Mr. Babcock, of Wisconsin, representing the Republican minority in favor of tariff reduction, said:

"Mr. Speaker, I want to say in reference to the

rule that is presented here this morning that I shall not offer any opposition to it. I believe there are other matters that should have been considered at this time, and especially those relating to the maintenance of tariff duties on sugar and the reduction of duties on iron and steel. But after consultation with the members who were in sympathy with me on this proposition I find the sentiment is that nothing should be done that would in any way hazard the passage of the war-revenue repeal bill; that they believe it to be their duty to their constituents to vote for this repeal and not jeopardize its passage by presenting other legislation in the shape of amendments; and further, that Congress is under moral obligation to pass this bill at the earliest date possible and relieve the country from this burdensome tax. For these reasons, Mr. Speaker, I shall vote for the rule; but I wish to say at this time that I shall take the first opportunity that presents itself after the passage of this bill to press for consideration House bill 9056, amending the iron and steel schedule."

Mr. Richardson, of Tennessee, challenged Republicans in favor of a modification of tariff rates to make their opinion effective by voting against the special rule:

"Now, if you want to afford your constituents some relief, if you want an opportunity to give your people a chance to have relief from high taxation on any one of the 4,000 articles now upon the tariff schedules, many of which are paying a tax of from 50 to 100 and even 150 per cent., this is the opportunity. You gentlemen will go back to your people and some of you will tell them that under the rule you could not offer a relief measure. I wish to tell them you could have done so by voting down this rule. You are willing to vote to take all the tax off of inheritances under this bill. You are willing to take all of the tax off of 'bucket-shops.' You are willing to take the tax off of corporations which are now taxed, which you do in this bill, and all the other war-taxes, including tax on beer, tea, tobacco, etc., but you leave the tariff, averaging more than 50 per cent., on over 4,000 articles, many of them of prime necessity to the people of this country. You have an opportunity now to give them some relief; but instead of voting against the rule, instead of speaking against the rule, which you refuse to do, you come up voluntarily and vote for it, and so tie your hands that you can not offer amendments reducing taxes, etc., and have them considered. Then you purpose to go home to your people, who are crying for relief, with the statement that 'the House of Representatives tied our hands and would not permit us to offer an amendment.'"

"Now, gentlemen on the other side, there is no escape from the result of your vote here. If you desire to offer any amendments to any one of the tariff schedules, reducing taxes on any one of the 4,000 articles now taxed, you have the opportunity by voting down this rule. You bring 21 of your 200 members on that side of the House against this rule, and we will vote it down. We will give you 150 or 160 votes from this side of the House. We will vote down the rule; and then what would be the situation? We would go into the committee of the whole under the five-minute rule, and you, my friend from Wisconsin, could tender your relief measure.

"Other gentlemen, on both sides of the House, who have relief measures in which their people are vitally concerned, could tender them, and after reasonable debate we would have a vote

upon them. But, instead of that, you come up voluntarily and surrender your prerogatives to represent the 180,000 or 200,000 free people whom you each represent, and tie your own hands so that you can offer no measure of relief and no amendment of any kind."

Mr. Cannon, of Illinois, put the case for the Republican majority as follows:

"Mr. Speaker, I recollect well when the legislation was enacted which the House of Representatives will I trust, so far as it can, in the next two days repeal. War had been declared with Spain. It was necessary to have additional revenues collected from the people. The Republican party, then in power as now in this House, under the leadership of the late distinguished representative from Maine, Mr. Dingley, passed the law which we now propose to repeal, with certain statements and pledges. One was that it was apparent that the enactment was necessary, and the other, in which we all on the Republican side participated by vote, and many by voice, was that when the war closed and these revenues were no longer necessary the Republican party, if in power, would see to it that they were repealed.

"I recollect quite well the debates that occurred. On the other side of the House there were various propositions. The most statesman-like of all was that we should pay the expenses of that war by coining all the silver bullion in the Treasury, etc. When the vote came, in the face of denunciations on the other side of the House that we were enacting that legislation with a high hand and that the House was lowering its dignity, the Republican party passed a bill, and, with a few honorable exceptions, the gentlemen on the other side of the Chamber voted 'no.'

"Now, those revenues are no longer necessary; and a party or administration that collects from its citizens more than enough to carry on the Government is derelict, and if they should continue to do so they ought to and would lose power.

"Again, unnecessary revenues in the Treasury and coming into the Treasury are but a prize, which, I started to say, adventurers, but perhaps that is too strong a term, all over the country organize themselves to get out from the Treasury as industriously as the busy bees organize themselves to get the sweets in the pursuit of their legitimate calling. What do we hear from the other side 'Arbitrary use of power!' It is for the majority to declare by voice and vote whether this rule shall be adopted and whether these revenues shall be reduced. If the rule is adopted and the revenues are reduced, it will be because of Republican votes and because of Republican policy."

The resolution embodying the special rule was carried by a vote of 158 to 121; and Mr. Richardson proposed that the vote be taken, by unanimous consent, on the amendment and passage of the bill as recommended by the Committee on Ways and Means, since it would be folly to spend a day in committee of the whole, considering a measure to which no amendment could be offered. And so the bill was passed.

March 21, it was amended and passed by the Senate. The main point in the amendments was the exclusion of the tax on bucket-shop transactions from the act of repeal. The House non-concurred in the Senate amendments, and after conference a report was made in which the Senate receded from the most important amendment.

The measure was approved by the President April 12, 1902, in the following form:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1 of the act entitled 'An Act to provide ways and means to meet war expenditures, and for other purposes,' approved June 13, 1898, as amended by the act of March 2, 1901, entitled 'An Act to amend an act entitled 'An Act to provide ways and means to meet war expenditures, and for other purposes,' approved June 13, 1898, and to reduce taxation thereunder,' be, and is hereby, further amended so as to read as follows:

"SECTION 1. That there shall be paid on all beer, lager-beer, ale, porter, and other similar fermented liquor, brewed or manufactured and sold, or stored in warehouse, or removed for consumption or sale, within the United States, by whatever name such liquors may be called, in lieu of the tax now imposed by law, a tax of \$1 for every barrel containing not more than 31 gallons; and at a like rate for any other quantity or for any fractional part of a barrel, as authorized and defined by section 3339 of the Revised Statutes of the United States: *Provided*, That in lieu of or in addition to the present requirements of law in that respect all stamps used for denoting the tax upon fermented liquors or other taxes may, in the discretion of the Commissioner of Internal Revenue, be canceled by perforations to be made in such manner and form as the commissioner may, by regulations, prescribe.

"SEC. 2. That section 2 of said act of June 13, 1898, and all amendments thereof, are hereby repealed.

"SEC. 3. That section 3 of said act and amendments thereof be amended to read as follows:

"SEC. 3. That upon tobacco and snuff manufactured and sold, or removed for consumption or use, there shall be levied and collected, in lieu of the tax now imposed by law, the following taxes:

"On snuff, manufactured of tobacco or any substitute for tobacco, ground, dry, damp, pickled, scented, or otherwise, of all descriptions, when prepared for use, a tax of 6 cents per pound. And snuff-flour, when sold, or removed for use or consumption, shall be taxed as snuff, and shall be put up in packages and stamped in the same manner as snuff.

"On all chewing and smoking tobacco, fine cut, cavendish, plug, or twist, cut or granulated, of every description; on tobacco twisted by hand or reduced into a condition to be consumed, or in any manner other than the ordinary mode of drying and curing, prepared for sale or consumption, even if prepared without the use of any machine or instrument, and without being pressed or sweetened; and on all fine-cut shorts and refuse scraps, clippings, cuttings, and sweepings of tobacco, a tax of 6 cents per pound.

"That the internal-revenue tax on cigars or cigarettes weighing more than 3 pounds per 1,000 shall be \$3 per 1,000; and the tax on cigars weighing not more than 3 pounds per 1,000 shall be 18 cents per pound, and on cigarettes weighing not more than 3 pounds per 1,000 and of a wholesale value or price of not more than \$2 per 1,000 shall be 18 cents per pound; and the tax on cigarettes weighing not more than 3 pounds per 1,000 and of a wholesale value or price of more than \$2 per 1,000 shall be 36 cents per pound; and all such cigars and cigarettes weighing not more than 3 pounds per 1,000 shall, for purposes of taxation, be held and considered as weighing 3 pounds.

"That in addition to the packages of smoking tobacco and snuff now authorized by law there

shall be packages of 1½ ounce, 2 ounces, 2½ ounces, 3 ounces, 3½ ounces, and 4 ounces; and there may be a package containing 1 ounce of smoking tobacco.

"SEC. 4. That on all original and unbroken factory packages of smoking and manufactured tobacco and snuff held by manufacturers or dealers on July 1, 1902, upon which there has been paid a higher tax than that provided for in the preceding section of this act, there shall be allowed a drawback or rebate equal to the full amount of the difference between such higher tax and the tax imposed by this act, after making the proper allowance for discounts and rebates heretofore authorized, but the same shall not apply in any case where the claim has not been presented within sixty days after July 1, 1902; and no claim shall be allowed or drawback paid for a less amount than \$10. It shall be the duty of the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, to adopt such rules and regulations and to prescribe and furnish such blanks and forms as may be necessary to carry this section into effect.

"SEC. 5. That section 4 of the act of June 13, 1898, is hereby repealed.

"SEC. 6. That section 5 of the act of June 13, 1898, be amended to read as follows:

"SEC. 5. That until appropriate stamps are prepared and furnished, the stamps heretofore used to denote the payment of the internal-revenue tax on fermented liquors, tobacco, and snuff may be stamped or imprinted with a suitable device to denote the new rate of tax, and shall be affixed to all packages containing such articles on which the tax imposed by this act is paid. And any person having possession of unaffixed stamps heretofore issued for the payment of the tax upon fermented liquors, tobacco, and snuff shall present the same to the collector of the district, who shall receive them at the price paid for such stamps by the purchasers and issue in lieu thereof of new or imprinted stamps at the rate provided by this act.

"SEC. 7. That section 4 of said act of March 2, 1901, and sections 6, 12, 18, 20, 21, 22, 23, 24, 25, Schedule A, Schedule B, sections 27, 28, and 29 of the act of June 13, 1898, and all amendments of said sections and schedules be, and the same are hereby repealed.

"SEC. 8. That all taxes or duties imposed by section 29 of the act of June 13, 1898, and amendments thereof, prior to the taking effect of this act, shall be subject, as to lien, charge, collection, and otherwise, to the provisions of section 30 of said act of June 13, 1898, and amendments thereof, which are hereby continued in force, as follows:

"SEC. 30. That the tax or duty aforesaid shall be due and payable in one year after the death of the testator and shall be a lien and charge upon the property of every person who may die as aforesaid for twenty years, or until the same shall, within that period, be fully paid to and discharged by the United States; and every executor, administrator, or trustee having in charge or trust any legacy or distributive share, as aforesaid, shall give notice thereof, in writing, to the collector or deputy collector of the district where the deceased grantor or bargainer last resided within thirty days after he shall have taken charge of such trust, and every executor, administrator, or trustee, before payment and distribution to the legatees, or any parties entitled to beneficial interest therein, shall pay to the collector or deputy collector of the district of which

the deceased person was a resident, or in which the property was located in case of non-residents, the amount of the duty or tax assessed upon such legacy or distributive share, and shall also make and render to the said collector or deputy collector a schedule, list, or statement, in duplicate, of the amount of such legacy or distributive share, together with the amount of duty which has accrued, or shall accrue, thereon, verified by his oath or affirmation, to be administered and certified thereon by some magistrate or officer having lawful power to administer such oaths, in such form and manner as may be prescribed by the Commissioner of Internal Revenue, which schedule, list, or statement shall contain the names of each and every person entitled to any beneficial interest therein, together with the clear value of such interest, the duplicate of which schedule, list, or statement shall be by him immediately delivered, and the tax thereon paid to such collector; and upon such payment and delivery of such schedule, list, or statement said collector or deputy collector shall grant to such person paying such duty or tax a receipt or receipts for the same in duplicate, which shall be prepared as hereinafter provided. Such receipt or receipts, duly signed and delivered by such collector or deputy collector, shall be sufficient evidence to entitle such executor, administrator, or trustee to be credited and allowed such payment by every tribunal which, by the laws of any State or Territory, is, or may be, empowered to decide upon and settle the accounts of executors and administrators. And in case such executor, administrator, or trustee shall refuse or neglect to pay the aforesaid duty or tax to the collector or deputy collector, as aforesaid, within the time hereinbefore provided, or shall neglect or refuse to deliver to said collector or deputy collector the duplicate of the schedule, list, or statement of such legacies, property, or personal estate, under oath, as aforesaid, or shall neglect or refuse to deliver the schedule, list, or statement of such legacies, property, or personal estate, under oath, as aforesaid, or shall deliver to said collector or deputy collector a false schedule or statement of such legacies, property, or personal estate, or give the names and relationship of the persons entitled to beneficial interests therein untruly, or shall not truly and correctly set forth and state therein the clear value of such beneficial interest, or where no administration upon such property or personal estate shall have been granted or allowed under existing laws, the collector or deputy collector shall make out such lists and valuation as in other cases of neglect or refusal, and shall assess the duty thereon; and the collector shall commence appropriate proceedings before any court of the United States, in the name of the United States, against such person or persons as may have the actual or constructive custody or possession of such property or personal estate, or any part thereof, and shall subject such property or personal estate, or any portion of the same, to be sold upon the judgment or decree of such court, and from the proceeds of such sale the amount of such tax or duty, together with all costs and expenses of every description to be allowed by such court, shall be first paid, and the balance, if any, deposited according to the order of such court, to be paid under its direction to such person or persons as shall establish title to the same. The deed or deeds, or any proper conveyance of such property or personal estate, or any portion thereof, so sold under such judgment or decree, executed by the officer lawfully charged with carrying the

same into effect, shall vest in the purchaser thereof all the title of the delinquent to the property or personal estate sold under and by virtue of such judgment or decree, and shall release every other portion of such property or personal estate from the lien or charge thereon created by this act. And every person or persons who shall have in his possession, charge, or custody any record, file, or paper containing, or supposed to contain, any information concerning such property or personal estate, as aforesaid, passing from any person who may die, as aforesaid, shall exhibit the same at the request of the collector or deputy collector of the district, and to any law officer of the United States, in the performance of his duty under this act, his deputy or agent, who may desire to examine the same. And if any such person, having in his possession, charge, or custody any such records, files, or papers, shall refuse or neglect to exhibit the same on request, as aforesaid, he shall forfeit and pay the sum of \$500: *Provided*, That in all legal controversies where such deed or title shall be the subject of judicial investigation, the recital in said deed shall be *prima facie* evidence of its truth, and that the requirements of the law had been complied with by the officers of the Government: *And provided further*, That in case of wilful neglect, refusal, or false statement by such executor, administrator, or trustee, as aforesaid, he shall be liable to a penalty of not exceeding \$1,000, to be recovered with costs of suit. Any tax paid under the provisions of sections 29 and 30 shall be deducted from the particular legacy or distributive share on account of which the same is charged.

"SEC. 9. That section 35 of said act of June 13, 1898, and the amendments thereof, be amended so as to read as follows:

"SEC. 35. That for the purposes of this act, the words 'mixed flour' shall be taken and construed to mean the food product resulting from the grinding or mixing together of wheat, or wheat-flour, as the principal constituent in quantity, with any other grain, or the product of any other grain, or other material, except such material, and not the product of any grain, as is commonly used for baking purposes: *Provided*, That when the product resulting from the grinding or mixing together of wheat or wheat-flour with any other grain, or the product of any other grain, of which wheat or wheat-flour is not the principal constituent as specified in the foregoing definition, is intended for sale, or is sold, or offered for sale as wheat-flour, such product shall be held to be mixed flour within the meaning of this act."

"SEC. 10. That section 50 of the act of June 13, 1898, be repealed, to take effect Jan. 1, 1903.

"SEC. 11. That this act, except as otherwise specially provided for in the preceding section, shall take effect July 1, 1902."

Irrigation.—March 1, 1902, the Senate passed without division an act "appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands.

Mr. Hansborough, of North Dakota, in arguing for the passage of the measure dwelt on the material good which would result from it:

"It should be understood at the outset that the plan proposed by this bill does not require a great outlay of money; that it does not contemplate a 'raid upon the Treasury,' as is apprehended by some gentlemen who have given the question only a superficial examination. Neither

is there the slightest probability of an overproduction of small grains as a result of the successful operation of the project.

"First, the cost is limited to the proceeds from the sale and disposal of public lands in the 13 States and 3 Territories named in the bill. This would involve a sum aggregating, perhaps, \$2,500,000 per annum, according to official reports on the present income from this source. It is provided in the bill that the cost of construction of each irrigation project shall be paid by the persons directly benefited. Thus the money expended would constantly be recouped or repaid to the reclamation fund, making the system automatic and self-sustaining.

"Second, as to the fear of overproduction of farm-products, there is no ground whatever for alarm. While it is true that there are in the great West about 600,000,000 acres of lands which might be irrigated, the essential fact is that there is not sufficient water available, and never will be, to reclaim more than 10 per cent. of the whole area, or about 60,000,000 acres. It should not be taken for granted, however, that the whole of this area would be irrigated from Government works. The irrigation experts of the Geological Survey, basing their calculations upon the most thorough investigations in the field, give it as their opinion that 20,000,000 acres would be the limit of land irrigated from waters conserved by Government enterprises, but that this would serve as a nucleus about which private effort would reclaim an equal amount, or 40,000,000 acres in all. On this point I will quote from the very interesting and instructive letter from the director of the Geological Survey to be found in the report accompanying this bill:

"The surveys and examinations made in different parts of the arid region show that the cost of water conservation ranges from \$5 per acre in the most favorable cases up to \$20 or \$25 per acre where the conditions are less favorable. Moreover, whereas \$25 per acre may be prohibitory in Montana for raising alfalfa, it is reasonable in Arizona, where high-class products are produced. An arbitrary statement, therefore, of the cost per acre reclaimed bears little relation to the feasibility of the enterprise.

"The cost of reclamation also depends upon the completeness with which the work is done. For example, the irrigation of 10,000 acres may cost only \$10 per acre, but the irrigation of 15,000 additional acres may cost \$15 per acre. Viewed as an investment only, it might be found more profitable in such a case to irrigate the smaller acreage; but as a matter of larger benefits to the people by the creation of more homes, it might be wiser to advocate the more complete system, under the general principle that in developing the resources of the country the larger benefits consistent with economy should be sought, and not merely the cheapest or the immediately profitable.

"The reclamation of 20,000,000 acres of arid land by means of irrigation would, on an average, cost probably from \$10 to \$15 per acre, and the ultimate average value would be three times as much.

"It has been variously estimated that there is available water for from 60,000,000 to 100,000,000 acres. It is not necessary for the Government to conserve all of this water. If the Government should build the great dams and divert the large rivers, individual enterprise would be able to put the water upon the greater part of the land. It is estimated that if the Government should conserve water for 20,000,000 acres individuals would

be able to obtain water for the remaining reclaimable land.

"The limit of 20,000,000 acres has been set for Government work as being a liberal allowance when consideration is had of the projects which are of sufficient size or importance to justify construction by the Government. It is assumed that it will not be the intention of Congress to irrigate the land, but merely to build some of the larger works. The possibilities of construction of these are limited by the character of the country. Taking the vast extent of the arid region as a whole, and the number of projects called to public attention, there are comparatively few of these which would justify more than survey and careful examination. The facts developed by impartial work conclusively prove that for some of these projects there is no reasonable demand for Government work.

"If the Government provides the larger storage works and regulates the rivers, it will then be possible for private enterprise to again take up the work of bringing water to the land.

"From the experience already acquired in the development of the arid regions, it may be assumed that where water is conserved for the direct reclamation of 1 acre there are ultimately brought in use 2 or 3 acres through the possibility of taking advantage of floods, through the use of seepage, through pumping-plants, and by various other devices. In short, if the Government, by means of large storage-works, or by taking water from great rivers, should provide water directly for 20,000,000 acres which otherwise would not be irrigated, this act would render possible the gradual utilization of the greater part of the remainder through construction of smaller individual systems.

"In the present state of engineering science, and at existing values of land, it will not be possible to now utilize all the waste waters within practical limits of expense. The influence of new inventions, cheaper appliances, and the increased demand for land make it impossible to place any definite limits upon the development."

"At an estimated average cost of \$15 per acre for construction of works, the reclamation and settlement of this 20,000,000 acres would bring to the fund the total sum of \$300,000,000, not from the Treasury of the United States, but from the lands themselves. Now, it is unreasonable to suppose that the whole of this 20,000,000 acres would be reclaimed in one or ten, or even in twenty years. The director of the survey estimates that with the income provided for in the pending measure a period of thirty-eight years would be required in which to reclaim 20,000,000 acres; so that reclamation would proceed at an average rate of about 526,000 acres a year for thirty-eight years. Assuming that 20,000,000 acres would be reclaimed by private enterprise, what shall be done toward subduing the remaining 560,000,000 acres must be left to future generations. The problem is not likely to be solved in advance of the necessities which will arise out of the mutations of time and the vicissitudes of struggling humanity.

"No one will therefore seriously contend that, under the proposed irrigation policy laid down in the President's message and provided for in this bill, the settlement of the public domain would proceed by leaps and bounds, to the detriment of the farmers of the East or of any other section."

The measure was taken up in the House of Representatives June 12 and a special rule was adopted providing for an immediate discussion and a vote next day on the passage of the bill.

In opposing the adoption of the rule Mr. Robinson, of Indiana, argued against the policy of the measure.

"Mr. Speaker, to a casual observer of legislation and to those who have only casually looked into the important questions involved it may seem that two or three days' time would be ample for the discussion of the features presented by this bill. But, involving, as it does in one form or another, nearly all the principles of government for which we have stood, involving all the questions of change in the administration of the public lands, involving the abdication by the House of Representatives of its powers over appropriations, involving the constitutional questions of State and national powers, and involving home rule, for State rule is home rule, for which this side of the House for a century has stood, two days' time for the discussion of these questions is not ample to present them to the House of Representatives. It involves the whole field of appropriation, economy in expenditure, wasteful extravagance, special and political influence, jobs and deals, political and legislative.

"It involves in government a change of an old and the ingrafting of a new system of laws for the regulation and control of 600,000,000 acres of public domain along untried and experimental paths.

"I do not mean that irrigation is an experiment, for it has been successfully and profitably employed by State and private enterprise for ages. But to the Government it is new, experimental, and dangerous.

"This change involves the abdication by Congress of its rights and its duties to appropriate money derived from taxation, money derived from the sale of land owned by all the people, and it is a surrender of these rights of the people and this prerogative of Congress to a Federal officer in the expenditure of a mountain of money, the cost of which irrigation projects is variously estimated by experts at from the lowest, \$300,000,000, to the highest, \$600,000,000, being the reclamation of 60,000,000 acres of irrigable land at from \$5 to \$10 an acre on the average.

"While this estimate of 60,000,000 acres of irrigable land is made, there are yet 540,000,000 in the arid regions, and we may confidently assume, in the light of all past experiences, that the efforts of experts and officers in charge will not be relaxed till the bounty of heaven is exhausted and the flood and snow waters are no more. *Cum grano salis* is a good rule in passing on preliminary estimates of experts when their hearts are set on a project.

"I congratulate the gentlemen of the arid regions, who have a special interest not common to the whole country, on securing consideration for this measure of interest in their districts and States, but troublesome and dangerous to every other section of the country.

"That it will affect them advantageously and ruinously affect all the rest of us I firmly believe, and think this will be made plain by a reading of the bill and the majority and minority reports. I can not speak in unkindness, but in praise, of Representatives of the States whose stars are fast floating away in the firmament, losing their luster, and preparing to join the Milky Way, but my constituency can not contribute to its own downfall to rescue them from the gloom that surrounds them, and I claim only the same rights that Representatives always exercise on this floor, to protect my people as I have the understanding to perceive and the power to execute. An attempt has been made, unjustly and

inordinately, to control the Democratic congressional committee and to divert it into an unwarranted and dangerous path, and culminated a brief time ago in a minority acting on some sort of an irrigation resolution.

"This new scheme involves the complicated, complex, litigious, and dangerous questions of condemnation of private property in a State jurisdiction by a Federal officer, and which power and property so condemned is to be used in and for another State to irrigate public land not only, but private land as well. To illustrate: Nevada must go to California and invoke all the complicated machinery of law—must wade through the perplexing problems of condemnation and interstate rights—or get no water, and this is rendered still more difficult by the invoking of the law within a State jurisdiction by a Federal officer for uses not wholly within the State and not exclusively concerning United States land.

"Such a conflict and litigation would arise like unto that which might come were the dead to arise and attempt to trace their ancient possessions. This scheme involves the purchase without condemnation by a United States officer from the public-land fund belonging to all the people, at exorbitant figures, as it must be when the United States is the purchaser in a State jurisdiction, of private property for the uses and purposes I have just named.

"It involves the United States Government in the execution of an enterprise around which will cluster, like banquets at a feast, those patriotic American citizens, with too many of which we unfortunately are cursed, who are always ready to encourage an enterprise by the Government, however stupendous, because there is something in it for themselves.

"It involves the robbery of peoples of self-government in States, and while some speak for them, saying that American citizens will abjectly submit to a surrender of their sovereignty to receive these gifts of the people's lands, and submit to be governed 2,000 and 3,000 miles away, I believe that Representatives of other States should save this misguided people from their friends and at once protect the interest of their own States, their own constituents.

"It is charged that the land-grant railroads are the principal promoters of this legislation. This is not met with a disclaimer, but by the question, 'Suppose they are?' This is a question difficult to answer satisfactorily to all, but for myself, I am unwilling to stand for a proposition embodied in this bill which my party has always stood against; unwilling to promote a system of land grants, either in the land itself or by the Government's increase of value to it, when I remember my party's opposition to the original grants and its vigorous insistence on the forfeitures of lands by the railroad corporations by reason of their refusal to comply with the terms of the grants. Others may see their way clear to go into this conflict with party doctrine, but I can not.

"Even if the great railroad interests of these sections do say that the only reasons for this dangerous legislation is to give us the Asiatic trade, for my part I can not see enough of merit in this irrigation proposition from any standpoint to fly me in the face of my party's uniform attitude when it made history on both the subsidizing of railroads by land grants or on expansion, the one the real and the other the claimed reason why the railroad corporations are in favor of the bill.

"This bill involves the United States Govern-

ment in the employment of its machinery of government to force values and utility in land by a stupendous outlay to control the elements by conquering nature's course, thereby exerting government powers in fields that should be exploited and will be exploited by State and private enterprises as fast and as far and as prudently as the needs of the people and localities may require.

"It is aimed to deter the slow but steady tide of immigration now setting in from the North to the rich mining-fields of Tennessee, Alabama, and the South; to check those who, from my State and others, go South to find your sweet Southern hospitality and reach your blooming fields, and, mingling with you, give a force for the future that no arid region irrigated in the world can compare with the results of this combination, and no States can rank your Southern States in the industrial development thereby produced."

Several able speeches were made for and against the bill, its advocates dwelling on the necessity of controlling and guiding our rivers and streams, and the advantage of developing vast tracts of land now worthless, and its opponents insisting on the unfairness of the measure, the dangerous powers granted, the difficulty of the task undertaken and those indirectly involved, and the lack of constitutional authority.

The vote on the passage of the measure was 146 yeas to 55 nays, not present 18, not voting 132.

The bill was approved by the President June 17, 1902; and the text of it is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all moneys received from the sale and disposal of public lands in Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington, and Wyoming, beginning with the fiscal year ending June 30, 1901, including the surplus of fees and commissions in excess of allowances to registers and receivers, and excepting the 5 per centum of the proceeds of the sales of public lands in the above States set aside by law for educational and other purposes, shall be, and the same are hereby, reserved, set aside, and appropriated as a special fund in the Treasury to be known as the 'reclamation fund,' to be used in the examination and survey for and the construction and maintenance of irrigation works for the storage, diversion, and development of waters for the reclamation of arid and semiarid lands in the said States and Territories, and for the payment of all other expenditures provided for in this act: *Provided,* That in case the receipts from the sale and disposal of public lands other than those realized from the sale and disposal of lands referred to in this section are insufficient to meet the requirements for the support of agricultural colleges in the several States and Territories, under the act of Aug. 30, 1890, entitled 'An Act to apply a portion of the proceeds of the public lands to the more complete endowment and support of the colleges for the benefit of agriculture and the mechanic arts, established under the provisions of an act of Congress approved July 2, 1862,' the deficiency, if any, in the sum necessary for the support of the said colleges shall be provided for from any moneys in the Treasury not otherwise appropriated.

"SEC. 2. That the Secretary of the Interior is hereby authorized and directed to make examinations and surveys for, and to locate and construct, as herein provided, irrigation works for

the storage, diversion, and development of waters, including artesian wells, and to report to Congress at the beginning of each regular session as to the results of such examinations and surveys, giving estimates of cost of all contemplated works, the quantity and location of the lands which can be irrigated therefrom, and all facts relative to the practicability of each irrigation project; also the cost of works in process of construction as well as of those which have been completed.

"SEC. 3. That the Secretary of the Interior shall, before giving the public notice provided for in section 4 of this act, withdraw from public entry the lands required for any irrigation works contemplated under the provisions of this act, and shall restore to public entry any of the lands so withdrawn when, in his judgment, such lands are not required for the purposes of this act; and the Secretary of the Interior is hereby authorized, at or immediately prior to the time of beginning the surveys for any contemplated irrigation works, to withdraw from entry, except under the homestead laws, any public lands believed to be susceptible of irrigation from said works: *Provided,* That all lands entered and entries made under the homestead laws within areas so withdrawn during such withdrawal shall be subject to all the provisions, limitations, charges, and conditions of this act; that said surveys shall be prosecuted diligently to completion, and upon the completion thereof, and of the necessary maps, plans, and estimates of cost, the Secretary of the Interior shall determine whether or not said project is practicable and advisable, and if determined to be impracticable or unadvisable he shall thereupon restore said lands to entry; that public lands which it is proposed to irrigate by means of any contemplated works shall be subject to entry only under the provisions of the homestead laws in tracts of not less than 40 nor more than 160 acres, and shall be subject to the limitations, charges, terms, and conditions herein provided: *Provided,* That the commutation provisions of the homestead laws shall not apply to entries made under this act.

"SEC. 4. That upon the determination by the Secretary of the Interior that any irrigation project is practicable, he may cause to be let contracts for the construction of the same, in such portions or sections as it may be practicable to construct and complete as parts of the whole project, providing the necessary funds for such portions or sections are available in the reclamation fund, and thereupon he shall give public notice of the lands irrigable under such project, and limit of area per entry, which limit shall represent the acreage which, in the opinion of the Secretary, may be reasonably required for the support of a family upon the lands in question; also of the charges which shall be made per acre upon the said entries, and upon lands in private ownership which may be irrigated by the waters of the said irrigation project, and the number of annual instalments, not exceeding 10, in which such charges shall be paid and the time when such payments shall commence. The said charges shall be determined with a view of returning to the reclamation fund the estimated cost of construction of the project, and shall be apportioned equitably: *Provided,* That in all construction work eight hours shall constitute a day's work, and no Mongolian labor shall be employed thereon.

"SEC. 5. That the entryman upon lands to be irrigated by such works shall, in addition to compliance with the homestead laws, reclaim at

least one-half of the total irrigable area of his entry for agricultural purposes, and before receiving patent for the lands covered by his entry shall pay to the Government the charges apportioned against such tract, as provided in section 4. No right to the use of water for land in private ownership shall be sold for a tract exceeding 160 acres to any one landowner, and no such sale shall be made to any landowner unless he be an actual *bona fide* resident on such land, or occupant thereof residing in the neighborhood of said land, and no such right shall permanently attach until all payments therefor are made. The annual instalments shall be paid to the receiver of the local land-office of the district in which the land is situated, and a failure to make any two payments when due shall render the entry subject to cancellation, with the forfeiture of all rights under this act, as well as of any moneys already paid thereon. All moneys received from the above sources shall be paid into the reclamation fund. Registers and receivers shall be allowed the usual commissions on all moneys paid for lands entered under this act.

"SEC. 6. That the Secretary of the Interior is hereby authorized and directed to use the reclamation fund for the operation and maintenance of all reservoirs and irrigation works constructed under the provisions of this act: *Provided*, That when the payments required by this act are made for the major portion of the lands irrigated from the waters of any of the works herein provided for, then the management and operation of such irrigation works shall pass to the owners of the lands irrigated thereby, to be maintained at their expense under such form of organization and under such rules and regulations as may be acceptable to the Secretary of the Interior: *Provided*, That the title to and the management and operation of the reservoirs and the works necessary for their protection and operation shall remain in the Government until otherwise provided by Congress.

"SEC. 7. That where in carrying out the provisions of this act it becomes necessary to acquire any rights or property, the Secretary of the Interior is hereby authorized to acquire the same for the United States by purchase or by condemnation under judicial process, and to pay from the reclamation fund the sums which may be needed for that purpose, and it shall be the duty of the Attorney-General of the United States upon every application of the Secretary of the Interior, under this act, to cause proceedings to be commenced for condemnation within thirty days from the receipt of the application at the Department of Justice.

"SEC. 8. That nothing in this act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof: *Provided*, That the right to the use of water acquired under the provisions of this act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right.

"SEC. 9. That it is hereby declared to be the duty of the Secretary of the Interior in carry-

ing out the provisions of this act, so far as the same may be practicable and subject to the existence of feasible irrigation projects, to expend the major portion of the funds arising from the sale of public lands within each State and Territory hereinbefore named for the benefit of arid and semiarid lands within the limits of such State or Territory: *Provided*, That the Secretary may temporarily use such portion of said funds for the benefit of arid or semiarid lands in any particular State or Territory hereinbefore named as he may deem advisable, but when so used the excess shall be restored to the fund as soon as practicable, to the end that ultimately, and in any event, within each ten-year period after the passage of this act, the expenditures for the benefit of the said States and Territories shall be equalized according to the proportions and subject to the conditions as to practicability and feasibility aforesaid.

"SEC. 10. That the Secretary of the Interior is hereby authorized to perform any and all acts and to make such rules and regulations as may be necessary and proper for the purpose of carrying the provisions of this act into full force and effect."

Chinese Exclusion.—A bill "to prohibit the coming into and regulate the residence within the United States, its Territories, and all territory under its jurisdiction, and the District of Columbia, of Chinese and persons of Chinese descent" was reported in the House of Representatives from the Committee on Foreign Affairs, with amendments, and made a special order by unanimous consent March 27, 1902. The basis of this measure was an elaborate bill with provisions shaped to carry out an extreme policy against the Chinese, and submitted by the California representatives. Mr. Perkins, of New York, set forth the points on which the committee had to determine upon that were new and the points wherein the majority had modified the measure as originally drafted:

"I shall not, Mr. Chairman, take the time of this committee in discussing the general question of Chinese exclusion, because I imagine that every member of this House is agreed that the admission of Chinese laborers on any large scale would be injurious to the laboring interests of this country; but, Mr. Chairman, as was said by the chairman of the committee, the problem is in what way should that exclusion best be carried out; and it is, perhaps, due to the committee in presenting to it a bill 30 pages in length that we should state briefly what has been covered by this bill.

"Now, Mr. Chairman, in the first place we were met by this new question, and that was, what should be done in reference to the Chinese who are now living in the colonial possessions of the United States. It was testified before the committee that there were in the Philippine Islands at least 250,000 Chinese, and perhaps very many more, and Gov. Taft testified before our committee that, in his judgment, the great majority of the Chinese in the Philippine Islands would gladly come to the United States if they could have the opportunity. What should be done with them? It was the unanimous opinion of the committee that the exclusion of the Chinese as against those living in China should be extended to the Chinese who live in the colonial possessions of the United States, and the act provides that Chinese laborers, Chinese coolies, can not come from the colonial possessions to the mainland any more than they can come from China to the United States. That provision, Mr. Chairman, I think

will meet the approval of the members of the House.

"Then came the next question, Mr. Chairman, Should the exclusion of the Chinese be extended to the colonial possessions? Now, the committee can see in one moment that the conditions existing in, for instance, the Philippine Islands, are totally different from the conditions existing in the United States. Here we have a large body of intelligent, educated, industrious laborers, and we owe it to them that they are not subjected to any unfair competition from men brought here who live on a different scale, who are willing to work for less price, who are content to live on a lower degree of comfort and civilization; but the members of the committee can see that those conditions do not exist in our colonial possessions.

"There is in the Philippine Islands, for instance, no body of educated, industrious, intelligent laborers, and the question was, What is the best thing for the interests of the Philippine Islands? And, Mr. Chairman, that question is by no means as free from doubt as is the question of the introduction of Chinese laborers into this country. But we felt bound, Mr. Chairman, and it is the doctrine, it is the principle, of the Republican party—of, I think, all members of Congress, regardless of party—to do for the Filipinos what within reasonable limits they themselves ask should be done. The committee was convinced that the desire of the Filipinos themselves was that they should not be subjected to the further competition of Chinese labor; that they were not ready to compete with them, and certainly they are not, and for that reason the committee has reported, by the bill before this committee of the whole, that Chinese laborers be excluded from the colonial possessions of the United States upon the same terms and in the same manner that they are excluded from the mainland of the United States.

"Now, Mr. Chairman, a word or two more about some provisions of detail in this bill that I wish to explain very briefly to the committee. The chairman of the Committee on Foreign Affairs said that we have taken in its general outline the Kahn bill, which was introduced in behalf of the members from California. The question of Chinese exclusion is more important in California than in any other part of the country, and it was our endeavor in every way to carry out the desire of the California delegation to make this law a law which should not only say that Chinese laborers should be excluded, but should furnish the means and the appliances and the requirements for making that exclusion effectual, which should check the fraudulent introduction of Chinese into this country.

"There were, however, two or three questions of detail in which the committee differed from some provisions of the Kahn bill, which I desire to submit to the judgment of the committee of the whole. By your judgment we will be guided. The Committee on Foreign Affairs had but one desire, namely, to have a bill which would be most effective, most judicious, most wise, to carry out the principle of Chinese exclusion, but on questions of detail we all have our judgment. Now, there are substantially three questions which I shall state very briefly to the members of the committee. The first was this: The bill provides that the Chinese shall be excluded from the Philippine Islands.

"Then the bill as it was introduced—not the committee bill—provided that the Treasury Department should appoint officials who should go

to the Philippine Islands, who should there make a registration of all Chinese in the Philippine Islands or any other foreign possession, who should carry out the enforcement of this law in reference to Chinese landing and the preventing of their landing. In reference to the removal of Chinese from one possession to another, Mr. Chairman, we did not regard that provision as judicious, and I feel confident that the committee will agree with us. What would be the necessary result? Why, Mr. Chairman, it would take 10,000 employees of the Treasury Department. Ten thousand employees would have to be shipped from San Francisco to the colonial possessions, to the foreign possessions of this country, to take charge of making that registration, to take charge of that detail.

"Now, what has the Committee on Foreign Affairs done? The Government has appointed a Philippine Commission, thoroughly familiar with all local questions. Gov. Taft, the head of that commission, appeared before the Committee on Foreign Affairs and gave his evidence. He is in thorough sympathy with the exclusion of the Chinese. What he said before the committee had, I think, more effect than what was said by any one else in leading the committee to the conclusion that the exclusion of the Chinese from the Philippine Islands was judicious. We have reported in our bill a brief provision, embracing half a dozen lines, in which we propose to authorize and direct the Philippine Commission to take such measures as may be necessary to carry out the provisions of this bill as to the exclusion of the Chinese from the islands and to attend to registration or whatever else may be requisite with reference to the regulation of this subject."

Another point of difference was on the proposition of the original bill, that the Treasury Department keep a record of Chinese children born in the United States or its dominions. The committee, in view of the fact that a permanent Census Bureau has been created, regarded this provision as needless. A third point of difference was in regard to the employment of Chinese seamen. A minority report recommended the provision of the original bill, forbidding their employment on American ships, but the majority report favored a provision forbidding their landing at an American port, no matter on what ship they sailed. Mr. Perkins said:

"First, I should say, gentlemen, that among the restrictions against the unlawful landing of Chinese we have in this bill a provision that when a ship comes alongside any wharf or dock of the United States on which are Chinese coolies who are not to be landed, the steamer must give bond in the penal sum of \$2,000 for every Chinaman on board, to see to it that the Chinamen whom they have on board do not get on land—that the ship that brings them carries them away. So, certainly the provision is stringent enough to keep these ships having Chinamen on board—men employed on the ships—from allowing them to land. If a ship has Chinamen on board who are to be landed, then there must be the certificates and the necessary papers to show that they are Chinamen who are entitled to land; but this proposition refers to ships having Chinamen on board who are not to land. There must be a bond signed by the steamship company, with the penalty of \$2,000 for every Chinaman on board who is not to land, that he shall not be permitted to land.

"All ships, when they come to our harbors, must submit to this law. So as you see, gentlemen, these Chinamen employed on the ships that

sail on the great seas are not going to get into this country. We have made stringent provisions that they shall not come in. But the bill as drawn, as submitted to the committee, contains this provision, that no ship carrying the American flag, no ship admitted to American registry, shall employ on it any Chinese. We struck out this provision, because, as the committee can see, it was no more needed for the protection of American laboring men living in America, and it has no more to do with them than it has with British laboring men living in England, not one bit."

Mr. Clark, of Missouri, advocated the more stringent policy. He said:

"When we annexed the Sandwich Islands we took twenty-odd thousand Chinese. When we acquired the Philippines we took in a number of Chinese variously stated at from 200,000 to 1,750,000. Consequently, for the first time, the Congress is confronted with the exceedingly difficult proposition of holding our newly acquired provinces, colonies, or insular possessions—whichever or whatever you please to call them—and at the same time excluding from our mainland the denizens of those same provinces, colonies, or insular possessions.

"Verily, verily, we have troubles of our own—lots of them. Not having enough on hand prior to the Spanish War to suit our taste, like the Knight of La Mancha, we went forth in quest of ventures to the uttermost ends of the earth, even to far Cathay, and we accumulated troubles enough, not only to last us during our natural lives, but to harass our posterity to the remotest generation, unless we possess the courage, the resolution, the wisdom, and the patriotism to unload them and thereby end them. Without being a prophet, or the son of a prophet, I make bold to predict that should the Supreme Court of the United States decide—as many think it will decide—that the citizens or subjects of Spain, resident in the islands we annexed, became when annexed *ipso facto* citizens of the United States, the people of this country will speedily find a way to rid themselves of that huge incubus; because it can not be that in their sober senses Americans will deliberately determine to subject American laborers to death-dealing competition with the cheap labor of the Orient.

"The truth is that it is high time the laborers of this country were waking up to the fact that their one escape, not only from competition with European cheap labor, but from unrestricted competition with the cheaper labor of Asia, is for us to at once and forever cut loose from the Philippine Islands. It is their only salvation. Suppose the Supreme Court of the United States decides that the subjects of Spain residing in the islands we annexed became American citizens by the act of annexation, then what? The probabilities in the case are that the Supreme Court will decide that Congress has no power to restrict the free locomotion of an American citizen into any part of the territory over which the Stars and Stripes float, and the laborers of the country, for whose benefit this bill is made, might just as well wake up now as later on to the realization of the fact that the whole tendency of this latter-day annexation is to bring them into ruinous competition with the cheap labor of Europe and the cheaper labor of Asia. There is no sense in locking the barn after the horse is gone. The quicker we get rid of the Philippines the better off the laborers will be; the better off we will all be.

"If we do not speedily unload these accursed islands, the day is not far distant when all of us,

especially the laborers of the land, will in agony of soul exclaim: 'Who will deliver us from the body of this death?' Should it be decided that the free locomotion of the inhabitants of the Philippines can not be restrained, the yellow flood will pour in and utterly submerge the laborers of America. Our retention of the Philippines means a reduction of wages to the Asiatic level. That is one of the main reasons why I was opposed to acquiring them and why I am dead against keeping them.

"That the longer we keep them the harder it will be to get rid of them is a proposition too plain to be argued.

"Let no man hug to his breast the delusion that Asiatics can work only as unskilled laborers, for the evidence in the case flatly contradicts that theory. They have the imitative faculty largely developed and soon learn to do anything they see done. Consequently they will not only compete with unskilled laborers but also with those of all degrees of skill, even unto the highest.

"The cry once rang along the Pacific coast, 'The Chinese must go!' Some day the laborers of America in self-defense will raise the cry, 'The Philippines must go!'

"The Committee on Foreign Affairs has been wrestling with these brain-racking problems for two months.

"We have listened patiently to a vast array of witnesses—ex-Cabinet ministers, ex-ambassadors, ex-governors, ex-Senators, great lawyers, great editors, congressmen, the head of the Federation of Labor and the heads of other labor organizations, representatives of our sailors, the commissioners of the State of California, representatives of great commercial bodies and of great lines of transportation, ministers of the Gospel, the Commissioner-General of Immigration and other Treasury officials—male and female, great and small—until their evidence constitutes a large, instructive, and decidedly interesting volume.

"To no question was there ever given a more patient, a more thorough, or a more conscientious investigation. I say this gladly as to the entire committee.

"We agree that Chinese laborers on land should be excluded; we differ somewhat as to how best to accomplish that end.

"The majority refuse to apply the exclusion principle to Chinese seamen, while the Democratic minority desire to make the exclusion apply both by land and sea.

"Upon these differences we ask the judgment of the House.

"The report of the minority, among other things, says:

"The question of Chinese exclusion is largely a racial question and largely a labor question.

"Because our Pacific coast is the chief place of entrance of Chinese into our country, because a vast majority of Chinese immigrants settle on the Pacific coast, and because American citizens resident on the Pacific coast having had more experience with Chinese than the rest of our people, they understand the Chinese character better and are better fitted to know what legislation is necessary to solve the numerous and difficult problems connected with Chinese immigration.

"Individually, I go further and say that the Chinese question is the race question of the Pacific coast. There is no use dodging it. The Chinese problem is to the Pacific coast what the negro problem is to the Southern States, except

that the race question of the South is entirely a domestic question, while the race question on the Pacific is complicated with international questions. I believe, moreover, that the white people of the South are the most capable of dealing with their race question, just as the white people of the Pacific coast are most competent to deal with their Chinese race question.

"Upon these race questions I unhesitatingly take my position with the white people of the South and the white people of the Pacific coast.

"The substitute reported by the Democratic minority is substantially the bill desired by our Pacific coast citizens and by the laborers of the whole country, which is a very persuasive reason why it should be adopted by the House."

The House passed the bill without a division April 7, after adopting certain amendments, which, it was claimed by Mr. Clark, embodied everything for which the minority contended, and which, according to Mr. Hitt, of Illinois, made the measure identical with that reported by a Senate committee as a modification of the original or Kahn bill.

In the course of the debate in both houses it was commonly conceded that the policy of exclusion was to be continued; and that the only matter open to discussion was the method of exclusion. A more generous course was advocated at times. Mr. Gallinger, of New Hampshire, said in the Senate:

"Mr. President, to my mind this bill is uncalled for, unnecessary, unwise, and un-American. It is harsh in its provisions, unjust in its definitions, and clearly violative of solemn treaty stipulations. It is the kind of legislation that prejudice engenders and unthinking agitation produces. It is a measure aimed at a weak people, and which would never be dreamed of in connection with any nation able to defend itself. It is narrow, bigoted, intolerant, and indefensible legislation. It assumes conditions that do not exist, and aims to correct evils that are purely imaginary. It suggests the want of laws to prevent undesirable Chinese immigration into this country, when the fact is that existing laws are entirely adequate to accomplish that purpose."

He quoted at length the letter of protest addressed by the Chinese minister to the Secretary of State, which set forth various objections to the measure as follows:

"I do not wish to go into the different provisions of the bill in detail, but I should like to call your attention in a general way to its effects. It restricts the privileged Chinese persons, other than laborers, to come to the United States to only five classes, viz., officials, teachers, students, merchants, and travelers, in direct contravention to the treaty of 1880, in Article I, where it states that the limitation or suspension of immigration shall apply only to laborers, 'other classes not being included in the limitation.' So also the history of the negotiation shows that it was the intention of the two governments that laborers alone were to be excluded. Under the bill there would be excluded bankers, capitalists, commercial agents or brokers, and even merchants who come only to make purchases; also scholars and professors, of which there are many in China of high attainments; also physicians, clergymen, and many other classes which do not fall under the five classes exempt by the bill. The provisions of the bill as to the five exempt classes are so restrictive as to practically nullify the treaty in regard to them. The definitions as to teachers, students, and merchants are so con-

trary to the spirit of the treaty as to make them almost impossible of observance.

"A woman married according to the Chinese custom to a person of the exempt classes would be prohibited from entering the country, because according to the provision of the bill it is necessary that the marriage shall be legal and binding by the laws of the United States.

"The bill requires that all Chinese laborers now in the United States shall undergo a new registration. It will be remembered that my Government remonstrated against the first registration that was proposed under the Geary law, and only consented to it at the earnest request of the Secretary of State at the time. All the Chinese laborers submitted to that requirement and were registered, and now it is proposed to nullify all that and subject them to the annoyance and trouble of a new registration. It is an unnecessary hardship and should not be required.

"The bill also contemplates the registration of all merchants and of others of the exempt class. This can not be required under the treaty, but the bill attempts to obviate that obstacle by making the failure to register a serious prejudice of their rights.

"I have heretofore complained to you of the great hardships to which laborers, merchants, and others are subjected after they have been admitted to the United States and are lawfully domiciled in this country. Past experience shows that Chinese have been arrested by the wholesale, placed in jeopardy, and subjected to molestation and insult. When found innocent, no redress is obtained for such illegal arrest. Persons charged with being unlawfully in the country and taken before a court are denied the privilege of bail, but must remain in jail until their case is decided. The bill, in place of providing some relief for these hardships, rather adds restrictions thereto.

"The provisions with regard to transit across the United States imposed by this bill are almost impossible to be complied with, because people who are passing through the United States *en route* to other countries do not know the laws of the country, and they can not understand the intricate rules and regulations made by the Commissioner-General of Immigration.

"The report of the committee says that 'the greatest degree of fairness and justice to the exempt classes will be insured by the provisions of the bill, which provides better means for the investigation and disposition of their claims.' And again it says: 'The features of the bill . . . will tend to protect the worthy immigrant in his treaty rights and privileges.'

"I have referred to the fact that the provisions as to the admission of the exempt classes are in direct violation of the treaty; and in addition to this the bill provides that the exempt classes must submit their right to admission to the adjudication of the Immigration Bureau, which, as I showed in my note to you of Dec. 10, last, was a purely *ex parte* investigation, where the claimant was not permitted to confront the witnesses, was deprived of the privilege of counsel, and was excluded from an appeal to the courts. I can not understand how the committee can style this 'the greatest degree of fairness and justice,' or how the 'worthy immigrant is protected in his treaty rights and privileges.' It seems to me, on the contrary, that his treaty rights are taken away from him.

"The provisions of the bill above referred to, and others which might be cited, place so many

restrictions upon Chinese persons and require them to comply with such strict provisions that no Chinese having the least respect for himself would submit to such indignities and come to this country. I fear the effect of the bill, if it becomes a law, will be that Chinese merchants will not come here to buy goods nor students come for educational purposes.

"Another feature of the bill must be alluded to. The new possessions of the United States, such as Porto Rico, the Hawaiian Islands, the Philippines, and others which may hereafter be acquired, are subjected to its provisions. It can not be claimed that they were considered when the treaty was negotiated, and it is hardly just or in accordance with international comity that the treaty should be extended to them without the consent of China.

"I have received repeated instructions from the Imperial Government, in view of the reenactment of the exclusion laws, to exert myself to see that treaty rights are observed and that no unnecessary hardships are placed upon Chinese subjects, and I feel that on account of the pendency of the legislation referred to I could not refrain from asking you to lay before the honorable Congress the views above set forth. You know that in regard to the exclusion of laborers my Government and myself have stood ready to cooperate with your Government in making the treaty prohibition effective. But with regard to the exempt classes who seek to come here for trading, educational, and other legitimate purposes, I must earnestly protest against the unwarranted and unjust provisions of the bill. In place of 'insuring the greatest degree of fairness and justice,' as stated by the Immigration Committee, it would impose such indignities and hardships upon these classes that few, if any, would come here. And notwithstanding the sincere wish of my Government and myself to maintain and cement closer the friendly relations between the two countries, I greatly fear that those friendly relations would be endangered by the enforcement of the act."

April 16, the Senate adopted, instead of the committee measure, a brief substitute offered by Mr. Platt, of Connecticut, and passed the measure by a vote of 76 to 1. April 17 this substitute was passed as an amendment to the House bill.

After the usual non-concurrence and two conferences, it was modified slightly and accepted by both houses of Congress.

It was approved by the President, April 29, 1902, in the following form:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all laws now in force prohibiting and regulating the coming of Chinese persons, and persons of Chinese descent, into the United States, and the residents of such persons therein, including sections 5, 6, 7, 8, 9, 10, 11, 13, and 14 of the act entitled 'An Act to prohibit the coming of Chinese laborers into the United States,' approved Sept. 13, 1888, be, and the same are hereby, reenacted, extended, and continued so far as the same are not inconsistent with treaty obligations, until otherwise provided by law, and said laws shall also apply to the island territory under the jurisdiction of the United States, and prohibit the immigration of Chinese laborers, not citizens of the United States, from such island territory to the mainland territory of the United States, whether in such island territory at the time of cession or not, and from one portion of the island territory

of the United States to another portion of said island territory: *Provided, however,* That said laws shall not apply to the transit of Chinese laborers from one island to another island of the same group; and any islands within the jurisdiction of any State or the District of Alaska shall be considered a part of the mainland under this section.

"SEC. 2. That the Secretary of the Treasury is hereby authorized and empowered to make and prescribe, and from time to time to change, such rules and regulations not inconsistent with the laws of the land as he may deem necessary and proper to execute the provisions of this act and the acts hereby extended and continued and of the treaty of Dec. 8, 1894, between the United States and China, and with the approval of the President to appoint such agents as he may deem necessary for the efficient execution of said treaty and said acts.

"SEC. 3. That nothing in the provisions of this act or any other act shall be construed to prevent, hinder, or restrict any foreign exhibitor, representative, or citizen of any foreign nation, or the holder, who is a citizen of any foreign nation, of any concession or privilege from any fair or exposition authorized by act of Congress from bringing into the United States, under contract, such mechanics, artisans, agents, or other employees, natives of their respective foreign countries, as they or any of them may deem necessary for the purpose of making preparation for installing or conducting their exhibits or are preparing for installing or conducting any business authorized or permitted under or by virtue of or pertaining to any concession or privilege which may have been or may be granted by any said fair or exposition in connection with such exposition, under such rules and regulations as the Secretary of the Treasury may prescribe, both as to the admission and return of such person or persons.

"SEC. 4. That it shall be the duty of every Chinese laborer, other than a citizen, rightfully in, and entitled to remain in any of the insular territory of the United States (Hawaii excepted) at the time of the passage of this act, to obtain within one year thereafter a certificate of residence in the insular territory wherein he resides, which certificate shall entitle him to residence therein, and upon failure to obtain such certificate as herein provided he shall be deported from such insular territory; and the Philippine Commission is authorized and required to make all regulations and provisions necessary for the enforcement of this section in the Philippine Islands, including the form and substance of the certificate of residence so that the same shall clearly and sufficiently identify the holder thereof and enable officials to prevent fraud in the transfer of the same: *Provided, however,* That, if said Philippine Commission shall find that it is impossible to complete the registration herein provided for within one year from the passage of this act, said commission is hereby authorized and empowered to extend the time for such registration for a further period not exceeding one year."

The Isthmian Canal.—Jan. 9, 1902, the House of Representatives passed by a vote of 308 yeas to 2 nays a bill "to provide for the construction of a canal connecting the waters of the Atlantic and Pacific Oceans." It authorized the President to act on the matter; but it determined upon the Nicaragua route, disregarding any other. It was on this point that the only difference of opinion arose. After many years of discussion there has come substantial agreement as to the

good policy of constructing such a canal, as to the necessity for Government ownership, and as to the propriety of immediate action; but the Panama route had some advocates in the House, and amendments to the measure were proposed favoring this route or leaving the choice of a route to the judgment of the President. These amendments were defeated. In the Senate, however, the sentiment in favor of the Panama route was much stronger, and Mr. Spooner, of Wisconsin, offered a substitute for the House bill, recommending the purchase of the Panama Canal and its completion as the best course, if feasible, and suggesting the Nicaragua route as an alternative. He said:

"No one can overstate the importance of the subject. The construction of a canal connecting the two oceans has been for many, many years the dream of statesmen and the prayer of mariners. It is a colossal enterprise; and one which I believe the people of the United States, with less division of sentiment than I have ever known upon any other subject, desire shall be inaugurated and carried forward as speedily as consists with the public interest; a great public work to stand forever—as long as the Government stands. And, Mr. President, as the years go on, it obviously is to become more and more important to the country and its commerce, to the world, if the world shall use it, and to the commerce of the world.

"He would be a very reckless and bold man who should attempt to set a limit upon what a hundred years from now will be our population, our wealth, and the extent of our commerce; and, Mr. President, no higher or more solemn duty, in my judgment, ever rested upon men in public position—as this work is to subserve not simply the purposes of commerce, but to promote the defense of the nation—than rests upon the Congress to reach the wisest possible conclusion upon this subject. It is too broad to be affected by sectionalism; it is a project of the whole country and of the whole people for all time, and it is not to be belittled, Mr. President, or it should not be, by action governed by mere sentiment, by prejudice, or by assumed local interest.

"If there ever was a question to the solution of which ought to be brought the broadest views from a national standpoint, to my mind this is that problem. I have not supposed it could be debated, that what the people of the United States expect of us and demand of us and have a right to receive from us, is the wisest solution of this question, to the best of our ability, unfettered by any extraneous considerations. The people are to build this canal, they are to maintain it, and it is not debatable that they wish, and they are entitled to have the best canal route.

"It has seemed to be considered by some Senators evidence of disloyalty to the project of an isthmian canal that an amendment has been offered to this bill, or proposed to be offered to it, projecting into the discussion consideration of the Panama route. In other words, it seems to have been thought novel, rather unjustified, and necessarily, therefore, with ulterior purpose, that the Senate did not find itself ready unanimously to adopt without debate the bill known as the Hepburn bill, which lies upon our table, providing for the construction of the Nicaragua Canal. I am quite unable to find any foundation or justification for that suggestion.

"For years the Panama Canal was so enveloped with the thick fog of scandal as not to be perceptible to the people of the United States and as to be considered entirely out of the question. How

does it come to us to-day? In 1899 Congress passed a law making it the duty of the President to 'make a full and complete investigation of the Isthmus of Panama with a view to the construction of a canal by the United States across the same to connect the Atlantic and Pacific Oceans; that the President is authorized to make investigation of any and all practicable routes for a canal across said Isthmus of Panama, and particularly to investigate the two routes known respectively as the Nicaragua route and the Panama route.' What for? 'With a view to determining the most practicable and feasible route for such canal.' I have never heard that law criticized. I believe it commended itself to the American people as a sensible proposition made in their obvious interest, the inspiration of it being to secure, through adequate investigation by fit men, an examination of the various routes and a report to the President and to the Congress of that route which possessed the greatest relative merit and advantage.

"Does any one say that after the enactment of that law we were only to look at the Nicaragua route; that thereafter the people did not expect us to act upon the report of the investigation inaugurated under our command by the President at an expense of \$1,000,000? That law was passed in order that there might be presented to Congress a comparison of routes, and in order that Congress might choose for this great work, which is to be perpetual, that one which all in all seems to be the best.

"The President did not appoint on this commission lawyers or laymen. He did not fill it with members of Congress or ex-members of Congress. He did what, of course, it was expected he would do, and what it was his duty to do. He chose experts in the science and practise of engineering—men of skill in that great profession, a profession which, with the lapse of years, has made as great strides in progress as any other.

"Everybody knew that this problem is one of infinite complication from the engineering standpoint; everybody knew, who thought about it, that the object of this commission and of its creation was to lay before Congress data and opinions of experts in order that the Congress might proceed conservatively and wisely. The mind of the people then was not focused simply on Nicaragua; they were taking a larger view of this subject; and from the time the commission was appointed it has not been a question of a canal—we all want that—but a question of which route should be chosen. I take it that the people of the United States are determined to have a canal.

"If the majority of the Senate believe that the Nicaragua route is the route, they will so vote; if they believe that the Panama route, if it can be obtained, is the better route, they will so vote, each Senator discharging, of course, his own duty and acting, of course, upon his own responsibility.

"Mr. President, this commission went about its work and proceeded with it methodically, with great labor. They went abroad; they studied the general subject of ship-canal; they investigated the maps, the profiles, the history, and everything connected with the New Panama Canal Company and its property. They went over the ground on the isthmus. They studied the situation there in every detail as they studied the Nicaragua route in detail.

"They were disinterested gentlemen. All of them are distinguished in their profession. Admiral Walker is a man who has won by a great career enduring fame. They are not subject to impeachment, and it is not imputed to them that

they have acted upon any other motive than a desire to discharge their duty honestly and intelligently and in the public interest; and nobody can impeach them. They point out the advantages of one route over the other; this reduction in price of the Panama Canal property; and they unanimously recommend the Panama route as the route which should be secured.

"Congress is asked to set aside incontinently that report of distinguished experts and to act in opposition to it in a way; to substitute the judgment of lawyers and laymen; and those of us who are sent here, most of us without experience or skill in engineering, are asked to adopt the plan, not which the commission recommends, but which we think is better.

"I have not been able—although I want a canal, and I want it under this bill, and if we can not secure the Panama Canal I want the Nicaragua route—to cast aside the solemn report and judgment of these experts chosen by President McKinley, carrying on their work under an appropriation of \$1,000,000, taking abundance of time to do it, and making a report in such detail, and to substitute my own judgment for it. Other Senators may be willing to do that.

"My judgment as a layman, although I would not act upon that alone, commends the conclusion of the commission to me. One thing of infinite consequence, and you see it on that map, is the difference in the length of the canals. A canal 49 miles long as against one 183 miles long. The shorter the canal, every one can see, the better. A canal through which a steamship can go in the daytime, through which a sailing ship with a tug can go in the daytime, between sunrise and sunset, as against one that will require *thirty-two hours!* That is an incalculable advantage. It is an advantage in the matter of *safety*, and because it is an advantage in the matter of safety it is an advantage for all time, too, in the matter of *insurance*.

"Panama is farther from some of our ports, measured by miles, but measured by time, so far as the steamship is considered, there is not an appreciable difference. Taking it as an original proposition, I think a man—lawyer or layman—being interrogated as to which canal would be preferable, one through which ships could pass between sunrise and sunset, or one through which it would take three days to pass in daylight, would not hesitate long to say that the former possessed a tremendous advantage.

"There is another thing, speaking only as a layman, which has commended to me the Panama route, since the report of the commission as against the Nicaragua route, although I want the canal built on that if we can not build it on the other. That point is this: The Panama Canal, however it is built now, the testimony shows, *can be made in the future a sea-level canal. The Nicaragua Canal can not.* It is a mere matter of money. It is so stated in the report of the commission. It is so stated in the testimony of the experts before the committee.

"It may become of infinite importance to the people of the United States 'in the long reach of time' to make a sea-level canal of it. Is it worth nothing to adopt the *shorter* canal? Is it worth nothing to have the certainty that in the future, *if the public interest and safety demand it, with the expenditure of the requisite money, this can be made a sea-level canal?* I think it is worth a great deal. Senators may think it is worth nothing.

"But given the practicability of it, Mr. President, in the long years to come, when our popula-

tion has grown to 300,000,000, and our wealth in proportion, and the commerce of the world, immeasurably increased, is using this canal, as it will do, who shall say that the people of the United States would care whether it cost \$200,000,000 or \$500,000,000 to turn this canal into a sea-level canal? All I mean to say is this, and to me it is entitled to great significance and influence in favor of the Panama Canal, with its other advantages, that as to it in the time to come, if our people *want to make of it a sea-level canal, they can do so*, when as to the other, *no matter how much they want it, they can not do so.*

"There is another thing, Mr. President, which has influenced me somewhat since I first began to read about the Panama Canal within the last two or three years. I think Gen. Abbot's article was the first that led me to study the subject at all. I refer to the fact that it is two-fifths completed, that it is a short canal, and that there is a good harbor at either end of it.

"I do not know that it is wise to say what I intend to in the open Senate, and I would not be governed by it if the Nicaragua route were clearly preferable; but if we build the Nicaragua Canal, making of it, as we have by our treaty with England made it, in a sense, a provincial canal (in other words, we are the sole guarantor of its neutrality, with a right to close it against an enemy), with this short, feasible, partly constructed canal, with the work of excavation easily available at any time, in the ever-increasing struggle between the commercial nations of the earth for trade, in the jealousies which have always existed and which always will exist between nations, I have feared that the time would come when, not with private money, but through governmental money placed perhaps in corporate hands, this canal would be finished. It is lying there two-fifths done, feasible, short.

"It is a continuous invitation, Mr. President, to any hostile influence or power which should desire its construction. It lies there a constant menace to the interests and to the safety in the future of the United States. I have thought it might be completed, and that the day might come when our Oregon would go around the Horn again, and an enemy's Oregon might go through this short canal. It will be said that if we build the Panama Canal some other government will probably build the Nicaragua Canal. I hope we will get title to the Panama property and the necessary concession from Colombia and will build the Panama Canal, because, Mr. President, for reasons which I have given, I think that is the safer and better canal for the United States to build. I am 'banking,' if I may use that word, on the experts and on the recommendation of the commission.

"I could not persuade myself, Mr. President, in the face of that report, to vote for the Nicaragua Canal and against the Panama, and get \$150,000,000 or \$200,000,000 or \$300,000,000 invested in the Nicaragua and have it prove to have been disadvantageous some day. I would hate to have my people turn to me and say, 'Well, you put *your judgment* as to the safer and better canal for the United States against a great body of experts chosen by President McKinley and sent over the ground with abundance of money to investigate with care and skill and report the better route.' I am not willing to take that responsibility.

"One thing the Senator can be certain of. Every doubt as to that title would be resolved by the President of the United States or any other public officer against the vendor."

Mr. Morgan, of Alabama, argued that the Lib-

eral party of Colombia had declared its hostility to the contract with the Panama Canal Company, and that the corporation in reality had nothing to sell for the \$40,000,000 which it now asks for the canal. He said:

"Now I have established it in a formal way, in protests that have been issued and notified to the Panama Canal Company, notified to the Colombian Government, the opposing government, notified to the United States, that the Liberal party in Colombia, now professing to have, and having, the support of the great majority of that people, will never ratify these agreements that we are bidding \$40,000,000 for.

"Mr. President, we might as well throw the money into the sea as to appropriate it to this broken-down company that is now speeding to its last moments of existence when it knows that this bribe to Sanclemente of \$1,000,000, which he paid in gold, is not going to hold good, that they can not realize anything from it, and that the Colombian people after 1904, two years from now, will repudiate the whole thing and claim the property, as they have a perfect right to do.

"They commit an act of bankruptcy in falling from \$109,000,000 to \$40,000,000 in a proposition to sell that property. There is not a bankrupt court in the United States, nor in France, nor in the world that would sustain a sale made by an acknowledged bankrupt or by one who becomes a bankrupt and files his petition for a discharge when he claimed to hold a property worth \$109,000,000 and had sold it for \$40,000,000.

"And yet upon technicalities our learned friends in the minority of this committee insist that that is a valid transaction and binding, not only upon Colombia but upon the clean conscience of this great and noble republic. I repudiate it. I deny the impeachment against my country that it is capable of entering into as questionable a contract as that.

"Now, Mr. President, I have presented the points I desired to present to show that this contract is not of the value of a last year's bird's-nest. It is void, and not only void, but it is fraudulent, and the Colombian people represented by the Liberal Government repudiate it and give us notice that they intend in future to repudiate it. Are we still to persist in paying \$40,000,000 to the Panama Canal Company for a contract that is thus assailed and proved to be not merely void, but fraudulent; for that is what these men charge?

"Now, sir, that war is going on. It has been flagrant every day since that transaction took place and since that Congress adjourned. They did resolve before they went out that the presidency was vacant, and thereupon the President of the provisional Government assumed that he was in lawful authority. From that day to this he has so contended. He has had his armies in the field and fought heavy battles, in which there have been great losses on both sides.

"This controversy in a minor way represents, not in principle, but in the action of the people concerned, that great and terrific controversy in which we were concerned in 1861-'62. They fight with desperate determination, and they are at it to-day. The latest accounts in the newspapers, by telegraph, on yesterday were that the Government, or the Conservatives, as they are called, were attacking the Liberals, who are fortified in Panama, and that those outside the walls had 7,000 troops and those inside the walls had about 4,000. There are 10,000 or 12,000 men to-day engaged in battle originating out of these unlawful acts, about which we are quietly legislating,

with a view of paying the company that have got up the row \$40,000,000 for their interference. That is the situation to-day.

"There is another fact connected with that war which I want to call to the attention of the American people. I have the honor of being listened to by a faithful and splendid Democrat, almost the only one who is here. The Senate is not my audience. I wish it distinctly understood that I am speaking to the American people, and through them I will speak to the Senate.

"I have presented now these facts, but I want to connect another one with it as another cause of the war. Why are these men called Liberals and Conservatives? It is an old political division, commencing on the first outbreak after the revolution in Mexico, and it has followed all the Spanish-American States after their first organization. The revolutions in those different governments found the bonds of Church and state irrevocable in all these Spanish provinces, and they revolted at that. Mexico in consequence of it had 52 presidents in fifty years, and Panama has had about that number of governors in sixty years. There are few states, if any, exempt; perhaps Chile and perhaps Argentina. There are few states, if any, in South America or in North America or in Central America that have escaped this same conflict that is raging to-day in Colombia. The division of parties is the Liberal and the Church party, or Conservatives.

"I read to the Senate the other day a paper from Pope Leo XIII, a concordat made with Colombia in 1888. It is in the Record here. It is established as a part of the fundamental government of that republic, not an established Church—Leo would not have it that way—but an independent Church represented by the Holy See and negotiating in its political capacity with Colombia as an independent republic. The two governments came to an agreement and made a compact, which is set forth in that concordat.

"The establishment of that concordat so long after Panama and Colombia had their struggles to maintain independence was a serious blow at the Liberal party in that country. They felt that the liberties for which they had actually been fighting for years and years were to be blotted out by the concordat. There it is in its hideous monstrosity, which permits a man and a woman who are duly married according to the laws of the United States and who have gone to Colombia, either of them, to marry some other person without any judicial decree of separation, if that marriage between them was not celebrated by the authority of the Catholic Church; and if the poor woman, for instance, was deserted in this way and the man married another woman in accordance with the rites of the Catholic Church, the only concession to be made at all was that the issue by her should be considered to be legitimate, and he should take care of them until she married again in accordance with the rules of the Church.

"When you come to education the public schools are not only under the patronage but under the control of the priesthood, and the bishop of each district fixes all the school-books, secular and ecclesiastical.

"Not only so, but the Government is pledged that if any man makes a lecture or writes an article or utters an opinion contrary to the tenets of the established Church or of the independent Church connected with Colombia by the concordat he is liable to criminal punishment, and the Government is bound to punish him and engages to do it. Not only so, but there is

a provision that the annual budget shall contain a certain large amount—in one instance it mentions \$100,000 a year—for the purpose of maintaining the Church in that country.

"Now, I am presenting these facts to the American people. I do not care what the Senators think about them, but I know the people will take note of it. I know the people of the United States do not want to go to Colombia under a contract which sustains the majesty and superiority of the laws of that state over a canal bill where honorable men, though they may be workmen, may desire to go and conduct their business, or some man may desire to go there and stay for the purpose of maintaining a little shop to make some money for his wife and children. I know that our people are not going to consent, for the purpose of getting a canal, to pay \$40,000,000 for the opportunity of placing themselves beneath the yoke of that concordat.

"The people will make points upon Senators on either side of this Chamber who undertake to put them and their affairs in that category by an expenditure of \$40,000,000 and then deal with a corporation that is denounced by the Liberal party, now in arms and fighting around Panama, as being absolutely and unquestionably violative of the Constitution of Colombia of 1886.

"That is as far as I care to go, Mr. President, in the presentation of that question. So in the very threshold of this legislation we are met by a company that is denounced by more than half of Colombia as a fraud and an outrage and as a conspirator in favor of the Church party and against liberal government. Whether it is true or not, what difference does it make? It shows the state of feeling there."

June 19, the House bill was radically amended by the Senate, and then passed by a vote of 67 yeas to 6 nays. The House non-concurred, but after conference receded from its disagreement to the Senate amendment. The President approved the measure in the following form June 28, 1902:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States is hereby authorized to acquire, for and on behalf of the United States, at a cost not exceeding \$40,000,000, the rights, privileges, franchises, concessions, grants of land, right of way, unfinished work, plants, and other property, real, personal, and mixed, of every name and nature, owned by the New Panama Canal Company, of France, on the Isthmus of Panama, and all its maps, plans, drawings, records on the Isthmus of Panama, and in Paris, including all the capital stock, not less, however, than 68,863 shares of the Panama Railroad Company, owned by or held for the use of said canal company, provided a satisfactory title to all of said property can be obtained.

"Sec. 2. That the President is hereby authorized to acquire from the Republic of Colombia, for and on behalf of the United States, upon such terms as he may deem reasonable, perpetual control of a strip of land, the territory of the Republic of Colombia, not less than 6 miles in width, extending from the Caribbean Sea to the Pacific Ocean, and the right to use and dispose of the waters thereon, and to excavate, construct, and to perpetually maintain, operate, and protect thereon a canal, of such depth and capacity as will afford convenient passage of ships of the greatest tonnage and draft now in use, from the Caribbean Sea to the Pacific Ocean, which control shall include the right to perpetually maintain and operate the Panama Railroad, if the

ownership thereof, or a controlling interest therein, shall have been acquired by the United States, and also jurisdiction over said strip, and the ports at the ends thereof to make such police and sanitary rules and regulations as shall be necessary to preserve order and preserve the public health thereon, and to establish such judicial tribunals as may be agreed upon thereon as may be necessary to enforce such rules and regulations.

"The President may acquire such additional territory and rights from Colombia as in his judgment will facilitate the general purpose hereof.

"SEC. 3. That when the President shall have arranged to secure a satisfactory title to the property of the New Panama Canal Company, as provided in section 1 hereof, and shall have obtained by treaty control of the necessary territory from the Republic of Colombia, as provided in section 2 hereof, he is authorized to pay for the property of the New Panama Canal Company \$40,000,000 and to the Republic of Colombia such sum as shall have been agreed upon, and a sum sufficient for both said purposes is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be paid on warrant or warrants drawn by the President.

"The President shall then through the Isthmian Canal Commission hereinafter authorized cause to be excavated, constructed, and completed, utilizing to that end as far as practicable the work heretofore done by the New Panama Canal Company, of France, and its predecessor company, a ship-canal from the Caribbean Sea to the Pacific Ocean. Such canal shall be of sufficient capacity and depth as shall afford convenient passage for vessels of the largest tonnage and greatest draft now in use, and such as may be reasonably anticipated, and shall be supplied with all necessary locks and other appliances to meet the necessities of vessels passing through the same from ocean to ocean; and he shall also cause to be constructed such safe and commodious harbors at the termini of said canal, and make such provisions for defense as may be necessary for the safety and protection of said canal and harbors. That the President is authorized for the purposes aforesaid to employ such persons as he may deem necessary, and to fix their compensation.

"SEC. 4. That should the President be unable to obtain for the United States a satisfactory title to the property of the New Panama Canal Company and the control of the necessary territory of the Republic of Colombia and the rights mentioned in sections 1 and 2 of this act, within a reasonable time and upon reasonable terms, then the President, having first obtained for the United States perpetual control by treaty of the necessary territory from Costa Rica and Nicaragua, upon terms which he may consider reasonable, for the construction, perpetual maintenance, operation, and protection of a canal connecting the Caribbean Sea with the Pacific Ocean by what is commonly known as the Nicaragua route, shall through the said Isthmian Canal Commission cause to be excavated and constructed a ship-canal and waterway from a point on the shore of the Caribbean Sea near Greytown, by way of Lake Nicaragua, to a point near Brito, on the Pacific Ocean. Said canal shall be of sufficient capacity and depth to afford convenient passage for vessels of the largest tonnage and greatest draft now in use, and such as may be reasonably anticipated, and shall be supplied with all necessary locks and other appliances to

meet the necessities of vessels passing through the same from ocean to ocean; and he shall also construct such safe and commodious harbors at the termini of said canal as shall be necessary for the safe and convenient use thereof, and shall make such provisions for defense as may be necessary for the safety and protection of said harbors and canal; and such sum or sums of money as may be agreed upon by such treaty as compensation to be paid to Nicaragua and Costa Rica for the concessions and rights hereunder provided to be acquired by the United States, are hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be paid on warrant or warrants drawn by the President.

"The President shall cause the said Isthmian Canal Commission to make such surveys as may be necessary for said canal and harbors to be made, and in making such surveys and in the construction of said canal may employ such persons as he may deem necessary, and may fix their compensation.

"In the excavation and construction of said canal the San Juan river and Lake Nicaragua, or such parts of each as may be made available, shall be used.

"SEC. 5. That the sum of \$10,000,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, toward the project herein contemplated by either route so selected.

"And the President is hereby authorized to cause to be entered into such contract or contracts as may be deemed necessary for the proper excavation, construction, completion, and defense of said canal, harbors, and defenses, by the route finally determined upon under the provisions of this act. Appropriations therefor shall from time to time be hereafter made, not to exceed in the aggregate the additional sum of \$135,000,000 should the Panama route be adopted, or \$180,000,000 should the Nicaragua route be adopted.

"SEC. 6. That in any agreement with the Republic of Colombia, or with the states of Nicaragua and Costa Rica, the President is authorized to guarantee to said republic or to said states the use of said canal and harbors, upon such terms as may be agreed upon, for all vessels owned by said states or by citizens thereof.

"SEC. 7. That to enable the President to construct the canal and works appurtenant thereto as provided in this act, there is hereby created the Isthmian Canal Commission, the same to be composed of 7 members, who shall be nominated and appointed by the President, by and with the advice and consent of the Senate, and who shall serve until the completion of said canal unless sooner removed by the President, and one of whom shall be named as the chairman of said commission. Of the 7 members of said commission at least 4 of them shall be persons learned and skilled in the science of engineering, and of the 4 at least one shall be an officer of the United States army, and at least one other shall be an officer of the United States navy, the said officers respectively being either upon the active or the retired list of the army or of the navy. Said commissioners shall each receive such compensation as the President shall prescribe until the same shall have been otherwise fixed by the Congress. In addition to the members of said Isthmian Canal Commission, the President is hereby authorized through said commission to employ in said service any of the engineers of the United States army at his discretion, and likewise to employ any engineers in civil life, at his discretion, and any other persons necessary for the proper and expeditious prosecution of said work. The

compensation of all such engineers and other persons employed under this act shall be fixed by said commission, subject to the approval of the President. The official salary of any officer appointed or employed under this act shall be deducted from the amount of salary or compensation provided by or which shall be fixed under the terms of this act. Said commission shall in all matters be subject to the direction and control of the President, and shall make to the President annually and at such other periods as may be required, either by law or by the order of the President, full and complete reports of all their actings and doings and of all moneys received and expended in the construction of said work and in the performance of their duties in connection therewith, which said reports shall be by the President transmitted to Congress. And the said commission shall furthermore give to Congress, or either House of Congress, such information as may at any time be required either by act of Congress or by the order of either House of Congress. The President shall cause to be provided and assigned for the use of the commission such offices as may, with the suitable equipment of the same, be necessary and proper in his discretion, for the proper discharge of the duties thereof.

"SEC. 8. That the Secretary of the Treasury is hereby authorized to borrow on the credit of the United States from time to time, as the proceeds may be required to defray expenditures authorized by this act (such proceeds when received to be used only for the purpose of meeting such expenditures), the sum of \$130,000,000, or so much thereof as may be necessary, and to prepare and issue therefor coupon or registered bonds of the United States in such form as he may prescribe, and in denominations of \$20 or some multiple of that sum, redeemable in gold coin at the pleasure of the United States after ten years from the date of their issue, and payable thirty years from such date, and bearing interest payable quarterly in gold coin at the rate of 2 per centum per annum; and the bonds herein authorized shall be exempt from all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority: *Provided*, That said bonds may be disposed of by the Secretary of the Treasury at not less than par, under such regulations as he may prescribe, giving to all citizens of the United States an equal opportunity to subscribe therefor, but no commissions shall be allowed or paid thereon; and a sum not exceeding one-tenth of one per centum of the amount of the bonds herein authorized is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to pay the expense of preparing, advertising, and issuing the same.

The Census Bureau.—The Congress passed a measure to provide for a permanent Census Office. The House committee, which reported in favor of the measure, said among other things:

"It is estimated that the sum required to complete the principal inquiries ordered by the temporary census act, and included in the proposed bill, will be about \$3,600,000, spreading it over the next four years. This involves an office force of not far from 800 people, including the present executive force, costing about \$160,000 per annum; including also rental, miscellaneous expenses, etc. Under the proposed bill, however, with the changes that have been made, it is estimated that the annual cost will be not far from \$615,000 for the next six years. This involves a material reduction in the clerical force during

the time indicated; also a reduction of about \$114,000 per year in the executive force and a corresponding reduction in general expenses, rental, etc., so that in effect the actual expenditures of the Government would be practically the same. It is the belief of your committee that when all phases of the question are taken into consideration there will be in the end an actual saving of money to the Government as a result of establishing a permanent Census Office at this time, to say nothing of the enormous gain from a scientific point of view, and increase in the value and accuracy of future censuses which would result from this legislation.

"There will also be a very handsome saving in the amount required to prepare for the ordinary decennial census. The appropriation for preliminary work at the last two decades has been \$1,000,000 each. In view of the fact that there would be a trained force in the Census Office and ample time, at least one-half of this sum could be saved in the work of preparation for the next census, and a further sum of \$100,000 saved in the way of furniture and fixtures.

"The question has been raised how the clerical force of a permanent Census Office can be kept profitably engaged during the interval that must elapse between the completion of the work on the special reports and the commencement of preparation for the thirteenth census.

"There is work enough provided for in section 8 of the existing law to keep a force of skilled clerks busy for the entire interval from July 1, 1902, to, say, October, 1908, when the preparation for the thirteenth census should be well under way. The special inquiries required by section 8 can be distributed over the whole period; and this distribution would undoubtedly result advantageously in the quality of the work done. For instance, in addition to the annual report upon births and deaths in registration areas, provided for in the new section of the present bill, the division of vital statistics would be employed upon a special report upon the deaf and dumb, a special report upon the blind, a special report upon the insane and feeble-minded, a special report upon criminals and juvenile delinquents, and a special report upon pauperism and benevolence; and these special reports would be made, one in each year, until completed.

"In the same way the report on public indebtedness, valuation, taxation, and expenditures, provided for in section 8, would divide itself into special reports upon public indebtedness, upon public receipts and expenditures, upon assessments and taxation, and upon true valuation of real and personal property. These separate reports, it is estimated, would occupy one division of the permanent Census Office until the spring of 1907, the publication of the results of the several parts of the investigation to take place from time to time as the same are completed.

"In another division the inquiries as to street-railways, telegraph and telephone, and electric light and power would be taken up and brought to completion, or substantially so, before the investigation of mines and mining is entered upon. Upon the completion of this latter report, the investigation of transportation by water, a difficult and important field of inquiry, would follow in due order. Thus the Census Office would be continuously preparing and publishing a series of valuable reports upon topics which Congress has already determined that it shall investigate. It would be entirely feasible, with a permanent Census Office, to arrange for the future publication of corresponding reports for the next census

in such a way that the report on each topic would be ten years distant from the last. This whole class of reports could thus be disassociated from the census year, with all its pressure, without destroying their comparability in point of time.

"Another clause of section 8 provides for a series of special reports on the social statistics of cities, and it will readily be seen that the work of making these reports, which will possess great value and interest, can be distributed to the best advantage over the entire period that will elapse before the next census. This course would involve the taking of the social statistics of the cities of certain sections of the country in one year and of other sections in another year, according as the facilities and opportunities of the permanent Census Office permit.

"Provision should be made also, in the event of a permanent census organization, for a careful review of the conditions governing the taking of the present census, in order that the plan of enumeration may be so perfected as to secure a very much closer supervision of the work of the census enumerators. Considerable progress has been made in this direction in the work of the twelfth census, but it is apparent from recent experience that very much more time must be given to the initiation of the preparatory work and steps taken at a comparatively early date to develop a better and more complete system, involving the possible separation of the enumeration of the population in cities from that in the rural sections of the country, and, in the latter case, making the country the unit for census supervision."

Mr. Hopkins, of Illinois, said, in presenting the measure:

"Mr. Chairman, if I can have the attention of the committee, I will take a few minutes briefly to explain the bill. I will say, however, that the report that was published in the Record this morning fully explains the character of the bill proposed here, the various provisions, and the expenditure necessarily incurred by the establishment of the bureau.

"I shall not take very much of the time of the committee to speak of the importance or the necessity of establishing a permanent Census Office.

"This is a question which has been before the people of this country for more than thirty years, and it is a question that has been favored by every statistician and every scientist in this country during that period. Every superintendent of the census since the taking of the ninth census has recommended the establishment of a permanent bureau.

"These men who have been charged with the duty of taking the census under the Constitution of the United States have seen and appreciated the wasteful expenditure of money under these temporary bureaus, and they have seen that by the establishment of a permanent bureau there can be an actual saving to the Government, in addition to the fact that the materials that are obtained under the operations of the bureau will be vastly more important by reason of their greater accuracy and the scientific manner in which they are presented to the general public.

"I take it that every member of the House who has given any thought to the subject whatever is in full accord with the views of the present director of the census in the idea that now is the opportune time to establish a permanent bureau. I take it that every gentleman who has investigated the subject at all will agree with

me that it will be a saving of money by establishing the bureau as proposed in this bill.

"When the director of the census first suggested this matter, he called the attention of the members of our committee to the extravagant expenditure of money in establishing some of the subheads in this bureau; and I violate no confidence in calling the attention of members of this House to the fact that in taking the agricultural census alone there was an expenditure of \$600,000 more than would be required under a trained force of clerks for the same work.

"As was stated by the director of the twelfth census, not a person, from the highest officer down to the lowest clerk, had any specific knowledge upon the subject that would enable him to properly and economically plan the work and then see that it was properly executed. It was only by experience, groping in this direction first, and then in that, they were enabled to gather statistics and make a report as required by law; and it is by reason of such experience, had in this special department of the bureau itself, that the director came to the conclusion that in the interest of economy alone it was important to the interests of the Government of the United States that a bureau of this character be established."

The main point of discussion was the provision in the bill as reported making permanent the appointment of employees already engaged in census work temporarily, and putting them under the civil-service rules. This occasioned some controversy, and the civil-service law came in for harsh criticism in both houses. In the Senate Mr. Stewart, of Nevada, said:

"Mr. President, while this matter of putting clerks who have been in the service under the protection of the civil service is before the Senate, I desire to put myself on record as being totally opposed to the present method of securing service in the departments. It has an element in it which in all ages, so far as we have any record, has led to unfair means and, perhaps, corruption. It has the element of secrecy about it. The public at large, although a few people may know it, do not know how a person gets into office through the civil service. They do not know upon what basis they are marked; they do not know how they are selected, and how it is all done. This undoubtedly could be explained if the people had access to the information, but they have not. It is all much of a mystery. Thousands of people have made trial to get in, have been examined, and they are now on the waiting list.

"I do not believe that this is the best way to select men for office. I think we should bring to bear some of the practical experience that great corporations—the railroad companies, who are so successful in the management of their affairs—use in selecting their employees. There should be more attention paid to the effectiveness of the parties in the particular line. Six months or a year of service is a great deal better test than any casual examination. There are a great many questions which are entirely irrelevant. Some persons can not get in who make the best and most efficient clerks. They can not answer these far-fetched questions; they are not right from school.

"As I said, we have thousands of people on the waiting list. I do not believe in the system at all. The great objection to the system is that the people do not know how it is done.

"I believe that every man is naturally honest; but he can only be kept so by publicity. Where there is secrecy, there is always a chance for

fraud and an opportunity to go into fraud. There is undoubtedly favoritism. We hear of it every day. The people are constantly talking about this service. It is a mystery to them. I believe in that portion of the civil service which retains competent and meritorious officials. I do not believe in them being turned out every time a new administration comes into power.

"The mode of selecting these officials is, I think, entirely defective. The old mode, which was called 'the spoils system,' had some defects, but it was better in many respects than the present, and secured for the Government better clerks. Before the civil service was inaugurated there was a chance for the departments to secure good clerks, for the reason that the heads of the departments had more discretion in the selection; but it was defective by reason of the fact that it permitted Senators and Representatives to make their recommendations orally. If the old system could be corrected and its defects cured by securing publicity, it would give us a most efficient service.

"So far as this bill is concerned, I have no doubt that the employees who have had experience in the Census Office have been much more fairly examined and have proved their efficiency in a much more satisfactory way than those who have been appointed after examinations which have very little to do with the particular work to which they are to be assigned. If the census clerks should be transferred to other departments, we should get a better class of clerks than we now get under the mysterious system which prevails, for many of the civil-service questions are abstract and mysterious and can only be answered by those who have just come from colleges and schools. An ordinary man can not answer such questions as are propounded. I do not suppose that five members of the Senate could go through a civil-service examination for a clerkship in any department. That does not prove the fact that Senators would not make fair clerks—that is, those of them who can write well enough—but still they could not pass the civil-service examinations. Such examinations, as I have said, can only be passed by those who are fresh from schools and colleges, who have had no experience in clerical work, and who have had no trained habits of work or industry, but who have the education which enables them to answer these conundrums.

"I do not believe that is the way to get an efficient service. I do not believe there is any railroad company desirous of employing a conductor, for instance, who would examine him in astronomy or in botany or in a great many of the things that the Civil-Service Commissioners require. No railroad company would subject a conductor or anybody who was to be placed in an important position on the railroad to any such examination. I think most of the questions asked in these examinations are entirely irrelevant and relate to matters with which persons will have nothing to do in the event of their appointment, but the persons who have been in the Census Bureau and have proved their efficiency will make the best clerks that can be obtained for the departments. There is no doubt about that, because they have had the experience and have already undergone such an examination as tended to develop their capacity for this kind of work. The civil-service examinations as they are conducted are of no consequence, and great harm has been done by the thousands who are now on the waiting list being kept out of other employment. This is doing injury to the coun-

try. I think we should try some other mode of putting men in office."

Mr. Gallinger, of New Hampshire, said:

"If it could be known—and no one can furnish that information but the Civil-Service Commission, and I think I shall ask for it some of these days—how many young men and young women who have left their homes have gone to the cities and spent from \$5 to \$10 on each pilgrimage to take the civil-service examination, who have passed the examination and have been put on the eligible list, have waited for one year and been dropped from it, and have gone again and been examined and been dropped from it, and have gone again and been examined and dropped from it—if the truth could be known and the expense it has been to the young men and the young women of this country could be aggregated, I think it would appal the Congress of the United States, and we can all imagine the disappointments it has brought to these young people.

"I have in my mind a young lady who passed three examinations, a year apart, in this city, and she passed at a very high rate. She is from my own State. She did not get an appointment. She left in despair and is doing other work; and all over our country this condition of things exists, and yet the commission are holding examinations all the time. One is scheduled for my city in the near future, and yet the eligible list is loaded down with hundreds and thousands of names that never will be reached for certification, and these young men and women are destined to disappointment.

"Not only that, Mr. President, but the young man who takes the civil-service examination and passes it nine times out of ten is not worth anything for business purposes. He expects to get a Government job, as he calls it, and he waits a year and he takes the examination again, and he waits another year, and he is enervated. I have a pathetic letter in my desk in the committee room from the father of a young boy who took the examination two years ago. He tells me that the boy is not worth anything because he expects to get Government employment, and he appeals to me to get him something to do in the Government service. I have known many and many such cases.

"So far as my State is concerned I do not know whether it is properly cared for in the departments or not. I know it to be true that the rolls of every department of this Government, so far as appointments from New Hampshire are concerned, are loaded down with people who never have been heard of in the State of New Hampshire for the last twenty-five years. The son of a dead Senator from a Western State is on the rolls at a high salary credited to the State of New Hampshire, and the only claim he has upon the State is that his mother was born in New Hampshire. I do not know who put him there. Such men, even if they once belonged to the State, do not come home to vote. They do not contribute for political purposes. They are of no earthly account to the State, and do not belong to the State, and there ought to be some way of weeding them out. But there is not. The Civil-Service Commission say they are there and they have to stay there until they die, and I presume that is a fact."

The bill passed the House of Representatives Jan. 30, 1902, and was amended and passed the Senate Feb. 17, also without a division. After a conference the measure was modified and approved by the President, March 6, 1902, in the following form:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Census Office temporarily established in the Department of the Interior in accordance with an act entitled 'An Act to provide for the taking the twelfth and subsequent censuses,' approved March 3, 1899, is hereby made a permanent office.

"SEC. 2. That the work pertaining to the twelfth census shall be carried on by the Census Office under the existing organization until the 1st day of July, 1902, when the permanent Census Office herein provided for shall be organized by the director of the census.

"SEC. 3. That the permanent Census Office shall be in charge of a director of the census, appointed by the President, by and with the advice and consent of the Senate, who shall receive an annual salary of \$6,000. It shall be his duty to superintend and direct the taking of the thirteenth and subsequent censuses of the United States and to perform such other duties as may be imposed upon him by law.

"SEC. 4. That there shall be in the Census Office, to be appointed by the director thereof, with the approval of the head of the department to which the said Census Office is attached, 4 chief statisticians, who shall be persons of known and tried experience in statistical work, at an annual salary of \$2,500 dollars each; a chief clerk, at an annual salary of \$2,500, who, in the absence of the director, shall serve as acting director; a disbursing clerk, who shall also act as appointment clerk, at an annual salary of \$2,500; 1 stenographer, at an annual salary of \$1,500; 4 expert chiefs of division, at an annual salary of \$1,800 each; 6 clerks of class three; 10 clerks of class two; and such number of clerks of class one, and of clerks, copyists, computers, and skilled laborers, with salaries at the rate of not less than \$600 nor more than \$1,000 per annum, messengers, assistant messengers, watchmen, and charwomen as may be necessary for the proper and prompt performance of the duties required by law. The disbursing clerk herein provided for shall, before entering upon his duties, give bond to the Secretary of the Treasury in the sum of \$25,000, which bond shall be conditioned that the said officer shall render a true and faithful account to the proper accounting officers of the Treasury quarter-yearly, of all moneys and properties which shall be received by him by virtue of his office, with surety, to be approved by the solicitor of the Treasury. Such bond shall be filed in the office of the Secretary of the Treasury, to be by him put in suit upon any breach of the conditions thereof.

"SEC. 5. That all employees of the Census Office, at the date of the passage of this act, except unskilled laborers, may be appointed by the director of the census with the approval of the head of the department to which said Census Office is attached, and when so appointed shall be and they are hereby placed, without further examination, under the provisions of the civil-service act approved Jan. 16, 1883, and the amendments thereto and the rules established thereunder; and persons who have served as soldiers in any war in which the United States may have been engaged, who have been honorably discharged from the service of the United States, and the widows of such soldiers, shall have preference in the matter of employment; and all new appointments to the permanent clerical force of the Census Office hereby created shall be made in accordance with the requirements of the civil-service act above referred to.

"SEC. 6. That all the provisions of the act of

March 3, 1899, relating to the twelfth census, not inconsistent with the provisions of this act, shall remain in full force and effect for the taking of the thirteenth and subsequent censuses.

"SEC. 7. That section 8 of the act of March 3, 1899, is hereby amended so as to read as follows: That after the completion and return of the enumeration and of the work upon the schedules relating to the products of agriculture and to manufacturing and mechanical establishments provided for in section 7 of this act, the director of the census is hereby authorized decennially to collect statistics relating to special classes, including the insane, feeble-minded, deaf, dumb, and blind; to crime, pauperism, and benevolence, including prisoners, paupers, juvenile delinquents, and inmates of benevolent and reformatory institutions; to social statistics of cities; to public indebtedness, valuation, taxation, and expenditures; to religious bodies; to electric light and power, telephone, and telegraph business; to transportation by water, express business, and street-railways; to mines, mining, quarries and minerals, and the production and value thereof, including gold in divisions of placer and vein, and silver-mines, and the number of men employed, the average daily wage, average working time, and aggregate earnings in the various branches and aforesaid divisions of the mining and quarrying industries until July 1, 1904. And the director of the census shall prepare schedules containing such interrogatories as shall in his judgment be best adapted to elicit the information required under these subjects, with such specifications, divisions, and particulars under each head as he shall deem necessary to that end, and all reports prepared under the provisions of this section shall be designated as 'Special reports of the Census Office.' For the purpose of securing the statistics required by this section, the director of the census may appoint special agents when necessary, and such special agents shall receive compensation as hereinafter provided: *Provided*, That the statistics of special classes, and of crime, pauperism, and benevolence specified in this section, shall be restricted to institutions containing such classes and the director of the census is authorized and directed to collect statistics relating to all of the deaf, dumb, and blind, notwithstanding the restrictions and limitations contained in section 8 of said act entitled: 'An Act to provide for taking the twelfth and subsequent censuses': *Provided*, That in taking the census of said classes the inquiries shall be confined to the following 4 questions, namely: Name, age, sex, and post-office address.

"SEC. 8. That there shall be a collection of the statistics of the births and deaths in registration areas for the year 1902, and annually thereafter, the data for which shall be obtained only from and restricted to such registration records of such States and municipalities as in the discretion of the director possess records affording satisfactory data in necessary detail, the compensation for the transcription of which shall not exceed 2 cents for each birth or death reported.

"SEC. 9. That in the year 1905, and every ten years thereafter, there shall be a collection of the statistics of manufactures, confined to manufacturing establishments conducted under what is known as the factory system, exclusive of the so-called neighborhood and mechanical industries; and the director is hereby authorized to prepare such schedules as in his judgment may be necessary to carry out the provisions of this section; and that in addition to the statistics now provided for by law the director of the census shall

annually collect the statistics of the cotton production of the country as returned by the ginner and bulletins giving the results of the same shall be issued weekly beginning Sept. 1 of each year and continued till Feb. 1 following; and that the director of the census shall make, from time to time, any additional special collections of statistics relating to any branch of agriculture, manufacture, mining, transportation, fisheries, or any other branch of industry that may be required of him by Congress.

"SEC. 10. That section 17 of the act of March 3, 1899, is hereby amended so as to read as follows:

"SEC. 17. That the special agents appointed under the provisions of this act have like authority with the enumerators in respect to the subjects committed to them under this act and shall receive compensation at rates to be fixed by the director of the census: *Provided*, That the same shall in no case exceed \$6 per day and actual necessary traveling expenses and an allowance in lieu of subsistence not exceeding \$3 per day during their necessary absence from their usual place of residence: *And provided further*, That no pay or allowance in lieu of subsistence shall be allowed special agents when employed in the Census Office on other than the special work committed to them, and no appointments of special agents shall be made for clerical work: *And provided further*, That the director of the census is hereby authorized in his discretion to employ the clerical force of the Census Office for such field-work as may be required to carry out the provisions of sections 7, 8, and 9, in lieu of employing special agents for that purpose; and such employees when so employed shall be allowed, in addition to their regular compensation, actual necessary traveling expenses and an allowance in lieu of subsistence not exceeding \$3 per day during their necessary absence from the Census Office. All employees of the Census Office shall be citizens of the United States."

"SEC. 11. That the printing-office established in the Census Office is hereby abolished to take effect July 1, 1902, and the outfit and equipment therein shall be turned over to the public printer; and the director of the census is hereby authorized and directed to have printed, published, and distributed, from time to time, bulletins and reports of the preliminary and other results of the various investigations authorized by law; and all of said printing and binding shall be done by the public printer at the Government Printing-Office.

"SEC. 12. That the supplemental acts amendatory of the act of March 3, 1899, approved Feb. 1, 1900, May 10, 1900, June 2, 1900, Feb. 23, 1901, are hereby repealed; and all provisions of the act of March 3, 1899, inconsistent with this act are hereby repealed."

Oleomargarine and Dairy-Products.—A bill "to make oleomargarine and other imitation dairy-products subject to the laws of any State or Territory or the District of Columbia into which they are transported, and to change the tax on oleomargarine, and to amend an act entitled 'An Act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine,' approved Aug. 2, 1886," was taken up for discussion in the House of Representatives Feb. 3, 1902. It provided that oleomargarine brought into one State from another for sale be subject to the laws of the locality, and that a tax of 10 cents a pound be levied on the manufacture of oleomargarine made in imitation of yellow butter. In support of the measure, Mr. Haskins, of Connecticut, speaking

for the majority of the Committee on Agriculture, said:

"The proposed legislation is not intended to be oppressive or unduly arbitrary, and only proposes adequate protection for the consuming public. It is the manifest duty of the governing power to prevent fraud and imposition upon those unable to protect themselves. Legislation tending to this end is as legitimate as laws for the prevention and punishment of crime and misdemeanors. Pure food of all kinds should be guaranteed to every citizen. The purchaser of all articles of food has a right to know what he is buying and consuming. If disguised, mixed, or blended, the manufacturer should be compelled to disclose the kind and quality of the ingredients used and certify to the purity and wholesomeness of the materials sold to a trusting public. It is not unjust or inquisitorial to subject producers and manufacturers to governmental inspection and control. Police supervision has long been exercised over the production and sale of milk and other dairy-products. Proper supervision is sought rather than opposed by every honest manufacturer and dealer. Reputable and inviolate trade-marks are invaluable. Manufacturers in all branches of textile and other industries fully realize this fact and carefully maintain high standards of excellence. This is equally true of the producers of cereals and other food-products. Why should manufacturers of oleomargarine or butterine be an exception to the general rule? Indeed, it is difficult to understand upon what reasonable grounds manufacturers of honestly made oleomargarine object to the proposed legislation.

"The pending majority bill, if enacted into law, will, hopefully, make the manufacture of oleomargarine colored in imitation of butter and deceptively sold unprofitable. To this end the internal-revenue tax upon colored oleomargarine is increased from 2 cents to 10 cents per pound, while the tax upon the uncolored article is reduced to one-fourth cent per pound, a nominal tax, merely imposed to maintain Government supervision and police control.

"The discrimination between the colored and uncolored will not and is not intended to ruin a legitimate industry. Your committee were strengthened in this conviction by testimony given at the committee hearings by manufacturers of oleomargarine. One manufacturer stated that one-half of his monthly product of 700,000 pounds, or about 350,000 pounds, is uncolored. Another manufacturer, when asked 'If, in his opinion, uncolored oleomargarine can be profitably made and sold,' replied: 'It is sold to some extent already, and I am one of those who believe that oleomargarine, having been used for more than a quarter of a century, there are some people at least who have learned that it is a wholesome and cheap article of food, and will continue to use it. These people, if the colored is not obtainable, will use the uncolored.'

"Properly manufactured from pure materials, the wholesomeness of oleomargarine is not challenged. The only question at issue is: 'Shall or shall not oleomargarine be colored and sold in the semblance of yellow butter?' Using the words of ex-Gov. Hoard, who ably argued the case from a dairyman's standpoint before the Committee on Agriculture, 'It is not oleomargarine the substitute for butter that we are fighting, but oleomargarine the counterfeit.' We do not care how much oleomargarine is made and sold as long as it is so manufactured as not to conflict through deception with the sale of our product. If a man prefers a mixture of lard,

tallow, and cotton-seed oil to butter, there is no reason why he should not have it. We do not ask that a single ingredient that is nourishing be omitted from the mixture. He can have it to imitate butter in taste, smell, grain, and consistency—we concede him all this. We only ask one thing—that there be about the product itself some characteristic by which the public can readily distinguish it from an article of food which has been known for four thousand years in the form it is now produced. We demand the distinction in color because there is no nutrition in color.

"The great consuming public are still unprotected from the imposition of unscrupulous manufacturers. The present Federal laws are obviously inadequate to correct a growing evil, and more stringent measures are demanded. Farmers and dairymen in all sections of the country believe that the bill reported by the majority of your committee, if enacted into law, will, without injustice to the honest manufacturers of oleomargarine, afford a fair and just degree of protection and give needed encouragement to the great farm industries of the country—industries that all will admit form the bed-rock foundation of our national prosperity."

The minority of the members of the committee presented a substitute bill described as not shaped to prevent the manufacture of oleomargarine or its legitimate sale, but to prevent its fraudulent sale as butter. They said:

"The purpose of the substitute bill, offered by the minority, is not to prevent the manufacture of oleomargarine or its legitimate sale, but to prevent it from being fraudulently sold for butter. To accomplish this end it throws such safeguards about the retail sale of the article (the only operation in which, under existing law, it is possible for fraud to be committed) as, in our opinion, to entirely eliminate all possibility of fraud in such retail sales and compel all dealers in oleomargarine to sell it for what it really is and not for butter. The substitute offered is really an amendment to sections 3 and 6 of the existing oleomargarine law. The annual licenses for the manufacture and sale of oleomargarine (\$600 for manufacturers, \$480 for wholesalers, and \$48 for retailers) are not lessened, while the penalties imposed for violation of the law are materially increased." In advocating the minority measure, Mr. Foster, of Illinois, said:

"Mr. Chairman, in my judgment the bill relating to oleomargarine as reported by the majority of the Committee on Agriculture is the most unjust and vicious measure in principle ever submitted to a legislative body. To begin with, the bill is not properly named. It should be entitled 'A bill to create a butter monopoly, by throttling legitimate industry.' I can not understand, Mr. Chairman, how any fair-minded man can vote for this bill, especially when he has the alternative of voting for the entirely just and proper measure proposed by the minority of the committee.

"Let us examine briefly these two measures and see what it is they would accomplish if enacted. The majority bill on its face provides that oleomargarine shall be subject in any State to the laws of that State. Now, as 32 States, through their legislatures, have been prevailed upon to pass laws forbidding the manufacture and sale therein of oleomargarine colored in resemblance of butter, if this bill should become a law such colored oleomargarine manufactured in other States could not be taken into and sold in those 32 States, even in the original packages. This would at once deprive oleomargarine of the larger part of

its market, and the rest of it would also be swept away by the other provision of the bill, namely, that all oleomargarine colored to resemble butter shall be taxed 10 cents a pound. In other words, this bill is simply aimed at the total and utter destruction of the oleomargarine industry.

"This is plainly evident from the wording of the bill, and what is more, it is acknowledged openly and defiantly by the promoters of the bill. Several of them have said so, in plain English, in their testimony before the committee, and all the others might as well have done so, for their purpose is perfectly obvious to everybody. This is absolutely all there is to the committee's bill—a barefaced, naked attempt to break up and ruin an industry which is just as proper and legitimate as the butter industry, and has been pronounced so by the Supreme Court of the United States and by other courts, and also by leading scientists, and by the great American public at large speaking through their representatives in Congress.

"The Supreme Court's language was, in its celebrated decision of 1898, the Schollenberger case, that 'oleomargarine had become a proper subject of commerce among the States and foreign countries.' Yet in the face of this decision of our highest court it is now coolly proposed by the promoters and sponsors of this bill to wipe out the entirely proper and legitimate industry of the manufacture and sale of oleomargarine. And why? This is not stated in the bill; but in the reports and remarks on the subject oleomargarine is referred to as an 'adulterated article of food,' and a 'deceitful article of food.'

"The charge of adulteration, Mr. Chairman, is absolutely false. The ingredients of oleomargarine are as pure and wholesome as the ingredients of butter. They have been so characterized by dozens of the highest scientific authorities in the country, as is well known by everybody—by such men as Prof. Chandler, of Columbia University; Prof. Barker, of the University of Pennsylvania; Prof. Johnson, of Yale University; Prof. Atwater and Prof. Wiley, of the United States Agricultural Department; and by many others as eminent.

"The article has been in common use by millions of people for many years, and no injury has been received from it by any one, nor any complaint made about it by any one except by the dairymen and butter monopolists. It is as nutritious and as wholesome as butter, and in many respects it is more so. It is as sweet and as palatable, and it is far cheaper, thereby enabling those of moderate or restricted means to obtain a perfectly satisfactory substitute for butter at a price within their ability to pay. And now these butter monopolists would deny to thousands—I might say to millions—of poor people the use of this, a perfectly pure and healthful substitute, on the false charge of adulteration. They make a great ado with their sneers about 'hog fat,' but, Mr. Chairman, it is not the oleomargarine men, but the butter men, who are showing a disposition to 'hog' it in this competition.

"Coming now to the charge of deceit, what do they mean by that? Much has been said about it by the distinguished gentleman from Vermont, and what is meant by deceit? If it is meant that the honest manufacturers and sellers of oleomargarine practise any deceit in the disposing of oleomargarine as oleomargarine, that charge is as false as the charge of adulteration; but if it is meant that some unscrupulous and dishonest dealers sell oleomargarine as butter, that of course is deceit, and the friends of oleomargarine are just as anxious as the friends of butter that it should be punished and put a stop to. No doubt

much of that sort of deceit has been practised in various parts of the country from time to time, and that is in reality the only complaint made against the present oleomargarine law that will hold water at all.

"Now, the friends of the pending bill propose to prevent this deceit, not by punishing those who are guilty of it, nor by preventing them from having any opportunity hereafter to pursue it—oh, no—but by uprooting and annihilating the whole oleomargarine industry! That is very much, Mr. Chairman, like curing a man's cough by cutting his head off.

"The friends of the minority or substitute bill, on the other hand, earnestly urge the members of this body and the public at large to examine this measure and judge of it fairly and impartially. If examined in this spirit the substitute bill will certainly convince anybody and everybody that it covers fully this point of 'deceit,' which is the only valid point against oleomargarine, and that it provides fully for the prevention and punishment of those who are guilty of deceit in the premises.

"By the terms of this substitute bill each 1 and 2 pound package is made an original package, and retail dealers in oleomargarine shall sell only the original package to which the tax-paid stamp is affixed. In that way, Mr. Chairman, every separate piece of oleomargarine exposed or offered for sale would bear its title on its face and would be known to all men for what it really was. What more than this could be asked by any reasonable man? Here is oleomargarine, already recognized and defined by our Supreme Court as a lawful article of commerce between the States, and here are those who manufacture and sell it, ready and willing and anxious to manufacture and sell it for what it really is, and to stamp its proper name on each and every package of it.

"And here, on the other hand, are the butter monopolists, who are hurt by its sale, and who say, 'No; we will not let oleomargarine be sold at all—we will crush it out of existence.' For that, Mr. Chairman, is what they will do if they can pass their bill. They will impose a prohibitory tax of 10 cents a pound on oleomargarine, which would raise its price to a level where nobody could afford to buy it; and, more than that, they will forbid it to be sold in 32 States of the Union at any price."

The measure of the majority of the Committee on Agriculture was amended and passed Feb. 12. In the Senate the rival methods of dealing with the matter, advocated in the House, were argued; and the bill was passed April 3 with 11 amendments, 10 of which the House accepted, concurring on the eleventh, after amending it. The Senate approved, and the President signed the bill, May 9, 1902. It is as follows:

"Be it enacted, etc., That all articles known as oleomargarine, butterine, imitation, process, renovated, or adulterated butter, or imitation cheese, or any substance in the semblance of butter or cheese not the usual product, of the dairy and not made exclusively of pure and unadulterated milk or cream, transported into any State or Territory, or the District of Columbia, and remaining therein for use, consumption, sale, or storage therein, shall, upon the arrival within the limits of such State or Territory or the District of Columbia, be subject to the operation and effect of the laws of such State or Territory or the District of Columbia enacted in the exercise of its police powers to the same extent and in the same manner as though such articles or sub-

stances had been produced in such State or Territory or the District of Columbia, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.

"SEC. 2. That the first clause of section 3 of an act entitled 'An Act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine,' approved Aug. 2, 1886, be amended by adding thereto after the word 'oleomargarine,' at the end of said clause, the following words:

"And any person that sells, vends, or furnishes oleomargarine for the use and consumption of others, except to his own family table without compensation, who shall add to or mix with such oleomargarine any artificial coloration that causes it to look like butter of any shade of yellow, shall also be held to be a manufacturer of oleomargarine within the meaning of said act, and subject to the provisions thereof."

"Section 3 of said act is hereby amended by adding thereto the following: 'Provided further, That wholesale dealers who vend no other oleomargarine or butterine except that upon which a tax of one-fourth of 1 per cent. per pound is imposed by this act, as amended, shall pay \$200, and such retail dealers as vend no other oleomargarine or butterine except that upon which is imposed by this act, as amended, a tax of one-fourth of 1 per cent. per pound shall pay \$6.'

"SEC. 3. That section 8 of an act entitled 'An Act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine,' approved Aug. 2, 1886, be, and the same is hereby, amended so as to read as follows:

"SEC. 8. That upon oleomargarine which shall be manufactured and sold, or removed for consumption or use, there shall be assessed and collected a tax of 10 cents per pound, to be paid by the manufacturer thereof; and any fractional part of a pound in a package shall be taxed as a pound: *Provided*, When oleomargarine is free from artificial coloration that causes it to look like butter of any shade of yellow said tax shall be one-fourth of 1 cent per pound. The tax levied by this section shall be represented by coupon stamps; and the provisions of existing laws governing the engraving, issue, sale, accountability, effacement, and destruction of stamps relating to tobacco and snuff, as far as applicable, are hereby made to apply to stamps provided for by this section."

"SEC. 4. That for the purpose of this act 'butter' is hereby defined to mean an article of food as defined in 'An Act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine,' approved Aug. 2, 1886; that 'adulterated butter' is hereby defined to mean a grade of butter produced by mixing, reworking, reurning in milk or cream, refining, or in any way producing a uniform, purified, or improved product from different lots or parcels of melted or unmelted butter or butter fat, in which any acid, alkali, chemical, or any substance whatever is introduced or used for the purpose or with the effect of deodorizing or removing therefrom rancidity, or any butter or butter fat with which there is mixed any substance foreign to butter as herein defined, with intent or effect of cheapening in cost the product or any butter in the manufacture or manipulation of which any process or material is used with intent or effect of causing the absorption of abnormal quantities of water, milk, or cream; that 'process butter' or

'renovated butter' is hereby defined to mean butter which has been subjected to any process by which it is melted, clarified, or refined and made to resemble genuine butter, always excepting 'adulterated butter' as defined by this act.

"That special taxes are imposed as follows:

"Manufacturers of process or renovated butter shall pay \$50 per year and manufacturers of adulterated butter shall pay \$600 per year. Every person who engages in the production of process or renovated butter or adulterated butter as a business shall be considered to be a manufacturer thereof.

"Wholesale dealers in adulterated butter shall pay a tax of \$480 per annum, and retail dealers in adulterated butter shall pay a tax of \$48 per annum. Every person who sells adulterated butter in less quantities than 10 pounds at one time shall be regarded as a retail dealer in adulterated butter.

"Every person who sells adulterated butter shall be regarded as a dealer in adulterated butter. And sections 3232, 3233, 3234, 3235, 3236, 3237, 3238, 3239, 3240, 3241, and 3243 of the Revised Statutes of the United States are, so far as applicable, made to extend to and include and apply to the special taxes imposed by this section and to the person upon whom they are imposed.

"That every person who carries on the business of a manufacturer of process or renovated butter or adulterated butter without having paid the special tax therefor, as required by law, shall, besides being liable to the payment of the tax, be fined not less than \$1,000 and not more than \$5,000; and every person who carries on the business of a dealer in adulterated butter without having paid the special tax therefor, as required by law, shall, besides being liable to the payment of the tax, be fined not less than \$50 nor more than \$500 dollars for each offense.

"That every manufacturer of process or renovated butter or adulterated butter shall file with the collector of internal revenue of the district in which his manufactory is located such notices, inventories, and bonds, shall keep such books and render such returns of material and products, shall put up such signs and affix such number of his factory, and conduct his business under such surveillance of officers and agents as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may by regulation require. But the bond required of such manufacturer shall be with sureties satisfactory to the collector of internal revenue, and in a penal sum of not less than \$500; and the sum of said bond may be increased from time to time and additional sureties required at the discretion of the collector or under instructions of the Commissioner of Internal Revenue.

"That all adulterated butter shall be packed by the manufacturer thereof in firkins, tubs, or other wooden packages not before used for that purpose, each containing not less than 10 pounds, and marked, stamped, and branded as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe; and all sales made by manufacturers of adulterated butter shall be in original stamped packages.

"Dealers in adulterated butter must sell only original or from original stamped packages, and when such original stamped packages are broken the adulterated butter sold from same shall be placed in suitable wooden or paper packages, which shall be marked and branded as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe.

Every person who knowingly sells or offers for sale, or delivers or offers to deliver, any adulterated butter in any other form than in new wooden or paper packages as above described, or who packs in any package any adulterated butter in any manner contrary to law, or who falsely brands any package or affixes a stamp on any package denoting a less amount of tax than that required by law, shall be fined for each offense not more than \$1,000 and be imprisoned not more than two years.

"That every manufacturer of adulterated butter shall securely affix, by pasting, on each package containing adulterated butter manufactured by him a label on which shall be printed, besides the number of the manufactory and the district and State in which it is situated, these words: 'Notice.—That the manufacturer of the adulterated butter herein contained has complied with all the requirements of law. Every person is cautioned not to use either this package again or the stamp thereon, nor to remove the contents of this package without destroying said stamp, under the penalty provided by law in such cases.' Every manufacturer of adulterated butter who neglects to affix such label to any package containing adulterated butter made by him, or sold or offered for sale for or by him, and every person who removes any such label so affixed from any such package shall be fined \$50 for each package in respect to which such offense is committed.

"That upon adulterated butter, when manufactured or sold or removed for consumption or use, there shall be assessed and collected a tax of 10 cents per pound, to be paid by the manufacturer thereof, and any fractional part of a pound shall be taxed as a pound, and that upon process or renovated butter, when manufactured or sold or removed for consumption or use, there shall be assessed and collected a tax of one-fourth of 1 cent per pound, to be paid by the manufacturer thereof, and any fractional part of a pound shall be taxed as a pound. The tax to be levied by this section shall be represented by coupon stamps, and the provisions of existing laws governing engraving, issuing sale, accountability, effacement, and destruction of stamps relating to tobacco and snuff, as far as applicable, are hereby made to apply to the stamps provided by this section.

"That the provisions of sections 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, and 21 of 'An Act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine,' approved Aug. 2, 1886, shall apply to manufacturers of 'adulterated butter' to an extent necessary to enforce the marking, branding, identification, and regulation of the exportation and importation of adulterated butter.

"Sec. 5. All parts of an act providing for an inspection of meats for exportation, approved Aug. 30, 1890, and of an act to provide for the inspection of live cattle, hogs, and the carcasses and products thereof which are the subjects of interstate commerce, approved March 3, 1891, and of amendment thereto approved March 2, 1895, which are applicable to the subjects and purposes described in this section shall apply to process or renovated butter. And the Secretary of Agriculture is hereby authorized and required to cause a rigid sanitary inspection to be made, at such times as he may deem proper or necessary, of all factories and storehouses where process or renovated butter is manufactured, packed, or prepared for market, and of the products thereof and

materials going into the manufacture of the same. All process or renovated butter and the packages containing the same shall be marked with the words 'Renovated Butter' or 'Process Butter' and by such other marks, labels, or brands and in such manner as may be prescribed by the Secretary of Agriculture, and no process or renovated butter shall be shipped or transported from its place of manufacture into any other State or Territory or the District of Columbia, or to any foreign country, until it has been marked as provided in this section. The Secretary of Agriculture shall make all needful regulations for carrying this section into effect, and shall cause to be ascertained and reported from time to time the quantity and quality of process or renovated butter manufactured, and the character and the condition of the material from which it is made. And he shall also have power to ascertain whether or not materials used in the manufacture of said process or renovated butter are deleterious to health or unwholesome in the finished product, and in case such deleterious or unwholesome materials are found to be used in product intended for exportation or shipment into other States or in course of exportation or shipment he shall have power to confiscate the same. Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor and on conviction thereof shall be punished by a fine of not less than \$50 nor more than \$500 or by imprisonment not less than one month nor more than six months, or by both said punishments, in the discretion of the court.

"SEC. 6. That wholesale dealers in oleomargarine, process, renovated, or adulterated butter shall keep such books and render such returns in relation thereto as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may, by regulation, require; and such books shall be open at all times to the inspection of any internal-revenue officer or agent. And any person who wilfully violates any of the provisions of this section shall for each such offense be fined not less than \$50 and not exceeding \$500, and imprisoned not less than thirty days nor more than six months.

"SEC. 7. This Act shall take effect on the 1st day of July, 1902."

The Congress likewise passed, and the President approved, July 1, 1902, an act "to prevent the false branding or marking of food and dairy products as to the State or Territory in which they are made or produced." It is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no person or persons, company or corporation, shall introduce into any State or Territory of the United States or the District of Columbia from any other State or Territory of the United States or the District of Columbia, or sell in the District of Columbia or in any Territory any dairy or food products which shall be falsely labeled or branded as to the State or Territory in which they are made, produced, or grown, or cause or procure the same to be done by others.

"SEC. 2. That if any person or persons violate the provisions of this act, either in person or through another, he shall be guilty of a misdemeanor and shall be punished by a fine of not less than \$500 nor more than \$2,000; and that the jurisdiction for the prosecution of said misdemeanor shall be within the district of the United States court in which it is committed."

Interpreting Pension Law.—A joint resolution was passed by the Congress and approved by the President, July 1, 1902, construing the act of June 27, 1890. It is as follows:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the act approved June 27, 1890, entitled 'An Act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents,' is construed and held to include all persons and the widows and minor children of all deceased persons, subject to the limitations of said act, who served for ninety days in the military or naval service of the United States during the late war of the rebellion and who have been honorably discharged therefrom, and section 4716, Revised Statutes United States, is amended accordingly: *Provided, however,* That the foregoing shall not apply to those who served in the First, Second, Third, Fourth, Fifth, and Sixth Regiments United States Volunteer Infantry who had a prior service in the Confederate army or navy and who enlisted in said regiments while confined as prisoners of war under a stipulation that they were not to be pensionable under the laws of the United States, nor to those who, having had such prior service, enlisted in the military or naval service of the United States after the 1st day of January, 1865.

"SEC. 2. That in the administration of the pension laws any enlisted man of the army, including regulars, volunteers, and militia, or any appointed or enlisted man of the navy or marine corps, who was honorably discharged from the last contract of service entered into by him during the late war of the rebellion, shall be held and considered to have been honorably discharged from all similar contracts of service previously entered into by him with the United States during said war: *Provided,* That such enlisted or appointed man served not less than six months under said last enlistment or appointment, that his entire service under said last enlistment or appointment was faithful, and that he did not receive by reason of said last enlistment or appointment any bounty or gratuity other than from the United States in excess of that to which he would have been entitled if he had continued to serve faithfully until honorably discharged under any contract of service previously entered into by him, either in the army, navy, or marine corps, during the war of the rebellion."

Protection of the President.—There was much popular discussion of this theme, as the assassination of President McKinley brought home to the people once more the danger to our Chief Magistrate, not so much from treasonable conspiracy as from criminal fools and fanatics. The Congress early in the session undertook the task of protective legislation. The Senate passed a measure making it a capital crime to kill or attempt to kill the President, or any official in line of succession to the presidency, or any sovereign or chief magistrate of a foreign country; setting a penalty of twenty years' imprisonment on instigating, advising, or counseling the killing of any of these persons, or conspiring for the death of any of them; and proposing imprisonment for ten years for any one threatening or advising such assassination, by spoken, written, or printed words. The Senate bill also provided for a presidential body-guard of regular troops. The House of Representatives passed a substitute by way of amendment to this measure. It

struck out the provision for a military body-guard, drew the distinction that the President, those in line of succession, and the heads and representatives of foreign governments must be assassinated or assaulted while engaged in the performance of official duties to give the Federal courts jurisdiction over the crime, and added provisions against the general profession or teaching of anarchy. There was no report made by the Conference Committee appointed to harmonize these differences.

Reciprocity with Cuba.—This policy engaged much of the attention of the Administration, brought on heated discussion in Congress, and became a subject of sharp political controversy in the press. It is understood that President McKinley promised reciprocal trade advantage to Cuba in consideration of the adoption of the Platt amendment by the Cuban constitutional convention; and President Roosevelt urged the concession in his annual message. The Ways and Means Committee of the House of Representatives framed a bill granting a tariff reduction of 20 per cent. on all Cuban imports, on condition that the Cuban Government adopt the immigration and contract labor laws of the United States, the President to proclaim the fulfillment of the conditions and the operative effect of the law. The Republican majority in the committee could not act together on this bill, and it was reported through the help of some of the Democratic minority. Republican conferences were held on the subject, and it was found that there was strong opposition to the bill within the dominant party. The source of difficulty was in the sugar-growing interests in this country; and a serious blow was dealt to the measure when the House adopted the following amendment to the bill, offered by Page Morris, of Minnesota, April 18:

"And upon the making of said agreement, and the issuance of said proclamation, and while said agreement shall remain in force, there shall be levied, collected, and paid, in lieu of the duties thereon now provided by law on all sugars above No. 16 Dutch standard in color, and on all sugar which has gone through a process of refining, imported into the United States, 1.825 cent per pound."

This amendment, technical and harmless looking as it is, touched a sensitive spot. The bill, as reported, disturbed the relation between raw sugar and refined sugar established in the existing tariff, and this amendment aimed at restoring the equilibrium, so that the reciprocity should not be at the expense of the American sugar-growers altogether, but also at the expense of the refiners. It was adopted by a vote of 164 yeas to 111 nays; and the measure was then passed.

The following day Mr. Teller, of Colorado, offered in the Senate a resolution to investigate the relation of the Sugar Trust to the proposal to reduce the tariff on raw sugar and the rumor that American capitalists have secured large holdings in the Cuban sugar plantations. June 16, he offered a resolution for the investigation of the expenditures of money from Cuban funds to promote reciprocity. The result was to cast suspicion on the reciprocity measure. The Republican Senators, after conference, determined upon a substitute making it a condition of proclaiming reciprocity that it be proved the Sugar Trust is not a party at interest; but it was thought best to abandon the bill for the session and depend upon the negotiation of a reciprocity treaty.

June 13, the President sent to the Congress the following message on the subject:

To the Senate and House of Representatives:

I deem it important before the adjournment of the present session of Congress to call attention to the following expression in the message which, in the discharge of the duty imposed upon me by the Constitution, I sent to Congress on the first Tuesday of December last:

"Elsewhere I have discussed the question of reciprocity. In the case of Cuba, however, there are weighty reasons of morality and of national interest why the policy should be held to have a peculiar application, and I most earnestly ask your attention to the wisdom, indeed to the vital need, of providing for a substantial reduction in the tariff duties on Cuban imports into the United States. Cuba has in her Constitution affirmed what we desired, that she should stand in international matters in closer and more friendly relations with us than with any other power, and we are bound by every consideration of honor and expediency to pass commercial measures in the interest of her material well-being."

This recommendation was merely giving practical effect to President McKinley's words, when, in his messages of Dec. 5, 1898, and Dec. 5, 1899, he wrote:

"It is important that our relations with this people (of Cuba) shall be of the most friendly character and our commercial relations close and reciprocal. . . . We have accepted a trust, the fulfilment of which calls for the sternest integrity of purpose and the exercise of the highest wisdom. The new Cuba, yet to arise from the ashes of the past, must needs be bound to us by ties of singular intimacy and strength if its enduring welfare is to be assured. . . . The greatest blessing which can come to Cuba is the restoration of her agricultural and industrial prosperity."

Yesterday, June 12, I received, by cable from the American minister in Cuba, a most earnest appeal from President Palma for "legislative relief before it is too late and [his] country financially ruined."

The granting of reciprocity with Cuba is a proposition which stands entirely alone. The reasons for it far outweigh those for granting reciprocity with any other nation, and are entirely consistent with preserving intact the protective system under which this country has thriven so marvelously. The present tariff law was designed to promote the adoption of such a reciprocity treaty, and expressly provided for a reduction not to exceed 20 per cent. upon goods coming from a particular country, leaving the tariff rates on the same articles unchanged as regards all other countries. Objection has been made to the granting of the reduction on the ground that the substantial benefit would not go to the agricultural producer of sugar, but would inure to the American sugar-refiners. In my judgment provision can and should be made which will guarantee us against this possibility; without having recourse to a measure of doubtful policy, such as a bounty in the form of a rebate.

The question as to which, if any, of the different schedules of the tariff ought most properly to be revised does not enter into this matter in any way or shape. We are concerned with getting a friendly reciprocal arrangement with Cuba. This arrangement applies to all the articles that Cuba grows or produces. It is not in

our power to determine what these articles shall be; and any discussion of the tariff as it affects special schedules, or countries other than Cuba, is wholly aside from the subject-matter to which I call your attention.

Some of our citizens oppose the lowering of the tariff on Cuban products, just as three years ago they opposed the admission of the Hawaiian Islands, lest free trade with them might ruin certain of our interests here. In the actual event their fears proved baseless as regards Hawaii, and their apprehensions as to the damage to any industry of our own because of the proposed measure of reciprocity with Cuba seem to me equally baseless. In my judgment no American industry will be hurt, and many American industries will be benefited by the proposed action. It is to our advantage as a nation that the growing Cuban market should be controlled by American producers.

The events following the war with Spain and the prospective building of the isthmian canal render it certain that we must take in the future a far greater interest than hitherto in what happens throughout the West Indies, Central America, and the adjacent coasts and waters. We expect Cuba to treat us on an exceptional footing politically, and we should put her in the same exceptional position economically. The proposed action is in line with the course we have pursued as regards all the islands with which we have been brought into relations of varying intimacy by the Spanish War. Porto Rico and Hawaii have been included within our tariff lines, to their great benefit as well as ours, and without any of the feared detriment to our own industries. The Philippines, which stand in a different relation, have been given substantial tariff concessions.

Cuba is an independent republic, but a republic which has assumed certain special obligations as regards her international position in compliance with our request. I ask for her certain special economic concessions in return, these economic concessions to benefit us as well as her. There are few brighter pages in American history than the page which tells of our dealings with Cuba during the past four years. On her behalf we waged a war, of which the mainspring was generous indignation against oppression, and we have kept faith absolutely. It is earnestly to be hoped that we will complete in the same spirit the record so well begun, and show in our dealings with Cuba that steady continuity of policy which it is essential for our nation to establish in foreign affairs if we desire to play well our part as a world power.

We are a wealthy and powerful nation; Cuba is a young republic, still weak, who owes to us her birth, whose whole future, whose very life, must depend on our attitude toward her. I ask that we help her as she struggles upward along the painful and difficult road of self-governing independence. I ask this aid for her because she is weak, because she needs it, because we have already aided her. I ask that open-handed help, of a kind which a self-respecting people can accept, be given to Cuba, for the very reason that we have given her such help in the past.

Our soldiers fought to give her freedom; and for three years our representatives, civil and military, have toiled unceasingly, facing disease of a peculiarly sinister and fatal type with patient and uncomplaining fortitude, to teach her how to use aright her new freedom. Never in history has any alien country been thus administered with such high integrity of purpose, such

wise judgment, and such single-minded devotion to the country's interests. Now, I ask that the Cubans be given all possible chance to use to the best advantage the freedom of which Americans have such right to be proud and for which so many American lives have been sacrificed.

THEODORE ROOSEVELT.

WHITE HOUSE, June 13, 1902.

A Senatorial Sensation.—The quarrel between Senator Tillman and Senator McLaurin, both of South Carolina, after many dramatic incidents, came to a fight on the floor of the Senate; and perhaps a record of the session requires an account of the affair. Mr. Tillman, on Feb. 22, 1902, in discussing the Philippine tariff bill, reviewed the contest over the ratification of the treaty of Paris, reverted to the influence which Mr. Bryan exerted to procure the necessary votes, and declared it insufficient to control the Democratic Senators. The following colloquy then took place:

Mr. Tillman: But with all Mr. Bryan's influence—and it was very great, because it was recognized then that he would be the nominee of his party—he did not and could not persuade enough men here to give the necessary votes. After every man whom Mr. Bryan could influence had been influenced and counted, you still lacked votes, and you knew it. You know how you got them.

Mr. Spooner: How did we get them?

Mr. Tillman: I say you know how you got them.

Mr. Spooner: I do not know how we got them. I do not know that any man voted for that treaty except in obedience to his convictions. Does the Senator know any different?

Mr. Tillman: I only know that in a court the Senator would convict on circumstantial evidence some men.

Mr. Spooner: Does the Senator impeach any Senator? Let him name him. I do not impeach any Senator, nor do I know any ground for impeaching any.

Mr. Tillman: I have reason to believe from the circumstantial evidence and from things that have been told to me in confidence by men on the other side that improper influences were used.

Mr. Spooner: Name the man. That is due to the country, and due to the man whom you suspect, and by innuendo charge. Who was it? Let him answer for himself if he is still a member of this body.

Mr. Tillman: Whom do you mean? I can not name the man who gave me the information.

Mr. Spooner: Whoever you mean.

Mr. Tillman: I can not give the name of the man who gave me the information, because he gave it to me in confidence.

Mr. Spooner: Oh, in confidence. A man who would impeach another in confidence is a coward.

Mr. Tillman: Cowardice in that case does not rest on my shoulders.

Mr. Spooner: The Senator turned to me. If the Senator knows of any member of this body who voted under corrupt influences for that treaty, name him.

Mr. Tillman: I can not prove it.

Mr. Spooner: Well, I would not say it.

Mr. Tillman: But I can prove this—

Mr. Spooner: I would not say it.

Mr. Tillman: I can prove this: that the patronage of a State has been given to a Democrat who voted for the treaty.

Mr. Spooner: What State?

Mr. Tillman: South Carolina.

Mr. Spooner: Fight it out with your colleague.

Mr. Tillman: I am ready.

Mr. Spooner: Yes, I am ready and he is ready.

Mr. Tillman: Let him—

Mr. Spooner: He is not here—

Mr. Tillman: He has not shown his readiness.

Mr. Spooner: But he will be.

The President *pro tempore*: The occupants of the galleries must remember that any marks of approbation or disapproval are not permitted under the rules of the Senate, and if there is a violation of the rule the Chair will be obliged to have the galleries cleared.

Mr. Tillman: I will state that after having made a speech in this body two weeks before, replete with cogent arguments and eloquence, against the ratification of the treaty, and after having told us in confidence that he would not vote for it, he did; and since then he has been adopted by the Republican caucus and put upon committees as a member of that party, and has controlled the patronage in South Carolina. I did not expect to bring this in in this way, but I do not dodge or flinch from any responsibility anywhere. I simply know what I believe.

After Mr. Tillman had closed his speech, Mr. McLaurin, who had returned to the Senate chamber, rose; and the Record reports what follows:

Mr. McLaurin, of South Carolina: Mr. President, I rise to a question of personal privilege. During my absence a few moments ago from the Senate Chamber, in attendance upon the Committee on Indian Affairs, the gentleman who has just taken his seat, the Senator who has just taken his seat, said that improper influences had been used in changing the vote of somebody on the treaty, and then went on later and said that it applied to the Senator from South Carolina, who had been given the patronage in that State. I think I get the sense of the controversy.

I desire to state, Mr. President—I would not use as strong language as I intend to had I not, soon after the Senate met, replied to these insinuations and said that they were untrue—I now say that that statement is a wilful, malicious, and deliberate lie.

[At this point Mr. Tillman advanced to Mr. McLaurin, of South Carolina, and the two Senators met in a personal encounter, when they were separated by Mr. Layton, the acting assistant doorkeeper, assisted by several Senators sitting near.]

Mr. Gallinger: Mr. President, I ask that the doors be closed.

The President *pro tempore*: The Senate will be in order. Senators will please resume their seats.

Mr. Pritchard: Mr. President, if the Senator from South Carolina has concluded—

Mr. McLaurin, of South Carolina: Mr. President, I will now proceed with my remarks, which were so unceremoniously interrupted—

Mr. Teller: Mr. President, I call the Senator from South Carolina to order.

Mr. McLaurin, of South Carolina: Which one of the Senators?

Mr. Teller: This one, and the other one, too, for that matter.

Mr. Foraker: Mr. President, I join in that. Surely there is some way of protecting the dignity of this body.

Mr. Burrows: Certainly; the Senate can not let this thing pass, Mr. President.

Mr. Gallinger: Mr. President, I asked that the doors might be closed.

Mr. Foraker: Mr. President, I move that the Senate go into executive session.

The President *pro tempore*: The Senator from Ohio moves that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After two hours and twenty minutes the doors were reopened.

In executive session a resolution was adopted unanimously declaring both South Carolina Senators in contempt and referring the matter to the Committee on Privileges and Elections. In open session the Senate adopted a resolution allowing the Senators, though in contempt, to make explanation. This is what took place:

Mr. Tillman: Mr. President, I have always esteemed it a high honor and privilege to be a member of this body. I had never had any legislative experience when I came here, and my previous service as Governor of South Carolina for four years had unfitted me in a measure to enter this august assembly with that dignity and regard—proper regard, I will say—for its traditions and habits and rules that is desirable.

I have been here seven years. I have in that time learned to judge men with a little more catholicity of spirit than I did when I came here. I have found a great many people here in whose personal integrity and honor and regard for their obligations as gentlemen I have implicit confidence; but I have seen so much of partizanship, I have seen so much of what I consider slavish submission to party domination, that I confess I have felt somewhat at a loss how to judge men who in one aspect appeared to be so high and clean and honorable and in another appeared more or less despicable. I say this because of the fact that one of the Senators has seen fit to allude to some matters that occurred in the debate this morning.

I now want to say that, so far as any action of mine has caused any Senator here, or the Senate as a body, or the people of the United States to feel that I have been derelict and have not shown that courtesy and proper observance of the rules of this body, I regret it; I apologize for it. I was ready to do that two minutes after I had acted; but under the provocation, which was known to all of you, I could not have acted otherwise than I did; and while I apologize to the Senate and am sorry that it has occurred, I have nothing more to say.

Mr. McLaurin, of South Carolina: Mr. President, I did not realize that I was in contempt of the Senate, nor do I think now, if my words are read in the Record, that I was, but, at the same time, as the Senate has ruled that I am in contempt of this honorable body, I beg leave to apologize.

I desire to say, Mr. President, that I have been very sorely and severely tried. I was in attendance on the Committee on Indian Affairs when I received a message from a friend in the Senate that my presence was needed here.

The history of the vote on the Spanish treaty is known to all of you. There have been statements made in newspapers and insinuations that I had been influenced by improper motives in connection with my vote on that treaty. Knowing in my own soul, and knowing that God in heaven also knows that it was false, when I was told that it was centered down to me, I was so outraged by what I considered a most brutal assault upon my honor as a man, and especially in view of the fact that in the beginning of the session, after the action of my party associates, I made a most careful and deliberate statement explaining all these matters, I did not feel as a man that I could ever hold my head up again if I did not resent it in

the place where it was delivered, in the strongest and most forcible terms that I could employ.

With that, Mr. President, I am done, except I have this to say: If there is any more talk of that kind or any more—

Mr. Patterson: I beg the Senator to refrain.

Mr. McLaurin, of South Carolina: I will refrain, Mr. President.

Pending further action on the matter, Mr. Tillman presented a protest to the Senate, which was received by that body, Feb. 27. He declared himself ready to submit to whatever action the Senate might take to vindicate its own rights and dignity; but he protested against mere delay as depriving South Carolina of its right as a State to be represented in that body. On the following day the committee in charge of the matter reported a resolution of censure against Senators Tillman and McLaurin, which was adopted by a vote of 54 yeas to 12 nays. Its adoption, under the terms of the resolution, cleared both gentlemen of contempt.

Miscellaneous.—The Senate passed a ship subsidy bill early in the session, but it was not considered in the House of Representatives.

The House passed a measure admitting Oklahoma, Arizona, and New Mexico into the Union as States; but the Senate got no further than to make it a special order at the second session. The House also passed an immigration bill, which the Senate did not take up.

Two treaties were ratified—the modified agreement with Great Britain on the Isthmian Canal, and the agreement with Denmark for the purchase of the Danish West Indies.

The following acts were passed:

What is known as the omnibus public building act. It bears the title "An Act to increase the limit of cost of certain public buildings, to authorize the purchase of sites for public buildings, to authorize the erection and completion of public buildings, and for other purposes"; and it deals with public buildings in 186 towns of the United States.

An act authorizing the President to reserve public lands and buildings on the island of Porto Rico for public uses, and granting other public lands and buildings to the Government of Porto Rico.

An act authorizing the Commissioner of Internal Revenue to return bank checks, drafts, and certificates of deposit, and orders for the payment of money having imprinted stamps thereon, to the owners thereof.

An act for the allowance of certain claims for property taken for military purposes within the United States during the war with Spain, reported by the Secretary of War in accordance with the requirements of an item contained in the sundry civil appropriation act, approved June 6, 1900, authorizing and directing the Secretary of War to investigate just claims against the United States for private property taken and used in the military service within the limits of the United States.

An act authorizing the adjustment of rights of settlers on the Navajo Indian Reservation, Arizona.

An act to provide for funding taxes paid upon legacies and bequests for uses of a religious, charitable, or educational character, for the encouragement of art, etc., under the act of June 13, 1898.

An act to amend an act to prohibit the passage of special or local laws in the Territories, and to limit the Territorial indebtedness.

An act to provide for the homesteads in the Ute Indian Reservation in Colorado.

An act to accept, ratify, and confirm a proposed agreement submitted by the Kansas or Kaw Indians of Oklahoma.

An act relating to the transportation of dutiable merchandise at the seaports of Tacoma and Seattle.

An act to provide for the transfer of the title to the military reservation at Baton Rouge to the Louisiana Agricultural and Mechanical College.

An act to confer jurisdiction on the Court of Claims to render judgments for the principal and interest in actions to recover duties collected by the military authorities of the United States upon articles imported into Porto Rico from the several States between April 11, 1899, and May 1, 1900.

An act to provide for the sale of the unsold portion of the Umatilla Indian Reservation.

An act to vest in the Spanish Treaty Claims Commission certain powers possessed by circuit and district courts of the United States.

An act for the allowance of certain claims for stores and supplies reported by the Court of Claims under the provisions of the act approved March 3, 1883, and commonly known as the Bowman Act.

An act to amend the act of May 12, 1900, authorizing the Commissioner of Internal Revenue to redeem or make allowance for internal-revenue stamps.

An act reserving from the public lands in the State of Oregon, as a national park for the benefit of the people of the United States, and for the protection and preservation of the game, fish, timber, and all other natural objects therein, a tract of 249 square miles, including Crater Lake.

An act to regulate the sale of viruses, serums, toxins, and analogous products in the District of Columbia, to regulate interstate traffic in said articles, and for other purposes. It provides that "no person shall sell, barter, or exchange, or offer for sale, barter, or exchange in the District of Columbia, or send, carry, or bring for sale, barter, or exchange from any State, Territory, or the District of Columbia into any State, Territory, or the District of Columbia, or from any foreign country into the United States, or from the United States into any foreign country, any virus, therapeutic serum, toxin, antitoxin, or analogous product applicable to the prevention and cure of diseases of man, unless such virus, serum, toxin, antitoxin, or product has been propagated and prepared at an establishment holding an unsuspended and unrevoked license, issued by the Secretary of the Treasury as hereinafter authorized, to propagate and prepare such virus, serum, toxin, antitoxin, or product for sale in the District of Columbia, or for sending, bringing, or carrying from place to place aforesaid; nor unless each package of such virus, serum, toxin, antitoxin, or product is plainly marked with the proper name of the article contained therein, the name, address, and license number of the manufacturer, and the date beyond which the contents can not be expected beyond reasonable doubt to yield their specific results."

An act to provide for the allotment of the lands of the Cherokee Nation and for the disposition of town sites therein.

An act for the relief of the citizens of the French West Indies.

An act to ratify and confirm a supplemental agreement with the Creek Indians, modifying the agreement ratified by Congress, March, 1901, in regard to the allotment of lands, descent and distribution.

An act to fix fees of juries in the United States courts.

An act to provide a commission to secure plans and designs for a monument or memorial to the memory of Abraham Lincoln.

An act to amend an act for the relief and civilization of the Chippewa Indians in the State of Minnesota approved Jan. 14, 1889.

Acts granting public lands for the water-supply of Denver and Colorado Springs, Col.

An act providing that the statute of limitations of the several States shall apply as a defense to actions brought in the United States courts for the recovery of lands patented in severalty to members of any tribe of Indians under any treaty between it and the United States of America.

An act to prevent any consular officer of the United States from accepting any appointment from any foreign state as administrator, guardian, or to any other office of trust, without first executing a bond, with security, to be approved by the Secretary of State.

An act to authorize the sale of part of the Moberly military reservation in the State of Nebraska.

An act for the authorization of the erection of buildings by the International Committee of the Young Men's Christian Associations, on the military reservations of the United States.

An act to facilitate the procurement of statistics of trade between the United States and non-contiguous countries.

An act to prevent the sale of firearms, opium, and intoxicating liquors in certain islands of the Pacific, not under the protection of any civilized power.

An act to increase the efficiency, and change the name of the United States Marine-Hospital Service.

An act to promote the efficiency of the Revenue-Cutter service.

An act to extend the provisions, limitations, and benefits of an act entitled "An Act granting pensions to the survivors of the Indian wars of 1832 to 1842, inclusive, known as the Black Hawk war, Creek war, Cherokee disturbances, and the Seminole war," approved July 27, 1892. The measure brings into the scope of the original act Indian wars preceding 1832 and following 1842.

An act authorizing the Comptroller of the Currency to extend the charter of national banks twenty years.

Acts amending the following sections of the Revised Statutes: 82; 548; 658; 683; 852; 1315; 1513; 1580; 1581; 1797; 2294; 2399; 2529; 2544; 2555; 2593; 2743; 3339; 3362; 3394; 4075; 4076; 4078; 4139; 4314; 4400; 4716; 4883; 4929; 5543; 5544. Sections 1584 and 2035 were repealed.

An act for the protection of miners in the Territories.

An act for the protection of game in Alaska, not affecting, however, any law now in force in Alaska relating to the fur seal, sea otter, or any fur-bearing animal other than bears and sea lions, or preventing the killing of any game animal or bird for food or clothing by native Indians or Eskimo, or by miners, explorers, or travelers on a journey when in need of food; but the game animals or birds so killed shall not be shipped or sold, and not to be construed as preventing the collection of specimens for scientific purposes, the capture or shipment of live animals and birds for exhibition or propagation, or the export from Alaska of specimens and trophies, under such restrictions and limitations as the Secretary of Agriculture may prescribe and publish.

Acts authorizing the construction of bridges across the Arkansas river, Fort Gibson, Indian Territory, and in Arkansas; Ashley river, South Carolina; Calumet river, Cummings, Ill., and

Hammond, Ind.; Chattahoochee river, Columbia, Ga.; Columbia river, Vancouver, Wash.; Cumberland river, Nashville, Tenn.; Current river, Randolph County, Arkansas; Devils lake, North Dakota; Duluth Canal, Minnesota; East Saint Andrews Bay, Farmdale, Fla.; Emory river, Harri-man, Tenn.; Manatee river, Florida; Mississippi river, Burlington, Iowa; Champlin and Anoka, Minn., and Little Falls, Minn.; Missouri river, Council Bluffs, Iowa, and Omaha, Neb., Kansas City, Mo., Parkville, Mo., Pierre, S. Dak., Plattsmouth, Neb., St. Joseph, Mo.; Monongahela river, Clairton Station, Pa., Morgantown, W. Va.; Neuse river, Kinston, N. C.; Ouachita river, Arkansas; Ohio river, Allegheny, Pa.; Pearl river, Mississippi; Red river, Shreveport, La.; Savannah river, Savannah, Ga.; Tennessee river, Marion County, Tenn.; Waccamaw river, Conway, S. C.; White river, Newport, Ark.

Appropriations.—The following statement of the appropriations of the Fifty-seventh Congress at its first session, and covering the fiscal year of 1902-'03, was prepared by the clerks of the Committees on Appropriations of the Senate and the House of Representatives:

Agriculture.....	\$5,308,960.00
Army.....	91,530,136.41
Diplomatic and consular.....	1,957,925.69
District of Columbia.....	8,547,526.97
Fortification.....	7,398,955.00
Indian.....	9,143,902.58
Legislative, etc.....	25,398,381.50
Military Academy.....	2,627,324.42
Navy.....	78,678,963.13
Pension.....	139,842,230.00
Post-office.....	138,416,598.75
River and harbor.....	26,726,442.00
Sundry civil.....	60,125,359.13
Total.....	\$595,502,705.58
Deficiencies.....	28,039,911.42
Total.....	\$623,542,617.00
Miscellaneous.....	2,600,000.00
Total regular annual appropriations.....	\$626,142,617.00
Isthmian canal.....	50,130,000.00
Permanent annual appropriations.....	123,921,220.00
Grand total, regular and permanent annual appropriations.....	\$800,193,837.00
Amount of estimated revenues for fiscal year 1903.....	\$580,000,000.00
Amount of estimated postal revenues for fiscal year 1903.....	132,020,630.00
Total estimated revenues for fiscal year 1903.....	\$712,020,630.00

It is necessary to consider this statement in connection with the explanatory notes appended by those who prepared it. As to the District of Columbia appropriation it is said that one-half the amount is payable by the United States except amounts in the water department, which are payable out of the water rates. The post-office appropriation includes all expenses of the postal service payable from postal revenues and from the Treasury. In addition to the sum given as the river and harbor appropriation \$5,768,757 is appropriated in the sundry civil act to carry out contracts already authorized for 1903. As to the grand total, this comment is made: "In addition to this amount contracts are authorized to be entered into, subject to future appropriations by Congress, as follows: By the District of Columbia act, \$2,118,405; by the Military Academy act, \$3,500,000; by the naval act, \$18,306,000; by the river and harbor act, \$38,336,160; by the sundry civil act, \$616,000; by the urgent deficiency act, \$550,000; by miscellaneous acts, including the public buildings act, \$15,946,650; by the isthmian canal act, \$180,000,000; in all, \$259,373,215."

CONNECTICUT. (See under UNITED STATES.)

COSTA RICA, a republic in Central America. The Congress is a single Chamber of 21 representatives, elected for four years by an electoral college, the members of which are elected by the votes of all self-supporting adult male citizens. The President is also elected for four years, and may be his own successor. Rafael Iglesias was reelected President for the term which began on May 8, 1898. Demetrio Iglesias Llorente and Federigo Tinoco were the Vice-Presidents. The Cabinet was composed in the beginning of 1902 as follows: Minister of the Interior, Police, and Public Works and acting Minister of Foreign Affairs, Worship, Public Instruction, Benevolence, and Justice, Ricardo Pacheco; acting Minister of Finance, E. Truque; acting Minister of War and Marine, Demetrio Iglesias.

Area and Population.—The area is estimated at 23,000 square miles, and the population on Feb. 18, 1892, was 243,205, comprising 122,480 males and 120,725 females. On Dec. 31, 1899, the population was officially estimated at 309,683. The number of births registered in 1900 was 10,695; deaths, 6,275. San José, the capital, has about 25,000 inhabitants.

Finances.—The revenue in 1901 was 8,700,833 colones, and expenditure 9,319,192 colones. The gold colon was adopted as the monetary unit by the act of Oct. 26, 1896, which established a gold standard at the ratio of 1 to 26½, the paper peso being made exchangeable for the colon, which weighs 0.778 gram, 900 fine. The new currency was put into circulation on July 16, 1900, when 5,000,000 colones had been coined. There were 3,000,000 pesos of paper currency in circulation. About 1,000,000 pesos of fractional silver currency were issued, and this is legal tender up to 10 pesos. Foreign gold coins are legal tender, but foreign silver coins are not.

The foreign debt, which in view of the depreciation of silver was scaled down in 1888 and again in 1897 by arrangement with the creditors, amounted on June 30, 1901, to £2,080,000 sterling, the amount in 1887 having been £2,691,300, with £2,119,512 interest in arrear. The interest on £1,475,000 of the capital was reduced in 1897 to 2½ per cent. and on £525,000 to 3 per cent. The unpaid coupons from Jan. 1, 1895, when the Government defaulted, till April, 1897, when the new arrangement went into effect, are paid by instalments of £5,000 a year for twenty years, £31,562 having been paid at the start. Amortization of the debt will begin in 1917 by the annual payment of £10,000. The floating debt in 1900 amounted to 6,067,898 pesos, and the total internal debt to 6,916,072 pesos.

Commerce and Production.—Costa Rican coffee brings a high price, and lands adapted for its culture when situated near a railroad are valuable. The banana plantations on the coast are remunerative, and the cultivation of cacao is a growing industry. There are also plantations of rubber-trees. The people are industrious and frugal, but little else is grown besides these products and corn, rice, yams, and potatoes for food. There are herds of cattle and horses on the highlands valued at 12,695,065 pesos in 1897. Gold is mined by American companies, which exported \$160,000 worth in 1900. The total value of imports in 1900 was \$6,084,895, and of exports \$6,321,192. Of the imports, 46.2 per cent. came from the United States, 27.3 per cent. from Great Britain, 13.6 per cent. from Germany, and 12.9 per cent. from other countries. The exports of coffee were valued at \$3,800,190; bananas, \$1,354,390; gold and silver, \$500,000; hides and skins, \$103,330; rubber, \$98,070.

Navigation.—The number of vessels entered and cleared at Limon and Punta Arenas during 1900 was 605, of 689,460 tons. The merchant fleet of Costa Rica consisted of 2 sailing vessels, of 541 tons, and 3 steamers, of 783 tons.

Railroads, Posts, and Telegraphs.—The railroad from Limon to Alajuela, with its branches, has a length of 137 miles. The line from San José to Tiveves, 59 miles, will, when completed, establish rail communication between the Atlantic and Pacific coasts.

The number of letters and other mail-matter that passed through the post-office in 1899 was 1,772,914 in the internal and 637,163 in the foreign service.

There were 880 miles of telegraph-wire in 1899; number of despatches, 342,572. The telephone-lines had a length of 200 miles.

CRETE, an island in the Mediterranean, formerly a Turkish vilayet, since Dec. 21, 1898, an autonomous province under the suzerainty of the Porte administered by a High Commissioner of England, France, Italy, and Russia. The High Commissioner is Georgios, Prince of Greece, born June 24, 1869, second son of Georgios I, King of the Hellenes. He was appointed for three years on Nov. 26, 1898, entered on his office on Dec. 21, 1898, and was reappointed on Dec. 15, 1901. The Constitution was adopted on April 28, 1899. The High Commissioner has supreme command of the military forces. The legislative body is the Boule, 64 members of which, of whom 3 are Mohammedans, are elected by universal suffrage for two years, in the proportion of 1 to 5,000 inhabitants, and 10 members, including 1 Mohammedan, are nominated by the Prince. The electoral system provides for minority representation. The Boule sits for two months every two years. The ministers are appointed by the Prince, and take part in the discussions of the Chamber without having the right to vote. The representatives at Rome of the protecting powers are authorized by their governments to decide questions affecting the foreign relations of Crete. The Council appointed on Sept. 7, 1901, was composed as follows: Finance, J. A. Tsouderos; Interior and Public Safety, Manoussos R. Koundouros; Public Instruction, Worship, Justice, and Foreign Affairs, A. D. Boreades.

Area and Population.—The island has an area of 3,326 square miles. The native population at the census of June 17, 1900, was 303,543, comprising 269,319 Greek Catholics, 33,496 Mohammedans, and 728 Jews. Compared with 1881 there were 62,256 more Greeks and 39,955 fewer Mohammedans. The number of foreigners in 1900 was 6,096, including 3,593 Hellenes and 1,071 Turks. Canea, the capital, had 21,025 inhabitants; Candia, 22,331.

Finances.—The revenue for the year ending Aug. 31, 1901, was estimated at 6,471,860 drachmas, and the expenditure at 6,281,277 drachmas. The revenue is derived mainly from direct taxes and duties on consumption. The chief expenditures were 1,789,553 drachmas for finance, 1,444,492 drachmas for communications and public safety, 1,344,214 drachmas for the interior, 749,508 drachmas for public instruction, and 703,510 drachmas for justice. The intervening powers promised to advance 4,000,000 drachmas to Crete, and Great Britain and Italy did advance 1,000,000 drachmas each, Russia 352,500 drachmas, and France 12,500 drachmas. This constitutes the total public debt, excepting 1,500,000 drachmas which the protecting powers in 1901 decided that Crete should pay to the Ottoman Public Debt Commission, besides the concession of the salt

monopoly for twenty years, thereby canceling all pecuniary claims of the creditors of Turkey against Crete.

Commerce and Production.—The chief product is coarse olive-oil from which soap is manufactured. Wine is made, and oranges, chestnuts, and carobs are exported. The silkworm is raised. Goats and sheep are reared. Commerce is carried on mainly with Greece and Turkey. The total value of imports in 1900 was 11,076,055 drachmas; exports, 5,590,436 drachmas.

Political Affairs.—M. Venezelo, whose proposal to establish an independent autonomous Government in Crete, a principality on the model of Bulgaria, resulted in his dismissal from office by Prince George in 1901, took the lead of the Opposition party. He did not propose a permanent principality, but one which should serve as a transitional arrangement and by the elimination of international control to a great extent and the removal of the international troops hasten the realization of a union with Greece. The democracy of Greece, however, and the Cretan patriots suspected an ambitious design of the High Commissioner. The storm of popular disapproval evoked by his proposal caused M. Venezelo to abandon the idea and put forward as his program the earliest possible union with Greece as the only solution of the Cretan question. Demonstrations in favor of immediate union, like those which in 1901 drew from the protecting powers an admonition to Prince George declaring their resolve to maintain the *status quo*, were supported by all parties and elements except the remnant of the Moslem population, reduced to a third of its former numbers. The substitution of a Greek force for the international troops was urged by the Government as the general desire. The Moslems insisted on the retention of the international troops, whose protection alone enabled them to live in the island. Those who still remained were mostly congregated in the towns. The small proprietors had sold or abandoned their farms and the beys had parceled out their estates among Christian tenants. The number of Mohammedan officials was constantly decreased. Parts of the Evkaf, or pious foundations, of the Mohammedans were appropriated by the Christians. When some Mussulman boatmen were murdered by Christians who had escaped the general disarmament the Mohammedan community of Canea appealed to the ministers of the four powers at Rome and to the Sultan as suzerain of the island to redress their grievances. A new independent party was started by M. Koundouros, who retired from the Cabinet in the beginning of June and was replaced by M. Mylogianakis. This party, which clamored likewise for speedy annexation to Greece, was encouraged by the Government as a rival to the growing Opposition party. The requests which Prince George made to the powers on accepting a prolongation of his mandate remained unanswered. In the summer the High Commissioner visited St. Petersburg and Vienna. Although party spirit in Crete raged more violently than ever, the Christian peasants, who form the bulk of the population, were comparatively unaffected. They reaped an abundant grain harvest in 1902 and the grape and olive crops were excellent.

CUBA, a republic in the West Indies. By the treaty of peace between the United States and Spain signed at Paris on Dec. 10, 1898, Spain relinquished the sovereignty of Cuba and the United States assumed the obligations for the protection of life and property. United States troops, already in occupation of parts of the

island, replaced the Spanish garrison when it was withdrawn in December, 1898. The President of the United States appointed a military Governor-General at the head of the administration which the United States undertook to carry on pending the establishment by the Cubans of a settled Government capable of fulfilling international obligations. Major-Gen. John R. Brooke, the first Governor-General, was succeeded, on Dec. 20, 1899, by Brig-Gen. Leonard Wood. On July 25, 1900, the President of the United States directed that a call be issued for the election of members of a constitutional convention to frame a Constitution for Cuba on such a basis as would insure a stable, independent Government. By order of the military Governor-General the election took place on Sept. 15, 1900, and the convention assembled at Havana on Nov. 5, 1900. Governor-General Wood informed the delegates that it was their duty to frame and adopt a Constitution adequate to secure a stable, orderly, and free Government, and to formulate the relations which, in their opinion, ought to exist between Cuba and the United States, after which the Government of the United States would doubtless take such action as would lead to a final and authoritative agreement between the people of the two countries to the promotion of their common interests. The Constitution was completed and adopted by the Convention on Feb. 11, 1901, and was signed on Feb. 21, 1901. Conditions demanded by the President and Congress of the United States were on June 12, by vote of the convention, embodied in the Constitution. These were that Cuba shall make no treaty which may tend to place in jeopardy the independence of the island or any portion thereof; that no loans shall be issued unless a surplus of revenue is available for the service of such obligations; that the United States may intervene if it becomes necessary for the preservation of Cuban independence or for the protection of life and property; that the acts of the United States military administration were recognized as valid; that proper hygienic measures must be taken to protect public health; that the question whether the Isle of Pines belongs to the United States or to Cuba should be reserved for future determination; and that coaling stations on the coast of Cuba should be sold or leased to the United States, the localities to be decided upon later. The Constitution vests the legislative power in a Congress consisting of a Senate of 36 members, 6 from each department, and a House of Representatives having as many members as the population contains multiples of 25,000. Senators are elected by the municipalities for six years, one-third retiring every two years. Representatives are elected in separate districts for four years by universal adult male suffrage. The executive power is committed to a President, who, with the Vice-President, is elected for four years by popular suffrage through colleges of electors. Each voter ballots for only two-thirds of the electors allotted to his department. Each department has a Governor and an Assembly elected by popular suffrage for three years. Departments and municipalities have a large measure of local self-government, with power to raise revenues and contract loans. Municipal government is carried on by a mayor and an elective municipal council. Spaniards and other foreigners residing in Cuba at the time of the adoption of the Constitution may adopt Cuban citizenship at their option, and so can all Cuban-born children of foreigners on attaining their majority. The Constitution guarantees freedom of speech,

of the press, and of religious worship. Prisoners can not be detained longer than twenty-four hours without judicial authority. The civil and criminal laws can be framed and amended only by Congress, which also has sole power to regulate railroads and telegraphs. Major-Gen. Leonard Wood was military Governor-General at the beginning of 1902. His civil Cabinet was composed as follows: Secretary of Foreign Affairs and of the Interior, Diego Tamayo; Secretary of Agriculture, Commerce, and Industry, Perfecto Lacoste; Secretary of Justice, Varela; Secretary of Public Instruction, Varola; Secretary of Finance, Cancio; Secretary of Public Works, Villalon; Secretary of the Treasury, Roloff. The military commandant of the Oriental Department, with headquarters at Santiago, was Col. Samuel M. Whitside. Gonzales de Quesada was Cuban commissioner at Washington.

Area and Population.—The area of Cuba is 35,994 square miles. The population by the census of Oct. 16, 1899, was 1,572,797. The area and population of the provinces which now constitute the departments of Cuba are shown in the following table:

PROVINCES.	Square miles.	Population.
Havana	2,265	424,804
Pinar del Rio	5,145	173,064
Matanzas	3,506	202,444
Santa Clara	7,534	356,536
Puerto Principe	7,429	88,234
Santiago de Cuba	10,125	327,715
Total	35,994	1,572,797

In Havana province there were 187 inhabitants to the square mile; in Matanzas, 58; in Santa Clara, 47; in Pinar del Rio, 34; in Santiago, 32; in Puerto Principe, 12. Of the total population 910,299, or 57.89 per cent., were native whites, divided into 447,373 males and 462,926 females; 142,198, or 9.05 per cent., were foreign whites, divided into 115,740 males and 26,458 females; 234,638, or 14.91 per cent., were negroes, divided into 111,898 males and 122,740 females; 270,805, or 17.21 per cent., were of mixed white and negro blood, divided into 125,500 males and 145,305 females; 14,857, or 0.94 per cent., were Chinese, divided into 14,694 males and 163 females. Of the total population 815,205 were males and 757,592 were females. The total number of colored inhabitants was 505,443; of whites and others having no negro blood, 1,067,354. The total number of foreigners, white and colored, including Chinese, was 172,535, of whom 129,240 were Spanish, 12,953 African negroes, 6,444 Americans, 1,968 Spanish Americans, 1,279 French, 731 British, 505 Italians, and 284 Germans. The number of persons engaged in occupations was 622,330, of whom 299,197 followed agriculture, mining, or fishing, 141,936 domestic service, 93,034 manufactures, 79,427 commerce and transportation, and 8,736 the professions. The illiterates among adult male white Cubans numbered 94,301, and among the colored 78,279. Education has been compulsory since 1880.

Commerce and Production.—There were 90,960 estates in Cuba in 1891, of the total estimated value of \$220,000,000, the annual rental being estimated at \$17,000,000. The total value of imports in 1900 was \$64,760,000, and of exports \$47,645,000. The imports from Cuba into the United States were \$31,371,704 in value, and exports from the United States to Cuba were \$26,513,613. In 1901 the imports of Cuban produce into the United States were \$43,428,088, and United States exports to Cuba \$25,964,801. The chief

imports of Cuban produce into the United States in 1900 were sugar for \$18,243,639 and tobacco for \$9,703,331, and among the exports of United States produce to Cuba were provisions for \$5,214,489, iron and steel manufactures for \$3,717,127, breadstuffs for \$2,122,553, lumber for \$2,122,553, and cattle for \$2,042,710. In a special message to the Cuban Congress President Palma requested Congress to pass laws for the reestablishment and development of stock-raising, suggesting that measures be taken to stimulate private enterprise, especially by removing all duties from cows and from bulls of established breeds, stallions, and jackasses, also for one year from fencing wire. He proposed to prohibit the slaughter of cows fit for breeding. Of 16,000,000 acres now unproductive, more than half the area of Cuba, nearly the whole is good grazing ground, capable of supporting 4,000,000 head of stock. President Palma estimated that in the first year of his administration 400,000 cattle would arrive, the average consumption for food being 300,000. Half of those arriving he thought ought to be pastured for six months before slaughtering, insuring an addition to the national income estimated at \$2,000,000, and he suggested prohibiting the slaughter of lean cattle for three months after importation.

Railroads, Posts, and Telegraphs.—There are 950 miles of railroads, of which British companies own 551 miles.

The length of telegraph-lines is 2,300 miles, with 3,450 miles of wire.

Establishment of the Republic.—An electoral law was framed by a committee of the constitutional convention. On Jan. 1, 1902, presidential electors were chosen, who, on Feb. 24, 1902, elected Tomas Estrada Palma President of the republic and Señor Estevez Vice-President. In fulfillment of the joint resolution of the United States Congress, approved on April 20, 1898, for the recognition of the independence of the people of Cuba, demanding that the Government of Spain relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect, the President of the United States was authorized in the army appropriation act approved on March 2, 1901, to leave the government and control of the island of Cuba to its people so soon as a Government shall have been established under a Constitution which, either as a part thereof or in an ordinance appended, defines the future relations of the United States with Cuba in substantial agreement with the Platt amendment. These provisions are that the Government of Cuba shall never enter into any treaty or compact with any foreign power which will impair or tend to impair the independence of Cuba, nor in any manner authorize or permit any foreign power or powers to obtain by colonization or for military or naval purposes or otherwise lodgment in or control over any portion of the island; that it shall not assume or contract any public debt to pay the interest upon which, and to make reasonable sinking-fund provisions for the ultimate discharge of which, the ordinary revenues of the island, after defraying the current expenses of government, shall be inadequate; that it consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a Government adequate for the protection of life, property, and individual liberty, and for

discharging the obligations imposed by the treaty of Paris on the United States, now to be assumed, and undertaken by the Government of Cuba; that all acts of the United States in Cuba during its military occupancy be ratified and validated, and all lawful rights acquired thereunder maintained and protected; that the Government of Cuba execute and as far as necessary extend the plans already devised or other plans to be mutually agreed upon for the sanitation of the cities of the island to the end that a recurrence of epidemic and infectious disease may be prevented, thereby assuring protection to the people and commerce of Cuba, as well as to the commerce of the Southern ports of the United States and their residents; that the Isle of Pines be omitted from the proposed constitutional boundaries of Cuba, the title thereto being left to future adjustment by treaty; that to enable the United States to maintain the independence of Cuba and to protect her people, as well as for its own defense, the Government of Cuba sell or lease to the United States lands necessary for coaling or naval stations at certain specified points to be agreed upon with the President of the United States; and that by way of further assurance the Government of Cuba embody these in a permanent treaty with the United States.

These conditions having been fulfilled, President Roosevelt in a message to Congress dated March 27, 1902, recommended measures for diplomatic and consular representation in Cuba. The people of Cuba having framed a Constitution and elected a President, preparations were made by the Secretary of War to terminate the military occupation and permit the installation of the Government of Cuba on May 20. The Cuban Senate and House of Representatives was convened by Gov. Wood on May 5 to pass on the credentials of their members, after which they officially informed the American military Governor of the election of Estrada Palma as President of the republic. President Palma selected his Cabinet on May 17 from both the Nationalist and Republican parties and included one Independent. It was composed as follows: Secretary to the Government, having charge of the Rural Guard, Sanitation, the Post-Office, and the Signal Service, Diego Tamayo; Secretary of State and of Justice, Carlos Zaldo; Secretary of Agriculture, Emilio Terry; Secretary of Public Works, Manuel Luciano Diaz; Secretary of Public Instruction, Eduardo Yero; Secretary of Finance, Garcia Montes. Gov. Wood formally transferred the government and control to President Palma and the Cuban Congress on May 20, advising them that the transfer was made on the understanding and condition that the new Government, pursuant to the appendix to the Cuban Constitution adopted by the constitutional convention on June 12, 1901, assumed the obligations which the United States had assumed with respect to Cuba by the treaty with Spain signed at Paris on Dec. 10, 1898. The judicial and subordinate executive officers appointed by the Government of occupation continued in the discharge of their functions, except such of them as Gov. Wood had already replaced with nominees of the President-elect, and all the laws promulgated by the provisional military Government remained operative until they should be changed by the new Government. Gov. Wood, in the proclamation of transfer, recited the obligations imposed on Cuba in her relations with the United States by the American Congress and accepted in the appendix to the Cuban Constitution of

Feb. 21, 1901, as a part of the organic law of the Cuban Republic. He read a message from the President of the United States declaring the American occupation at an end, and then lowered the American and raised the Cuban flag. The United States garrison had been gradually withdrawn, and the remaining troops left with Gen. Wood, excepting 800 of the coast-artillery, left to care for three batteries on the coast until these should be replaced by a Cuban force. The Cuban Congress met and proclaimed the Constitution as soon as the Government was installed. President Palma in his message to Congress on May 28 said that the motive of the United States in siding with Cuba in her fight for independence was purely disinterested and that Cuba is capable of fulfilling all the obligations and promises she has contracted. The budget, however, should be prepared with care. Cattle-raising ought to be encouraged and agricultural stations established to improve the methods of culture of sugar and tobacco, and agricultural industries of various kinds should be introduced. The crisis in the sugar industry was due to the excessive production of beet-sugar in Europe. An immediate remedy would be the reduction of the American tariff charge on sugar, to obtain which he would devote his efforts. The Government would also devote attention to education and encourage the construction of railroads, at the same time protecting the capital already invested in them. Cuba must cultivate cordial relations with all nations and secure favorable treaties of amity and commerce, and must also take special care that her relations with the United States are of the friendliest character. The new Cuban Government pardoned all convicted Americans, including the post-office officials Neely, Reeves, and Rathbone, sentenced for ten years. On Aug. 10 Señor Terry offered his resignation as Secretary of Agriculture. The State Department at Washington decided that the Isle of Pines passed under Cuban control when American authority over Cuba was withdrawn and must remain so until the question of its ownership is settled by treaty. American settlers, who have obtained half the grazing ground that constitutes the chief wealth of the island in dispute, petitioned for the protection of the United States Government because the Cuban Government neglected to exercise any authority or jurisdiction. Rear-Admiral R. B. Bradford, who inspected sites for naval and coaling stations in the West Indies, recommended that one naval station be established at Triscornia, in Havana harbor, opposite the capital, and another at Guantanamo, and that coaling stations be located at Nipe Bay and at Cienfuegos. By means of these the United States could control the passes leading to its coasts from the Caribbean Sea. The Cubans were not inclined to oppose these selections except the one that the American naval expert considered the most important of all, the one in Havana harbor, commanding the Bahama, Florida, and Yucatan channels and the entrance to the Gulf of Mexico. Although it insures the Cuban capital against attack without cost to Cuba and provides employment and remuneration for many individual Cubans, they would chafe to see the United States flag flying in Havana harbor, to be saluted equally with the Cuban flag by foreign ships as they enter. It would seem like an emblem of American suzerainty and a sign of their vassalage, and appeared to be unnecessary, since without such fortified station the United States could use Havana as a naval base in case of war. The Isle of Pines, having no good harbor, is valueless for

a naval or coaling station. While the American settlers and some of the other inhabitants petitioned for annexation to the United States, others asked that it be permitted to remain attached to Cuba. It is claimed by Cuba as an island adjacent to the coast which was under the administration and jurisdiction of the Spanish colonial Government. The claim of the United States is based on the cession of Porto Rico and all other islands belonging to Spain in the West Indies by the treaty of peace acknowledging the independence of Cuba.

Reciprocity with the United States.—The oppression of Spain from which Cuba was freed by the intervention of the United States was mainly a financial and commercial oppression. Spain, however, gave Cuba a preferential market for her products. This market was closed as a result of the war, and as a condition of withdrawing the military Government and permitting the Cubans to set up an independent republic the United States Congress, in the Platt amendment, imposed a restriction on their independence, denying them the right to seek a market in any other country by granting preferential tariff rates that should not be shared by the producers and exporters of the United States. The sugar and tobacco on which the livelihood of the Cubans depends could find a market nowhere save in the United States; yet they were excluded from that market by the prohibitive duties of the Dingley tariff. The Cuban planters were holding their unmarketable sugar by the aid of money borrowed at 2 per cent. a month, awaiting the opening of United States ports by a removal of the tariff barrier. Although reciprocal trade relations were generally believed to be conducive to American, as they were essential to Cuban prosperity, a strong opposition to effective reciprocity was shown by the American beet-sugar growers, whose entire crop has till now reached only 77,000 tons, and by growers of tobacco for cigars, in whose behalf the Protectionists opposed a reduction of tariff sufficient to afford relief to Cuba. A bill for reciprocal trade relations introduced by the Committee on Ways and Means in the House of Representatives provided for a reciprocal reduction of duties equivalent to 20 per cent. ad valorem, conditional on the enactment by Cuba of the same immigration and exclusion laws as those of the United States. Gov. Wood's opinion was that a reduction of not less than 33½ per cent. in the United States sugar tariff was absolutely necessary for the welfare of the island. The merchants of Europe were very desirous that there should be no operative reciprocity between Cuba and the United States. Representatives of various commercial interests in England and India prayed their Government to use any possible means to prevent it. Mr. Roosevelt, in his message to Congress of March 27, said that the commercial and political conditions in the island of Cuba while under the Spanish Crown afford little basis for estimating the local development of intercourse with this country under the influence of the new relations which have been created by the achievement of Cuban independence and which are to be broadened and strengthened in every proper way by conventional pacts with the Cubans and by wise and beneficent legislation aiming to stimulate the commerce between the two countries if the great task we accepted in 1898 is to be fittingly accomplished. Even the measure of reciprocity contained in the bill before Congress was strongly opposed by a section of the Republican members, who refused to be bound by the decision of the party, pronounced by a major-

ity vote of 54 in the caucus. Early relief was necessary to enable the Cuban planters to market their crop. When a minority of Republicans in the Senate refused to sanction the reciprocity measure, and it could not therefore be put to a vote, President Roosevelt, on June 13, sent a special message to Congress in response to an appeal from President Palma for legislative relief before it is too late and Cuba is financially ruined. Mr. Roosevelt considered that the Cuban question stood alone, and did not raise the question of tariff revision; nor would any American industry be injured, but many would benefit, and the growing Cuban market should be controlled by American producers. If Cuba was expected to treat the United States on an exceptional footing politically, she should be put economically in an exceptional position in relation to the United States. To give all possible chance to the young republic to use to advantage the freedom for which many American lives have been sacrificed was the plain duty of a wealthy and powerful nation like the United States. The national honor was pledged to give the relief needed. Mr. Roosevelt suggested that the substantial benefit of a reduction of duties should go to Cuban producers, not to American sugar-refiners, and advised against recourse to a bounty in the form of a rebate. The deadlock was not broken by the President's message nor by the indorsement of his policy by one Republican State convention after another. The Spooner bill providing for a 20-per-cent. reciprocal reduction of duties for five years, which was amended in the House by a provision to abolish

the differential duty protecting American refiners, though retaining the countervailing duties on bounty-fed sugar, was recommended by the Senate Committee on Cuban Relations, considered in a conference of Republican Senators, but the minority opposed to reciprocity remained firm and unbroken. Meanwhile the industrial situation in Cuba grew more acute. Planters were unable to borrow more money to give employment to laborers, and distress prevailed throughout the island. Starvation was in sight, and disorder as its sequel. The finances of the republic were in such shape that there was scarcely money enough to meet expenses. Early in August the Cuban Congress discussed a bill for raising a loan of \$4,000,000 at 5 per cent., redeemable in thirty years, to be issued at 90, the proceeds to be devoted to the assistance of cane-growers. It was proposed to issue six months later a loan of \$35,000,000 on the same terms, with the customs receipts as security, for the purpose of paying the Cuban army and discharging debts mentioned in the Constitution. A tariff bill was passed increasing to 50 per cent. the duties on fresh and salt beef and pork, codfish, rice, wheat-flour, eggs, coffee, olive-oil, and beer; those on cheese, butter, wines, and liquors to 70 per cent.; the duty on lard to 80 per cent.; those on soap, starch, poultry, condensed milk, beans, peas, onions, potatoes, and preserved foods to 100 per cent.; the duty on corn to 333 per cent.; also putting a duty of 17 per cent. on shoes, one of 40 cents a cubic meter on undressed pine lumber, and one of 25 cents a ton on coal. The increases were expected to add \$520,000 to the revenue.

D

DELAWARE. (See under UNITED STATES.)

DENMARK, a kingdom in northern Europe. The legislative body, called the Rigsdag, consists of an upper house, the Landsting, of 66 members, 12 appointed for life by the King and 54 elected for eight years by indirect suffrage, and a popular assembly, the Folkething, containing 114 members, elected for three years by the direct vote of all male citizens thirty years of age excepting criminals, paupers, and servants living with their employers. The reigning King is Christian IX, born April 18, 1818. The heir apparent is Prince Frederik, born June 3, 1843, eldest son of the King and Queen Louise, daughter of the Landgrave Wilhelm of Hesse Cassel.

The Cabinet appointed July 23, 1901, was composed as follows: President of the Council and Minister of Foreign Affairs, Dr. J. H. Deuntzer; Minister of Marine, Rear-Admiral F. H. Jöhnke; Minister of War, Col. V. H. O. Madsen; Minister of Finance, C. F. Hage; Minister of Justice and for Iceland, P. A. Alberti; Minister of Worship and Public Instruction, J. C. Christensen; Minister of Agriculture, O. Hansen; Minister of Public Works, V. L. B. Hörup; Minister of the Interior, E. Sørensen.

Area and Population.—The area of the divisions of Denmark and the population at the census of Feb. 1, 1901, are given in the following table:

DIVISIONS.	Square miles.	Population.
City of Copenhagen.....	21	378,235
Islands in the Baltic.....	5,062	1,007,513
Peninsula of Jutland.....	9,765	1,063,792
Faroe Islands.....	512	15,230
Total.....	15,360	2,464,770

The population, not including that of the Faroes, was divided into 1,193,448 males and 1,256,092 females. The increase in population since 1890 was 12.75 per cent., annual increase 1.1 per cent. The increase in the urban population was 29.7 per cent., and in the rural population 4.3 per cent. The population of Copenhagen within the city limits was 378,235; with suburbs, 476,806. Aarhus had 51,814 inhabitants; Odense, 40,138; Aalborg, 31,457. The number of marriages in 1900 was 18,499; of births, 72,141; of deaths, 40,924; excess of births, 31,217. The emigration, mainly to the United States, was 3,570.

Finances.—The revenue for the year ending March 31, 1901, was 78,959,357 kroner; expenditure, 78,883,529 kroner. For 1902 the revenue was estimated at 71,512,513 kroner and expenditure at 72,077,975 kroner. The budget estimate of revenue for the year ending March 31, 1903, was 72,871,598 kroner, of which 927,892 kroner are a balance from domain revenues, 3,239,923 kroner are interest on state assets, 10,886,300 kroner come from direct taxes, 51,405,630 kroner are from customs, excise, and other indirect taxes, 136,006 kroner are net revenue from posts and telegraphs, 1,090,000 kroner are the balance accruing to the state from lotteries, 549,377 kroner are separate revenues, and 4,636,468 kroner are revenue from employment of capital and funding of debt. The total expenditure was estimated in the budget at 72,388,208 kroner, of which 1,203,200 kroner are the civil list and appanages, 532,032 kroner are expenses of the Rigsdag and the Council of State, 7,041,384 kroner are the public debt charges, 3,377,130 kroner are civil and military pensions, 739,300 kroner are for the Ministry of Foreign Affairs, 2,844,977 kroner for the Ministry of Agriculture, 6,035,954

kroner for the Ministry of the Interior, 4,950,168 kroner for the Ministry of Justice, 6,970,705 kroner for the Ministry of Worship and Public Instruction, 10,226,370 kroner for the Ministry of War, 6,742,635 kroner for the Ministry of Marine, 4,164,676 kroner for the Ministry of Finance, 77,164 kroner for the Ministry for Iceland, 3,836,304 kroner for extraordinary state expenditure, and 13,646,159 kroner for improvement of state property and reduction of debt. The reserve fund kept at the disposal of the Government to provide for sudden emergencies amounted on March 31, 1901, to 17,891,915 kroner. The actual revenue for the financial year 1902 amounted to 96,800,000 kroner and expenditure to 76,700,000 kroner. The receipts included 30,000,000 kroner of the loan concluded in 1901, of which 10,000,000 kroner were used, leaving 20,000,000 kroner unexpended and a total balance in the treasury of 40,000,000 kroner on March 31, 1902. In the budget for the year ending March 31, 1904, the revenue is estimated at 70,200,000 kroner, including a balance in the treasury on April 1, 1903, estimated at 11,000,000 kroner, and the expenditure is estimated at 74,500,000 kroner, showing a probable deficit of 4,300,000 kroner. The amount of the public debt on March 31, 1901, was 217,294,224 kroner. The foreign debt was 149,012,250 kroner, the domestic debt 68,281,974 kroner. The rate of interest is generally 3 per cent. The value of state railroads on March 31, 1901, was 247,492,711 kroner and of other investments and the domains 81,751,643 kroner, including the war chest.

The city of Copenhagen had a revenue of 23,647,206 kroner in 1900, 19,363,676 kroner of expenditures, a debt of 59,255,344 kroner, and property valued at 66,936,304 kroner. The revenue of the provincial towns in 1899 amounted to 18,264,393 kroner, their expenditures to 14,882,386 kroner, their debts were 36,750,368 kroner, and the value of their property was 61,439,805 kroner. The collective revenue of rural communes was 23,023,172 kroner, their expenditure was 20,669,605 kroner, their debts amounted to 19,466,375 kroner, and the value of their property to 48,357,907 kroner. Provincial places collected 3,600,570 kroner of revenue, expended 3,132,596 kroner, had 5,536,737 kroner of debts, and owned 7,477,508 kroner of property.

The Army.—Young men from the age of twenty-two are liable to serve eight years in the regular army and its reserve and eight years longer in the extra reserve. When drawn for service they are drilled six months for infantry, three months for field-artillery and engineers, eight months for cavalry, and four months for fortress-artillery. Recruits who fail to become proficient are required to go through a second period of drill, which is eight months for infantry, eleven months for cavalry, and twelve months for artillery and engineers. All troops are called into camp for annual exercises lasting from twenty-five to thirty days. The army is organized in 2 divisions, one of 2 and one of 3 brigades, the brigade consisting of 3 regiments of infantry and 1 regiment of cavalry. There are 31 battalions of infantry of the line, 11 battalions of reserve, 5 regiments of cavalry, 2 regiments of field-artillery of 6 active batteries, and 4 reserve batteries each, 1 regiment of fortress-artillery, and 1 regiment of engineers. The total strength on the peace footing was 824 officers and 8,945 men in 1901; war footing, 1,448 officers and 60,138 men.

The Navy.—The Danish navy contains one old turret-ship, the *Helgoland*, of 5,370 tons,

armed with one 36-ton gun, 4 22-ton guns, 4 5-inch guns, and 2 2½-inch quick-firers. The barrette ship *Iver Hvitfeldt*, of 3,450 tons, carries 2 28-ton and 4 5-inch guns and 2 2½-inch quick-firers. The cruiser *Tordenskjold*, of 2,530 tons, has a 52-ton gun in an armored barrette and 2 5-inch guns. The armor-clad coast-defense vessels *Gorm*, of 2,400 tons, and *Herluf Trolle*, of 3,470 tons, launched in 1899, carry 2 26-ton or 18-ton guns in armored turrets. The *Skjold*, of 2,160 tons, has a single 26-ton gun. The *Lindormen*, of 2,100 tons, has a pair of 13-ton guns. The *Odin*, of 3,230 tons, has 4 18-ton guns in a central battery. A new turret-ship of 5,317 tons, launched in 1900, has 2 pairs of 26-ton guns. Nearly all the vessels of the navy were built at Copenhagen. The *Valkyrien*, of 3,020 tons, the *Fyen*, of 2,740 tons, and the *Geiser*, *Hekla*, and *Heimdal*, of 1,310 tons, are deck-protected cruisers of recent construction.

Commerce and Production.—The European agricultural crisis affected Denmark as seriously as any country and led to a diversification of crops, a contraction in the area under cereals, and a great extension of pastoral industry which with the encouragement of the Government and by the aid of agricultural schools has placed Denmark in the first rank of dairying countries, and not only restored but augmented the former prosperity. There were exported 40,578 cattle, 20,543 horses, and 2,095 sheep in 1900. The quantity of beet-sugar produced was 49,678 tons. The manufacture of oleomargarine was 18,254 tons. There were 21,879,576 gallons of beer brewed, and the distillation of spirits amounted to 7,479,845 gallons. The catch of fish in 1899 was valued at 7,455,871 kroner. The total value of imports in 1900 was 526,803,000 kroner; of domestic exports, 281,919,000 kroner; total exports, 393,570,000 kroner. The special imports were valued at 416,200,000 kroner, of which 96,200,000 kroner represent food substances, 81,300,000 kroner articles for personal or domestic use, 43,100,000 kroner fuel, 71,300,000 kroner seeds, manure, and fodder, and 124,300,000 kroner raw products. Of the domestic exports 235,500,000 kroner represent food substances, 4,500,000 kroner articles for personal or domestic use, 2,000,000 kroner seeds, manure, and fodder, and 39,900,000 kroner raw products. Of the general imports 44,534,000 kroner and of exports 14,085,000 kroner were colonial produce; of the imports 7,655,000 kroner and of the exports 3,448,000 kroner were beverages; of the imports 58,372,000 kroner and of the exports 6,306,000 kroner were textile manufactures; of the imports 47,081,000 kroner and of the exports 12,079,000 kroner were metals and metal manufactures; of the imports 25,626,000 kroner and of the exports 2,162,000 kroner were timber and wood manufactures; of the imports 47,362,000 kroner and of the exports 4,470,000 kroner were coal; of the imports 2,513,000 kroner and of the exports 21,852,000 kroner were live animals; of the imports 52,037,000 kroner and of the exports 231,228,000 kroner were dairy-produce and provisions; of the imports 66,873,000 kroner and of the exports 13,339,000 kroner were cereals. The values in kroner of the commerce of Denmark with various foreign countries in 1900 are given in the table on the next page.

The imports of Danish butter into Great Britain increased from £767,190 in 1870 to £8,029,625 in 1900; imports of eggs, from £67,654 in 1878 to £923,551 in 1900; and in the latter year £3,058,782 of Danish bacon was imported.

Navigation.—The number of vessels in the foreign trade entered at Danish ports during 1900

COUNTRIES.	Imports.	Exports.
Great Britain.....	108,093,000	233,467,000
Germany.....	153,568,000	67,765,000
Sweden and Norway.....	60,503,000	50,222,000
United States.....	77,839,000	6,909,000
Russia.....	49,051,000	23,010,000
France.....	14,854,000	1,524,000
Netherlands.....	12,476,000	646,000
Belgium.....	7,559,000	1,041,000
Danish colonies.....	3,760,000	4,186,000
Rest of America.....	5,121,000	32,000

was 33,389, of 2,913,849 cargo tons; cleared, 34,313, of 844,567 tons of cargo. There were 33,650 vessels entered and 33,667 cleared coastwise. The merchant fleet of Denmark and the colonies comprised 3,252 sailing vessels above 4 tons, of 158,303 tons, and 521 steamers, of 250,137 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1901 was 1,810 miles, of which the state owned 1,108 miles, built at a cost of 247,492,711 kroner.

The number of letters and postal cards carried in the mails in 1900 was 95,791,494; of newspapers, circulars, samples, etc., 87,321,089.

The Government telegraph-lines in 1900 had a total length of 2,413 miles, with 8,601 miles of wire. The length of telephone-lines was 1,351 miles, with 2,620 miles of double and 595 miles of single wire.

Colonies.—*Iceland* has an area of 39,756 square miles, a small part of which is productive. The population in 1900 was 70,927. The imports in that year were valued at 2,386,000 kroner, and exports at 2,993,000 kroner. The coast and deep-sea fisheries are the principal resource of the population. Fishermen from all the countries bordering on the North Sea visit the fishing-banks. The Althing, the autonomous legislature, passed a law in 1898 by which trawling in Icelandic waters is prohibited, and inhabitants of the island are forbidden under penalties of imprisonment to aid or abet trawling. Fishing with trawling-nets from steamers has depleted the fisheries on which Icelanders depend for a living, and therefore the territorial waters have been vigilantly patrolled and the law strictly enforced against steam trawlers. British owners of these vessels have complained of confiscations due, not to illegal trawling in territorial waters, but to the storms of the northern seas which compelled their vessels to seek a port of refuge. A fisheries convention was concluded by Denmark in 1901 by which trawlers are no longer excluded from territorial waters. They have liberty to navigate and anchor if they enter them through stress of weather or ignorance of the currents, but they must stow away their trawling gear. The Icelanders have sought a larger degree of autonomy, which the Danish Government is quite willing to concede. In 1901 the Althing passed a resolution requesting that the Minister for Iceland in the Danish Cabinet should always be a person acquainted with the Icelandic language. The Danish Government submitted a constitutional reform bill to the Althing convened in special session by which not only will a special minister for Iceland be appointed who knows the language of the island, but the seat of the ministry is transferred from Copenhagen to Reykjavik. Besides fish, the Icelanders export sheep, wool, and mutton, and also ponies of the shaggy northern breed. The imports are cereals, groceries, and textiles. The trade is shared with Denmark by Great Britain.

The Danish colony of *Greenland* has an area of 46,740 square miles, with a population in 1900 of 10,516. These people, cut off from the rest of

the world, are visited every year by Government steamers which bring the supplies they need and take away the oil, furs, and other arctic products, which are purchased by the Government and resold in Europe. The value of imports in 1900 was 831,000 kroner; of exports, 340,000 kroner.

The Danish West Indies are the islands of *St. Croix*, *St. Thomas*, and *St. John*. When West Indian islands were in a more prosperous condition than at present the sugar, rum, and molasses of the Danish Antilles found a ready market in the United States. Of late years they have suffered more than most of the other islands from the depression in their main industries. Negotiations have been going on for years looking to their transfer by purchase to the United States (see WEST INDIES).

Legislation.—The question of the sale of the West Indian possessions of Denmark to the United States was the main subject of discussion in the Rigsdag in 1902. The treaty for their transfer was signed at Washington on Jan. 24, 1902. It was ratified by the United States Senate on Feb. 17. The Danish Steamship Company, which has a large traffic in the Atlantic, opposed the sale, and it was distasteful to the upper classes of Denmark. The signing of the Brussels sugar convention seemed to promise a better future for the islands. When the treaty was laid before the Folkething its opponents debated long against it, but it was ratified on March 18 by an overwhelming majority, only 7 voting to reject it outright and 19 withholding their votes, desiring the matter to be left to a vote of the people of the islands. This proposition found favor in the Landsting, which voted to delay the decision until the qualified electors of the islands indicated their desire by a plebiscite. Meanwhile various enterprises designed for the economic benefit of the islands were promoted in Denmark, chief of which were a new steamship company to start a regular service between North Sea and Gulf ports, and a plantation company, which intended to buy up land in the islands and have it tilled scientifically under the direction of Danish agriculturists. Objections were made to the treaty on the ground that it did not secure to the islanders American citizenship and free trade with the United States, although former ministers in their negotiations with the United States Government had stipulated for these privileges. The Folkething would not accept the provision inserted by the Landsting that the inhabitants of the island who have the right to vote for members of the colonial councils first take a vote on the question, but agreed by 98 votes to 2, with 5 abstentions, to have a plebiscite taken of all the male inhabitants of the islands, as was done in 1867, when the former treaty for the sale of the islands was made, which failed of ratification in the United States Senate. The Landsting by 33 votes to 30 insisted on its own amendment, and the matter had to be postponed till another session. The electors to the two colonial councils, to whom the Conservative majority in the Landsting proposed to refer the question, are only 366 in number, while the adult male population exceeds 6,000. There was a possibility that the electors might pronounce in favor of the sale by a slight majority. The amendment of the Landsting was therefore framed so that the Rigsdag would not be bound by the vote unless the feeling in the islands as indicated by it was undoubtedly in favor of the sale. The Agrarians, who constituted an overwhelming majority of the voters of Denmark, were

united in their desire to relieve the country of the financial burden and the trouble of these distant negro colonies. The bankers and merchants of Copenhagen, the university men, and the court circle were as strongly bent on keeping the islands for Denmark. Since ratifications could not be exchanged by the date fixed, July 24, 1902, the time for ratification was, at the proposal of Mr. Hay, extended for a year.

Negotiations for the sale of the Danish Antilles to the United States have been resumed several times since the conclusion of the abortive treaty of 1867. The latest negotiations were suggested to Mr. Hay by a Danish adventurer named Christmas, who brought the information that overtures for the purchase of the islands would be favorably received at Copenhagen. Horace White, secretary of legation at London, was entrusted with an informal mission early in 1900 to sound the views of the Danish Government. Admiral N. F. Ravn, Minister of Marine in the Hørring Cabinet, who was also provisional Minister of Foreign Affairs, was ready to discuss the matter with Mr. White, but turned Christmas, who accompanied him, out of his office. Christmas returned to the United States and pretended to have a part in the business in association with other lobbyists and go-betweens, on the basis of which he demanded money from the Danish Government. His claim was denied, and when the contest over the ratification of the treaty began he turned to the opponents of the sale and supplied them with scandalous tales of secret corrupt dealings, asserting that Danish ministers had promised a large sum to be expended in influencing statesmen and legislators in Washington and the American press and that he had paid over money for these purposes.

The Rigsdag increased postage rates, chiefly in order to give better pay to employees. The session was closed on May 17 after the Folkething had spent over half a year on the budget, and left it with a prospective deficit of 5,500,000 kroner, making larger military appropriations than the Conservative ministries had ever obtained, yet accomplishing none of the fiscal reforms that Radicals and Social Democrats have called for, such as the abolition of tithes and revision of the whole system of taxation. The Government proposed to make a declaration to the powers that Denmark desired to be neutral in all European wars, such as had been made before, and in a consultation with the Cabinets of Sweden and Norway the policy of all the Scandinavian nations making simultaneous declarations was considered. Elections were held on Sept. 20 to replace half the members. The old Conservative party lost its small majority. Of the new Lands-thing 29 were Extreme Conservatives, 8 Independent Conservatives, 3 Conservatives not belonging to any faction, and 25 Radicals, including 1 Socialist.

DISCIPLES OF CHRIST. The report of the statistical secretary presented to the General Missionary Convention at Omaha, Neb., in October, furnished the following summaries of the churches of the Disciples of Christ: Number of churches, 10,957; of communicants, 1,207,377; of Bible schools, 8,271, with 796,699 pupils, officers, and teachers; of ministers, 6,477; showing gains for the year of 84 churches, 26,836 members, 269 Bible schools, 22,158 members of Bible schools, and 94 ministers. The report gave as the money raised during the year for the various church enterprises: For the Foreign Christian Missionary Society, \$178,324; for the Christian Woman's Board of Missions, \$139,034; for the American

Christian Missionary Society, \$82,931; for the Board of Church Extension, \$54,866; for State and district missions, \$154,059; for miscellaneous missions, \$15,000; total for missions, \$624,214; for education and benevolence (including buildings and endowments of schools, homes for orphans, the aged, etc., and ministerial relief), \$254,753; for local church work (ministerial support, incidental church expenses, church buildings, and church and Bible school literature), \$5,315,000; making the whole amount of annual contributions from all sources, \$6,193,967. Special notice is made of the growth of interest in missions as shown in the increase of contributions for that object from \$4,671 given to one national society in 1874 to \$464,902 contributed to four national societies in 1902—one hundred-fold in twenty-seven years.

The General Board of the convention met in Omaha, Oct. 18. H. O. Breeden presided. Reports were made on church extension, ministerial relief, and statistics, and addresses were delivered on various subjects, in nearly all of which the desirability of Christian union was emphasized. A conference was held on this subject, as the basis of which the following points were set forth: "What modification or modifications of our proposition on the subject of Christian union ought we to make? None whatever. What features of our plea for union ought to be made especially prominent to meet changed conditions? The whole of it. In what ways can we promote union among Christians? By practising it everywhere and all the time."

The Christian Woman's Board of Missions reported 1,716 auxiliary societies with 37,211 members. Its receipts for the year had been \$139,034. More new work had been undertaken during the past than in any previous year in its history. Among the enterprises reported upon were new school-buildings; additional missionaries and new stations in India; special offerings for Mexico and the purchase of a building site there, evangelistic work in Chicago, and State University Bible work in Kansas. The year's receipts of the Home Mission Board had been \$82,931, in addition to which \$134,895 had been contributed to the State boards for their missions, making a total of \$217,826 of offerings by the churches for home missions. Forty-nine more churches and 62 more Endeavor Societies had contributed to the work of the board than in the previous year, and the whole increase of contributions was \$6,039. The board had assisted 274 missionaries in 34 States and in Ontario, Prince Edward Island, Nova Scotia, Manitoba, and Porto Rico, who had visited and assisted 947 places, organized or reorganized 101 churches, and received 11,284 members, of whom 6,419 had been received on confession of faith and baptism. Adding those under the direction of the State boards, 418 home missionaries had been employed. Ten named memorial funds of \$5,000 each, intended to keep one missionary at work, were reported. The sum of \$23,720 had been received in annuity funds, being a gain of \$10,020 over the previous year. The Board of Ministerial Relief had raised \$9,326 during the year. The Board of Church Extension returned \$54,866 of new receipts, \$37,551 received from returns of loans, and \$16,000 from the sale of land, which, with \$84 for insurance, made its total receipts \$108,501, showing a net gain of \$4,850 over the previous year. Its permanent fund amounted to \$345,044. Since the beginning of its operations \$180,658 had been returned on loans, \$60,289 had been received in interest, 655 churches had been aided, and 249 churches had

returned their loans in full. During the year 73 loans aggregating \$79,939 had been made, and loans aggregating \$61,500 promised to 52 churches.

The Foreign Christian Missionary Society had had the best year in its history. Its total receipts, \$178,323, were \$6,425 in excess of those of the previous year, and were derived—\$68,586 from the churches and \$48,117 from the Sunday-schools. The bequests amounted to \$2,947, or \$11,664 less than in 1901, and the annuities to \$29,411. Reports were given of work in China, where there were 19 stations and out-stations; Japan, 44 stations, etc.; India, 13 stations, etc.; Scandinavia, 16 churches; Turkey, 24 stations; Hawaii, 3 stations; Africa, 1 station; Cuba, 2 stations; England, 14 churches; and in the Philippine Islands, 1 church. At these stations 70 missionaries and 234 native helpers were employed, besides the ministers in England; 629 additions were returned, besides more than 5,700 pupils in Sunday-schools and 1,411 pupils in day-schools in China, India, and Japan. Two boarding-schools were maintained in China, hospital

work was carried on in China and India. The Drake Bible College was about to open in Japan, with a fund of \$20,000; and new buildings were in course of erection or to be built in India. The churches in Canada, England, and Australia cooperate with the society, supporting 7 missionaries, while the Canadian churches were preparing to support another.

The annual convention of the English churches was held in Southport in September, with Mr. Leslie T. Morgan as president, who delivered an address on The Reunion of Christendom. An increase of 163 members was reported. Work had been begun in three new places. During the past year the churches had raised \$19,208 for their local work, \$3,546 for home missions, and \$1,233 for foreign missions, making in all \$24,387. In the convention \$2,500 were contributed for home, and about \$400 for foreign missions.

At the annual conference of the South Australian churches, in September, a net gain of 158 members was reported. In Victoria, the number of accessions in six months was about 700.

DOUKHOBORS. (See under MANITOBA.)

E

EARTHQUAKES AND VOLCANIC ERUPTIONS.

The year 1902 was one of unusual volcanic and seismic activity. In Mexico, Guatemala, the West Indies, the Aleutian Islands, and Russia severe disturbances occurred, accompanied by great loss of life, while the volcanoes of Vesuvius and Mauna Loa, Hawaii, displayed marked activity. But two apparently quiescent and long-forgotten volcanoes gave the most striking exhibition of the impotency of man against the wrath of nature. In one terrible moment a great blast of hot ashes, rocks, and poisonous gases rolling down from the crater of Mont Pelée, in the island of Martinique, wiped out of existence the beautiful city and commercial center of that island and destroyed its entire population of 30,000, except one who escaped, and that one, a condemned murderer, was confined in an underground chamber. About the same time La Soufrière, in the neighboring island of St. Vincent, similarly burst forth, sending up great clouds of flame and smoke, red-hot cinders, rocks, and ashes, which, in descending, covered the beautiful green fields with desolation and destroyed thousands of lives.

In earthquake countries it is the common belief that after a series of violent shocks the earth must open to let out its pent-up fires, after which the shiverings that constitute local earthquakes subside. The sequence of such events in the early part of the year appears to justify this belief, were it not offset by the fact that in Japan, where the Government keeps a record and studies earthquake shocks more carefully than they are studied in any other part of the world, 1,000 earthquakes have been recorded annually without any unusual volcanic disturbances. However, on Jan. 16, a section of country on the western coast of Mexico was violently shaken, destroying several cities and towns. The earthquake was felt in the City of Mexico, where the people, rushing from their dwellings and offices, became so panic-stricken that many of them threw themselves on their knees in the middle of the streets and plazas, praying for mercy. Telegraph-poles swayed like trees in a gale, but no particular damage was done, and within thirty seconds it was all over, the earth resuming its normal condition of quie-

tude. But Chilpancingo, the capital of the state of Guerrero, which appears to have been in the center of the earthquake zone, was almost totally destroyed. The earthquake occurred on a quiet, pleasant afternoon, about twenty minutes past five o'clock. The ground heaved and shook with such force that not a building was left in Chilpancingo without some damage. The disturbance began with a slight tremor of the ground, accompanied by a rumbling noise such as that made by a heavy truck driven over a roughly paved street. The rumbling swelled, and then distinct oscillations of the ground were felt, and then came an upheaval and a crash. Walls fell outward, roofs fell in, and clouds of dust ascended amid the shrieks of the wounded and dying and panic-stricken. In their wild terror those who could escape fled over the *débris* which blocked their way, never stopping to look back, nor heeding the cries of the maimed, till they had reached the open fields, the usual goal of safety in countries where the people are accustomed to these violent shakings. As the clouds of dust cleared away and the calmer people looked about them, they saw only their ruined town with its streets blocked with the ruins of their houses. The domed roof of the old Spanish church in which the Mexican Declaration of Independence was signed and in which the bones of their patriot, Gen. Bravos, repose had fallen in, burying beneath it two women who were praying. The pedestal that had supported a statue of the general in the little park fronting the church, now supported only a pair of legs, while the body of the statue lay in two pieces on the ground. The belfries of the two churches were cracked from top to base, and the roofs of one-story houses were shaken in and their walls of solid masonry cracked. Comparatively speaking, there was only small loss of life, owing to the fact that the people fled from their houses upon feeling the first tremor of the earth's crust. At Chilapa, another good-sized town within the zone of the shaking, which suffered greatly, the people were gathered in the open plaza, looking at a tight-rope performer. This resulted in many lives being saved that would have otherwise been buried under falling *débris*; but many people went insane with fright, while many contended

that the earthquake was sent in punishment of the sacrilege that had been committed in allowing the performer to tie one end of his rope to the church tower.

A series of earthquake shocks were reported from Guatemala on April 8, and on the night of the 18th they were of such severity that they were

BROKEN STATUE IN CHILPANCINGO, MEXICO.

recorded by the seismograph in the Isle of Wight, and might have been recorded in any part of the world. It appears that on this night the Cordilleras of Central America were relieved of their seismic strain; villages and towns were shattered and earthquake waves passed over the world, and other unusual phenomena were recorded. On April 23 Mont Pelée showed a plume of smoke, and on May 3 it showed a fiery glow at night from the incandescent lava within its crater. There were low rumblings in the neighboring island of St. Vincent, and its long-extinct volcano, La Soufrière, began its eruptions two days later. On May 8 a geyser or boiling lake in Dominica, about 300 feet in length by 200 in breadth, disappeared completely. About the same time it was reported from Tacoma that Mount Redoubt, Cook inlet, in the State of Washington, was pouring forth dense volumes of smoke, and that it had become luminous in the night. Volcanic ashes fell, and snow near the mountain was covered with ashes. The last eruption of Mount Redoubt occurred in 1867. On May 31 earthquake shocks were felt in various parts of Greece.

Lack of available means of transit comparatively shuts off Guatemala from the rest of the world, and it was not till about the time the world was horrified with the news of the eruption of Mont Pelée and the wiping out of the city of St. Pierre, as also that of La Soufrière, that definite news came from the Central American republic that its second largest and richest city, Quezaltenango, had been completely destroyed by an earthquake, undoubtedly the one that had been recorded on the Isle of Wight in the night of April 18. Quezaltenango was a well-constructed

city of many imposing edifices of lime and stone construction, with an estimated population of 25,000 to 30,000 inhabitants. It is supposed by some to have been built within the crater of an extinct volcano, but this is doubtful, the belief having originated from the fact that it is surrounded by high, jagged mountain peaks at an elevation of 8,000 feet above the sea. The only reliable account of the seismic disturbances that shook the Cordilleras and finally destroyed this city appears in a communication from Edwin Rockstroh, a German for a long time in the employ of the Guatemala Government as an engineer. He says that at 8.25 P.M., April 18, an earthquake of more than thirty seconds' duration affected a large part of Guatemala, eastern Chiapas, and western Salvador and Honduras. The intensity of the movement was greatest in western Guatemala, where the second and richest city of the country was completely destroyed, with the loss of about 500 lives. The cities of Sololá, San Marcos, and its sister town, San Pedro Sacatepequez, were also completely ruined, with a loss of more than 200 lives. Retalhueu and Mazatenango, important towns on the Pacific coast plain to the south of Quezaltenango were also ruined. The cities that were most violently shaken were those on the highlands a little north of the great volcanoes that rise in the vicinity of Quezaltenango. Besides the cities named, nearly every town and hamlet in the Department of San Marcos, Quezaltenango, Retalhueu, and Suchitepequez, and several in Chimaltenango, suffered, and nearly every one of the many important coffee and sugar plantations in the western coast regions had its buildings, aqueducts, and machinery shattered. At the port of Ocos only 3 houses remained standing, and the pier extending into the sea was broken in two. Later it was reported that Ocos was sinking beneath the sea. The railways between Retalhueu and the port of Champerico, and the one between Ocos and Coatepec, were interrupted by the falling of bridges and other damage. Until May 5 earthquakes were frequent, extending from Gualan, near the Atlantic coast, to the west, near the Pacific.

It was on the night of May 3 when Mont Pelée began to throw large quantities of scoræ and volcanic ash into the surrounding country, and on May 5, two days later, a stream of lava rushed down the mountainside, reaching the sea, 5 miles distant, in three minutes, it is said. When the red-hot stream met the sea the water receded 300 feet on the west coast of the island, returning with great force. Two days later, May 7, a hot blast from the volcano engulfed the town of St. Pierre, destroying everything. Almost simultaneously with the outbreak of the Martinique volcano occurred that of La Soufrière, in St. Vincent.

Forming the arc of a circle, roughly speaking, a string of islands extends around the western border of the Caribbean Sea, from Porto Rico to a point near the continent of South America. The group begins with Saba on the north, and ends with Grenada on the south, near the large island of Trinidad. In this group lie the islands of Martinique and St. Vincent. The islands appear from the sea like mountain peaks, and geologists tell us that they are merely ancient ash-heaps over which time has weathered a soil and moisture has nursed a luxuriant tropical vegetation. On all of the larger ones there are evidences of their volcanic origin in the form of craters and boiling springs; but, with the exception of St. Vincent, none of them seemed to have suffered from any severe eruptions since they were

ST. PIERRE, MARTINIQUE, BEFORE THE ERUPTION.

discovered four hundred years ago; and to such an extent did the inhabitants of Martinique consider themselves as enjoying immunity from such disturbances that they spoke of Mont Pelée, which overshadowed them at a height of 4,428 feet, as an extinct volcano. St. Vincent's volcano, La Soufrière, erupted in 1812, and Caracas, the capital of Venezuela, was destroyed about the same time, when the entire city was shaken down and 10,000 people lost their lives. This fact merits attention because about three months previously to the recent eruption of La Soufrière Caracas and the country about it suffered from considerable seismic perturbation. In both instances the disturbances in the northern part of Venezuela preceded the eruption of the St. Vincent volcano. La Soufrière mountain rises to an altitude of 3,500 feet. Previously to the recent eruption it had two craters, known as the old and the new. The first was 3 miles in circumference and 500 feet deep, and was separated from that which was known as the new crater, formed in 1812, by a ridge of igneous material. This crater was half a mile in diameter, with a beautiful lake at the bottom, walled in by rocky cliffs to a height of 800 feet, covered with verdure, and fringed over the top with a growth of dense forest.

The first news of the outburst of either of these island volcanoes to reach the United States was a despatch of May 6 from St. Thomas, W. I. On the same day severe earthquake shocks were reported from Spain at Barcelona, Saragossa, Irun, Tafalla, and Murcia. At the last-named place the cathedral, a convent, and several houses suffered damage. At Alberique, in Valencia, houses were destroyed and a school-building and a church suffered severe damages. The disturbances dislodged great masses of rock in the Fuen-Santa mountains, and similar shocks were reported from Bordeaux, Bayonne, Pau, and other places in that region. On May 9 the London Times published a despatch from the West Indies saying that the Martinique volcano had destroyed St. Pierre on the day previous, and that the steamer Roddam had returned to St. Lucia at 5 P. M. from that city, almost a total wreck from fire, with 17 of her crew dead and the survivors badly burned. The captain reported that he had barely been able to make his escape from the harbor of St. Pierre, and that the Quebec steamer Roraima was lost with all the crew in the harbor, with the rest of the shipping. May 10 a fuller report was given of the terrible disaster. The French cruiser Sachet attempted to make a landing at St. Pierre, but was forced to desist, owing to the terrible heat. The crew reported dead bodies lying all about the wharves and shore, and 30 survivors, more or less burned, were picked up from the sunken vessels in the harbor. Consul L. H. Aymé reported to the State Department from Guadeloupe that 18 vessels were burned and sunk, including 4 American vessels and the steamer Roraima. Among those lost was the cable-repair steamer Grappler. The Roddam carried the first news of the disaster to St. Lucia, whence the outside world was informed, the cable from Martinique having been interrupted since Sunday, May 4. The Colonial Office at London received a despatch dated May 8, announcing the outbreak of the St. Vincent volcano, La Soufrière, from the Governor of the Windward Islands, then at Kingston. A later despatch from St. Lucia announced that cable communication was broken off with St. Vincent, and a despatch from Bridgetown, Barbados, more than 100 miles away to the east, said that loud reports like cannonading had been heard in the direction of St. Vincent, and

that volcanic dust from the volcano had been falling all over the island in great quantities. Orders were immediately cabled by the British Government to the cruiser *Indefatigable* at Trinidad to go at once to the relief of St. Vincent. A subsequent cablegram from Barbados reported the continued rumbling sound resembling artillery fire in the direction of St. Vincent, and at 5 P. M. darkness set in, with thunder and a downpour of dust. It was also reported from Pointe à Pitre, Guadeloupe, that La Soufrière had been in a state of eruption for nine consecutive mornings.

The Secretary of the Navy cabled from Washington to Capt. McLain, of the cruiser *Cincinnati*, at Santo Domingo city, to go with the utmost haste to Martinique and render such assistance as was possible, and at the same time he ordered the commander of the Brooklyn Navy-Yard to prepare the *Dixie* for sea as soon as possible. The State Department ordered Consul Aymé, at Guadeloupe, to go to the scene of the great disaster to report thereon, and inform the United States of the help needed.

A definite report was received from St. Vincent on May 11, which said that on the 5th a loud explosion was heard proceeding from La Soufrière crater, and that the water forming the lake within ascended in a stupendous cloud of steam and exploded high in the heavens. Explosions and noises continued till May 7, when the old crater, 3 miles in circumference, and the new crater, both belched forth smoke and stones, forcing the inhabitants of Wallabou and Richmond valley, beneath the volcano, to fly to Chateau Belair for refuge. At midday the craters ejected enormous columns of steaming vapor, which, rising 8 miles high, expanded in the form of huge cauliflower through which flashed streaks of fire resembling lightning. Later the mountain rid itself of a mass of molten lava, which flowed over its sides, forming 6 red-hot streams down its slopes. About 2,000 lives were reported lost, whole families were exterminated, and the bodies were left unburied.

The United States took the lead among nations in helping France in the work of rescue and relief of her unfortunate citizens, and both the executive and the legislative department of the Government prepared for the work. A resolution passed the Senate on Saturday, May 10, under

RUINED CHURCH IN CHILPANCINGO, MEXICO.

suspension of the rules, providing for an appropriation of \$100,000 for the relief of the citizens of the French West Indies, and authorizing the President to purchase provisions, clothing, medicines, and other supplies and to tender them in the name of the United States Government to the French Government for the relief of the af-

slicted people; and the Secretary of War was authorized to use such vessels as might be necessary for the quick transportation of the articles. This bill was held up in the House by being re-

Dr. E. O. Hovey, of the American Museum of Natural History, also went on the *Dixie*, as well as newspaper and magazine correspondents, photographers, and artists. The *Dixie* reached

A WEALTHY CITIZEN'S RESIDENCE, QUEZALTENANGO, GUATEMALA, RUINED BY THE EARTHQUAKE.

ferred to the Committee on Appropriations; but when the President informed Congress on the following Monday in a special message that the French Government had asked for relief, and urging immediate action, also recommending that the appropriation be increased to \$500,000, the House increased the Senate appropriation by \$100,000 (on May 12). The War Department at once ordered the *Dixie* to load the necessary stores, and by direction of the President, Secretary Hay cabled Ambassador Choate at London to express to the British Government the sympathy of the President and the people of the United States in the affliction that had befallen the island of St. Vincent, and our desire to share in the work of relief and rescue.

The *Dixie* sailed from Brooklyn in the night of May 14, at 9 o'clock, bearing the relief expedition to the unfortunate islands, including a special scientific expedition to investigate the regions of the disturbances under the auspices of the National Geographical Society. Its members consisted of Prof. Robert T. Hill, of the Geological Survey; Prof. Israel C. Russell, Professor of Geology in the University of Michigan; Comd. C. E. Borchgrevink, antarctic explorer; Dr. T. A. Jaggar, of Harvard University; Mr. G. C. Curtis, of Cambridge; and Dr. Angelo Heilprin, president of the Philadelphia Geographical Society. This was one of the most important and best equipped expeditions ever sent out to study volcanic action.

Fort de France, Martinique, on the morning of May 21, and while the explorers proceeded to St. Pierre in a smaller boat she unloaded a part of her supplies. A desolate scene met the gaze of those who debarked among the ruin and piled-up *débris* and volcanic ash on what was once the beautiful city of St. Pierre. There was not a person in sight or a living thing among all this ruin, except where a squad of French soldiers were busy far up the slope piling up the dead to be cremated. Prof. Russell estimated that about 20 square miles had been devastated on the western slope of Mont Pelée, and in all that space not a living thing was left. Fire followed the hurricane of hot vapor, and a rain of rock dust buried what the fire left uncovered. Never in the history of man had such complete destruction been wrought on an area of equal size. As to the precise nature of the blast that destroyed the city, the opinions of the commission seem to differ. Prof. Russell favors the opinion that the general cause of death was a blast of steam charged with hot dust. The people on the border of the devastated area who escaped, and who in some instances were injured, suffered from burns inflicted by hot dust that adhered to the skin. Witnesses who were on the *Roddam* in front of St. Pierre at the time of the disaster say that when the eruption occurred the vessel was struck with such force by the material ejected that she was nearly capsized, and at the same time she seemed to be enveloped

in a whirlwind of fire. It appeared to them that what burst from the volcano was highly heated gas, carrying with it immense quantities of white-hot volcanic ash. After the vessel reached the harbor of Castries, St. Lucia, a survivor gave the following account of his experience: "No human being could stand against that terrific deluge of molten ashes. Even those who reached the cabin or the hold did not escape, almost every nook and cranny of the ship being filled with the blazing dust. Capt. Freeman sought shelter in the chart-room, but, the port-holes being open, the fire streamed in and burned him horribly on the face and hands. The heat was awful, for the mass of ashes that poured into the ship all aglow retained their heat, and it was only with the greatest difficulty and caution that it was possible to move about."

From such testimony as could be gathered, it appears that a fissure opened on the side of the mountain overlooking the city and belched out lava, superheated steam, and poisonous gases. This rolled in a great cloud like a hurricane down upon the doomed city, and in three minutes, as estimated by some, every living creature, except the man in the underground cell, was dead.

From Martinique the Dixie proceeded to St. Vincent, where more of her supplies were issued to those who had been driven from their homes. Here not so many lives were lost as in Marti-

have been no hurricane blast of steam or gas charged with burning dust sweeping down upon any part of the island, as in Martinique. The words of a survivor show how most of those who were killed died: "A dark cloud came from La Soufrière about 4 p. m., and a fine leaden powder filled the air, penetrating the doors and windows of the houses. People breathed it, and it was so hot it burned the flesh. The people in the houses began to cry out and struggle, shouting for water; and, placing their hands on their stomachs, they gasped, fainted, and died. The hot powder burned into the flesh wherever it touched."

The eruptions appear to have been heard at Maracaibo, Venezuela, 830 miles away. The United States consul at that place reported that on the morning of the eruption of Mont Pelée he heard a noise as of cannonading. Eruptions of both volcanoes continued through the summer. Soufrière was reported in eruption on Oct. 8, causing even greater distress in the island than that which prevailed before. Large areas of land that were considered outside the volcanic zone were buried in sand. Dust continued to fall in Barbados, with a very strong smell of sulfur, for several days, producing a deposit about an eighth of an inch in depth. Again on Oct. 15 and 16 La Soufrière increased its area of destruction.

The eruption of Mont Pelée continued through August. On the night of Aug. 28 a magnificent

BULL-RING IN QUEZALTENANGO, GUATEMALA, RUINED BY THE EARTHQUAKE.

nique, as there was no large city within the zone of destruction, and those who were within the zone, unlike the people of Martinique, sought refuge at the first mutterings of the volcano. Nevertheless, the destruction was terrible, due to dust, lapilli, and stones, which rained down upon everything while yet hot. But there appears to

display of lightning was seen issuing above the mountain. It seemed to shoot out from the mountain in all directions, zigzagging and flickering flashes alternating with or accompanied by reddish globes of fire, which ascended and exploded and shot out stars and long rays. Two days later there was another disastrous eruption of

Pelée, accompanied by an enormous discharge of steam and hot water, even greater than in the case of the earlier eruptions. As there were no large rivers or lakes to supply water in sufficient quantity to produce the phenomenon, it is supposed that the sea got in by some fissure and, reaching the fire feeding the volcano, was blown out at the top. Much alteration was discovered in the bed of the sea near the volcanoes; the cable-repair ship reported that the depth had increased in some places a half-mile. Unprecedented difficulties were encountered in the endeavor to repair the cables between St. Lucia and St. Vincent, and St. Lucia and Grenada. The section between St. Lucia and St. Vincent was buried in mud. On the night of Aug. 30 Mont Pelée again sent out one of its extraordinary explosions of hot water and red-hot dust, and the pretty little village of Morne Rouge, which had barely escaped the St. Pierre disaster, was engulfed and 1,500 persons were killed.

On Aug. 27 Gen. Chaffee reported from the Philippine Islands a series of earthquakes in the Lake Linao country in the Moro section of the island of Mindanao. Up to that time 400 shocks had been felt since Aug. 21. Severe earthquake shocks were also reported from the island of Guam. A volcanic eruption was also reported in August from Tori Shima, and a vessel that was sent out to investigate the disaster in that island returned to Yokohama on Sept. 1, and reported that Tori Shima was in a state of utter ruin, and that its population of 150 had all been destroyed. The island was found buried beneath the *débris* of a volcanic eruption that was still in progress. The disturbance was distinctly visible from a distance of 25 miles. The vessel drew as near the island as possible, but at the distance of about a mile it was thought dangerous to go any nearer. Tori Shima is in 30° 28' 26" north latitude, 140° 14' 20" east longitude, and rises 1,200 feet above sea-level. It is about 1½ mile long by 1 mile wide. About a mile south of Tori Shima a submarine volcano was reported sending up huge columns of mud and water to a height of about 600 feet at intervals of ten and fifteen minutes.

On Oct. 30 a cable despatch to Castle Brothers, coffee importers in San Francisco, announced the eruption of one of Guatemala's many volcanoes, Santa Maria. Only meager details were given, but the despatch said that the entire coffee zone of western Guatemala had been buried in ashes, and that the flames from the volcano threatened every living thing in the vicinity. This volcano is between Retalhuleu and Quezaltenango, and is about 50 miles from the Pacific coast, near the center of the earthquake zone that destroyed those towns in April last. The volcano had been quiet for many years. Additional details from Guatemala were that it began to erupt on Oct. 25, and continued active till Nov. 9. The country within 30 miles was rendered a desolate waste, and every vestige of life was destroyed. The loss of human life was placed at 7,000, mostly Indians, and 10 villages, with populations varying from 50 to 5,000, were wiped out, the Indian huts being buried beneath tons of volcanic *débris*. Porfirio Herrera, who owned a valuable coffee plantation 7 miles from the volcano, reported that when the eruption ceased, on Nov. 9, he went to his plantation and found it buried 11 feet under ashes, mud, and sand. Everything was in ruins, the residence was destroyed, and of his 112 laborers, all but 7 had perished. These happened to be away when the eruption began and they took refuge in a cave.

On Dec. 5 it was reported at Honolulu that the inhabitants of Savii, the most southern of the Samoan group, had been removed to other islands of the group, owing to a volcanic eruption and continued excitement of the people, who feared a repetition on a smaller scale of the Martinique disaster. Earthquakes shook the little island with great violence and were of exceptional duration. Great stones were sent rolling down the volcano's sides, blocking roads and damaging groves and fields. Great yawning chasms opened in the earth, extending long distances and to an unknown depth. Panic-stricken, the entire population deserted the vicinity of the mountains and fled to the seashore, where they were picked up by the German authorities, who ordered the evacuation of the island till such time as the disturbances should subside.

EAST AFRICA. The strip of coast over which the Sultan of Zanzibar formerly exercised sovereign rights was leased by him to Germany, Great Britain, and Italy, and these three powers subsequently made agreements dividing among themselves the Hinterland as far as the borders of the Congo State and the equatorial provinces of Egypt. German East Africa extends from the Umba river southward to the Rovuma river, which is the northern boundary of the Portuguese possessions on the east coast. British East Africa extends from the Umba northward to the Juba, where the Italian sphere begins, and in the interior borders on Abyssinia. Zanzibar itself was declared a British protectorate in 1890.

German East Africa.—The German protectorate has an area estimated at 384,180 square miles and is supposed to have a population of 8,000,000. It is divided into 9 districts, in each of which is an administrator assisted by a council. At the head of the administration is the Imperial Governor, Graf von Götzen, who resides at Dar-es-Salam. A decree was issued in November, 1901, for the mitigation of slavery and its ultimate abolition. The military force consisted in 1901 of 176 German officers and sergeants and 1,692 native troops, the police force of 20 German officers and 570 Askaris. The number of Europeans on June 30, 1900, was 1,139, of whom 872 were Germans. Native planters cultivate bananas, corn, and pulse. German settlers have planted coconut-palms, coffee, vanilla, tobacco, cacao, rubber-trees, and various fiber plants. Many tropical plants have been tried in the Government experiment stations, and new breeds of cattle have been introduced as well as asses, mules, and camels. The natives raise goats and some cattle, hogs, and sheep. Dar-es-Salam and Bagamoyo have about 13,000 inhabitants each; Pangani, Saadani, and Kilwa, 10,000; Lindi, Mikindani, and Tanga, 5,000. A railroad from Tanga to Muhesa, 54 miles, has been continued to Mombi, 28 miles farther, and thence to Korogwe, through which pass the two main trade routes to the lake country. Another will run from Dar-es-Salam to Mrogoro, and a telegraph-line to Kilossa. The seaports are connected with each other by telegraph-lines and with Zanzibar by a cable. The expenditure for 1903 is estimated at 9,601,496 marks, of which 2,186,296 marks are covered by the estimated local revenue, and 6,415,200 marks are contributed by the Imperial Government. The total value of imports in 1900 was 11,430,500 marks. The value of exports was 4,293,600 marks. Imports of provisions were 776,600 marks in value; textile goods, 3,649,700 marks; hardware and iron manufactures, 1,897,300 marks; rice, 1,353,200 marks. Rubber was exported to the amount of

1,058,700 marks; grain, 373,375 marks; coffee, 274,800 marks.

German enterprise is mainly in the hands of the German East Africa Company, founded in 1890 with a Government grant of 6,500,000 marks. The plantations of the company are constantly being extended at an outlay exceeding the annual sales of produce. The company has the coinage privilege, and makes a small profit out of the difference between the cost of silver and the nominal value of the rupees and half and quarter rupees coined. The privilege of mining in the stream beds of the East Africa Protectorate has been reserved to the Government. German merchants who formerly had agencies in East Africa lost through giving credit to Arabs. The trade of the interior has fallen into the hands of Greeks, Arabs, and Banians. Labor is abundant in the German protectorate at rates which the Government has fixed that are twice as high as those paid on the British side of the border. The pay of the native soldiers and Soudanese in the German military force is equally liberal. The roads in the German protectorate, one from Bagamoyo through Dar-es-Salam to Tabora, thence branching off to Muanza on the Victoria Nyanza and Ujiji on Lake Tanganyika, another from Kilwa on the coast to Withaven on Lake Nyasa, are the best in central Africa. The Tabora route to the two northern lakes has been selected for a Government railroad or one with a Government guarantee.

British East Africa.—The British East Africa Company, provided with a royal charter from the English Government, took possession of the coast north of the Umba, leased for fifty years from the Sultan of Zanzibar, as far as Kipini, which was recognized as the northern limit of the Sultan's dominions on the mainland. The interior was claimed as a British sphere and conceded as such in the Anglo-German agreement of Nov. 1, 1886, and the supplementary agreement of July 1, 1890. An agreement was made with Italy in 1891 conceding the region north of the Juba river as an Italian sphere of interest. The British East Africa Company, having occupied Uganda and the countries beyond as far as the Semliki and becoming involved in warfare with the natives, resigned its responsibilities in 1893 into the hands of the Imperial Government, which proclaimed a British protectorate over Uganda on June 19, 1894, and over the region between the coast and Victoria Nyanza on June 15, 1895. The latter region, the *British East Africa Protectorate*, has an estimated area of 280,000 square miles and a population estimated at 2,500,000, including 25,000 British Indians and 450 Europeans and Eurasians. The British agent and consul-general at Zanzibar is Commissioner and consul-general having control of the administration. The dwellers are Arabs and Suahelis. Parts of the interior are inhabited by Bantu negro tribes, other parts by Masais, Somalis, and Gallas. Mombasa, the seat of the local administration, has a population of 27,000. The revenue in 1901 was £64,750, and the expenditure £157,886. The value of imports was 6,662,131 rupees, and of exports 1,259,385 rupees. Banian merchants carry on the trade. A duty of 5 per cent. is levied on imports under the Brussels act. The Indian code of law has been adopted, modified by local customs. Domestic slavery is legal on the coast strip leased from the Sultan of Zanzibar; elsewhere it is prohibited. There is a military force of 1,000 Soudanese, Suahelis, and Masais, known as the East African rifles, and 300 Soudanese besides; the police force numbers

650. The exports are ivory, rubber, cattle, goats, grain, gum copal, and hides. Cotton cloth is imported from England and India, and the only other considerable imports, except provisions, are brass wire and beads for barter with the natives of the interior. The protectorate embraces Seyyidieh, the 10-mile strip leased from the Sultan of Zanzibar; Ukamba, comprising Teita, Kitui, Masailand, Ulu, and Kenia; Tanaland, with Lamu for its capital; and Jubaland, the capital of which is Kismayu. The British Government in 1902 made grants in aid of £93,000 to the British East Africa Protectorate and £172,000 to Uganda, and contributed £60,000 to Somaliland and £50,000 to British Central Africa. Under the Uganda Railway act £870,000 were spent in the year ending March 31, 1902, on the railroad, the lake end of which was in Uganda, but in April, 1902, the boundary of the East Africa protectorate was moved so as to include all the country between the lake and the ocean.

Slavery still exists in the coast strip under sanction of the law, the British Government having refused to abolish the legal status of slavery, although the Sultan of Zanzibar was persuaded to do so within his own remaining dominions, the islands of Zanzibar and Pemba. In Pemba, where there were 25,000 negro slaves on the clove plantations of the Arabs, 5,000 have obtained emancipation under the decree of April, 1897, which enables any slave to go before a magistrate and obtain emancipation papers by declaring his wish to be free. Of late very few have sought their freedom, only 240 in 1901. The introduction of fresh slaves into the islands or into the coast strip, now a part of the East Africa Protectorate, has been forbidden since 1896. Nevertheless, slaves have been brought in or illegally held by the Arab planters, who have not been restrained by the authorities. Bishop Tucker asserts that 90 per cent. of the slaves are held in illegal bondage. Under the social customs and the regulations in force as to freed slaves the condition of a freeman is worse than that of a slave. He loses the regard and protection of his master and the society and companionship of his fellows, and is left alone in the world. The Arabs allow these freedmen the use of a house and patch of land if the latter will work half the time on their plantations, and thus they get their land cultivated by freedmen as well as by slaves without paying wages. Under the native laws a slave has rights against his master for maintenance, care in sickness, and other matters, which he forgoes when he obtains his freedom. The slaves in Zanzibar and Pemba are generally so comfortably off and some of the freed slaves so much worse off than they were before that the desire for emancipation no longer exists, those who were ill treated having already obtained their freedom in most cases. The fact that any slave who is ill treated can claim his freedom operates to alleviate the condition of the mass who remain in slavery in the immediate dominions of the Sultan. In the 10-mile strip of the mainland, where domestic slavery can be lawfully maintained, there is no such palliating check. Beyond the 10-mile strip slavery is not legal, though it exists where the Arabs have plantations, and the buying and selling of slaves still goes on in many parts of the East Africa Protectorate.

The protectorate proclaimed in 1894 over Uganda and the neighboring countries has been extended since 1896 until it embraces all the British sphere west and north of the East Africa

Protectorate, being bounded by the parallel of 5° of north latitude on the north, by the meridional line passing through the middle of Lake Rudolf, the parallel of 1° of north latitude and the German frontier on the south, and the frontier of the Congo State on the west. The eastern province is to be transferred to the East Africa Protectorate. The estimated area of the Uganda Protectorate with its present limits is 140,000 square miles. Uganda proper is ruled under British direction by 3 native chiefs in the name of a Kabaka, or King, Daudi Chua, the infant grandson of Mtesa. Other districts are governed under native laws by native rulers more independently of British control, although in 11 out of 18 districts British supervision is recognized and the position and revenues of the kings are regulated by treaty. The British Commissioner, consul-general, and commander-in-chief of the forces is Lieut-Col. James Hayes Sadler. Uganda proper has a population of about 1,000,000, the majority of whom are Christians. The Eastern, Rudolf, and Central provinces, and the Nile province, which extends from the Victoria Nyanza northward as far as Lado, the southern limit of the Egyptian Soudan, are inhabited by Masai and Soudanese, and the Western province by Bantu and Soudanese and some tribes of dwarfs near the Semliki river. Including the kingdom of Uganda, the total population is estimated at 4,000,000. The military force under the commander-in-chief numbers about 4,000 men, consisting of a native battalion, the remnant of the Soudanese rifles brought into the country by the British East Africa Company, the rest having mutinied and returned to the Soudan, an armed native constabulary, bodies of native levies, and a battalion of Indian troops who volunteered for native regiments in India to serve three years in Uganda after the mutiny of the Soudanese troops. The native battalion of African rifles consists of 9 companies under 25 British officers. Another battalion of 600 men from the Central African Protectorate, which served in the Ashanti war and was afterward stationed at Zomba, was held in readiness to serve in Uganda if needed. An armed steamer on Lake Victoria and 2 steam-launches, with some sailing vessels, form an efficient naval force. The seat of the British administration is Entebbe, which is the terminus of the Uganda Railroad. This railroad was completed on Dec. 19, 1901, to Kisumu and Port Florence, on the lake. The length from Mombasa to Port Florence is 583 miles. The British Government built the line at a cost of £4,815,600. Ivory, rubber, and cattle are exported. Germans, Englishmen, Bombay Banians, Persians, and Arabs carry on the trade. The natives of Uganda pay a hut-tax and a tax on firearms. The total local revenue for 1903 is estimated at £60,000. Roads for wheeled traffic are being made through Buddu province and from Entebbe, on Lake Victoria, to Butiaba, on Lake Albert. The hut-tax is levied through the agency of the native regents and chiefs who retain a share of it for themselves. In case the people refuse to pay or are incited to resistance by the head men, who are deprived of the imposts they formerly levied, the authorities will not resort to extreme measures to collect the tax. The natives are encouraged and trained to grow cereals, vegetables, and fruits, to domesticate useful animals, and to collect rubber and other wild products. Mining and land regulations have been framed with a view of attracting capital and white settlers, though no promise of Government assist-

ance is held out to intending settlers. The new railroad is expected to develop a considerable external commerce. At some future time the Nile route will be opened by making a navigable channel from Nimule to Gondokoro, and then there will be a double outlet for the products of Uganda and the adjacent countries. Although the revenue is increasing, it can not be expected to meet the expenditure for years to come. There are several regions that are suitable for colonization by whites. Besides the extensive Nandi country, sparsely inhabited by a turbulent people, which lies northeast of Lake Victoria and has been detached from Uganda and annexed to the British East Africa Protectorate, there are districts between the Victoria and Albert lakes and on the slopes of the Ruwenzori range where white families could live and rear their children, but none such below an elevation of 5,500 feet. There are large tracts suited to agriculture and others where cattle can be reared, and horses in the areas free from the tsetse fly. Regions unhealthful for Europeans include what are now the productive parts of the protectorate, thickly peopled by races representing all the types found in Africa—Hamitic, Semitic, Bantu, negro, pygmy, and their intermixtures, and some of these are capable of civilization and industrial development if their prospects are not marred by injustice and misrule.

Major C. Delmé Radcliffe, who had civil and military control in the Nile province, conducted in 1901 an expedition into the Lango country to reduce the people to subjection and capture the remnant of the Soudanese mutineers who had settled among them and formed with the chiefs the pact of blood brotherhood. The mutineers with their Lango allies carried on raids as far as Acholi and entered into a league with Rajumba and other rebels in Unyoro, who persuaded the natives that Kabarega, their king, would return. When the British officers with their force of loyal Soudanese and Baganda troops entered the Lango country they found that some of the tribes were on bad terms with the mutineers and the chief who had received them, Obokhe by name. Others could be induced to take sides with the British if they could be freed from the obligations of blood brotherhood. The English doctor invented a charm that broke the spell, which he accomplished by making them thoroughly sick by an injection of morphine in the cicatrix, followed by nauseous doses. Since the capture of Mwanga and Kabarega none of the British expeditions had been thorough enough to disturb the Soudanese rebels and the Lango tribes that befriended them. When Major Radcliffe began his operations they offered a strong resistance, which they were encouraged to continue when smallpox broke out among the Government troops. The British persisted, however, and scoured the country until they had killed or captured nearly all the mutineers and made a prisoner of the Lango chief who protected them, which they were enabled to do by the active aid of three other native chiefs and a force of native levies that operated from the southeast, despatched by Sir Harry Johnston, who as special commissioner was examining the region west of M. Elgon. The operations lasted nearly six months. As in the earlier pursuit of the mutinous Soudanese, the Government had to rely mainly on the Soudanese troops that remained loyal. In 1902 many of the troops of the protectorate were stationed in Unyoro and near the Semliki and toward the German frontier, which was delimited by Major Radcliffe and

Major R. G. T. Bright and German commissioners. Major Bright and Major H. H. Austin in 1901 conducted an expedition from the Nile up the Sohat river, and thence overland through the Rudolf province of Uganda, to which the Abyssinians lay claim, to the British post on Lake Baringo, losing in the journey three-fourths of their Soudanese soldiers and attendants, as none of the tribes of the disputed region would furnish them with food.

The railroad has wrought great economical changes in the country through which it runs and in Uganda. Where wire, beads, and cloth were used in exchange rupees are now current. The journey from Mombasa to Port Florence takes two days and a half, the steamer journey of 148 miles to Mengo one day more. The caravan journey occupied seventy days. Suahili is spreading as the language of commerce and general intercourse. There are 90,000 Christian converts in Uganda and 90,000 children in the mission schools. The route of the railroad through the British East Africa Protectorate is mountainous, rising to 7,700 feet above the sea 350 miles from the starting-point, falling to 6,000 feet in the next 75 miles, rising again to 8,300 feet in 65 miles, and finally descending to 3,700 feet at the lake terminus. Little unskilled and no skilled labor could be found in the country, and this necessitated the importation of 20,000 laborers and mechanics from India, for whom supplies had to be brought from India and Great Britain, and in the dry tracts water was transported from 20 to 60 miles. The railroad was the only means of transport, since pack animals could not live in the country, owing to the tsetse fly. The workmen suffered from fevers and from ulcers caused by jiggers, and in some parts they were frightened from their work by man-eating lions. The maximum grade on the line is 1 in 50; the sharpest curves have 800 feet radius.

The sultanate of Zanzibar, comprising the islands of Zanzibar and Pemba, was declared a British protectorate in 1891. The Sultan, or Seyyid, in the beginning of 1902 was Hamud bin Mohammed bin Said, who was set up by the British on the death of Seyyid Hamed bin Thwain on Aug. 27, 1896. The Sultan receives an allowance of 195,000 rupees from the public revenue for the maintenance of his court and harem, and no expenditure can be incurred without the consent of the British agent and consul-general, Sir C. N. E. Elliot. The military and police force of 900 men is commanded by Gen. A. E. Raikes. The Prime Minister is A. S. Rogers, appointed in November, 1901. A duty of 5 per cent. in aid of the suppression of the slave-trade was imposed from Oct. 1, 1899, previous to which date Zanzibar had been since Feb. 1, 1892, a free port. The legal status of slavery on the islands was abolished on April 6, 1897. The area of Zanzibar is 640 square miles; of Pemba, 380 square miles. The population of Zanzibar is about 150,000; of Pemba, 50,000. The foreign population includes about 50 English, 40 Germans, and smaller numbers of American, Greek, French, Italian, and other traders. The native population, aside from about 7,000 East Indians and 10,000 Arabs, consists of negro slaves and ex-slaves. The town of Zanzibar has about 100,000 inhabitants. The revenue is derived from customs and a tax on produce. The value of imports in 1900 was £1,116,041, and of exports £1,167,794, including only the commerce with foreign countries. The imports of cotton goods were valued at £255,720, and exports at £264,701; imports of rice at £159,353; imports of ivory at £94,817,

and exports at £115,354; imports of grain at £33,482, and exports at £98,351; imports of groceries at £54,326, and exports at £55,168; imports of kerosene at £37,102; exports of cloves at £158,148. Cloves are the chief product. The tonnage entered in 1900 was 348,405 tons. The value of the trade with different countries in 1900 is shown in the following table:

COUNTRIES.	Imports.	Exports.
British India.....	£405,902	£123,123
German East Africa.....	180,628	437,811
Great Britain.....	106,400	106,165
United States.....	60,781	81,477
British East Africa.....	72,507	101,530
Germany.....	67,331	35,592
France.....	23,560	55,907
Belgium.....	11,066

Sultan Hamud died, and Seyyid Ali, his minor son, was on July 20, 1902, proclaimed his successor and A. S. Rogers was appointed regent until the new Sultan attains the age of twenty-one.

British Somaliland, on the Gulf of Aden, formerly a dependency of Egypt, was declared a British protectorate in 1887, delimited by agreement with Italy in 1894, and in 1897 an arrangement was made with the Emperor of Abyssinia by which 7,000 square miles were conceded to him. The present area is about 68,000 square miles. The revenue in 1901 was 334,858 rupees; expenditure, 389,557 rupees. The value of imports at Berbera and Bulhar in 1901 was 2,838,776 rupees, and of exports 2,170,403 rupees. At these ports a duty of 5 per cent. is levied on imports and a 3-per-cent. duty on exports. At Zeyla, where the import duty is 5 per cent. on some articles and on others from 1 per cent. up, and the export duty is only 1 per cent., the imports were 3,070,577 rupees and the exports 3,289,919 rupees in value. Cotton goods, rice, and dates are imported. The exports are hides and skins, cattle, sheep, gum, and ostrich-feathers. The administration of the protectorate was left with the Indian officials of Aden till 1898, when it was taken in hand by the Imperial Government.

Col. Swayne, who in 1901, cooperating with an Abyssinian army, carried on an indecisive campaign against the enemy to the British in Somaliland, Mohammed Abdullah, called the Mad Mullah, resumed operations in the spring of 1902. When the British force concentrated at Burao the Mad Mullah gathered his followers, who were increased by the hitherto neutral eastern tribes, against which Col. Swayne led a flying column in May. The combined forward movement followed. The friendly tribes gave aid to the British. The Mad Mullah retired as before into a waterless region, the Haud country. A mounted column under Col. Cobbe seized the camels and sheep of some of the Mullah's allies. Other animals were captured by a second column under Major Phillips. The main column endeavored to get between the Mullah and the tribes that supported him. The British force marched and countermarched on short rations, but were not able to overtake the enemy. The Somalis on their fleet ponies always evaded a fight, although the British formed a camel corps to enable them to move faster. On Oct. 6 the British main column, advancing from the zareba, or fortified camp, against the Mullah at Mudug, was surprised while marching through the dense jungle. The native levies were rallied, and they beat off the tribesmen, only to be attacked on the other flank. The transport and the firing-line were

thrown together in confusion and the artillery was driven back. Many camels were captured by the Mullah, and one of the Maxim guns. Col. Swayne finally checked the Mullah's horde by a gallant charge and retook some of the camels. Major Phillips and another officer and 50 men were killed and about 100 wounded. Col. Swayne retreated to Erego and called for 600 reliable men to reinforce his command, numbering about 3,000, mostly Somalis, whose loyalty and confidence in their leaders were shattered owing to the mishap. A much larger development of force was required to awe the Mullah and the hostile Somalis, who now had allies in the Italian protectorate. Col. Swayne was compelled to continue his retreat northward from the Italian border into the center of British Somaliland. The rainy season was beginning, in which the Somalis, as well as the British, could move more freely. None of the sheikhs or mullahs of Somaliland, of whom there are about 15, each at the head of a village of cultivators, has shown hostility to Europeans until the fanatical Mohammed Abdullah began to preach a holy war against Christians. His supporters came from the nomadic Somalis, who rear sheep, goats, cattle, asses, horses, and camels, and are addicted to plundering. One tribe often sends out a party of horsemen to carry off the live stock and grain of a neighboring tribe, but they never attack the settlements over which the pious mullahs preside. White traders and hunters have usually been respected until the troubles arose in British Somaliland which have almost put a stop to the commerce of Zeila, Berbera, and Bulhar. The Somalis are an active and intelligent race, fine horsemen and skilful fighters with native weapons, proud of their Arab blood, regarding as an inferior race the pure Gallas who live to the west of them. The force that the Mad Mullah led against the British was 12,000 strong at the end of 1901, and in 1902 he had at least 15,000 followers, many of them armed with rifles.

Italian Somaliland.—The sultanate of Obbia was declared an Italian protectorate in 1889, and the Mijertain Sultan accepted Italian protection for a part of his dominions and agreed not to conclude treaties with other powers regarding the rest. The ports of Brava, Merka, Mogadiscio, and Warsheik and a zone extending 180 miles inland by cession of the Sultan of Zanzibar in 1892 and by agreement with England in 1891 and 1894 were included in the Italian sphere, the total extent of which is estimated at 100,000 square miles, with about 400,000 inhabitants. The agreed boundary between the British and Italian spheres is the Juba river up to 6° of north latitude, that parallel to 35° of east longitude, and that meridian northward to the Blue Nile.

French Somaliland.—The French occupied Obok in 1881 and proclaimed a protectorate over Tajura, Sagallo, and Ambado in subsequent years. France claims also the Bay of Adulis. The area of the French sphere is estimated at 45,000 square miles, with 200,000 inhabitants. The port of Jibouti has 15,000 inhabitants, including 2,500 Europeans. The people of the country are Danakils and Gallas. A railroad to Harar has been built for a distance of 100 miles, and caravans travel at regular intervals between the present terminus and Harar. The imports are grain, provisions, tobacco, beverages, and cotton and silk goods. The exports are ivory, sheepskins, gold, civet, coffee, and gum arabic. The value of imports in 1900 was 5,929,107 francs, and of exports 693,013 francs. The local revenue and

expenditure was 581,000 francs, and the expenditure of France 200,000 francs. The fisheries off the coast are valuable.

ECUADOR, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 32 members, 2 for each province, and a House of Representatives, 41 in number, elected for two years by adult male citizens who can read and write. The President is elected for four years by direct popular suffrage, and the Vice-President, who is called upon in certain contingencies to take the place of the President, is elected for the same term at the succeeding biennial election. The President elected for the term ending Aug. 31, 1905, is Gen. Leonidas Plaza. The Vice-President is Carlo Freile Zaldumbide. The Cabinet appointed by President Plaza was composed as follows: Minister of the Interior, Police, Public Works, and Public Charity, A. Moncayo; Minister of Foreign Affairs, Public Instruction, Worship, and Justice, José Peralta; Minister of Finance, T. Gagliardo; Minister of Fomento, Dr. F. Lopez; Minister of War and Marine, Gen. Nicolo Arellano.

Area and Population.—Ecuador has an estimated area of 120,000 square miles. The population is estimated at 1,271,861. Quito, the capital, has about 180,000 inhabitants; Guayaquil, 51,000; Cuenca, 30,000.

Finances.—The ordinary revenue in 1899 was 7,805,191 sucres, and the expenditure was 6,662,945 sucres for ordinary purposes and 2,234,715 sucres for railroads, wharves, debt, etc., under special appropriations, which left a deficit of 1,271,829 sucres. The total revenue for 1900 was estimated at 8,268,100 sucres and the total expenditure at 8,967,783.

The foreign debt, the payment of which was undertaken by the Guayaquil and Quito Railroad Company, was £671,000 on July 1, 1901. The internal debt, which was 4,580,000 sucres in 1896, has since been increased. The railroad company was merged in the Ecuadorian Association, and the majority of the shares were transferred from English to American holders, who raised the money to continue the railroad as far as Guamote. The cost of completing the whole line was estimated at £200,000.

The coinage law of 1898 adopting the gold standard, which went into operation on Nov. 4, 1900, provided for the coinage of gold condores of 10 sucres, of the same value as the English sovereign. In 1900 100,000 condores were minted. There were in circulation 1,000,000 silver sucres, and 2,000,000 sucres were in the vaults of the banks, which are required by law to hold metallic reserves equal to one-half of the bank-notes issued. There are two banks of issue. The Bank of Ecuador on Jan. 1, 1899, had 2,138,170 sucres of notes in circulation and 1,955,424 sucres of gold and silver in its reserve. The Banco Comercial y Agrícola had 3,522,242 sucres of notes out and a reserve of 1,495,251 sucres, of which 600,000 sucres were gold.

The Army.—The regular army numbers 3,341 officers and men, consisting of 1 brigade of field-artillery, 1 brigade of fortress-artillery, 4 battalions of infantry, 2 companies of light infantry, and 1 regiment of cavalry. The naval force consists of a torpedo-launch and a transport steamer.

Commerce and Production.—The leading product is cacao. There are estimated to be 47,200,000 cacao-trees in the coast provinces, and in 1900 the production was 18,280,000 kilograms. Of vegetable ivory, another valuable product, 19,620,800 kilograms were exported. The export of sugar was 1,733,500 kilograms; of coffee, 2,300,-

000 kilograms. The rubber export was 501,600 kilograms. The forests of rubber-trees have been nearly exhausted, but many trees have been planted in recent years. The Indians wash gold from stream beds, and at Esmeraldas an American company is working with hydraulic machinery, obtaining both gold and platinum. At Zaruma quartz is mined. Silver is also found. Copper, lead, iron, sulfur, and petroleum exist, but are not exported. The total value of imports in 1900 was 13,431,179 sucres; of exports, 15,419,222 sucres. The principal imports are cotton goods, woollens, machinery, and hardware. The export of cacao in 1900 was 10,700,581 sucres; of ivory-nuts, 1,400,793 sucres; of rubber, 1,076,068 sucres; of silver coin and bullion, 349,876 sucres; of Panama hats, 321,367 sucres. Of the total imports Great Britain sent 29 per cent., the United States 25 per cent., Germany 19 per cent., France 9 per cent. Of the exports France took 35 per cent., the United States 20 per cent., Germany 17 per cent., and Great Britain 15 per cent.

Navigation.—The number of vessels in the ocean trade entered at the ports of Ecuador during 1900 was 862, of 55,358 tons; cleared, 850, of 50,651 tons.

Railroads, Posts, and Telegraphs.—A railroad from Duran, opposite the port of Guayaquil, to Chimbo, 65 miles, is being rebuilt and extended to Quito, 20 miles having been completed beyond Chimbo in 1901, leaving 195 miles to be constructed through a fertile country producing cacao, coffee, and sugar.

The length of telegraph-lines is 1,242 miles.

The post-office in 1900 carried 820,000 letters in the internal and 1,809,000 in the international service and 6,347,000 newspapers and packets.

EGYPT, a principality in northern Africa, tributary to Turkey and under the military occupation and the political and financial control of Great Britain. The Government is an absolute monarchy of the Mohammedan type, modified by the law of primogeniture and the introduction of a Council of Ministers, and now subject to the control of the British diplomatic agent. The Khedive, or Viceroy, is Abbas Hilmi, born July 14, 1874, who succeeded on the death of his father, Mehemet Tewfik, Jan. 7, 1892. The heir apparent is Prince Mohamed, born Feb. 20, 1899. The British occupation has lasted since the suppression of the military revolt led by Arabi Pasha in 1882, and since Jan. 18, 1883, an English financial adviser has had the power of veto over financial measures and has generally exercised a decisive voice in all important measures, imposing such as he and his Government consider desirable and preventing the enactment of others that they disapprove. A conference of representatives of the powers, assembled at Constantinople to consider the situation caused by the bankruptcy of the Egyptian treasury, dissolved when England intervened single-handed in Egypt after the signature of a self-denying protocol. England and France previously exercised a dual financial control; but, France having refused to join in the military intervention, Great Britain thenceforward assumed control of the Egyptian Government, giving the assurance, which was reiterated afterward by successive British ministers, that the British troops would evacuate Egypt as soon as Egypt should be able to maintain a firm and orderly Government. The Cabinet of the Khedive, appointed on April 16, 1894, was composed as follows: President of the Council and Minister of the Interior, Mustapha Fehmi Pasha; Minister of War and Marine, Mohamed Abani Pasha; Minister of Public

Works and Public Instruction, Hussein Fakhry Pasha; Minister of Foreign Affairs, Butros Ghali Pasha; Minister of Finance, Ahmet Mazlum Pasha; Minister of Justice, Ibrahim Fuad Pasha. The British diplomatic agent at the beginning of 1902 was Earl Cromer; financial adviser, J. L. Gorst; commander-in-chief of the army of occupation, Lieut.-Gen. R. A. J. Talbot.

Area and Population.—Egypt has an area of 400,000 square miles below Wady Halfa, including the oases in the Libyan desert, the desert region between the Nile and the Red Sea, and the district of El Arish in Syria. The fertile valley and delta of the Nile have an area of only 12,976 square miles. The total population at the census of 1897 was 9,734,405, comprising 4,947,850 males and 4,786,555 females. The foreign population was 112,526, including 38,175 Greeks, 24,467 Italians, 19,557 British, 14,155 French, 7,117 Austro-Hungarians, 3,193 Russians, 1,277 Germans, 1,301 Persians, and 3,284 of other nationalities. The increase in the general population since 1882 has been at the rate of 2.76 per cent. per annum. Of the native population in 1897 over ten years of age 2,049,258 males were employed in agriculture; 532,322 males and 21,496 females in industries; 184,096 males were laborers; 61,577 males and 4,801 females were clerks; 4,072 males and 2,553 females were in the professions; 156,623 males and 2,218 females were engaged in religious work and in teaching, including 2,171 Christian ecclesiastics and Jewish rabbis and 113,438 readers of the Koran, 40,441 students and school children above the age of ten, and 4,934 teachers of all kinds; 29,201 males were in the army or police; 111,665 males and 32,663 females were domestic servants; and 142,089 males and 3,088,673 females were without gainful occupation. The total native population over ten years of age was 6,423,307, comprising 3,270,903 males and 3,152,404 females; under ten years of age, 3,198,524, including 1,612,698 males and 1,585,826 females; total native population, 9,621,831, comprising 4,883,601 males and 4,738,230 females. Of the foreign population, comprising 64,249 males and 48,325 females, 385 males were engaged in agriculture; 25,494 males and 2,371 females were in industries and trades; 1,172 males were laborers; 6,031 males and 148 females were clerks; 1,959 males and 189 females were in the liberal professions; 4,361 males and 2,049 females were ecclesiastics, teachers, or students; 6,850 males were on the public force, including the army of occupation; 1,712 males and 2,683 females were domestic servants; 5,309 males and 30,229 females over ten years of age had no occupation; and 10,976 males and 10,656 females were under ten years of age. Cairo, the capital, had 570,062 inhabitants in 1897; Alexandria, 319,766. Of the total foreign population over seven years of age 74 per cent. could read and write, of the sedentary Egyptian population only 5.8 per cent.

Finances.—The revenue in 1900 was £ E. 11,447,095 and the expenditure £ E. 9,895,224, leaving a surplus of £ E. 1,552,000, of which £ E. 666,000 were paid into the general reserve fund, £ E. 265,000 were paid into the economies fund, £ E. 62,000 were set aside for the sinking-fund, and £ E. 559,000 went to the Egyptian Government. The estimate of revenue for 1901 was £ E. 10,484,000, and of expenditure £ E. 9,822,728. For 1902 the revenue was estimated at £ E. 11,060,000, including £ E. 215,600 contributed from the general reserve fund. The revenue from ordinary sources was estimated at £ E. 10,844,400, of which £ E. 4,708,000 came from the land tax, £ E. 172,000 from other direct taxes,

£ E. 1,000,000 from customs, £ E. 1,000,000 from tobacco, £ E. 477,000 from other indirect taxes, £ E. 650,000 from other taxes, £ E. 207,400 from miscellaneous sources, £ E. 2,200,000 from railroads, £ E. 60,000 from telegraphs, £ E. 130,000 from the post-office, and £ E. 240,000 from other sources. The total expenditure was estimated for 1902 at £ E. 10,850,000, of which £ E. 9,900,279 were ordinary expenditures, £ E. 265,037 conversion economies, £ E. 65,646 the sinking-fund of the guaranteed loan, and £ E. 619,038 the share of surplus paid into the general reserve fund. Of the ordinary expenditures £ E. 255,361 were for the Khedivial civil list, £ E. 2,342,732 for administrative expenses, £ E. 1,047,200 for operating railroads, £ E. 49,922 for telegraphs, £ E. 119,466 for the post-office, £ E. 70,360 for other services, £ E. 448,816 for the Egyptian army, £ E. 84,825 for the army of occupation, £ E. 410,000 for pensions, £ E. 665,041 for tribute, £ E. 37,300 for expenses of the Caisse de la Dette, £ E. 488,866 for the expenses of the consolidated debt, £ E. 208,669 for debts not consolidated, £ E. 250,000 for suppression of the corvée, £ E. 389,721 to cover the deficit in the Soudan, and £ E. 32,000 for a reserve to meet unforeseen expenditure. The expenditure in the Soudan and the accumulation of conversion economies required under the law are unfavorable to a true showing of the financial condition of the Government, while these conversion economies and the arbitrary limit placed upon administrative expenditure, precautions taken for the security of the bondholders, hamper the financial resources of the Government. These provisions the English administrators would like to alter. The result of the accumulation of economies is that the Government buys its own bonds at a premium, and thus aids in maintaining an artificial price to its own disadvantage. If Egypt were not hampered by the peculiar system of accounts and estimates imposed by its international obligations, the estimate of revenue for 1902 would have been £ E. 10,844,000, and of expenditure £ E. 9,900,000, showing a surplus of £ E. 944,000. For 1901 the revenue would have been £ E. 11,944,000, and expenditure £ E. 9,988,000; surplus, £ E. 1,956,000.

The Egyptian debts on Jan. 1, 1901, amounted to £102,714,180 sterling, of which the guaranteed debt of £8,333,000 pays 3 per cent. interest, the privileged debt of £29,393,580 pays 3½ per cent., the unified debt of £55,971,960 pays 4 per cent., the Daira Sanieh loan of £6,117,240 pays 4 per cent., and the domains loan of £2,898,400 pays 4½ per cent. The charges on these debts amount to £ E. 3,851,761 a year, and the total debt charge, including the Turkish tribute, is £ E. 4,399,876. The reserve funds on Jan. 1, 1901, amounted to £ E. 5,997,772, of which £ E. 4,002,302 were economies from conversions, £ E. 1,186,790 the general reserve fund, and £ E. 808,680 the special reserve fund.

The Army.—The Egyptian army had a strength of 18,114 men in 1902, with 134 English officers in the principal commands, 1,610 horses and mules, 1,100 camels, and 150 guns. The commander-in-chief, called the Sirdar, is Major-Gen. Sir Reginald Wingate.

The British army of occupation had in 1902 a strength of 4,500 men. The annual expense to the Egyptian Government to maintain this force is £87,000.

Commerce and Production.—Cotton, sugar, and rice are grown in the summer; rice, sorghum, and vegetables in the autumn; and grain of various kinds in the winter. In Lower Egypt, where

there is perpetual irrigation, cotton, sugar, rice, corn, wheat, and cucumbers and other vegetables occupy the ground throughout the year. In Upper Egypt the land is irrigated at high Nile and one crop of millet or vegetables is obtained except where the canals permit of repeated irrigation and the cultivation of cotton and sugarcane. The reservoir at Assouan and the barrage at Assiout store 1,065,000,000 cubic meters of water, and when the irrigation canals are completed large tracts of new land will be made available for high culture. The cotton crop in 1900 was 6,510,000 kantars of 50 kilograms. The exports of cotton were 4,868,596 kantars, valued at £ E. 13,039,000; exports of sugar, 53,729,309 kilograms, value £ E. 575,496. The total value of merchandise imports in 1901 was £ E. 15,244,939, and of exports £ E. 15,730,088; imports of specie were £ E. 3,085,678, and exports £ E. 2,432,172. Imports of animals and animal food products were £ E. 685,012, and exports £ E. 112,958; imports of hides, skins, and leather and its manufactures were £ E. 219,560, and exports £ E. 90,642; imports of other animal products were £ E. 80,551, and exports £ E. 63,825; imports of cereals and vegetables were £ E. 1,706,352, and exports £ E. 2,649,970; imports of provisions and drugs were £ E. 415,089, and exports £ E. 804,471; imports of spirits and oils were £ E. 812,867, and exports £ E. 19,579; imports of books, paper, and paper material were £ E. 231,051, and exports £ E. 15,132; imports of coal, wood, and wood manufactures were £ E. 2,139,420, and exports £ E. 15,979; imports of stone, lime, glass, etc., were £ E. 407,683, and exports £ E. 1,487; imports of dyes and colors were £ E. 324,710, and exports £ E. 25,524; imports of textiles and textile materials were £ E. 4,642,241, and exports £ E. 11,892,397; imports of metals and metal manufactures were £ E. 1,744,084, and exports £ E. 4,187; imports of tobacco were £ E. 595,621; imports of miscellaneous merchandise were £ E. 880,142, and exports £ E. 18,008. The value of cotton cloth imported was £ E. 2,414,681. The quantity of raw cotton exported was 6,123,350 kantars, valued at £ E. 11,833,277. Of £ E. 14,112,370, the total value of imports of merchandise in 1900, the value of £ E. 12,429,306, and of £ E. 16,766,610, the total value of exports, the value of £ E. 16,486,911 passed through the port of Alexandria. The values of imports from and exports to various countries in 1901 are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	£ E. 5,568,498	£ E. 8,013,911
France and Algeria.....	1,406,435	1,262,524
Turkey.....	2,246,414	312,789
Russia.....	612,346	1,743,305
Austria-Hungary.....	1,051,300	628,408
America.....	315,890	1,016,455
Germany.....	530,368	778,096
India and Australia.....	882,458	107,378
Italy.....	802,156	549,885
Belgium.....	498,768	89,035
China and Japan.....	138,394	114,983
Greece.....	157,075	5,897
British Mediterranean colonies.....	130,708	6,632
Morocco.....	49,236	167
Persia.....	36,844	1,854
Total.....	£ E. 15,244,939	£ E. 15,730,088

Navigation.—The number of vessels in the foreign trade entered at the port of Alexandria during 1900 was 2,830, of 2,375,619 tons, of which 673, of 1,022,834 tons, were British; 109, of 291,643 tons, were French; 129, of 248,875 tons, were

Austrian; 135, of 222,706 tons, were Italian; 1,399, of 175,938 tons, were Turkish; 84, of 166,425 tons, were Russian; 176, of 80,511 tons, were Greek; 35, of 58,459 tons, were German; 26, of 49,436 tons, were Swedish and Norwegian; and 64, of 58,788 tons, were of other nationalities. The total number cleared was 2,784, of 2,364,672 tons, of which 674, of 1,019,908 tons, were British; 110, of 292,076 tons, were French; 129, of 251,587 tons, were Austrian; 136, of 223,134 tons, were Italian; 1,364, of 173,148 tons, were Turkish; 83, of 163,769 tons, were Russian; 169, of 78,024 tons, were Greek; 35, of 58,427 tons, were German; 22, of 42,038 tons, were Swedish and Norwegian; and 62, of 62,561 tons, were of other nationalities.

Railroads, Posts, and Telegraphs.—The Government railroads on Jan. 1, 1902, had a length of 1,393 miles, and private companies owned 780 miles of agricultural railroads. Of the state railroads 958 miles were in the delta and 435 miles in Upper Egypt. The number of passengers carried on the state railroads during 1900 was 12,428,300; tons of freight, 2,950,000; gross receipts, £ E. 2,158,877; working expenses, £ E. 971,495, being 45 per cent. of the receipts; net earnings, £ E. 1,187,382.

The number of letters and postal cards handled by the Egyptian post-office in 1900 was 13,759,000 in the internal and 2,920,000 in the international service; newspapers, etc., 8,061,000 internal and 1,280,000 international; parcels, 197,000 internal and 90,000 international; post-office orders 628,500, value £ E. 17,191,000.

The telegraphs owned and operated by the Egyptian Government have a total length of 2,365 miles, with 9,934 miles of wire. The number of inland telegrams sent in 1901 was 4,250,571.

Internal Affairs.—Egypt under British control is making a slow but appreciable advance in the direction of civilized government. The fiscal system is on a sound basis. In the general administration no radical change is contemplated. The institution of slavery is practically extinct. The *corvée* has been abolished in its oppressive features. The *courbash* is no longer employed as an instrument of government. The judicial system and the organization of the police admit of further improvement, yet already law and order prevail. New prisons and reformatories have been built, and the treatment of prisoners is in conformity with the principles generally adopted in Europe. Hospitals have been established, where the sick receive proper care. The lunatic is no longer treated as a wild beast. Education in all its branches has received a great impulse. The army is well organized and efficient, and all the abuses of the old recruiting system have been swept away. The principal irrigation works have been completed. Means of locomotion by rail and road have been improved and extended. The Government has taken steps to enable the fellahin to shake themselves free from the grip of the money-lenders. The result of the experiment, which has been going on since 1899, indicates that the peasants will not use the advantages offered them to incur fresh loans. The usurers charge from 40 to 100 per cent. per annum on their loans. In 1902 an agricultural bank was founded with a capital of £2,500,000, which makes advances to fellahin on easy terms. The Government guarantees the repayment of the advances and interest on the capital. Occasional cases of slave-dealing and kidnaping come before the courts. In 1902 a provincial governor was retired and an influential pasha and several police officers were imprisoned for applying torture to extract a confession from cattle-thieves who had

robbed the Khedive. The plague and the cholera appeared in Egypt in 1901 and continued in 1902. Officials found difficulty in dealing with the plague, owing to the habits and prejudices of the people.

The Egyptian Soudan.—The Mahdi and the Khalifa having ruled the Soudan for sixteen years, the latter was defeated by an Anglo-Egyptian army on Sept. 2, 1898, and on Jan. 19, 1899, a convention was signed at Cairo by representatives of the British and the Egyptian governments in accordance with which the territory south of 22° of north latitude is administered by a governor-general appointed by the Khedive with the approval of the British Government; the Egyptian and British flags are used together; laws are made by proclamation; no duties can be levied on imports from Egypt, and duties on goods from other countries shall not exceed those levied by Egypt; the importation or exportation of slaves is prohibited, and special attention is paid to the provisions of the Brussels act of 1890 regulating the importation and exportation of firearms and ammunition and of spirits.

The Soudan is divided into the provinces of Khartoum, Dongola, Berber, Kassala, Senaar, and Kordofan and the districts of Wady Halfa, Suakin, and Fashoda, over each of which is a Mudir, or military governor. The estimated revenue of 1901 was £ E. 224,374, and the expenditure was estimated at £ E. 614,095, leaving a deficit of £ E. 389,721 to be paid out of the Egyptian treasury. The total area of the Egyptian Soudan, extending southward to Albert Nyanza and east and west from the Red Sea to Wadai, is estimated at 950,000 square miles, with a population which was formerly estimated at 10,000,000, but has declined under the rule of the Dervishes. The frontier between the Italian colony of Erythria and the Soudan has been delimited by a joint commission. The port and district of Massowa, which before the Mahdist revolt were occupied by Egypt, now belong to Italy; Zeila and Berbera belong to Great Britain; and Harar belongs to Abyssinia. The Soudan was placed by the British under an embargo during the Mahdist régime, and all trade ceased excepting a surreptitious trade in slaves. It was again declared open for traffic on Dec. 12, 1899; but the trade in gum arabic, ostrich feathers, ivory, gold dust, and skins has not returned. Ebony, rubber, gum, and other valuable forest products can be obtained on the White Nile and the rich lands on the Blue Nile are adapted to grow wheat as well as sesame, millet, dhurra, and pulse, which are now cultivated. In the northern part of the country regular government has been restored and industries have in some measure been revived. Khartoum, which has again been made the capital, instead of the neighboring Mahdist city of Omdurman, is connected with Cairo by the Anglo-Egyptian military railroad and by a telegraph-line. The Governor-General of the Soudan is the Sirdar, Sir Reginald Wingate, who has Col. F. J. Nason for his civil secretary and Sir Rudolf von Slatin for inspector-general. The accumulation of swamp vegetation called the *sudd*, which renders the Nile and its tributaries impassable, has been removed. The Nile is open the entire year from Khartoum to Gondokoro, the northern post of the Uganda Protectorate, which is 15 miles from Mongalla, the southernmost post of the Egyptian Soudan. Lado and Kiro are held by a Belgian force, and from those stations officers of the Congo State administer the *enclave* on the Nile that was leased to the Congo Government. The Egyptian Soudan has been generally

tranquil since its occupation by the Anglo-Egyptian forces. The Sultan of Darfur, who pays tribute to the Government at Khartoum, had trouble with his own people, against whom he sent an expedition. Government posts have been established in Kordofan, which is developing rapidly. The Agar Dinkas in January, 1902, raided a camel caravan near Rumbek and killed Lieut. Scott Barbour and 40 of his men. They were promptly punished by Lieut.-Col. Hunter from Nao cooperating with an expedition sent from Shambeh to Rumbek. The Bahr-el-Ghazal was occupied by an expeditionary force under Lieut.-Col. Sparkes, who has cut the *sudd* in the Djur river so as to permit steamers to ascend to Wau, the chief military station in the province. The only railroad project favored by the Government is the proposed line from Berber to Suakin, which will furnish a shorter outlet than the river-and-rail route northward through Egypt, and will supply the Soudan with fuel. Beds of coal have been discovered near Rosaites and Abu Harras. The Egyptians, who have provided the money for the conquest and development of the Soudan, regard with dismay the prospect of losing their trade with the Soudan, and European merchants fear that India will capture the market. In the southern parts of the Soudan a little roadmaking in the uneven places will enable motor cars to transport freight all over the country. The money taken out of the Egyptian treasury to build the Khartoum railroad and for barracks and other purposes in the Soudan is treated as an advance to be repaid at some future date. In 1901 the expenditure of Egypt in the Soudan was £ E. 417,000. The Caisse de la Dette has ceased to dispute the financial sacrifices Egypt is called upon to make for the Soudan. Of £ E. 1,287,000 in the special reserve fund on Dec. 31, 1901, the amount pledged for future expenditure, mainly in the Soudan, was £ E. 567,000. The finances of the Soudan are in a more satisfactory condition than was anticipated, but it is not yet possible to balance the budget without a heavy deficit, which for 1902 was £2,268,000. Vast tracts of fertile country and valuable mineral lands in the Soudan lie idle because there are no facilities for bringing produce to market. Engineers who are studying the question of irrigation have found plenty of water available. Cotton of good medium grade is now grown. Wheat and barley grow freely. Indigo is cultivated. Rubber is obtained in some sections. The soil is exceedingly rich, capable of producing all kinds of useful plants.

Suez Canal.—The number of vessels that passed through the Suez Canal in 1900 was 3,441, of 13,699,238 tons, of which 1,935, of 7,771,346 tons, were British; 462, of 2,047,230 tons, were German; 285, of 1,167,987 tons, were French; 232, of 704,458 tons, were Dutch; 126, of 467,605 tons, were Austro-Hungarian; 100, of 451,152 tons, were Russian; 63, of 351,854 tons, were Japanese; 82, of 247,167 tons, were Italian; 34, of 153,248 tons, were Spanish; 27, of 97,240 tons, were Danish; 30, of 90,205 tons, were Norwegian; 22, of 78,314 tons, were American; 28, of 43,125 tons, were Turkish; 7, of 16,895 tons, were Belgian; 3, of 6,424 tons, were Portuguese; 2, of 2,996 tons, were Swedish; 1, of 1,777 tons, was Argentinian; and 2, of 214 tons, were Greek. The receipts in 1900 were £3,624,944. The number of passengers that passed through was 282,203.

The Storage Dam at Assouan.—It is hardly credible that the engineers of the Pyramids and the builders of league-long colonnades beside the

Nile could have failed at least to make estimates for harnessing the great river upon which the Egypt of antiquity as well as of to-day depended for its wealth and power. It is certain, however, that nothing was accomplished on a scale at all commensurate with the importance of the work. If one of the early Pharaohs had set the example of perpetuating his memory by means of a great irrigating and regulating dam, instead of a mere pyramid, his example would have probably been followed by his successors and the Nile would have been put in training thousands of years before the earliest English was spoken, and it would not have been left for a nation then unborn to rejuvenate Egypt in her declining years.

It is not intended to ignore the achievements of the early engineers who utilized the great valley of Fayum as a reservoir (Lake Moeris) or to belittle the importance of the irrigating canals, partly natural and partly artificial, which they constructed with wonderful skill; but apparently they made no serious attempt to control the river itself, being perhaps appalled at the magnitude of the undertaking and not having at hand resources of the twentieth century. It must have been obvious to them, however, that the storage in great reservoirs of the surplus flood, for use during the season of low water and consequent drought, was a problem demanding complete solution. The Nile, as we have all learned at one time or another, cuts its way northward from the great lakes of Central Africa for 2,000 miles and more through a region that, with proper irrigation, is among the most productive on earth. It breaks through ranges of hills in its course, forming numerous rapids and six "cataracts," as they are called, some of which are barely more than rapids, which at high-water are navigable, though with some difficulty and danger, by the river craft, but are impassable at low water.

The lower or first cataract is at Assouan, about 600 miles from the mouth of the river and 250 miles above Cairo, which marks the southern angle of the famous delta. Here, after protracted consideration of the whole problem, it was decided to build the first dam. Sir W. Willecks, K. C. M. G., was appointed director-general, with a large staff of assistants. The preliminary surveys were accomplished, and the work of construction was begun in 1898, that being the year in which the British were fighting the Mahdi in the upper reaches of the Soudan. The work was completed and the structure formally accepted by the Khedive and the Duke of Connaught, with due ceremony, on Dec. 10, 1902.

Many changes have taken place in the staff of engineers entrusted with the work—so many that the officials who deserve the credit can not all be named here, but the original plan was carried out with but few changes, and the work was completed under Maurice FitzMaurice as resident engineer.

The dam is located at what was the head of the first cataract. Its total length is 1,950 meters, or a little less than a mile and a quarter. It is laid in a straight line directly across the channel of the river, and not with the curve up-stream which is often introduced in such structures with a view to increasing their strength. To receive and retain the foundation, a trench was excavated mainly through solid rock in the river-bed. In this was laid a wall of solid masonry, 29 meters in width at its deepest section and narrowing to 7 meters (nearly 23 feet) at the crest. The lower face of the dam is very steep, and the

THE GREAT DAM AT ASSOUAN, ON THE NILE.

up-stream face is pitched at a less abrupt angle in order to secure greater stability. The height of crest or roadway above the zero mark of the long-established water-gage is 25 meters, and the high-water level as at present designed is 22 meters above the same zero. When full, the reservoir will hold 1,165,000,000 cubic meters of water, and its set-back will reach 143 miles above the dam. The total cost of construction as given by the best English authorities was £2,400,000, and the amount of work accomplished is divided as follows: Excavation, 775,000 cubic meters; masonry, 496,000 cubic meters; brickwork, 7,000 cubic meters; ashlar, 41,400 cubic meters; sluice-gates, 2,240 square meters; lock-gates, 530 square meters. At these figures, the initial rate of water-storage is about 1 cent for each cubic foot, but as this must diminish in a direct but irregular ratio from year to year, it will eventually disappear altogether when balanced against the accruing benefits.

Technically, the dam is described as "insubmergible"—that is to say, it is not intended that the water shall at any time flow over its lip or crest. The reason for this is, that the Nile carries in suspension such enormous quantities of silt that if the flow is entirely checked at any point the suspended matter settles to the bottom. In the case of a reservoir, no matter how large, it is evident that in a few years it would be filled up, and its purpose for irrigation would be defeated. This dam, therefore, is provided with an elaborate system of sluice-gates, 65 of them being but $3\frac{1}{2}$ meters above the zero mark; then come 75 at 8 meters, 18 at 12 meters, and 22 at 16 meters above zero. These different groupings of the sluice-ways can be seen in part in the accompanying illustration, and some idea can be formed of the way in which the discharge of the river can be regulated through these great openings, each of which is fitted with its own hand-operated machinery for the effective opening and closing of its gates.

During the period of high water that is beginning about the middle of July, when the percentage of solid matter in suspension is at its highest, the river will be permitted to flow through the sluices with as little hindrance as possible, bearing its rich alluvial tribute to be deposited in the lower valley. When all the sluices are open there will be little perceptible difference in the appearance of the river channel a short distance above and below the dam from what has always existed. As the flood subsides, usually some time in November, the water becomes comparatively clear, and the gates will then be closed. Under average conditions the reservoir should be at its full level in January, and this can be maintained until May, when the need of reserve water begins to be felt in the agricultural regions. From this time until the next flood is due in July the gates will be open, regulating the quantity of water in the lower Nile according to the special climatic conditions of the season.

At the western end of the great dam is a navigating channel with locks, each 75 meters long and $9\frac{1}{2}$ meters wide, affording ample accommodation for any river craft likely to be in use upon the Nile. The lock-gates were designed by F. B. M. Stoney, who is also the designer and patentee of the sluice-gates used in the dam. The heavier lock-gates are worked by hydraulic power.

The present high-water line of the reservoir is as stated above; but the structure was intentionally designed to sustain a pressure resulting from a higher level, 28 meters above the zero mark being contemplated. This will nearly or quite double the capacity of the reservoir, and as the expense of raising the dam will be comparatively small (£250,000), it may be effected before many years.

Curious and interesting problems are involved in this initial step toward harnessing the great river of the Pharaohs. Similar dams or weirs

are in contemplation at the different cataracts, at the sources of the river, and near certain of the natural depressions in the desert lands adjoining. The great lakes Victoria and Albert Nyanza, Lake Tana, and Lake No will all be utilized. Of these lakes, Victoria and Tana are held back by natural dikes of rock, which will only need to be tunneled or cut to make it possible to draw off the enormous accumulations of water as they may be needed. Lake Albert will need to have its level raised by damming its natural outlet; this can be done, however, without asking any one's permission, as the whole region is in British territory and so nearly barren of inhabitants that possible claims for damages may be ignored. These plans, if carried out, would furnish about 18,000,000,000 cubic meters of water per annum. The additional water-supply is not the only question involved, for there are extensive swamps along the White Nile, which in years of extremely low water pollute the whole river, with serious and often fatal results to animal life. With the supply under control at its source, these swamps could be practically eliminated by preventing stagnation and checking the flow of the dreaded "green-water," which at times affects the stream even to Cairo.

It is remarkable that this is the first comprehensive scheme that ever has been attempted for reducing a large river as far as possible to the service of man. Some European rivers have been in a measure harnessed and reduced to service; but the Nile is unique in many of its surroundings and affords opportunities for ingenuity in the matter of engineering that can hardly be found in any other stream. The greater rivers of the world, as, for instance, the Mississippi and the Amazon, are far beyond the reach of mortal power in its present development, and indeed their courses for the most part lie through

a country that makes it impossible for any great engineering operations to be undertaken, even if they were desirable. Some of the smaller rivers in the arid regions of our own Western States are already largely subjected to a system of management that has already wrought wonderful improvements in the great deserts of the West, but the historic Nile affords thus far the most conspicuous instance of a great river so placed by nature that its productive powers can be readily controlled for the benefit of mankind.

The construction of the dam at Assouan with a view to future enlargement has a curious side issue. The original plans were considered by an international commission, and no sooner was it known among archeologists that the first cataract was chosen as the site for a dam than it became evident to those interested that the structures on the island of Philæ would be submerged. This island, with its stately temples and colonnades, is among the most famous localities in a land rich in the treasures of antiquity, and archeologists all over the world raised such an outcry against the desecration that the engineer in charge, being a wise man, announced that the dam should not be built so high as was at first intended. This was something of a subterfuge, for these wonderful and majestic ruins will necessarily be to some extent submerged except when the river is flowing in its natural channel—that is to say, when the sluice-gates are all open. Unfortunately, this period of the year corresponds in a general way with the season least attractive to Egyptian tourists, so that some of the finest specimens of Egyptian architecture will be less accessible than heretofore to modern observers. The engineers have taken the precaution to strengthen and reinforce the ancient foundations of the temples, so that it is thought no harm will actually result from their periodical submergence.

F

FARMERS' NATIONAL CONGRESS. The twenty-second annual meeting of the Farmers' National Congress was called to order by the president, the Hon. George L. Flanders, of New York, in Macon, Ga., Oct. 7, 1902.

The congress was welcomed to Georgia by Gov. Allen D. Candler, who in the course of his address said: "Most of the men that have shaped the destinies of this republic since it was born were farmers and sons of farmers. It is almost impossible to grow a man on a brick pavement. We propose that Georgia shall be the best place on earth for a good negro, and the worst place for a bad negro."

The congress was welcomed to Macon by the Hon. George A. Smith, president of the Macon Chamber of Commerce. He called attention to the fact that the largest residence in the city was built with the proceeds of one year's peach-crop of the owner. Another mansion was built from one season's hay-cutting. Cotton is not the only crop grown in Georgia. Mr. Smith called attention to the Torrens system of registering the title to lands, and strongly recommended it. He reminded his hearers that Henry Ward Beecher had called Macon "the most beautiful city in America."

The addresses of welcome were responded to on the part of the congress by its first vice-president, the Hon. Harvie Jordan, of Georgia, president of the Cotton Growers' Association of America. In speaking of the meeting just opened, he

said: "It will put into motion a sentiment along the lines of national cooperation by the farmers of the country, which will be of untold profit and benefit to the great industry of which the Farmers' National Congress has become the leading representative organization. The days of individual action are rapidly being relegated to the past, while the cultivation of a closer relationship along the lines of cooperative action is being fast inculcated in the minds of our people all over this country. The unprecedented prosperity of the United States is due in largest measure to the results of the labor of our farmers. We are largely feeding and clothing the nations of the civilized world, and it is due to the vast exports of our cotton, meats, and cereals that the United States has within recent years become the creditor nation of the world."

In his annual address, President Flanders said: "The education that has been going on in the interest of the farmers during the past thirty years, at the State agricultural colleges, etc., has produced wonderful results, but all or nearly all are upon one side of the two-sided question, viz., upon the side of production, without touching the question of distribution or the question of the relation of the farmer to the governments under which he lives and by virtue of which he is protected. We are living in an age of combination; an age of corporations and corporate interests united for purposes which to them seem proper and just and

right; an age in which capital, generally speaking, is organized and combined for reasons which to it seem just and right, so that when any problem arises, from the question of distribution to the question of legislation, they are prepared at short notice to determine what action should be taken, and then act as a unit. What is true of these combinations is not true of the agricultural population, and yet that population is ten-twenty-ninths of the entire number engaged in industrial pursuits in this country. The scope of our educational work should now be such that it will extend to this class of our population as much information as possible, through some kind of organization or through some means best suited to that end, of the fundamental principles involved in the economic questions of the times and of their political duties and obligations to themselves and others through the governments under which they live."

More than 800 delegates were present, from 31 States.

A Committee on Resolutions of one from each State, selected by the delegates from each State, was announced, and organized by electing Hon. Benjamin F. Clayton, of Iowa, chairman, and Prof. W. F. Massey, of North Carolina Agricultural College and Experiment Station, secretary.

Prof. T. J. Wooster, of Georgia, read a paper on An Inter-oceanic Canal. He said: "Let us not waste too much time quibbling over choice of routes, but push to successful completion one or the other. We need the canal. It is to be our good right hand. Agriculture and manufacture stimulate each other. Agriculture must furnish much raw material; then, as more and more people engage in manufacturing, greater demands are made on agriculture to feed them. Roundly put, then, stimulation in production of raw materials and increase in manufacturing must inevitably follow lessening cost of transportation and extending the limits of the markets. New England and the Middle Atlantic States, which constitute the most important manufacturing section of the country, have to ship to Europe to contest the home markets of the Old World, or to ship long distances to the Orient or to our Pacific regions by way of Cape Horn, Cape of Good Hope, and the Isthmus of Suez. These manufacturing regions must get some of their raw materials and food supplies from the States on the Pacific Ocean, and in turn these Pacific people desire the manufactured articles of New England. The water distance from New York to San Francisco is 15,000 miles; by an isthmian canal it would be 5,000 miles. The canal will give us a decided advantage over the other nations of the world in the competitive international struggle which is certain to take place to secure the industries of the great Pacific Ocean."

At the morning session, Oct. 8, a paper on Reciprocity—How may it affect Agricultural Interests? was read by the Hon. John K. Campbell, of Michigan. Mr. Campbell said he did not consider it just "to frame a bill that will admit the raw material free to benefit the manufacturer, and then shut the door on the manufactured product by a high tariff that enables the home manufacturer to charge his own price, imposing on the farmer the burden of the tax that benefits only the manufacturer." Referring to the beet-sugar industry, he said he favored a diversified system of agriculture, and that "every protection should be extended to the farmer that will aid him in developing the cultivation of the sugar-beet, or any other product that the farmer, under proper protection, can develop."

At the afternoon session a paper on Forestry and the Preservation of Forests was read by George M. Whitaker, editor of the New England Farmer. He declared that not cotton nor corn, but "the tree is king!" He deplored the waste in cutting and in using timber, and emphasized the danger of a timber famine. "The supply of oak and hickory in the Northern and Eastern States has been so nearly exhausted as to create a heavy demand for timber lands in Tennessee, Arkansas, and Mississippi. The papers report that all the wagon-manufacturers of the North and East, as well as wood-working companies of all kinds, have their agents in these States for the purpose of buying up every available acre of timber land. This is emphatically a farmer's question. A tree is a product of the soil. The national Department of Agriculture is undertaking to assist the farmer in applying better methods, by which the forest on his wood-lot will be improved without appreciably increasing the cost of harvesting the forest crop."

At the opening of the morning session, Oct. 9, Prof. Louis B. Magid, of Georgia, had a few minutes in which to present the claims of silk-growing in the United States. This he did so ably that a strong sentiment manifested itself in the congress favorable to the action of the national Department of Agriculture to determine the feasibility of silk-growing in this country.

Prof. Magid's paper was followed by one in favor of National Irrigation, by C. M. Heintz, of California. This paper presented some striking figures, including the following: "By the building of irrigation systems, great wealth is actually created. Take the Colorado delta, for an example. Here is a body of about 900,000 acres of land arid and worthless. The Colorado river is of sufficient size, it is estimated, to reclaim 8,000,000 acres. This land was worthless without the water, and the water was worthless without the land. When they are brought together, there are 900,000 acres of land that will be worth, when fully reclaimed, an average of \$100 an acre, or a total of \$90,000,000. National expansion should be confined to building up our home country first. There is no sense in subduing the jungles of the Philippine Islands until we have first reclaimed the arid wastes of America."

The opposing view of National Irrigation was presented in a paper by Gilbert M. Tucker, editor of the Country Gentleman. He called attention to the fact that "the vast development of our national contributions to the sustenance of the world has no necessary relation to the welfare of the men that raise the crops." He pointed out that what was wise when the nation was younger might be unjust and foolish when it had attained a certain development. Speaking specifically of the effects of national irrigation, especially as it would bear upon agriculture, he said: "Every district brought from aridity into cultivation, by irrigation, will for a long time export a considerable surplus of foodstuffs, and thus act to a certain extent in bearing down the market price. A second channel of mischief is the absorption by the new lands of the men and women who ought to supply, and in the normal condition of things would supply, an abundance of labor, at moderate prices, for established farmers. If the Government is going into such [irrigation] business, we can point out thousands of farms east of the Mississippi where we should like to see it tried, and also tens of thousands of farms east of the Mississippi where we should like to see the Government apply the correlative of irrigation—tile drainage—at the public expense. There is no doubt whatever that

the expenditure east of the ninety-eighth meridian of the millions of dollars proposed to be used west of that line, in irrigating and draining farms already in operation, would increase their product by a larger volume than will be raised west of it, for generations to come, under the irrigation scheme."

At this point the children of the Georgia Industrial Home for Unfortunate Children marched upon the stage and sang patriotic songs.

At the afternoon session a paper on How can we best Build up our Merchant Marine, by F. B. Thurber, of New York, was read. It favored ship subsidies. Mr. Thurber opened his paper by saying: "Great Britain is our chief competitor, and she has consistently followed the policy of sustaining new lines until sufficient commerce developed to make them self-sustaining, and then gradually reducing the subsidy. That should be our policy." He said further: "The percentage of American products carried in American ships has dwindled from 90 to 9 per cent. If we are to find a market for American products, they must be distributed by American ships. Steamship-lines work for their own countries precisely as railway-lines work for their terminal points. The original cost of building American ships is greater than is the case abroad; the wages paid to American officers and seamen are very much higher than those paid to the officers and seamen of competing foreign vessels, and the standard of living on our ships is far superior to the standard of living on the ships of our commercial rivals."

Opposition to ship subsidies was expressed in a paper by the Hon. Oliver Wilson, master of the Illinois State Grange. He began by saying that "in treating this important proposition there is but one fair way, and that is in the interest of the mass of citizens"; and he declared that "instead of benefiting the masses, it appears that the proposition for subsidizing our merchant marine is a scheme largely to increase the wealth of the few at the expense of the many." He pointed out that the reports of the Leland and other ocean steamship-lines recently bought by American capitalists showed that they did not need Government aid to be profitable, that the high subsidies of the French Government had not built up the shipping of that nation; that "the latest facts and figures go to prove that ship-building can be done in this country as cheaply as in Great Britain or anywhere else"; and that while our workmen "receive higher wages, they accomplish more in a given time, so that the factor of higher price for labor is eliminated."

At the morning session, Oct. 10, a paper on Farm-Products in the Markets of the World was presented by O. P. Austin, chief of the Bureau of Statistics, Treasury Department. He showed that the American farmer is keeping pace with the world's demand for his products and will retain the market both at home and abroad. He said that "the application of scientific methods has enabled the American farmer not only to prevent the deterioration of the virgin soil which made this country the world's greatest producer, but an intelligent understanding of that soil and its capabilities, coupled with the use of new machinery and new methods, enables him to make its products of more value to him than ever before. The man who in 1867 gave up 1 bushel out of every 6 of his wheat to pay transportation from Chicago to New York, now gets the same transportation for 1 bushel out of every 16."

A paper on A Bird's-Eye View of the Farm-Products of the World, by John Hyde, statistician of the national Department of Agri-

culture, was rendered specially interesting by the use of the stereopticon. Charts that showed at a glance the relative standing of different countries as regards the principal agricultural products showed also the commanding importance of the United States as an agricultural country, and the great importance of our agricultural exports in maintaining a favorable balance of trade. Mr. Hyde also gave incidentally a history of the production of the principal cereals.

At the opening of the afternoon session a paper on The Labor Problem from the Farmer's Standpoint was read by John M. Stahl, editor of the Farmer's Call. He divided his subject into two parts, the first being the labor problem on the farm. He said that of those things the farmer needed, the hardest for him to get is intelligent, conscientious labor. Among the remedies for the scarcity of farm labor he mentioned agricultural education, beginning in the primary school in the country; better appreciation of the advantages of farm life in developing character; better treatment of farm hands; and the trolley-line to farms from the cities. In treating the second division of his subject—the labor problem in the city—he pleaded the cause of the "innocent public" which was often the chief sufferer from strikes or lock-outs; opposed compulsory arbitration as impracticable, but favored conciliation, and, that failing, voluntary arbitration; and closed with a denunciation of both the open and the subtle lawlessness that too often appeared in the conflict between labor and capital, which should be good friends.

The following resolutions were adopted by the congress:

"That we favor the policy of reciprocity when it can be used to enlarge the markets for our agricultural products, and we indorse the words of the late President McKinley that we 'should take from our customers such of their products as we can use without harm to our industries and labor.'

"That we express our sincere regret at the present deplorable conditions of business caused by the conflict between capital and labor, and we declare ourselves strongly in favor of settling all such difficulties either by conference or arbitration.

"That we express our hearty approval of the rural free mail-delivery system, and favor its further extension as rapidly as is consistent with public policy, until the rural population of the entire country receives its mail in this way.

"That we urge upon Congress the need of the early passage of the bill now pending for the establishment of the Appalachian park and forest reserve.

"That we favor the speedy enactment of a law by the Congress of the United States to prevent the adulteration of any article used for human food in any form; and that such laws should carry sufficient penalties to make them effective.

"That we favor the discontinuance of the distribution of seeds, except of new, valuable, or rare seeds, which we recommend shall be distributed under the direct supervision of the Department of Agriculture at Washington.

"That we favor and urge on Congress an increase in the appropriation to each State and Territory for experiments in agriculture by the sum of \$15,000.

"That we respectfully urge our representatives in Congress to make more liberal appropriations for the Agricultural Department, which embraces within its scope of work the largest and most useful of all the industries of the Union.

"That we recognize with pleasure and gratifica-

tion the growing usefulness of the national Department of Agriculture, and the earnest efforts being made by the head of that department, the Hon. James Wilson, to encourage scientific and diversified farming, to gather correct statistical information regarding the annual yield and distribution of all crops, and otherwise to foster and protect the agricultural interests of the whole country.

"That we condemn the use of adulterants in the manufacture of food and clothing as being detrimental and injurious to the business interests of the people; and we respectfully request the Congress of the United States to enact such laws, of uniform application in all the States of the Union, as will compel manufacturers of food and clothing to stamp or label their manufactured goods in such a way as to show the true character and exact percentage of all articles used in their manufacture, before placing their products on the markets of the country, together with proper penalties for violations of these laws.

"That we commend the efforts of the national Department of Agriculture to determine the practicability of establishing silk-culture as an industry in this country.

"That we ask at the hands of the Congress of the United States a wider and more general recognition of the necessity for improvement of our public highways, and that appropriations be made annually from the general funds of the national treasury to broaden the work already undertaken by the Federal Government along that line.

"That we commend the efforts of the present Secretary of Agriculture to extend and increase the value and efficiency of farmers' institutes by cooperation and closer relationship in this line between the States and the national Department of Agriculture through the inauguration of farmers' institute work in a limited way in one of the present divisions of the Department of Agriculture; and we urge upon the Congress of the United States the importance of this work and the desirability of increasing the support for its maintenance, to be used by the Secretary of Agriculture according to plans that he may deem most wise.

"That corresponding supervision and authority in the expenditure of Government funds appropriated to the agricultural colleges of the States should be vested in the national Department of Agriculture in the interest of real agricultural education and the accomplishment of the purposes for which such appropriations were originally made.

"That the early construction of an interoceanic canal is deemed essential and imperative for meeting the objects and purposes above set forth, and we hereby earnestly petition the Congress of the United States to take immediate steps toward the opening of the interoceanic canal; and that said canal shall be built and controlled by the Government of the United States without the aid of any other nation."

The congress adopted an important amendment to its constitution, offered by the Hon. William L. Ames, of Wisconsin, which reads as follows:

"The membership of this congress shall consist of as many members from each State and Territory as shall be equivalent to one from each congressional district, two at large, one for each State agricultural college and experiment station, and one for each national or State society or organization created and maintained to foster any agricultural interest in the United States having headquarters in that State, proof to be produced, if required, of the standing of such organization; and

as many more as to the appointing power may seem wise up to, but not exceeding, 10 from any one congressional district, to be appointed preferably by the Governors of the respective States, but if in case of pressure of other business, lack of interest, or other reason the Governors fail to make liberal appointments, a certificate of appointment by the secretary of the State Board of Agriculture or State agricultural society, or by the State vice-president of this congress, shall be sufficient credentials of appointment as delegate to the Farmers' National Congress.

"And, further, it shall be the duty of such appointing power to appoint delegates recommended by any member of this congress up to the prescribed number.

"All appointments shall be for the term of two years, beginning Aug. 1 of the year in which the appointment is made, regardless of where or when the annual meeting of the congress may be held; and should a delegate so appointed fail to attend the first annual meeting after his appointment, and also fail to render a valid excuse for such neglect to the power that appointed him, another may be appointed in his place the following year. Provided always, however, that any delegate who shall have been properly appointed under the constitution of the Farmers' National Congress and has attended four of its annual meetings shall be a life-member and shall be entitled to every privilege and right of any member of the congress as long as he shall comply with the required annual payment of dues and his conduct continues acceptable to the congress.

"The vote of any State or Territory is not to exceed in any case the number of its congressional districts, plus 2, and 1 for each of its State agricultural institutions and State or national societies or organizations, as prescribed in the first paragraph of this amendment."

The congress was lavishly entertained by Macon and Georgia. At an expense of several thousand dollars a complete display of Southern products had been gathered in large tents near the Academy of Music, where it was convenient for the delegates to the congress to inspect it. A Southern barbecue was enjoyed by more than a thousand delegates and hosts. Receptions and carriage drives were given to the ladies accompanying the delegates. At the close of the congress the Georgia Southern and Florida Railway took the delegates in a special train to Palatka, Fla.; and on their return to Macon the Macon, Dublin and Savannah Railway took them on a special train to Savannah, where they were entertained by a trip down the river to the ocean, a banquet being served on board; by a clambake, rides about the city, etc.

The officers of the congress for 1903 are: President, George L. Flanders, Albany, N. Y.; first vice-president, Harvie Jordan, Monticello, Ga.; second vice-president, B. Cameron, Stagville, N. C.; treasurer, J. H. Reynolds, Adrian, Mich.; secretary, John M. Stahl, Chicago, Ill.; first assistant secretary, Edward A. Callahan, Albany, N. Y.; second assistant secretary, George M. Whitaker, Boston, Mass.; third assistant secretary, Joel M. Roberts, Waco, Neb. The executive committee is composed of Benjamin F. Clayton, Indianola, Iowa, chairman; Edward W. Wickey, Ocean Springs, Miss.; William L. Ames, Oregon, Wis.; and the president and secretary of the congress *ex-officio*.

FEDERATION OF CHURCHES. The second annual conference of the National Federation of Churches and Christian Workers in the United States was held in Washington, D. C.,

Feb. 4 and 5. Seventy-five delegates were enrolled, representing 7 States, 11 denominations, and 15 organized federations of States and cities. In response to an address of welcome by the Rev. J. N. Butler, of Washington, Mr. J. Cleveland Cady, president of the National Federation, said that he believed that great as might be the practical power gained for righteousness by the cooperation of the several branches of Christ's Church, the greatest gain would be the spiritual gain born of "peace and good-will toward men." The report of the secretary, E. B. Sanford, gave a detailed account of the work of the year, mentioning the establishment of federations in a considerable number of cities and towns, and of State federations in New York and Ohio. Different methods of work were taken up in different places according as circumstances might suggest. Among those mentioned in the present report were house-to-house visitation, the general canvass of neighborhoods, efforts to bring various churches into closer fellowship and cooperation, and measures for preventing overlapping and collision. A part of the duty of the general secretary had been to make what might be called missionary tours, in which he would visit a number of cities and towns, meet pastors and laymen of the several churches, and explain to them the principles and methods of organization under the plan of federation. Speaking of The Possible and Impossible in Church Federation, the Rev. L. C. Barnes, of Pittsburg, characterized as the impossible, and indeed, undesirable thing, ecclesiastical union, saying that it concentrated attention on points of difference, and this was sure to result in wider ecclesiastical divergence. The possible and desirable thing was Christian cooperation, which drew mind and heart away from the things in which Christians differ, to those in which they could join heartily as workers together with Christ. In an address on the way in which churches can unite for social work, the Rev. Walpole Warren, of New York, maintained that the denominations were desirable, in that each had its own particular work to do. Other subjects of discussion concerned Home Visitation, Church Federation in the Interest of Social and Civic Righteousness, Why a New England City needs Federation, Federation from a Layman's Point of View, Cooperation in Home and City Mission Work, and Interdenominational Affiliation. In the last paper the suggestion was made by Mr. Benjamin G. Welch that members of the church who move away from home be given letters to the church of their choice as fraternal associates, while they still retain their connection with the home church.

At the meeting of the Executive Board of the National Federation held in New York city Nov. 5, the secretary made report of two trips he had made to the Middle West—one in the spring and one just completed—covering together about 10,000 miles of travel. The way had been prepared by correspondence for meetings which brought together many of the men who had in charge the home mission and church extension interests of denominations representing nine-tenths of the English-speaking church-membership in the States of Michigan, Illinois, Wisconsin, Minnesota, South Dakota, Iowa, Kansas, and Nebraska. With entire and earnest unanimity of action steps were taken in all those States to secure the appointment of representatives from the denominational bodies, to meet in conference and decide the question of organization.

A meeting of delegates appointed by the leading denominations, held in Lincoln, Neb., Oct. 29, by unanimous vote, organized the Nebraska Federa-

tion of Churches, with a constitution similar to those of the New York and Ohio federations. Similar conventions were to be held at Barraboo, Wis., Nov. 11; Lansing, Mich., Dec. 10; and Chicago, Ill., Dec. 15. In Chicago, Milwaukee, Minneapolis, St. Louis, Peoria, Kansas City, Topeka, and Omaha the interests of local federated action and organization had been placed under the care of committees. The General Conference of the Methodist Episcopal Church, South, had provided for the appointment of representatives to attend the meeting of the National Federation in 1905. The General Missionary Convention of the Disciples of Christ had, by resolution, approved the spirit and purpose of the work of the Federation. In a summary of the work of the Federation and what it has done during the term of its operations, published by the national secretary, its work is defined to be to promote the formation of federations in every State and community for the purpose of securing cooperation between churches and Christian workers of all denominations and of making more effective the prosecution of their common interests. During its career it had brought about the organization of State federations in New York, Ohio, Nebraska, Massachusetts, and California; had prepared the way for action in other States—Michigan, Illinois, Wisconsin, Minnesota, Iowa, Missouri, and Kansas; and had aided the work of State organizations in Maine, Rhode Island, and Pennsylvania. Local federations had been organized in 24 cities, having an aggregate population of nearly 6,000,000. Of these 24 federations 13 had sprung from the direct initiative of the National Federation. Several federations had taken effective action for civic, social, and moral righteousness, and by putting a stop to sources of corruption had accomplished results that were possible only by united action. In some cases federations had made their work the elimination of needless and competitive churches and the establishment of churches in destitute places; and it was believed that through mutual understanding and wise counsel a better and more economical use might be made of funds contributed for missions, church extension, and charitable purposes. Federation in no way interfered with denominational belief or practise, but was intended to furnish a means by which churches of different creeds can cooperate for ends which all have at heart, but which none could attain by themselves. Among the advantages of this plan set forth by the federation of Hartford, Conn., are that it is permanent rather than transient, systematic rather than spasmodic; that it draws all the churches together for united effort, bringing all their activities into relation with one another; and that it furnishes a convenient medium for expressing the Christian sentiment of the community in support of officers of the law and other functionaries who desire to do their duty, but are unable to work successfully without a strong moral support. House-to-house visitation by voluntary workers has been carried on in several cities and arrangements are making for it in many others. Its principal purpose is to bring all the people into sympathetic contact with some church; to seek out persons who have become alienated from the Church and restore them to its influence. Work of this kind has been systematically prosecuted in the city of New York, where numerous conditions exist which illustrate the need of it. Among these conditions, as described in a report of the city federation, are the frequent changes of families from one apartment or tenement house to another; the uneven distribution, not correspond-

ing with the distribution of population, of church settlements, and charitable institutions; the high percentage of the foreign population; and frequent changes of nationality which some neighborhoods undergo. For effective work, the city is divided into assembly-district or ward sub-federations, and a parish system is instituted, under which each block is assigned to a church or co-operative organization. These cooperating agencies report yearly through the central federation all families with definite religious preference to congregations of their creed, while families without such preferences are given into the charge of the church supervising the blocks in which they live. Through the same agencies watch is kept upon all vicious institutions in the several districts and blocks in order that the power of the federation may be brought to bear against them through the officers of the law. Through them also interest is fostered in the improvements of schools and the maintenance of playgrounds, parks, and libraries.

Federation in Great Britain.—The Free Church Year-Book for 1902 represents that, according to the latest returns, the Free Churches of England and Wales have an aggregate of 1,946,959 members, while the estimated membership of the Anglican Church is 1,974,629. The figures for the entire English-speaking world indicate that the Free Church membership is more than 18,000,000, and the Anglican membership a little more than 3,000,000.

National Council of Evangelical Free Churches.—The seventh annual meeting of the English National Council of the Evangelical Free Churches was held in Bradford, beginning March 11. The Rev. Dr. W. J. Townsend, of the Methodist New Connection, presided and delivered an opening address on the subject of *The Free Church of England: Its Divine Call*. In it he suggested the thought as a gladdening and a sobering one that this, the youngest of the great organizations of the land, was yet the greatest, and covered at least 8,000,000 of adherents. The annual report showed that since the meetings of the previous year at Cardiff the number of councils had increased from 720 to 796. There was likely to be a diminishing proportion of new councils, owing to the fact that the entire area of England and Wales was nearly covered already. A few councils since the movement started had dissolved, and others had been merged in larger councils. The fears formerly entertained that the movement would become political had not been realized, and not more than a dozen councils "had struck on this rock." The councils were increasingly doing solid spiritual work. The district federations were perfecting their organizations and readjusting their areas. The three missionaries of the National Council had each held missions in all parts of the country, with crowded services, many conversions, and quickening of the spiritual life of the churches. Cycling mission bands had been very active in the villages during the summer. The Social Purity Crusade carried on by the Central South London Council had led to the closing of 300 disorderly houses. The National Council had taken an active part in defense of progressive and unsectarian education against the attacks of a "clericalizing government." A feature of the year had been the launching of the Free Church Girls' Guild, which had been taken up by 80 councils, while about 40 workers in addition were engaged in the villages. About 3,000 girls had been brought within the shelter of the guilds. Resolutions were adopted proposing that non-conformist churches should be enabled to acquire land compulsorily for

the erection of places of worship when they can not get land by purchase, and to enfranchise on equitable terms places of worship held on leasehold tenure; urging local councils to take action against gambling, and calling for rigorous enforcement of the existing law, with increased municipal and administrative powers for the suppression of betting; welcoming the Government's bill to amend the law relating to the sale of intoxicating liquors and to drunkenness and to provide for the registration of clubs, and appealing to the Government to introduce at the next session a bill dealing radically with the licensing system on the line of the recommendations of the minority report; and reaffirming the resolutions of the previous year respecting secondary education. These resolutions protested against the application of local rates to the establishment or maintenance of denominational schools privately managed, and expressed the opinion that the only solution of the education question was the creation of one local and directly representative authority, in areas of sufficient size, responsible for all grades of education. Among the subjects treated in the addresses and papers delivered and read to the meeting were Housing (Rev. Dr. Clifford); *The Attitude of Free Church Councils to Social Problems*; *The Right Use of Wealth*; *Free Church Twentieth-Century Funds: the Opportunities they Give Us*; *How Successfully to Work a Free Church Council*; *Twentieth-Century Evangelism*; *The Federation Movement: a Link between the Nations*; and the *Free Church Boys' Camp Movement*.

A national conference of Free Church Councils to consider the education bill pending in Parliament was held in London April 15. The Rev. Dr. W. J. Townsend, president of the National Council of Free Churches, presided. In his opening address the chairman declared that what were said to be concessions to non-conformists in the education bill were found to be "aggravations of the injustice under which they had lived. The bill aimed to destroy the only education authority which had worked well for thirty-two years, and it changed the face of education in the country immeasurably for the worse. The proposals involved a new endowment of what was already the richest church in the world. This would constitute a new church rate which would become a flag of controversy and bitterness throughout the entire land. The bill was objectionable in almost every detail, and they could do nothing less than demand its withdrawal in the name of national righteousness." Resolutions were adopted describing the bill as an entire reversal of the leading principles of the settlement of 1870, and a violation of public justice, seeing that it destroyed the direct popular management and unsectarian character of schools wholly maintained by the ratepayers; protesting against it as compelling non-conformists to pay rates and taxes to schools whose teaching is wholly repugnant to their conscience; perpetuating the subjection of a state-paid teaching profession to sectarian tests, thus closing a large majority of the possible appointments against non-conformist teachers otherwise eligible, and as tending to the multiplication of sectarian schools; protesting against destroying popularly elected school boards, and questioning the equal efficiency of the school boards contemplated in the bill with those specially elected and directly responsible to the ratepayers; and calling upon non-conformists "to oppose the bill at every stage by public meetings, petitions to Parliament, deputations to members, and by every form of legitimate action in their several districts"; and declaring "that Free Churchmen can never agree or submit to the conditions laid

down in the Government bill, which was calculated still further to hinder education, greatly decrease the rates, inflict injustice, and create religious bitterness."

At a meeting of the General Committee of the National Council, June 2, reports were made of activity in all parts of the country in opposing the Education bill by the circulation of documents, the holding of public meetings, and the delivery of addresses by representatives of the Free Churches.

FINANCIAL REVIEW OF 1902. The most important event of the year was the ending of the Boer War in South Africa through the acceptance, on May 31, by the Boer delegates to the peace conference at Pretoria of the terms of surrender imposed by the British Government, through Gen. Kitchener. These terms were, as briefly stated, that the burghers should lay down their arms and recognize the sovereignty of King Edward; the return to South Africa of all Boer prisoners, Great Britain undertaking that they shall not suffer the loss of liberty or of property, and that no action shall be taken against any such prisoners save in cases where they have been guilty of a breach of the laws of war; that the Dutch language will be taught in the schools of the new colonies where the parents desire it, and that this language will be used in the courts of law where necessary; that the burghers will be allowed to retain rifles for self-protection and that military occupation of the colonies will cease as soon as possible and self-government will be substituted.

The total British losses in South Africa, as officially stated, from the beginning of the war, Oct. 10, 1899, to the ending of hostilities, which practically terminated with the capture of Lord Methuen's force by Gen. Delarey March 10, were 1,069 officers and 20,897 men who were either killed in battle or died from wounds or disease, 884 officers and 9,181 men missing and prisoners, and 2,937 officers and 68,311 men sent home as invalids. The British took 37,000 Boer prisoners; of the killed and wounded no statistics were given. The cost of the war to the British, as officially reported by the Chancellor of the Exchequer in presenting the budget on April 1, was £165,034,000 (\$825,170,000). The direct and indirect borrowings on account of the war were estimated by the London Statist at £250,000,000 (\$1,250,000,000). The last loan issued was for £35,000,000 on April 14, and another loan for about £10,000,000 for the restocking of the Boer farms and for other improvements in the Transvaal will soon be emitted. The British forces in the field during the war were about 280,000 men; the Boer force at the beginning was estimated at 50,000.

The effect of the war upon the gold production of South Africa is shown by the fact that from a maximum of 459,709 ounces in August, 1899, it fell to 19,906 in October, and the total for that year was 4,069,166 ounces. In 1900 no record of production appears after March, and the output for that year is stated at 251,891 ounces. In 1901 mining was resumed in May, and the production in that year was 238,901 ounces. For nine months of 1902 the output was estimated at 1,329,573 ounces, and it increased from 81,405 in February to about 190,000 ounces in October.

Another event of the year was the postponement of the ceremonies of the coronation of King Edward and of Queen Alexandra, which were to have taken place on June 24, because of the illness of the King, which necessitated an operation for appendicitis. The ceremonies were finally

held on Aug. 9, after the King's recovery, though they were of a much less imposing character than originally contemplated.

Prince Henry of Germany visited the United States in February, when he was enthusiastically received and entertained by the Federal, State, and municipal governments and by commercial and other bodies. In October the Crown Prince of Siam was a visitor to this country.

When the time arrived for the payment of the interest and of the first instalment of the Chinese indemnity, which were due July 1, the Chinese Government insisted upon such an interpretation of the terms as would permit payment to be made on a silver, instead of a gold basis. The United States Government assented to the change, but other powers refused; later, however, the terms were partially modified by these powers. Largely as a result of the payments of the indemnity, the market price of silver declined, and on Nov. 22 it fell to the lowest price on record, 22½ pence per ounce.

During the first half of the year there was more or less depression in the European markets, and particularly in those on the Continent. In France the Bourse was unfavorably affected in December, 1901, by a decline in copper shares, which fall was also reflected in the London market. Later coal-mining strikes in France caused more or less industrial unrest, which extended to Germany, and the situation in Russia was at times regarded as critical. Consequently French and German capital was largely diverted to London for employment, resulting in an enormous increase in the investments, especially by French bankers, in consols and in other securities and also in sterling bills in the British capital. It was estimated late in October that the investments of France in foreign countries amounted to about £1,200,000,000, and that those investments in England alone were not far from £40,000,000. The plethora of French capital seeking employment greatly facilitated borrowings, through sterling bills, by American bankers, and it was estimated at the end of October that such loans were upward of £200,000,000. This large indebtedness of Americans will account for the sensitiveness of our markets to the changes in monetary conditions abroad which resulted from the efforts in September of the Bank of England to divert to Paris the drain of gold to New York, which was then threatened by the acute monetary tension at this center. When our money-market grew easier and gold exports hence to Paris became possible, the London discount and the bullion markets promptly responded to the changed conditions here and to those in Paris as indicated by the rate for exchange at the French capital on London.

The following is a tabular survey of the economic conditions and results of the twelve months ending Nov. 29, 1902, contrasted with those of the corresponding period ending Nov. 30, 1901:

ECONOMIC CONDITIONS AND RESULTS.	1901.	1902.
Coin and currency in the United States, Nov. 30 . . .	\$2,530,351,896	\$2,645,558,304
Bankclearings in the United States	\$117,840,532,916	\$118,030,230,393
Business failures	\$118,316,189	\$115,567,058
Imports of merchandise . . .	\$869,187,846	\$954,976,817
Exports of merchandise . . .	\$1,474,324,185	\$1,349,473,632
Gross earnings 74 railroads . .	\$575,882,954	\$623,776,463
Wheat raised, bushels	748,460,218	620,695,000
Corn raised, bushels	1,522,519,801	2,542,516,000
Cotton raised, bales	10,425,141	10,701,453

Money.—As was the case in the previous year, the feature of the monetary situation in 1902 was the continuous and increasing absorption by the Treasury of money from the banks through the fiscal operations of the Government. In December, 1901, the excess of receipts over expenditures was \$9,742,966.53, and in January, 1902, this excess was \$8,033,856.26. In the following month there was a reduction in the surplus revenues to \$2,060,448.37, followed in March by a recovery to \$8,398,976.67. In April the surplus fell off to \$4,416,127.24, recovering in May to \$10,762,651.58, and in June the excess of receipts over expenditures was \$15,839,609.45, though provision had been made by Congress for the abolition of the war-revenue taxes imposed by the act of 1898, the repeal to take effect July 1. After the beginning of the new fiscal year the effect of the repeal of internal-revenue taxes was observable in the excess of expenditures over receipts in July by \$7,507,876.49, for the first time since August, 1900, when the deficiency in the revenues was \$820,244.12. In August, 1902, however, the above-noted deficiency was reduced to \$2,015,674.14, the excess of receipts over expenditures for that month being \$5,492,202.35. Thereafter customs payments were quite large, reflecting increasing imports, and internal-revenue collections were heavy, due to prosperous conditions of such industries as were taxable under those internal imposts which were in effect, and at the end of November the surplus revenues for five months of the fiscal year were \$14,149,179, against \$32,882,941.12 for the corresponding five months in 1901, when the majority of the internal taxes were in force. This absorption of money through the fiscal operations of the Treasury had a direct influence upon the New York banks because of the fact that about 70 per cent. of the Government business is conducted at this center. In addition to the drain upon the banks in New York through fiscal operations there was in December, 1901, a notable movement into the Treasury caused by the action of banks in the interior remitting, through their correspondents in this city, lawful money to the redemption bureau at Washington for the purpose of substituting such lawful money for United States bonds held as security for circulating notes, the bonds so withdrawn being sold in order to realize the high prices for them then ruling. This movement continued with but little interruption until about the middle of March, when Secretary Shaw, who succeeded Secretary Gage at the beginning of the month, suspended the purchases of United States bonds, which had been inaugurated by his predecessor, such suspension being mainly for the purpose of checking the withdrawal for sale of those of these securities which were pledged for circulating notes. With a view to relieve the monetary situation, which had become somewhat tense by reason of withdrawals of gold for export, and the above-noted absorption of money by the Treasury, Secretary Shaw sought to increase deposits of public funds in the depository banks throughout the country, but he was only partially successful, because of the fact that the bonds required as pledge for these deposits commanded such high prices that few of the banks would procure them for the purpose of qualifying for the reception of public funds. Moreover, the tense monetary conditions were, for the reasons above assigned, chiefly confined to this center, and they did not generally prevail in the interior; consequently there was little inducement for country banks to apply for Government deposits. In the early summer months the mone-

tary tension relaxed, but by the middle of August stringent conditions again developed, owing to the concurrent absorption of money from the banks into the Treasury through fiscal operations and a movement of funds to the interior for crop and for business purposes, and also an enormous expansion of bank credits. In the following month the situation became so acute because of the low bank reserves that the Secretary of the Treasury was impelled to resort to expedients for relief. On Sept. 13 he announced a policy of designating as temporary depositories of public funds such banks as had free United States bonds, or those which were not pledged for deposits or for circulation. The Secretary also anticipated the payment of interest upon the public debt due Oct. 1, and on Sept. 20 he announced that he would divert to depository banks the full amount of internal-revenue and miscellaneous receipts, amounting to more than \$500,000 per day for thirty or sixty days, or longer, should such a course be necessary. On Sept. 25 the Secretary directed the prepayment, with a rebate of $\frac{1}{10}$ of 1 per cent. per month, of all interest on the public debt from Oct. 1 to and including July 1, 1903. He also offered to buy at 105 any of the United States 5-per-cent. bonds of 1904 which might be offered on or before Oct. 15; the price offered for these bonds was, however, so low that only \$23,500 out of the \$19,410,350 outstanding were presented for redemption. The above-noted measures of relief having proved entirely ineffective in relieving the monetary tension, which was most severely felt at New York, the Secretary on Sept. 30 announced that he would accept as pledge for public deposits in the banks municipal or such other bonds as were permissible as investments by savings-banks of the various States, these bonds to be substituted for those of the Government on condition that the United States bonds so released be immediately deposited as security for new circulation; the object which the Secretary had in view was an increase in the volume of bank-notes. At the same time Secretary Shaw, as part of his general plan for the relief of the money market, announced that no reserve would be required to be held by depository banks against deposits of those of the public funds which were secured by United States bonds. It was expected that the release of this cash reserve would result in the expansion of bank credits generally throughout the country by four times the sum of such cash. The depository banks in this city did not take advantage of this permission to release the reserve against public deposits and expand their credits, chiefly for the reason that it was deemed prudent to check as much as possible undue speculation in the stock-market, and the surplus reserves of the associated banks continued to be computed upon the basis of net deposits, including those of the Government, as formerly, though the amount of the public funds was separately stated, and the changes in the surplus, on the basis of net deposits, less those of public funds, were noted in the official weekly statements. The above-mentioned measures of Treasury relief to the situation proved only partially effective, there having been up to Oct. 18 only about \$15,500,000 of municipal bonds substituted for those of the Government as pledge for public deposits, releasing \$11,625,000 of United States bonds as security for new circulation. The payments of rebated interest at that date did not exceed \$3,200,000. About \$8,000,000 of gold had been received from Europe, South Africa, and Australia, and \$1,500,-

000 more was in transit, but the condition of the foreign-exchange market was such as to make entirely improbable the importation of further sums. On Oct. 7 Secretary Shaw was offered a block of \$5,000,000 United States 4-per-cent. bonds of 1925 at 138. He declined to accept them, though he expressed a willingness to consider the proposal and take an option upon the bonds, provided the bankers making the tender would offer a larger amount at a concession in the price. These bankers thereupon negotiated with holders of United States 4-per-cent. of 1925 for their exchange for municipal bonds, which had been accumulated in the course of the business of these bankers, and having succeeded in effecting such exchange for about \$10,000,000 of the above-mentioned United States bonds, they offered them to the Secretary. On Oct. 17 Mr. Shaw announced that he had accepted the option on the \$5,000,000 offered on the 7th, and that he would buy at 137½ and interest any United States 4-per-cent. bonds of 1925 that might be offered on that day and until the close of business on Oct. 20. The offerings on the 17th were \$8,253,400, and on the 18th \$865,000; the total amount paid for the bonds on the completion of deliveries was \$21,885,864. The Secretary also directed the payment of the November interest on the public debt, which interest amounted to about \$2,300,000, without rebate. Early in November the Secretary suspended the substitution of State and municipal for United States bonds as security for deposits of public funds; the amount of substitutions then was \$20,488,500. Secretary Shaw also announced that no further increase would be made in deposits of public funds in the banks.

Average cash holdings of the New York associated banks at the beginning of December, 1901, were \$248,581,700. The maximum for the twelve months ending Nov. 29, 1902, was \$270,622,600 Feb. 1. By May 17 the cash had been reduced to \$242,387,000, largely by reason of the suspension, March 15, by Secretary Shaw of bond purchases. There was a recovery by July 26 to \$253,526,700, due, in part, to the return movement of money to this center from the West. This was followed by a gradual reduction in the cash, caused, at first, by absorption by the Treasury and later by the movement of currency to the interior, and by Oct. 11 the cash was reduced to \$219,612,500, the minimum of the year. The liberal purchases of bonds by the Treasury on the 17th caused a recovery in the cash to \$238,452,800 by Oct. 25, and at the end of November it was \$236,745,500. At the beginning of December, 1901, the average loans of the associated banks were \$876,169,200. After Dec. 21, when the minimum of the twelve months, \$857,005,400, was recorded, loans rapidly expanded to \$938,191,200 by March 1; this was not only the maximum of the year, but the highest on record. Then came contraction, influenced by a reduction in bank reserves, and by April 26 the loans had been reduced to \$893,394,100. After a recovery to \$904,162,500 in the following week, loans were again reduced, reaching \$881,070,400 by June 14. They were thereafter more or less rapidly expanded to \$929,148,000 by Aug. 16 in anticipation of the effects of the abolition of the war-taxes, and then followed gradual reduction, owing to calling of loans and liquidations, to \$865,450,800 by Oct. 18; at the end of November they were \$879,826,000. Average deposits of the associated banks at the beginning of December, 1901, were \$940,668,500. They fell to \$904,096,300 by Dec. 21, and thereafter there was a rapid rise to \$1,019,-

474,200, the highest of the year and on record, by Feb. 21. After irregularly declining to \$931,751,000 by May 24 there was an advance to \$960,246,000 by Aug. 16, followed by a decline to \$863,125,800, the lowest of the year, Oct. 18; at the end of November the deposits were \$883,836,800. It should be noted that, beginning with Oct. 4, the amount of public deposits in the banks was separately reported; these, on that date, were \$40,769,300, and by the close of November they were \$40,169,900. The surplus reserve of the banks at the beginning of December, 1901, was \$13,414,575. This was reduced to \$5,455,025 by Dec. 14, recovering to \$26,623,350, the maximum of the year, by Feb. 1, 1902. There was a fall to \$3,112,900 by March 15, a recovery to \$6,965,575 on the 29th, a decline to \$2,649,525 April 5, and then came an irregular recovery to \$15,709,275 by July 19. The effects of the drain of cash into the Treasury and to the interior and also of the expansion of loans and the consequent increase of deposits were observable in the decrease in the reserve to \$1,642,050 deficiency by Sept. 20, for the first time since Nov. 18, 1899. There was a recovery in the reserve in the following week and an improvement in bank conditions thereafter; the surplus reserve at the end of November was \$15,786,300. Computations of reserve based upon net deposits, less those of the Government, showed a surplus at the close of November of \$25,828,775. One feature of the totals of the weekly bank statements, observable in October until the 25th was the increasing excess of loans over deposits beginning with the 4th. This was due to the practical transfer of deposits to the capital and net-profit account, and this occurred for the first time since 1896; on and after Oct. 25 deposits were in excess of loans. Previous to October this year individual banks having large capital loaned in excess of their deposits, but in the above-named month from 20 to 22 banks pursued this course.

The extreme rates for money on call at the New York Stock Exchange during the twelve months under review were 35 per cent. and 2 per cent. The tone of the money market was firm in December, 1901, the rate gradually advancing after the middle of the month to 15 per cent. on the 31st, influenced by the low bank reserves. In January, 1902, the market grew easier as the result of the return flow of money from the interior, the purchases of bonds for the sinking-fund, and the restoration of bank reserves, and in the following month, 2 per cent., the minimum of the year, was recorded. The tone became firmer in March, influenced by gold exports and by the suspension of bond purchases by the Treasury, and in April low bank reserves and continued gold exports kept rates comparatively high until the close of the month, when the tone became easier, influenced by increased deposits of public funds in depository banks. In May, during the derangement incident to failures of Stock-Exchange houses, money on call advanced to 25 per cent. After the excitement subsided, however, normal conditions were restored, and the market was easy in June and until the middle of August, when the rate on call rose to 6 per cent., subsequently declining to 3 per cent. In September monetary tension developed as the result of a concurrent drain of money to the interior, absorptions by the Treasury through fiscal operations and the expansion of loans, and 35 per cent. was recorded by the end of the month; this rate was the highest of the year. In October tense monetary conditions prevailed until they were relieved through the purchase of \$15,584,050

4-per-cent. bonds by the Treasury, when rates declined, and thereafter to the close of November the range for money on call was from 6 per cent. to 2 per cent.

Time loans were 6 per cent. for thirty to sixty days, and $4\frac{1}{2}$ to 5 per cent. for four to six months on stock collateral in December, 1901, and until after the middle of January, 1902, when the rates fell to 4 per cent. for all periods, and from February to April, inclusive, quotations were $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. for short and long dates respectively. In May there was an advance to 6 per

The clearings of the New York associated banks during the clearing-house year ending Sept. 30, 1902, were \$74,753,189,436, against \$77,020,672,494 in the previous year. For twelve months ending Nov. 29, 1902, the clearings were \$76,477,924,342, against \$79,059,126,079 for the same time in 1900-'01.

The condition of the New York Clearing-House banks, the rates of interest, exchange, and silver, and the prices of United States bonds on Nov. 30, 1902, compared with the same items for the previous two years, are as follow:

ITEMS.	Nov. 30, 1900.	Nov. 30, 1901.	Nov. 29, 1902.
NEW YORK CITY BANKS:

2s coupon, 1930.....	105 $\frac{1}{2}$ bid	108 $\frac{1}{2}$ bid	108 $\frac{1}{2}$ to 109

cent. for short, followed in June by a decline to $4\frac{1}{2}$ to 5 for all periods, and these rates remained practically unchanged until September. Then they rose to 6 per cent., plus a commission of from $\frac{1}{2}$ of 1 to 1 per cent., equal to 7 and 8 per

The following is a statement of the average loans, specie, circulation, deposits, and legal tenders of the New York associated banks at the beginning of each quarter and at the end of November, 1902:

DATE.	Loans.	Specie.	Circulation.	Deposits.	Legal tenders.
January 4.....	\$869,546,600	\$164,808,800	\$31,874,200	\$926,204,100	\$74,257,800
April 5.....	907,223,400	173,254,200	31,059,900	964,618,300	70,549,900
July 5.....	910,883,200	173,116,800	31,683,800	958,647,500	76,629,800
October 4.....	872,303,700	151,269,900	35,660,900	872,176,000	68,593,300
November 29.....	879,826,000	168,840,200	45,432,800	883,836,800	67,905,300

cent. per annum, in consequence of the monetary derangement which then prevailed. In the latter part of this month and in October banks refrained from offering time loans, having so little money to lend that they preferred to employ it on call, and the few time contracts recorded were made with trust companies at the above-named rates. After the monetary tension was relieved, through bond purchases, rates declined to 6 per cent., without a commission. The market for time money was, however, firm in November, when the demand was greatest for short periods at 6 to 7 per cent.

Commercial paper of first class was $4\frac{1}{2}$ to $5\frac{1}{2}$ per cent. in December, 1901, so remaining until February, 1902, when it fell to 4 to $4\frac{1}{2}$ per cent., recovering to the above-quoted rates in April, and declining to 4 to $4\frac{1}{2}$ per cent. in June. In the following month there was a rise to $4\frac{1}{2}$ to 5 per cent., in August to $4\frac{1}{2}$ to $5\frac{1}{2}$ per cent., and in September and October rates were nominal at 6 per cent. for all periods. No local business was then transacted in paper, the banks being out of the market as buyers, and merchants desiring accommodation resorted to their banks for discounts. Mercantile requirements were, however, small, collections being generally good and sufficient to meet current needs. It is noteworthy that at no time during the monetary derangement were merchants in the least incommoded by the high rates, these being confined to the Stock Exchange.

Stocks.—The stock-market was more or less unsettled during the greater part of December, 1901, by active money, and also by important declines in the price of some of the industrial properties, notably Amalgamated Copper and American Sugar Refining, the former falling to 60 $\frac{1}{2}$, compared with 130 six months previously, and the latter to 103 $\frac{1}{2}$ from 126 $\frac{1}{2}$ at the beginning of the month and 153 early in June. Toward the last week there was a decided recovery in the market, led by the anthracite-coal shares, the rise in which was influenced by the very satisfactory condition of the trade as indicated by the unprecedentedly large production for the year and by the maintenance of firm prices. Central New Jersey sold at 196 $\frac{1}{2}$ as against 145 $\frac{1}{2}$ Jan. 4, and Lackawanna was 258 Dec. 31 compared with 188 $\frac{1}{2}$ Jan. 3. The Reading stocks, Manhattan, St. Louis and San Francisco, and Chicago, Indianapolis and Louisville common also recorded notable advances. Among the exceptionally large transactions during the month were those in Amalgamated Copper of 2,555,000, and in American Sugar Refining of 1,050,000 shares. In January, 1902, the dealings in stocks were smaller, and though there was apparently inherent strength in the market, prices fell off on light offerings. There seemed to be a disposition on the part of speculators to await developments of an encouraging character before venturing in the market. The movement by the State of Minnesota for the institution of a suit in the United

States Supreme Court against the Northern Securities Company attracted attention, and one depressing influence was the embarrassment of a Western syndicate which had undertaken to consolidate a group of trolley and telephone lines, while another event of a somewhat discouraging character was the failure of the Crude Rubber Company. The floating of \$30,000,000 debenture bonds by the Atchison, Topeka and Santa Fé Railroad Company was unfavorably construed, and there were rumors of a large bond issue by the Erie. The deplorable Park Avenue Tunnel accident had an adverse influence upon the stock of the New York Central Company. This was followed by the announcement of an issue of \$35,000,000 of new stock, through which shareholders would have valuable rights, and the market price of the stock thereupon recovered. The dividend on the Central New Jersey was increased during the month from 5 per cent. to 8 per cent. per annum, and that of the New York, Chicago and St. Louis second preferred from 2 per cent. to 3 per cent. Amalgamated Copper stock recovered because of the improvement in the copper situation, and the annual report of the United States Steel Corporation was so favorable that it stimulated active buying of the shares. The London security markets were strong on rumors of peace negotiations, indicating a speedy ending of the war in South Africa, and this news had some influence on the speculation in American securities at the British capital, more or less contributing to a better tone here toward the close of the month. Among the important advances were Lackawanna to 28½, in Rock Island to 165, Chicago and Northwestern to 16, and Metropolitan Street Railway to 173. In February the depressing influences on the market were the phenomenally bad weather conditions between the 17th and the 28th, and also the effort of the Commissioner of Internal Revenue to enforce a ruling taxing collateral deposited as security for loans. The United States Supreme Court adjourned on the 3d, having failed to announce a decision in the matter of the application of the State of Minnesota for leave to file a bill of complaint against the Northern Securities Company, and therefore it was felt that the intended suit would not be pressed. Interest in the matter was revived, however, by the action of President Roosevelt, who, on the 19th, directed the Attorney-General to bring suit against the company on the ground that it existed in defiance of the antitrust law of 1890. Though the Supreme Court on the 24th rendered a decision denying the application of the State of Minnesota, the above-noted action by the President had an unsettling effect, because it was seen that if the Northern Securities Company had violated the provisions of the act of 1890 there were other concerns which were similarly situated. There was a severe fall in prices of stocks on the exchange on the 20th, but this was followed by an irregular recovery, and the market was generally strong thereafter, though the trading was comparatively small.

Labor troubles were the prominent features in March, and the most serious was the strike of freight-handlers at Boston. A lockout was threatened by the cotton manufacturers at New Bedford, Mass., but the differences with the employees were compromised. The United Mine Workers in the anthracite coal regions of Pennsylvania demanded an eight-hour working day, but through the mediation of the National Civic Federation a strike was averted. The bill of complaint in the action brought by the United

States Government against the Northern Securities Company was filed in the circuit court for the District of Minnesota on the 10th, but this attracted little attention. There was some anxiety felt respecting the prospects for winter wheat, owing to long-continued drought in the Southwest, until copious rains tended to relieve apprehensions. Notwithstanding the above-noted unsettling features the tendency of the stock market was generally upward, and closing prices showed improvements compared with the lowest of the month; one of the notable events was an increase in the dividend on Southern Railway preferred to the basis of 5 per cent. per annum. A prominent feature in April was a partial corner in Louisville and Nashville. This was brought about through the sale by the company of 50,000 shares of new stock, the issue of which had been authorized in 1893. The sale was made, however, before the new stock had been listed on the Stock Exchange, and, taking advantage of this fact, John W. Gates bought largely of the stock, intending to squeeze the short interest, but, in order to effect this purpose, he was obliged to buy more than he could conveniently carry. He had secured control of the property, and if he forced a corner he would place himself in the embarrassing position of being technically short of his own stock. He extricated himself from this position by turning over his control to J. P. Morgan & Co. When it was seen that a corner was threatened the whole market became unsettled, but after the impending danger had been averted there was a decided recovery in the entire list influenced by speculative manipulation on a large scale. Among the notable advances were Chicago and Northwestern common from 232 to 271, Illinois Central 141½ to 153½, Nashville, Chattanooga and St. Louis 89½ to 122, and Michigan Central 150 to 192; Louisville and Nashville rose during Mr. Gates's operations from 105½ to 133. The quarterly dividend on Amalgamated Copper was reduced this month to ½ of 1 per cent., and that on Calumet and Hecla was also lowered. The United States Steel Corporation announced its intention to issue \$250,000,000 of new bonds for the purpose of retiring with \$200,000,000 of the issue a corresponding amount of preferred stock and converting the remainder of the bond emission into cash. The Rock Island obtained control of the Choctaw, Oklahoma and Gulf Railroad, and the Atlantic Coast Line acquired control of the Savannah, Florida and Western, or the Plant system of roads. One event early in May was the collapse of what were known as the Webb-Meyer securities, involving the failure of three Stock-Exchange firms. There had been wild speculation in these properties, the result of manipulation, and the collapse was brought about through a sharp break on the curb market on the last day in April in International Power stock from 198 to 120. This attracted attention to Dominion Securities, Hackensack Meadow, Storage Power, and North American Lumber and Pulp because of the supposed connection of the Webb-Meyer syndicate with International Power. The market was again unsettled, after it had partially recovered from the effect of the above-noted failures, by the decision of the United Mine Workers on May 15 to strike, they having failed to obtain any concession from the anthracite-coal operators. Gradually, however, the market recovered, influenced in part by the restoration of normal monetary conditions, which had been deranged by the Webb-Meyer troubles, and the tone was steady for the re-

mainder of the month, though prices were generally lower at the end than at the beginning; one important exception was Canadian Pacific, which rose from 122½ to 141½. The anthracite-coal miners' strike continued throughout June, and an attempt at the beginning of the month by the leaders of the organization to induce the engineers, firemen, and pump-men at the mines to join in the strike was partially successful. On the 18th a call was issued by John Mitchell, the president of the United Mine Workers' Association, for a convention to be held July 17 of all the coal-miners in the country, both bituminous and anthracite, to determine whether the former should also strike. Mining of anthracite coal was suspended throughout the month, the operators fearing that those who were willing to work would not be protected, but the washeries at the mines were operated and some coal was supplied to the market. The stock speculation was not greatly influenced by the coal strike, because it was felt that some way would be found for settling the troubles. The tone of the market was generally strong, though the volume of business was not large. One feature was a sharp rise in Chicago and Eastern Illinois from 159½ to 195, and there was also an advance in Illinois Central from 150 to 161½ on the announcement of an increase in the capital from \$79,200,000 to \$95,040,000, stockholders to be given the privilege of taking the additional shares at par. Other noteworthy price movements were sharp advances in Missouri Pacific, Wabash common and preferred, and St. Paul. The granting of a permanent injunction restraining the conversion of \$200,000,000 of the United States Steel preferred stock into bonds caused a fall in the shares of the corporation. Though the Pennsylvania Railroad Company made a contract with the Postal Telegraph Company for the use of the lines of the Pennsylvania system to displace the service of the Western Union, the stock of the latter was not materially affected.

In July the stock-market was generally strong and at intervals buoyant. The efforts of the anthracite miners' organization to induce the bituminous miners to join in a sympathetic strike failed for the reason that the latter considered themselves bound by existing contracts with their employers; this action of the bituminous miners removed a threatening feature in the coal situation. Riotings and other violence by the anthracite miners at Shenandoah, Pa., led to the calling out, by Gov. Stone, of the Pennsylvania militia. Strikes among the freight-handlers at Chicago resulted in a partial suspension of freight traffic until the 16th, when the strikers surrendered; there were labor disturbances in the bituminous-coal regions of Virginia and West Virginia, but these were unimportant. Among the decided advances in stocks during the month were those in Atchison, Missouri Pacific, and other Southwestern properties, St. Paul, Illinois Central, New York Central, Pennsylvania, Rock Island, Chicago and Eastern Illinois, St. Louis and San Francisco, and Colorado Fuel and Iron. Toward the end of the month the stocks which had been most rapidly advanced sharply declined, influenced by liquidation and by realizations. One feature was a contest for the control of the Colorado Fuel and Iron stock, which resulted in litigation. Another feature was the taking over by the St. Louis and San Francisco of the Chicago and Eastern Illinois. Though money rates were firm the stock-market was not unfavorably affected thereby in August, nor was it influenced by the

continuance of the coal strike. The crop conditions were good, railroad earnings large, and the industrial situation was encouraging, and these favorable factors contributed to a confident feeling among stock speculators. The trading on the exchange was large and well distributed, and leading stocks, including low-priced properties, recorded material advances. Among the features of the month was the reduction of the dividend on Reading first preferred stock, the effect of which was to continue the voting trust. The declaration of the dividend on Southern Railway preferred was postponed pending the action of the stockholders as to the extension of the voting trust. The Central of Georgia dividend on first preference incomes was reduced from 5 per cent. to 3 per cent. per annum. The Colorado Southern semiannual dividend was increased from 1½ per cent. to 2 per cent. Severe monetary tension led to quite general liquidation in the stock-market in September, and the tone was weak during the greater part of the month, and on the 29th there was a demoralizing fall in prices, which was only partially checked by the announcement by the Secretary of the Treasury of plans for the relief of the monetary situation. The coal strike was a deranging element, and the market was also more or less affected by the news of an operation upon President Roosevelt, necessitated by the injury which was inflicted at the time of the collision with a trolley-car at Pittsfield, Mass., in August. One of the most important declines was in Louisville and Nashville, which broke heavily on the announcement of the merger with the Atlantic Coast Line, owing to the fear of minority holders that they would not be included in the arrangements for the majority stock. There was quite liberal selling of American stocks in London during the greater part of the month, caused by apprehensions of large gold shipments to New York as the result of the high money rates.

The stock-market was irregular and lower in October, influenced early in the month by the activity in money, and later by bearish demonstrations. The ending on the 16th of the anthracite-coal strike, which resulted from the appointment by President Roosevelt, with the concurrence of the coal operators, of a commission to investigate the causes of the trouble, had only a temporary influence upon the market, and the tendency was generally downward throughout the month, though there were occasional rallies due to rebuying to cover short contracts. The market was heavy early in November, and on the 14th there was an unsettling fall due to disquieting rumors, which carried prices of some of the leading stocks to about the lowest of the year. This was followed in the third week by an exceptional rise in Manhattan influenced by reports of a practical merger with the Metropolitan and the Interborough companies. The market was active and generally strong to the end of the month. The announcement on Nov. 22 that the anthracite strike commission had adjourned to Dec. 3 for the purpose of affording opportunity for a compromise of the differences between the operators and the miners had a stimulating effect upon the coal stocks.

Total sales of stocks on the New York Stock Exchange during the twelve months ending Nov. 29 were 189,535,721 shares, against 272,605,303 for the same time in the previous year.

The following shows the highest prices of a few of the leading speculative stocks in 1901, and the highest and lowest prices to Nov. 30, 1902:

STOCKS.	1901.	1902.	
	Highest.	Highest.	Lowest.
American Sugar Refining Co.	153	135½	113
Brooklyn Rapid Transit.	88½	72½	54½
Central New Jersey.	185	198	170
Consolidated Gas.	238	230½	211
General Electric.	281½	334	170½

St. Paul.	188	198½	160½
Southern, preferred.	94½	98½	91½
Tennessee Coal and Iron.	76½	74½	60½
Union Pacific.	133	113½	98½
Western Union.	100½	97½	84½

The Crops.—Crop conditions were unfavorable early in the year, owing to drought in the winter-wheat States, and reports of serious damage from this cause were numerous. The general average of this grain reported on April 1 by the Bureau of Agriculture was only 78.7 per cent., against 91.7 per cent. at the corresponding date in the previous year. Midsummer heat was experienced in some sections on the 18th and the 20th, and much injury resulted. This term of heat was, however, not prolonged, and it was followed by rains and cooler weather, and in the succeeding month conditions were more favorable. The report of the Bureau of Agriculture showing the state of the crops on June 1 was generally satisfactory, though not so good as had been expected, the average of winter wheat being about equal to that on May 1; at the same time there was a decrease of about 5,000,000 in the acreage planted. The condition of spring wheat was, however, very high, it being 95.4 per cent. on June 1 against 92 at the same date in 1901. There were general rains during the month, and at the close these rains were excessive in some sections, causing much damage. The crop situation in July was in marked contrast with that of the year before; instead of drought and continued impairment there were abundant rains. The percentage of condition shown by the official reports on July 1 was quite favorable, and an increase of about 3,500,000 in the acreage was shown in corn. At the end of the month estimates were made that the yield of this cereal would be not far from 2,500,000,000 bushels. One feature in the following month was a corner in July deliveries of corn, the speculators taking advantage of the short crop of the previous year and of the small stocks in the market to advance the price. This was sharply moved upward to 85 cents in Chicago and 90 cents in New York by July 8. Attracted by these high prices, large supplies of corn were sent to Chicago from those sections where reserves were fairly abundant, and some of the cereal was reshipped from Eastern ports, where it was awaiting export to Europe. The price sharply broke, under the pressure of these unexpected offerings, to 65½ cents at Chicago, and by the close of the month it fell to 55 cents. The speculators in corn, after the above-noted break, manipulated an advance in oats, forcing the price to 72 cents by the 25th, against 53 at the beginning of the month. Wheat values were not greatly affected by these corners, and the tendency was downward on reports of large crops abroad and favorable prospects at home. The condition of all grains was very satisfactory in August. The general average of corn was reported on the 1st at 86.5 per cent. against 54 at the same time last year, and the indications

then pointed to a yield of fully 2,600,000,000 bushels. In Kansas the condition was 103 against 19 in 1901, in Missouri 100 against 29, and in Nebraska 101 against 36. The harvest began under favorable conditions, and as it progressed the reports of actual yield seemed generally to confirm previous estimates. Not only was the corn-crop almost unprecedented in volume, but the yield of wheat was enormous, far exceeding the most sanguine expectations, and in some States it was the largest ever recorded. When the crops began to move freely a serious shortage of railroad transportation facilities was experienced, but this difficulty was soon remedied. As was the case in the previous year, ocean freights were low, chiefly because the steamers which brought coal from Europe in the fall were in active competition with the regular lines for return cargoes, thus forcing rates downward to almost unprecedentedly low figures.

Estimates in November of the probable yield of cereals indicated a crop of 2,542,516,000 bushels of corn, of 620,895,000 of wheat, of 988,632,000 of oats, of 33,626,000 of rye, and of 135,169,000 of barley.

While the grain-crops were abundant the yield of cotton was irregular, and considerable damage was caused in Texas and in other States by drought. The Agricultural Department reported the general condition Sept. 4 at only 64 per cent. There was a slight improvement during that month, but the outlook was not regarded as favorable, and fears were entertained of an early frost; this encouraged a bull speculation, to which the Liverpool market responded. The official report of Oct. 1 placed the general condition at 58.3 per cent., and this gave a further impetus to the rise in prices, which did not appear to be checked by subsequent more favorable reports indicating a good growth of the late crop; it was then estimated by a prominent member of the trade that the yield for the current season would be about 11,300,000 bales. Toward the end of October killing frosts appeared in some sections, especially west of the Mississippi, checking the growth of late cotton; this news, however, did not materially advance the price, for traders were disposed to realize.

Foreign Exchange.—The exports of domestic and foreign merchandise for twelve months ending Nov. 30, 1902, were \$124,850,554 below those to the same date in 1901, and the imports of merchandise were \$85,788,971 greater. The excess of merchandise exports over imports for the twelve months was \$394,496,815, against \$605,136,340 for the corresponding period in 1901. The excess of exports over imports of merchandise and gold and silver coin and bullion for twelve months was \$411,720,929, against \$630,026,929 for the same time in 1901. Gold imports were \$4,736,581 in excess of exports for twelve months in 1902, against \$1,906,620 imports over exports for the corresponding period in 1901.

The dominating influence in the foreign-exchange market during this year was the almost continuous borrowing by our bankers from those of Europe, which operations began to be important in June of the previous year. Late in January the Bank of England rate of discount was reduced from 4 per cent. to 3½ per cent., and there was a further reduction in the first week in February to 3 per cent. Discounts at Continental centers were easy, and money ruled at such low rates at Paris that French bankers largely increased their investments in sterling and in other securities in London, and otherwise sought employment for their funds. At the same time

rates for money in New York, especially for fixed periods, were comparatively firm and higher than those ruling abroad. In consequence of these conditions those of our bankers who were largely interested in railroad and other enterprises which required considerable sums of money for financing became even greater borrowers of foreign capital than they were in the previous year. These loans were negotiated through the medium of sixty- to ninety-day bankers' bills on London which were borrowed on stock or bond collateral. As these bills approached the period when they would become sight drafts they were covered with demand bills, thus repaying the loan, or the loan was extended through further borrowings for a sixty- or ninety-day period. These operations resulted in continuous offerings of long sterling, called loan bills, which were drawn either against the foreign credits of the bankers through whom they were negotiated or against capital abroad which was seeking employment. The credits and the capital so drawn against were reimbursed by the sight drafts which were procured for the purpose of the settlement of the loan or for its extension. These sight drafts were drawn against credits resulting from the discounting or the maturing of commercial bills of exchange made against exports hence of commodities, thus causing a steady absorption of such commercial bills the prices of which were maintained at figures quite close to those of bankers' long sterling. The almost uninterrupted demand for sight bills to remit in settlement of maturing loans caused these drafts to rule at firm rates, and whenever the inquiry for them was in excess of the supply and they were not procurable at prices less than the gold export point this metal became the cheapest form of remittance and it was shipped abroad. There were occasions during the year, as was the case in November, 1901, when through remittances from London to Paris for settlements, the rate of exchange at Paris on the British capital fell to such low figures as to draw gold from London. Then bankers here having remittances to make resorted to arbitration operations, drawing exchange on London and shipping gold to Paris with which to procure French exchange for the reimbursement of the credit against which the draft on London was made. This will account for the movement of gold hence when the rate for exchange at New York on London was fractionally below the gold-exporting point. The imports of gold from Europe in September resulted from the urgency in the demand for money at this center, the high rates for loans on call and on time practically lowering the gold-importing point to such a figure as to make such imports profitable. After the monetary tension was relieved exchange advanced more or less sharply in response to a demand for remittance, and also because of dearer discounts abroad, a higher price in London for gold, and low rates for exchange at Paris on the British capital, and toward the end of October gold exports as an arbitration operation seemed probable.

So great were the above-mentioned borrowings by our bankers from those in Europe, not only in London, but at Continental centers through London, that it was estimated early in the current year that the merchandise balance in favor of this country had been so largely offset by the indebtedness of American borrowers to those abroad that there remained an amount of debt so large that it would require for its cancellation nearly, if not quite, all of the credits resulting from the exports during the current

season of our commodities. Not only was our indebtedness to Europe thus increased through borrowings of foreign capital, but it was augmented by subscriptions to European loans, notably the British consol loan of £32,000,000 emitted in April, quite large amounts of which were taken by prominent New York bankers; remittances for instalments on this loan, as they fell due, added to the demand for exchange. Other important requirements for remittance of an unusual character were those for the shipping deal, for American industrial enterprises in London and elsewhere in England, and for importations of steel, and during October of coal from Great Britain; the expenditures of tourists in Europe incident to King Edward's coronation ceremonies were also large.

Imports of merchandise in March were \$84,227,082, or greater by \$8,340,248 than in the same month in 1901, and though there was a decline to \$73,115,054 in June, there was an increase to \$79,147,874 in July. August imports were \$78,923,281, September \$87,736,346, October \$87,419,138, and November \$85,478,765. Merchandise exports fell from \$136,941,539 in December, 1901, to \$88,790,627 in July. In August they were \$94,942,310, in September \$121,232,384, in October \$144,327,428, and in November \$125,043,181.

The market for foreign exchange was strong in December, 1901, and though rates declined when money on call was firm, they advanced in response to easier monetary conditions. During the early part of the month gold was exported to Europe in comparatively large amounts, \$2,417,273 going forward on the 3d and \$1,115,869 on the 11th. Then, however, higher rates for money caused a decline in exchange below the gold-exporting point, but with the relaxation in monetary tension exchange advanced. Rates for bankers' long sterling fell from \$4.84½ to \$4.83½, and bankers' sight bills were \$4.86½ on the 31st against \$4.88 on the 1st; while the gold exports were in progress sight exchange was above \$4.87. The market kept so close to the gold-exporting point in January, 1902, that moderate amounts of the metal were shipped at intervals, though these exports were the result of arbitration operations, which were facilitated by low rates for exchange at Paris on London. Sight bills fluctuated during the month between \$4.86½ and \$4.87½, and long bills between \$4.83½ and \$4.84½. In February the market was strong and \$4.265,283 gold was exported on the 6th and \$3,513,823 on the 27th. These shipments were, however, made on arbitration operations, while sight exchange was no higher than \$4.87½; long bills ranged from \$4.84½ to \$4.85½. The market closed firm, with sight bills at \$4.87½, and it was strong early in March, when sight exchange was \$4.88, and then moderate amounts of gold were exported; long bills were \$4.85½. After the 8th rates declined fractionally, and gold shipments were checked, but by the close of the month there was a recovery in sight bills to the opening figures of \$4.87½. In April the tone of the market was strong throughout the month, and on the 7th \$2,518,689 gold was shipped to Paris. Then came a decline in rates for sight bills below the gold-export point, caused by dearer money, but later in the month there was a recovery due to a demand to remit for Louisville and Nashville stock, and also in settlement for American subscriptions to the new British loan, and the market closed firm at \$4.88 for sight, the best figures of the month; no further gold exports were made, however. Sixty-day bills sold at \$4.85½. In May high money rates caused a de-

cine in exchange, and the tone was weak during the first half of the month at a decline of $1\frac{1}{2}$ cent per pound sterling for sight to \$4.86 $\frac{1}{2}$. There was a partial recovery by the close, due to easier money; long bills sold during the month at \$4.85 $\frac{1}{2}$ and at \$4.84. In June the tone was strong and rates steadily advanced, though they were not sufficiently high to justify exports of gold, and sight exchange did not rise above \$4.87 $\frac{1}{2}$; sixty-day bills were \$4.85 $\frac{1}{2}$. The market continued strong in July, and gold began to be shipped through arbitration operations on the 22d, \$7,459,506, the largest single shipment on record, going forward by the end of the month. While the movement was in progress sight exchange ranged from \$4.87 $\frac{1}{2}$ to \$4.88, while long bills moved between \$4.85 $\frac{1}{2}$ and \$4.85 $\frac{1}{2}$. The tone was firm early in August, and \$519,445 gold was shipped to Germany on the 7th. Then, however, dearer rates for money and a pressure of commercial drafts caused a decline in exchange, and by the close of the month sight bills were \$4.86 $\frac{1}{2}$, or about $1\frac{1}{2}$ cent per pound below those at the opening; sixty-day drafts fell from \$4.85 $\frac{1}{2}$ to \$4.83 $\frac{1}{2}$. In September the market was weak, influenced by dear money, and with a view to the relief of the stringent monetary conditions, gold to the amount of \$4,250,000 was engaged in Europe for import hither, and included in this sum was \$2,500,000, which was procured in South Africa. At the same time about \$4,000,000 was imported from Australia. The movement of gold hither from Europe was checked after the early engagements by an advance in the foreign discount rates, and also by a rise in the price of gold in the London market. Sight bills declined from \$4.86 $\frac{1}{2}$ to \$4.85 $\frac{1}{2}$, and sixty-days drafts fell from \$4.84 to \$4.82 $\frac{1}{2}$; the weak tone for these bills was caused by dear money, which induced their sale, and there were also large offerings of loan drafts against stock collateral. The market was firm throughout October, influenced by a demand for remittance and also by a scarcity of bankers' bills, and though commercial drafts were freely offered, they were promptly absorbed. Toward the end of the month sight bills sold at \$4.86 $\frac{1}{2}$, and in the second week in November they advanced to \$4.87 $\frac{1}{2}$. Then a concurrent fall in exchange at Paris on London to 25 francs 11 $\frac{1}{2}$ centimes made possible an export of gold as an arbitration operation; none was sent at that time, however, because of the prevailing firm tone for money, which caused a decline in sight bills to \$4.86 $\frac{1}{2}$. In the last week there was a recovery to \$4.87 $\frac{1}{2}$, in response to a demand to remit for December settlements, and the tone was strong to the close.

Railroads.—Combinations of prominent railroad lines, as was the case in the previous year, made considerable progress, though some important consolidations were held in check by the litigious proceedings instituted to prevent the consummation of the Northern Securities scheme. In December, 1901, the Lake Shore acquired control of the Indiana, Illinois and Iowa road and the Norfolk and Western obtained control of the Pocahontas Coal and Coke Company, issuing thereon \$30,000,000 of 4-per-cent. bonds. The gross and net earnings of the 157 roads reporting for the calendar year 1901 made the most remarkable showing of increases of \$138,973,621 in gross and of \$64,800,530 in net income compared with the previous year, following successive increases in each twelve months as far back as 1897. Early in March the Pennsylvania Railroad Company announced an issue of \$50,000,000 of bonds, \$24,000,000 of which were to provide new equipment

and \$20,000,000 to cover expenditures for the tunnel extension of the system into New York city. The bonds had the right of conversion into stock of the road at 140 on and after May 1, 1904. Late in March it was announced that interests identified with the Minneapolis and St. Louis Railroad Company had acquired control of the Colorado and Southern. A short time previously these interests obtained possession of the Iowa Central, which enabled them to control the Fort Worth and Denver City. In April the Plant system of roads was acquired by the Atlantic Coast Line system and the Choctaw, Oklahoma and Gulf Railroad was bought by a syndicate of bankers in the interest of the Chicago, Rock Island and Pacific. In May the last-named company acquired the St. Louis, Kansas City and Colorado, enabling an extension to be made to an important section in the Southwest. In June the directors of the Illinois Central recommended an increase of \$15,840,000 in its stock to be offered to its shareholders at par. About the middle of July there was a sharp rise in the market price of the stock of the Chicago, Rock Island and Pacific company to 200, against about 152 in January. This was explained by the announcement on July 25 that the property would be reorganized and its securities rearranged. The plan provided for the absorption of the companies embraced in the Rock Island system by a holding company, the stockholders of the Rock Island receiving for each 100 shares of their stock \$10,000 in new bonds, 75 shares of new preferred and 100 shares of new common stock; the majority of the stockholders of the Rock Island promptly gave their assent to the plan. At the end of July it was announced that arrangements had been perfected for the taking over by the St. Louis and San Francisco of the Chicago and Eastern Illinois, thus giving the former a terminal at Chicago. With the completion of the extension of the St. Louis, Memphis and Southeastern to Memphis, in the interest of the St. Louis and San Francisco, this would make an entirely new route between Chicago and Memphis, greatly to the advantage of the San Francisco line. With the previous acquisition of the Kansas City, Fort Scott and Memphis and of the Kansas City, Memphis and Birmingham, the St. Louis and San Francisco would have a line into the center of the South at Birmingham and, with other combinations, extensions to the Gulf of Mexico in one direction and to El Paso in the other. Compilations of gross and net earning of 154 roads for the six months ending June 30 showed a gain, compared with the same time in the previous year, or \$38,904,639 in gross and \$7,722,906 in net revenue. The decrease of \$19,000,000 in the latter, compared with the first six months of 1901, was largely due to the unfavorable weather in February and to the coal strike, which began in May. It was announced in October that the shareholders of the Atlantic Coast Line would be asked in the following month to vote upon a proposition for the increase in the capital by \$15,000,000 and in the bonded debt by \$35,000,000, the proceeds to be applied toward the payment for 306,000 shares of the capital stock of the Louisville and Nashville Railroad Company, which were purchased by J. P. Morgan & Co. from the parties who earlier in the year obtained control of the road through speculative manipulation, as elsewhere noted. Late in October the Stock Exchange authorized the listing of \$42,316,900 additional stock of the Baltimore and Ohio Railroad Company, making the total of the

stock \$124,146,100, which new issue was taken by stockholders at par in the previous month. In November the principal lines of railroads voluntarily advanced wages 10 per cent. in anticipation of demands from their employees for such advance.

Gross earnings of 74 railroads for twelve months ending Nov. 30 were \$623,776,463, against \$575,882,954 for the corresponding period in the previous year.

Manufacturing Industries.—The depression in copper, which was a notable feature in the previous year, had more or less effect upon that industry until March, when there was a recovery. In that month labor troubles at the Massachusetts cotton-mills threatened a lockout, but the mill owners finally yielded to the demands of the operators and advanced wages. The prolonged strike of anthracite-coal miners caused a serious deficiency in the supply of coke and other fuel and a materially decreased output of pig iron. Steel manufacturing was also affected, and the mills were unable to supply the current demands, necessitating large importations of finished products in Europe. At the same time these mills had contracts of such magnitude for future deliveries as were expected to keep them fully employed at least until the middle of the ensuing year. One feature was the development of petroleum-oil fields on an extensive scale in Texas, but owing to the cost of transportation this product could not be made available for fuel at the East during the anthracite-coal famine; the consumption of bituminous coal was, however, largely increased.

While exports of manufactures showed some augmentation during the year the gain was small compared with previous periods, largely owing to the inability of our steel-mills to meet foreign orders because of the greater demand for the home consumption of their products. Exports of manufactured articles for twelve months ending Oct. 31 were \$410,260,314, against \$397,836,062 for the same time in the previous year. There was a large gain in importations of articles in a crude condition which enter into the various processes of domestic industry, these amounting for the twelve months to \$341,611,525, against \$290,600,786 for the corresponding period in 1901.

FINE ARTS IN 1902. Under this title are treated the principal art events of the year ending with December, 1902, including especially the great exhibitions in Europe and the United States, sales and acquisitions of works of art, and erection of public statues and monuments.

Paris.—The exhibitions of the rival Salons were held contemporaneously (May 1 to June 30) in the Grand Palais des Champs Élysées, the building constructed originally for the Art Exhibition of the Centennial Exposition of 1900, and now under the administration of the Beaux-Arts.

Paris: Salon of the Artistes Français.—The officers of the Société des Artistes Français for the year are: Honorary Presidents, Léon Bonnat, Édouard Detaille, Jean Paul Laurens; President, William Bouguereau; Vice-Presidents, A. Bartholdi, Louis Scellier de Gisors; Secretaries, A. de Richemont, G. Lemaire, J. L. Pascal, A. Mongin; Corresponding Secretary, Albert Maignan; Secretary-Treasurer, E. A. Boisseau.

The annual exhibition comprised 4,268 numbers, classified as follow: Paintings, 1,680; cartoons, water-colors, pastels, miniatures, enamels, porcelain pictures, etc., 518; sculptures, 750; engraving on medals and precious stones, 95; decorative art, 463; architecture, 278; engraving and lithography, 484.

The honorary awards for 1902 are as follow: Section of Painting: The medal of honor was awarded to Joseph Bail for his *Les Dentellières*. First-class medal: No medal awarded. Second-class medals: Paul Michel Dupuy, for his *Au Luxembourg*; Arthur Stockdale Cope, *Portrait of Lady Hickman*; Clémentine Hélène Dufau, *Automne*; Georges Jules Moteley, *Village de la Fa-verie—Normandy*; Léon Dambeza, *Le Passeur*; Henry Émilien Rousseau, *Les Oliviers—Sahel Tunisien*; Emmanuel Fougerat, *Ma Maisonnée* and *Portrait du Supérieur du Petit Séminaire de Vitré*; Pierre Jacques Dierckx, *Fileuses Flamandes*; Mary Shepard Greene (New York), *Une Petite Histoire*; Edmond Richter, *Salammbo*; Alexandre Jacques Chantron, *Feuilles Mortes*; Jules Gustave Besson, *Le Moissonneur de Lauriers—triptyque*; Henry Grosjean, *Au Coucher du Soleil*; Louis Alexandre Cabié, *L'Approche de l'Orage*; François Charles Cachoud, *L'Heure du Grillon à Bouvans*. Third-class medals: Tom Mostyn, Louis François Cabanes, Antoine Marie Raynolt, Eugène Jules Delahogue, Lawton Parker (United States), Félix Augustin Édouard Planquette, Paul Ivanovitch, Victor Octave Guétin, Albert François Lartean, Georges Frédéric Rotig, Henry Brémont, Charlotte Chachet, Nanny Adam, Jules Cayron, Théodore Duchateau, M. E. Dickson (St. Louis), Honoré Victor Louvet, Pauline Marie Louise Dubron, Mme. Sudmilla Flesch de Bruningen, Mary Emmanuel Michel Benner, Eugène Benjamin Selmy, Fernand Stiévenart, Charles Joseph Watelet, Jean Louis Lefort. Among the honorable mentions are: Sidney Gorham (United States), Edward Dufner (Buffalo, N. Y.), and Coggeshall Wilson (New York).

Section of Sculpture: Medal of honor to Hippolyte Lefebvre for his marble group *Jeunes Aveugles*. First-class medals: Jean Baptiste Antoine Champeil, *Le Printemps de la Vie* (marble group); Auguste Henri Carl, *Le Christ et Sainte Véronique* (marble group) and *Lutte de Jacob avec l'Ange* (marble group); Prosper Lecourtier, *Chienne Danoise allaitant ses Petits* (bought by the state) and *Face à l'Ennemi—Lion* (plaster group); Michel Léonard Béguine, *La Première Parure* (marble statue). Second-class medals: Louis Baralis, *Naufragés* (group); Gabriel Zimmermann, *Appel Suprême* (plaster); Alphonse Terroir, *Seul dans la Vie* (plaster bas-relief); Julien Lorieux, *La Chute des Feuilles* (plaster group); Raymond Sudré (plaster portrait and statue); Paul Darbefeulle, *Danseuse* (marble) and *Le Berger Daphnis* (plaster); Jules Louis Rispal, *Nymphes de Diane* (marble); Constant Roux, *L'Automne* and *L'Hiver* (bas-reliefs for Chamber of Deputies). Third-class medals: Charles Paillet, Alphonse Muscat, Raphael Charles Peyre, Charles Louis Malrie, Georges Colin, Carl Johan Eldh, Philippe Perrotte, Jean Cézard-Bru, Léon Ernest Drivier, Arthur George Walker.

Section of Architecture: Medal of honor to Henri Eustache, for his plan showing the actual state and a restoration of the Via Sacra, Rome. First-class medals: Alexandre Bruel, Rome, sud-ouest du Mont Palatin and Le Domain du Culte de Cybèle; Paul Guadet, *Restauration de la Salle de Spectacle, bâtie en 1790*; Charles Henri Prudent, do. (in collaboration). Second-class medals: Malgras-Delmas, Louis Charles Guinot, Georges Gromort, Émile Brunet. Third-class medals: Ferdinand Marie Chanut, Léon Jausseily, André Félix Narjoux, Henri Parmentier, Félix Ollivier, Prosper Jean Santerre.

Section of Engraving and Lithography: No medal of honor awarded. First-class medal:

Louis Jean Muller, *The Squire's Song* (etching after Dendy Sadler). Second-class medals: Émile Ferdinand Crosbie, *Portrait d'une Princesse Bonaparte* (wood, after Ingres); Arthur Jules Mayeur, *L'Amateur de Peinture* (burin, after Meissonnier); Léon Salles, *L'Abreuvoir* (etching, after Detaille); Louis Huvey, *Les Bébés* (original lithograph); Jules Lerendu, *Portrait de Vieillard* (lithograph). Third-class medals: Marius Bernard Labat, Victor Mathieu, Rose Maireau, Edmond Jules Pennequin, Théodore Auguste Truphème, Georges Fouquet-Dorval, Georges Garen, Pierre Frédéric Barré, Louis Trinquier.

Among the noteworthy exhibits was Jean Léon Gérôme's *La Rentrée des Félins dans le Cirque*, representing the return to their dens, after a human feast in the amphitheater, of the lions and tigers. A few spectators still linger in the seats above, though most of the ranges are empty. In the arena are scattered human corpses, and attendants armed with whips driving the gorged wild beasts into their den, the mouth of which opens in the background. In the foreground one maned lion seems disposed to dispute the keeper, who has his whip raised in the attitude of striking.

Edmond Detaille's two contributions, large decorative canvases for the Hotel de Ville, Paris, represent, the one *Les Enrôlements Volontaires sur le Terre-plein du Pont-Neuf, en Septembre, 1792*, and the other *Reception, par la Municipalité de Paris, des Troupes revenant de Pologne—1806-'07*.

Edmond Richter's *Salammbô* represents the sister of Hannibal standing before a mirror, with Taanach kneeling with clasped hands beside her, a scene from the famous romance of Gustave Flaubert.

Alphonse Lalauze's *Marengo—14 June, 1800*, represents the cavalry of the Consular Guard, under Gen. Bessières, charging impetuously the Austrian dragoons. Bessières, in the foreground, with saber uplifted and shouting, is leading the grenadiers upon the enemy, seen at left.

Cléopâtre à Tarse, the principal contribution of Adolphe Lalire, is a scene from Plutarch, where the author describes the arrival of the Egyptian queen at Tarsus, on the Cydnus, in her magnificent galley with silken sails and silver oars, surrounded by her women clad as Nereids and Graces.

Pandore, by Charles Amable Lenoir, represents the mischief-maker at full length in flowing robes, holding the fatal box in her hand. This picture belongs in New York.

Maurice Henri Orange's *Boulogne—1804* represents Napoleon, mounted, talking with another mounted officer and looking out upon the arm of the sea that separates him from "perfidie Albion." Behind the two are other mounted men, soldiers, artisans, etc., and a long row of vessels nearly ready to be launched for the conquest of England.

Gustave Wertheimer's *Le Rival* represents a desert country with a stream winding through it. On the bank, in the foreground, are a lion and two lionesses looking across the water, on the other side of which is another lion, the rival, looking jealously across at the favored one.

Le Colonel Roosevelt à Cuba; Prize des Hauteurs de San Juan is the long title of a picture by Ernest Jean Delahaye, which tells its own story. The future President is standing calmly on the heights, a target for the Spanish sharpshooters, pointing with his right arm at the entrenchments of the enemy. He is almost isolated, being nearer the Spanish line than are his men to him.

Bouguereau's chief exhibit, *Les Oreades*, illustrates a passage from F. Humbert. As the shadows are dissipating and Aurora tints the mountain tops the troop of joyous wood-nymphs who have spent the night on earth return in long procession to the ethereal regions where dwell the gods. A confused mass of nude and wingless Oreades are passing upward out of the shadows of a wood, while fauns and satyrs, gathered in the foreground, gaze in astonishment at the spectacle.

Louis Beroud's *Le Martyr de Saint-Antoine* represents the good saint, bearded and in monastic robes, with a cross in his hand, pulled hither and thither on a flowery hillside by a laughing bevy of shameless nude nymphs, who appear to enjoy the martyrdom more than the martyr does.

American exhibitors in the Salon of 1902 were: Inez Abernethy (Arkansas), George C. Aid (St. Louis), Carroll Beckwith (New York), Henry S. Bisbing (Philadelphia), Lu Blackstone-Freeman (New York), Frank M. Boggs (New York), Benjamin J. Bowen (Boston), Theodore A. Brewer (Cincinnati), Frederick Arthur Bridgman (Tuskegee), Edwin D. Connell (New York), Cacharme Critcher (Virginia), M. E. Dickson (St. Louis), William Dodge (Virginia), Gaines Ruger Donoho (Mississippi), Mattie Dubé, Edward Dufner (Buffalo), Frederick M. Du Mond (Rochester), Ferdinand Earle (New York), David Erieson, Mary Franklin, Edward Fulde, Della Garretson (Ohio), Sidney Gorham, Frank Russell Green (Chicago), Mary Shepard Greene (New York), Peter Alfred Gross (Allentown, Pa.), Mary Gulliver (Norwich, Conn.), Eliza Voorhies Haigh (New York), Howard Morton Hartshorne (New York), Nina Rose Hartwell, Herman Hartwich (New York), Elizabeth Case Harwood, Chester C. Hayes, Laura Healy (Chicago), Louis C. Herreshoff (Providence), Felix Hidalgo (Manila), George Hitchcock (Providence), William S. Horton, Henry S. Hubbell, Margaret Kemiston (Boston), Anna Elizabeth Klumpke (San Francisco), Daniel Ridgway Knight (Philadelphia), Elsa Koenig (Philadelphia), Elizabeth Kruseman Van Elten (New York), Charles Lasar (Pennsylvania), Ossip L. Linde (Chicago), William Cushing Loring (Massachusetts), Walter McEwen (Chicago), Frederick Macmonnies (New York), Ruth Moore (New York), Gustave Henri Mosler (New York), Mme. Willy Betty Newman (Nashville), Adeline Oppenheim (New York), Mabel Packard, Jules Pagès (San Francisco), Lawton Parker, Charles Sprague Pearce (Boston), Mary Smyth Perkins, William Sherman Potts, Isabel Ross (Buffalo), Albert H. Seymour, Freeman W. Simmons (Cleveland), Henry O. Tanner, David A. Tanzky (Cincinnati), S. Seymour Thomas, Mme. Harry Ellen K. B. Thompson (New York), Lionel Walden, Bertha Mary Waters (Connecticut), Susan Watkins (California), Edwin Weeks (New York), Coggeshall Wilson (New York).

Paris: Salon of the Société Nationale.—The officers of the Société Nationale des Beaux-Arts for the year are: President, Carolus-Duran; Vice-Presidents—Section of Painting, Alfred Philippe Roll; Section of Sculpture, Auguste Rodin; Section of Engraving, Charles Albert Waltner. President of Section of Objects of Art., Mme. Charlotte Besnard. Secretaries, René Billotte, Jean Béraud; Treasurer, G. Dubufe.

The thirteenth annual exhibition, opened April 20, comprised 2,443 numbers, of which 1,203 were paintings, 557 designs, drawings, etc., 156 engravings, 223 sculptures, 224 art objects, and 80 architecture.

The president of the society, Carolus-Duran,

had but one exhibit, entitled *En Famille*, a picture containing 15 or 16 human figures and a hound. The happy father in this *At Home* stands at the right, smiling and looking toward the mother, a matronly woman seated at the left with her children gathered around her.

Roll, the Vice-President, exhibited 6 canvases, of which *Vielle au fagot* represents an old woman carrying a large bundle of fagots on her head descending a hill, with a house and trees in the background.

José Frappa contributed 5 portraits, among them a full-length of Cardinal Gibbons, of Baltimore, in his episcopal robes, holding a book in his left hand.

Jean Veber had a half-dozen exhibits, among them two, entitled respectively *La Machine* and *Le Monstre*, which prove him to be the possessor of a very fervid Gallic imagination. The first represents a nude woman seated astride of what may be intended to be the boiler of the machine, from which apparently proceeds the power that turns an immense wheel, whose revolutions grind to death many diminutive human beings. The second picture, *The Monster*, represents a nude woman asleep on a bank, with wild men and animals gazing on her from a little distance with gestures indicative of astonishment.

Auguste Hagborg's *Dalecarlienne* represents a Swedish lady, seen at three-quarters length, leaning on a table, on which are scissors, a work-basket, and sewing materials, and bending forward to look out of a small window.

Alexander Harrison, of Philadelphia, contributed 6 canvases, and J. McNeill Whistler and Julius L. Stewart 5 each. Other American exhibitors were: Lucien Abrams, Albert Jean Adolphe, Frederick Baker, J. Hoxie Bartlett, Cecilia Beaux, Charles Bittinger, Kate Carl, Mlle. L. Crapo-Smith, Herbert W. Faulkner, Frederic Carl Frieske, Walter Gay, Walter L. Green, Harvey Hall, John McLure Hamilton, Child Hassam, John Humphreys-Johnston, Bradford Johnson, Rebecca Jones, Mme. Lucy Lee-Robbins, Mme. Mary Louise Macmonnies, Gari Melchers, Eleanor Norcross, Elizabeth Nourse, Galen Joseph Perrett, John H. Recknagel, Julius Rolshoven, William Sartain, William Émile Schumacher, Winnaretta Singer, Harry Van Der Weyden.

Paris: Miscellaneous.—The Humbert collection, which attracted more attention, perhaps, than was justified by its actual worth on account of the connection of the name with the most gigantic swindle of modern times, was sold in Paris, June 20 and 21, and produced a total of 1,187,000 francs. Some of the best prices obtained were: Paul Baudry, *L'Amour et Psyche*, 25,000 francs, and *La Fortune et L'Amour*, 26,000; Boudin, *L'Avant-port*, 16,200; Jules Breton, *Le Retour des Moissonneuses*, 25,200; Corot, *Le Pêcheur*, 49,000, and *La Ferté-sous-Jouarre*, 26,100; Daubigny, *Les Laveuses*, 55,500; Eugène Fromentin, *Le Passage du Gué*, 30,000; Isabey, *La Bénédiction*, 47,000, and *Le Marchand d'Étoffes*, 23,000; Charles Jacque, *L'Abreuvoir*, 34,000; Gustave Moreau, *Le Roi David*, 51,000, and *St. Sébastien*, 39,500; J. F. Millet, *La Porte de Barbizon*, 26,500; Roybet, *La Main Chaude*, 36,100, and *Les Comédiens au Château*, 34,500; Van Marcke, *Rentrée à la Ferme*, 36,500. Angelo Asti's portrait of Mme. Humbert herself brought only 450 francs, and that of Frédéric Humbert by the same artist, only 145 francs.

A statue of Balzac was unveiled in Paris, Nov. 22, in the presence of many persons prominent in the literary world. The statue, at the intersection of Rue de Balzac and the Avenue de Fried-

land, is of heroic proportions and represents the author seated, in a meditative mood. Bas-reliefs show scenes from the *Comédie Humaine*. Addresses were made by M. Hermant, president of the Society of Men of Letters, and M. Chaumie, Minister of Instruction, and a poem was read by Albert Lambert. M. Chaumie paid an eloquent tribute to the memory of Balzac, whose fame, he said, is now fully established, after a hundred years' perspective, as that of one of the foremost figures in literature.

Benjamin Constant's famous picture *La Justice du Chérif*, exhibited several years ago at the Salon, and which the artist always refused to sell, has been purchased by the state since his decease, and will go to the Luxembourg Museum.

Rembrandt's *Portrait of Admiral van Tromp*, lately the property of M. Floriet, Paris, has been purchased for 300,000 francs, it is reported, by Charles Schwab, president of the United States Steel Company. This picture, which is painted on wood and measures about 33 by 27 inches, was sold in the Erard sale in Paris, 1832, for 17,100 francs. There are several other Rembrandt portraits of Van Tromp.

London: Royal Academy.—The winter exhibition, devoted to the old masters from English private collections, was an amazing revelation of the wealth of art hidden in galleries the owners of which have seldom before permitted the public to view their treasures. Among these were some pictures seen probably for the last time in an English exhibition, lament the English journals, because they have fallen a prey to the inevitable American. "America has become the financial center of the world," says the *Athenæum*, and has begun to absorb our priceless heirlooms, and it suggests the formation of a society similar to the *Société des Amis du Louvre* to raise subscriptions to "retain permanently in English galleries a few at least of the masterpieces which are so rapidly disappearing."

The one hundred and thirty-fourth summer exhibition was marked by a reduction in the number of works exhibited, only 1,726 pictures and sculptures being given a place as compared with 1,823 in 1901. In the 11 galleries devoted to oil-paintings, only 795 examples were hung, as against 923 last year and 1,090 in 1900.

The place of honor was given to the state portrait of King Edward VII, by Luke Fildes, which, isolated by cloth-of-gold draperies, was hung where last year was exhibited Benjamin Constant's portrait of Queen Victoria. The King is represented life-size, standing almost full-face, in field-marshal's uniform, scarlet jacket studded with orders, top boots, and white breeches. From the shoulder depends the deep crimson cloak, lined with ermine, worn at the opening of Parliament. The crown and orb lie on a red cushion on a marble-topped *baroque* table and the scepter, which rests on the table, is grasped in the King's right hand. It is a faithful portrait treated in a kingly way.

A second picture exhibited "by command of the King" was Seymour Lucas's *Reception by King Edward VII of the Moorish Ambassador*, June 10, 1901. His Majesty, with Queen Alexandra by his side, is seated on a canopied dais at left, in St. James's Palace, receiving the Moorish ambassador, Kaid el Mehidi el Mehebbi, and his suite. The ambassador, a white-robed, hooded central figure, stands before the throne reading from a manuscript in his hand greetings from his master to the new sovereigns. The simple grandeur of his robes and of those of his suite standing in the background are in striking con-

trast to the gorgeous uniforms of the Western court.

The Victors of Paardeberg, by James P. Beadle, is one of a few pictures dealing with the Boer War. It illustrates the first noteworthy triumph of the British arms, the surrender of Gen. Cronje on the anniversary of Majuba day, in the spring of 1900. The trench dug during the night by the Canadians and a company of royal engineers has rendered untenable the Boers' position, and they have succumbed to the inevitable. They are seen at the left straggling forward, unarmed, and many carrying their portable possessions, while the victors in front, emerging from their trench, are greeting them, some shouting with caps in air, some standing in silence.

A portrait of Major-Gen. Baden-Powell, a bust picture in khaki and slouched hat, is the sole contribution of George F. Watts. A full-length of Lord Milner, standing, with a bust of the King in the background, by P. Tennyson Cole, represents another figure prominent in South African affairs.

A Tanagraean Pastoral, by George H. Boughton, aims to revitalize some of the beautiful figurines exhumed in the neighborhood of Tanagra, where they have lain buried from a time long anterior to the Christian era. At the left Pan presides over a fountain, at the base of which are three musicians crowned with bays and playing on pipe, lyre, and tambourine. At the right, in the foreground, several dancers, in swirling draperies, keep measure to the music on the grass, against a background of poplars and of purple hills.

Mr. Sargent was represented by 8 life-size portraits and groups. One of the latter, The Ladies Alexandra, Mary, and Theo Acheson, Daughters of Lord Gosford, an essay in the grand style, has been compared, though not very justly, with Sir Joshua Reynolds's Three Irish Graces, in the National Gallery. It is a picture full of grace and sentiment, but the grace is of the present and not of the eighteenth century. The most masterly portrait of the exhibition was Mr. Sargent's Lord Ribblesdale, standing, in a long riding-coat and top hat, against a fluted marble pilaster.

La Belle Dame sans Merci, by Frank Dicksee, represents the lady of the "wild sad eyes" who holds in thrall the dreamer of Keats's poem. The mailed knight has dismounted and placed her on his charger, beside which he walks, blind to all else but her faerie song as she looks down on him unpitifully as they move onward through a blossoming country to her "elfin grot."

Opposite it hung the Aphrodite of Briton Riviere, which illustrates the potency of love, a canvas suggested by lines in the Homeric hymn telling how the laughter-loving goddess, gloriously clad, hastened down many-rilled Ida, attended by the gray wolf, the bear, the lion, and the pard, each under her potent spell.

London: New Gallery.—The winter exhibition was devoted to royal portraits, a collection, says one of its critics, that does not give a very high idea of the artistic patronage of English royalty. One of the best exhibits was the picture of Richard II from Wilton House, a diptych representing the monarch in company with St. John the Baptist, a pure tempera painting on a patterned gold ground that would have done credit to the finest technicians of Italy, Fra Angelico, or the Siennese. It is probably of French origin. There was a good portrait of Richard III and one of Henry VII, but it was not until Henry VIII secured the services of Holbein that royalty was worthily depicted. Among other exhibits were

the portrait of Queen Mary, by Lucas de Heere, many of Elizabeth, mostly attributed to Zuccherro, and a number of Stuart portraits attributed to Van Dyck.

The fifteenth summer exhibition contained only 309 numbers, as compared with 469 of last year. If this diminution meant a higher standard there would be cause for congratulation, but it seems to indicate rather that the New Gallery has reached a critical point in its career, for ever since the death of Sir Edward Burne-Jones its exhibitions have decreased both in number and importance. Among the best of the exhibits were:

Love steering the Boat of Humanity, by G. F. Watts, which, like many of that painter's works, is an allegory. On relentless waters, under a stormy sky, Love steers the boat, in the bow of which is Humanity, apparently in the teeth of a strong wind, the sail having collapsed. The picture is a marvel for a man of Mr. Watts's years, but it will scarcely rank as one of his great works.

Of Mr. Sargent's three contributions, The Children of Asher Wertheimer is a decorative triumph. It contains three figures, two girls on a draped couch with a black poodle between them, and a boy posed on the floor in front. It is a well-balanced picture both in pose and in its color scheme, and marked by absolute sincerity.

Sir W. B. Richmond's Last Watch of Hero for Leander represents her seated on a balcony at evening by cypresses, tragically silhouetted against the sky, as if conscious that her lover is to come no more.

Places of honor were given to three sequent works, by C. E. Hallé: In Infancy, the Mother's Care, shows a child on the daisied bank of a river giving to the kneeling mother a daffodil; In Manhood, the Help and Playmate, a young man and a girl, lovers probably, are beneath an apple-tree; and In Old Age, the Daughter's Song, the patriarch, with gray locks and sunken cheeks, is solaced by his daughter, who sings to the accompaniment of a harp.

London: Picture Sales.—While the art-sale season of 1902 was not a very remarkable one, a few pictures brought good prices. The number of paintings which have reached a limit of 1,400 guineas during the past eight years is as follows: 1894, 20; 1895, 45; 1896, 28; 1897, 32; 1898, 15; 1899, 30; 1900, 23; 1901, 21. Taking this as a standard, the sales of the present year have been small, for only 19 have reached the limit of 1,400 guineas, as is shown in the following table:

	Guineas.
G. Romney, Portrait of Miss Rodbard.....	10,500
M. Hobema, Peasants shaking Hands.....	9,200
J. Hoppner, Portrait of Lady Mary Arundel.....	7,800
C. Troyon, Cattle and Sheep.....	7,000
Sir H. Raeburn, Sons of D. M. Binning.....	6,500
T. Gainsborough, Portrait of his Daughters.....	5,600
Rembrandt, Portrait of Old Woman.....	5,500
G. Romney, Portrait of Lady Morshead.....	4,100
F. Hals, Portrait of Gentleman.....	3,780
Sir H. Raeburn, George and Maria Stewart.....	3,600
Velasquez, The Grape-Seller.....	2,500
Sir H. Raeburn, John Campbell when a Child.....	2,300
J. van der Heyden, View of a Dutch Château.....	2,300
Sir T. Lawrence, Charles Binney and Two Daughters.....	1,950
J. Hoppner, Portrait of a Lady.....	1,700
Botticelli, Madonna and Child.....	1,680
Portrait of Edward VI.....	1,600
Cecil Lawson, Valley of Doon.....	1,560
Sir J. Reynolds, Maria, Countess of Waldegrave.....	1,500

The Gainsborough, the sixth in the above list, a portrait of the artist's own daughters, Mrs. Lane and Miss Gainsborough, was once in the collection of J. W. W. Brett, and was bought from him in 1864 for £117. In 1887 it was sold

from the collection of Henry Wilkinson for £221. The name of the purchaser, who in 1902 paid 5,600 guineas for it, was not disclosed.

The following brought £1,000 and more:

P. de Hooghe, Interior with Figures.....	£1,350
Sir H. Raeburn, Portrait of Lady.....	1,300
" Portrait of Miss Graham.....	1,250
" Child with Basket of Cherries.....	1,250
R. P. Bonington, Fisher Boys on Beach.....	1,250
C. Fielding, Bolton Abbey.....	1,200
Sir E. Burne-Jones, Wheel of Fortune.....	1,155
J. Constable, Gillingham Mill.....	1,150
T. Gainsborough, Portrait of Squire Rowe.....	1,150
J. Crome, Norfolk Landscape.....	1,150
G. Morland, Carrier's Stable.....	1,100
Rembrandt, Portrait of Lady.....	1,050
F. Francia, Madonna and Child.....	1,000

New York: National Academy of Design.—

The officers-elect for the year are: President, Frederick Dielman; Vice-President, J. G. Brown; Corresponding Secretary, Harry W. Watrous; Recording Secretary, Will H. Low; Treasurer, Lockwood De Forest. The Council consists of Francis C. Jones, Irving R. Wiles, A. C. Howland, George H. Yewell, Herbert Adams, and R. Swain Gifford.

The following new academicians and associates were chosen: Academicians: Edwin A. Abbey, Cecilia Beaux, J. W. Alexander, Henry O. Walker, and Thomas Eakins. Associates: Birge Harrison, Wilton Lockwood, George Grey Barnard, Joseph De Camp, Charles Niehaus, Elliott Daingerfield, Henry B. Snell, Albert Ryder, and William Gedney Bunce. This brings the list of academicians up to 100 and of associates to 91.

The seventy-seventh annual exhibition (Jan. 3 to Jan. 31) was held, like that of last year, in the galleries of the Fine Arts Society. The annual prizes awarded were: The Thomas B. Clarke prize of \$300, for the best American figure composition, to Elliott Daingerfield, for his *Story of the Madonna*; the first Julius Hallgarten prize (\$300) to E. Irving Couse's *Indian picture The Peace Pipe*; the second Hallgarten prize (\$200) to Louis Loeb, for his picture *The Mother*; and the third Hallgarten prize (\$100) to Will Howe Foote, for *The Blue Vase*. The Inness gold medal was awarded to Walter Clarke, for his *Gloucester Harbor*, a charming view of the harbor at low tide. The Norman W. Dodge prize (\$300) for the best picture painted by a woman was not awarded, and is said to have been discontinued.

Among the most noteworthy pictures in the exhibition were Irving R. Wiles's portrait of Julia Marlowe, representing the actress seated on a sofa looking straight out of the canvas, and J. W. Alexander's *The Piano*, an interior with a young matron seated at the instrument and in the background the husband with his head resting upon his hand, a picture with a story-telling quality which appeals to every one. Other pictures deserving of mention are J. G. Brown's *An Old Vermonter*, W. C. Fidler's *Meadows in June*, Bruce Crane's *November Morn*, Charles Schreyvogel's *Going for Reinforcements*, Henry Mosler's *Sans Souci*, F. A. Bridgman's *The Secluded Wood*, Charles C. Curran's *A Mountain Vista*, Edward Gay's *Black Creek*, Will H. Low's *The Elysian Lawn*, Gustave H. Mosler's *Fidelity*, Dwight F. Boyden's *Moonrise—Holland*, and Carleton Wiggins's *Crossing the Moors*.

New York: Society of American Artists.—

The Board of Control for the year consists of: President, John La Farge; Vice-President, Kenyon Cox; Secretary, Bruce Crane; Treasurer, Samuel Isham; and Bolton Jones. The society consists of 112 members.

The twenty-fourth annual exhibition was held

in the Fine Arts Society Building from March 28 to May 4. The annual prize of \$300, instituted in 1887 by Dr. W. Seward Webb, for the best landscape by an American artist under forty years of age, was awarded to H. Bolton Jones, for his picture *Early Spring*. The Julia A. Shaw memorial prize (\$300), founded by Samuel T. Shaw in place of the fund instituted by him in 1892, for the best figure composition painted in oil by an American woman, was awarded to Miss Mary F. Macmonnies, for her *Blossom Time in Normandy*. The Carnegie prize (\$500), founded by Andrew Carnegie for the most meritorious oil-painting in the exhibition by an American artist, was awarded to J. Francis Murphy, for his *October Fog*.

The exhibition consisted of 318 numbers, of which 295 were paintings. Among the exhibitors were J. McNeill Whistler, *L'Andalousienne*; William M. Chase, *Portrait of Louis Windmüller*; Cecilia Beaux, *Portrait*; John W. Alexander, *A Mother*; Winslow Homer, *Northeast*; Kenyon Cox, *Portrait*; Thomas Eakins, *Cardinal Martinelli*; Augustus St. Gaudens, *Medallion Portraits*; and Rhoda Holmes Nicholls, *My Daughter*.

New York: Metropolitan Museum.—The annual rearrangement of collections in May was attended with the usual loan exhibitions, the most important of which was the collection of George W. Vanderbilt, consisting of most of the foreign pictures acquired by the late William H. Vanderbilt. Among these are some of the best works of the modern French school, including fine examples of Meissonier, Rousseau, Millet, Dupré, Diaz, Cabanel, Fromentin, Gérôme, Bonnat, and others. Among the gifts to the museum is the famous *Holy Family* by Rubens, portions of which are attributed to his celebrated pupil Van Dyck, presented by James Henry Smith, and a portrait of the artist Vanderlin, bequeathed by P. V. Sidell. The Rubens was bought at the Matthiessen sale for \$50,000.

On Dec. 22 was formally opened the new wing of the museum, which includes the splendid façade on Fifth Avenue, the work of the late Richard M. Hunt. The exercises consisted of brief addresses of delivery and acceptance by the president of the Department of Parks and the president of the trustees of the museum, and an address by Mayor Low. The new wing is to be devoted principally to sculpture.

New York: Picture Sales.—The collection of paintings of Mrs. P. C. Hanford, sold by the American Art Association, Jan. 30, brought in the aggregate \$124,135. The principal picture sold, Rembrandt's portrait of a scrivener, entitled *The Accountant*, was bought by a dealer for \$23,000, a low price as Rembrandts go. Though several of the master's portraits have changed hands at private sales, this is the first one to appear in a public sale since *The Gilder of the Schaus* sale several years ago. Other pictures brought good prices, as Rousseau's *Marsh in Spring*, \$11,000; Troyon's *Landscape with Cattle*, \$10,000; De Neuville's *Trumpeter*, \$4,600; Jacques's *Watering the Sheep*, \$3,500; Diaz's *In the Harem*, \$4,400; Holbein the Younger's *Portrait of an Ecclesiastic*, \$4,000; and Cuypp's *Cavaliers in Holland*, \$4,600. A Murillo, *The Immaculate Conception*, which is said to have cost its owner \$20,000, brought only \$8,700.

Mr. E. F. Milliken's collection, sold Feb. 14, brought in total receipts \$128,325. The two most notable pictures were Titian's portrait of Giorgio Cornaro, bought by Durand-Ruel for \$42,000, and Corot's *St. Sebastian*, bought by Cottier & Co. for

\$20,000. Other fair prices were realized, as for Millet's Landscape, \$8,250; Manet's *Sortie du Port de Boulogne*, \$7,050; Degas's *Les Coulisses*, \$6,100; Daubigny's *Cliff at Villerville*, \$5,500; Homer Martin's *Westchester Hills*, \$5,300; and Puvion de Chavannes's *L'Espérance*, \$4,100.

The sale of the collection of oil-paintings, water-colors, bronzes, etc., of the Paris firm of Boussod, Valadon & Co., who have discontinued their branch shop in New York, occupied the last three evenings in February. The amount realized on the first evening was \$36,542, on the second \$76,475, and on the third \$156,093, or a total of about \$269,000. The picture that brought the highest price was Regnault's well-known *Automédon and the Horses of Achilles*, which was sold for \$12,500. This large work (10.4 high by 10.9), painted in Rome in 1867, was bought by L. P. Morton, of New York, and sold in 1882 to S. A. Coale, Jr., of St. Louis, for \$5,900. Two years later it was placed on exhibition in the Boston Museum of Fine Arts, where it was supposed it would remain permanently. The only other picture that sold for more than \$10,000 was Corot's *La Ferté*, which brought \$11,500. Another Corot, *Twilight*, brought \$7,100. A Rousseau, *La Rivière*, brought \$9,500, and a Jacque, *Shepherd and Flock*, \$8,100. Diaz's *Sandy Road* sold for \$7,800, and Dupré's *Frog Pool* for \$6,850. Sir Joshua Reynolds's *Portrait of Sacchini* brought only \$2,450.

The sale of the F. O. Matthiessen collection, on April 1 and 2, realized \$348,780, of which \$112,505 was obtained for 81 pictures, and the remainder for 64 pictures sold on the last evening. The highest price was obtained for Rubens's *The Holy Family*, which was bought in by George P. Blow for \$50,000. The picture that brought the next highest price was Jules Breton's *Harvesting the Poppies*, which sold for \$36,500. Other good prices were: *Landscape and Cattle*, Troyon, \$16,500; *Portrait of an Old Man*, Rembrandt, \$16,000; *Portrait of Antonio Grimani, Doge of Venice*, Titian, \$13,000; *Mary Magdalen at Prayer*, Murillo, \$13,200; *Arabs Crossing a Stream*, Schreyer, \$13,000; *The Awakening of Love*, Diaz, \$10,000; *Gipsy Mother*, Ludwig Knaus, \$7,200; *Normandy Horse*, Rosa Bonheur, \$7,200; *The Philosopher*, Meissonier, \$8,300; *Summer*, Daubigny, \$6,600; *Avenue of Trees*, Corot, \$6,950; *Sunset after Rain*, Rousseau, \$5,300; *Fontainebleau Forest*, Diaz, \$4,500; and *Officer ordering an Advance*, Detaille, \$7,100.

The Blakeslee collection of early English, Dutch, and Flemish masters, sold on the evenings of April 10 and 11, 163 paintings in all, realized \$168,940, of which \$85,220 was obtained at the first sale for 82 pictures. The highest price received was for Sir Thomas Lawrence's famous portrait of Mrs. Siddons, which sold for \$17,000. Van Dyck's *Portrait of the Duke of Portland*, a full-length, life-size canvas, brought \$16,000. Constable's *Opening the Lock* was sold for \$13,000. Other good prices obtained were: *Les Deux Sœurs*, Bouguereau, \$4,400; *Allant au Pâturage*, Corot, \$3,000; *The Butcher Boy*, Knaus, \$3,850; *Portrait of Fanny Kemble*, Sir Thomas Lawrence, \$2,850; and *Nell Gwynne*, Sir Peter Lely, \$2,600.

Philadelphia: Pennsylvania Academy of Fine Arts.—The seventy-first annual exhibition, which opened with the usual reception on Jan. 18, was the most notable art show held in Philadelphia in the past five years, even exceeding that of last year. The collection, which included many of the prize pictures from the Buffalo Exposition, comprised 745 numbers, of which 439

were paintings in oil, 60 pieces of sculpture, and 312 water-colors, black and whites, etc., including 66 etchings by Whistler. The place of honor was given to George De Forest Brush's portrait group of Mrs. Goodwin and her Sister. To the right of it was Edwin A. Abbey's *Penance of Eleanor, Duchess of Gloucester*, from the Carnegie Institute, Pittsburgh, and to the left a fine landscape, with tittling effect, by Charles H. Davis. Dagnan-Bouveret's large figure piece *Consolatrix Afflictorum* was loaned by Henry C. Frick. An attractive figure study, entitled *Une Parisienne*, was contributed by Albert Lynch, the Parisian artist, his first appearance here as an exhibitor. Among notable portraits were Whistler's *L'Andalousienne*, Sargent's G. M. Williamson, Eastman Johnson's John D. Rockefeller, Cecilia Beaux's Mrs. Phelps Stokes, Alexander's Newbold Morris, and Anna E. Klumpke's *Rosa Bonheur*. Milton Lockwood contributed five portraits and Horace Walker five pastoral scenes. Winslow Homer was represented by an interesting study of Wild Geese, and Edward Simmons by a fine marine, *The High Sea*. The sculpture exhibition was confined principally to portraits, but St. Gaudens was represented by his Stevenson memorial bronze, Karl Heber by a figure of a resting boy, entitled *Pastoral*, and Herman A. Macneil by an Indian group, *The Sun Vow*.

The honors and prizes connected with the exhibition were awarded as follows: Walter Lippincott prize of \$300, to Walter McEwen, for his picture *An Ancestor*; Temple gold medal, Winslow Homer, for his picture *Northeast*; Mary Smith prize of \$100, Eleanor Earle, for her picture entitled *Fire Light*.

Miscellaneous.—Memorial Day was observed in New York by the dedication in the Riverside Park, at the foot of Eighty-ninth Street, of the *Soldiers' and Sailors' Memorial Monument*, one of the most beautiful structures of the city. Before the unveiling of the monument there was an imposing parade by Government troops, sailors from the battle-ships, regiments of the National Guard, Grand Army posts, and other organizations, reviewed by Acting-Gov. Nixon, Mayor Low, Gen. Miles, Gen. Horace Porter, and Gen. O. O. Howard. The oration was delivered by Gen. Howard. The battle-ship *Alabama* took part in the celebration by firing salutes. The monument, a circular Corinthian temple whose design suggests the Choric Monument of Lyciurates at Athens, but which is much larger and is embellished with symbolic ornaments belonging to its national character, is of pure white marble on a circular basement surrounded by terraces and approached by grand staircases on each side.

The unveiling of the Rochambeau statue, in Washington, on May 24, was an event of almost international importance, and was marked by the presence of a large special French embassy, including the present Count and Countess de Rochambeau, descendants of the marshal's brother, Gen. Brugère, commander-in-chief of the French army, the Count de Lafayette, the Marquis de Chambrun, great-grandson of Lafayette, and other prominent representatives of the French Government. The occasion was made notable also by a military parade, a speech by Ambassador Horace Porter, and an oration by Senator Lodge. The statue, the work of Ferdinand Harrier, of Paris, stands in the southwest corner of Lafayette Square, a short distance from the White House. Rochambeau, in bronze, in the uniform of his rank, stands on an ornate pedestal, with a scroll in the left hand and pointing with the

right to some object in the distance. At the base of the pedestal is Victory bearing an unfurled flag in her left hand and a naked sword in the other, with an eagle at her feet.

Indiana has just dedicated at Indianapolis an enormous monument to her dead soldiers and sailors. The shaft, including a bronze figure of Victory, is 284 feet high, and has a balcony 228 feet above ground, to which ascent is made by elevator. The design is by Bruno Schmitz, of Berlin.

A Holy Family, attributed to Palma Vecchio, has been discovered in a very dirty and dilapidated condition by Prof. Cantalamessa, the director of the gallery of the Venice Academy, and now, in its restored condition, occupies a place in one of the principal rooms of the Academy. The picture is a *Sacra Conversazione*, representing the Virgin seated holding the Child, who looks toward St. Joseph, seated at the right. At the left is St. Catherine pointing with her right hand to St. John, kneeling on one knee. The picture is a remarkable one, exceedingly beautiful in color and composition, and challenges comparison with some of the finest easel pictures produced in Venice during the later Renaissance. It is assigned to Palma on the strength of internal evidence, and is placed by Prof. Cantalamessa among the very latest of his pictures.

A memorial to Lord Leighton, late president of the Royal Academy, was unveiled on Feb. 19, in St. Paul's Cathedral, London, by his successor, Sir E. J. Poynter. The monument, the work of Thomas Brock, R. A., consists of a recumbent figure in bronze upon a sarcophagus on which are inscriptions on bronze tablets. At the head and feet respectively are bronze figures symbolical of painting and sculpture.

A portrait of John Bunyan, painted in 1685 by Thomas Sadlier, has been added to the National Portrait Gallery, London. Its authenticity it said to be established by an unimpeachable record. It is interesting to note, in this connection, that a copy of the first edition of *The Pilgrim's Progress* was lately sold at Sotheby's for £1,475.

An irreparable loss to Venice and a distinct loss to art is the fall of the famous Campanile of St. Mark's, which collapsed and sank into a ruined mass on July 14. Even if the building be reconstructed on the ancient site, it will be only a modern tower, and will never excite the interest of art lovers as did the original.

The age to which Titian lived is the subject of an article in the *Nineteenth Century* by H. F. Cook, the result of the inquiry being to make it probable that Titian was not born until 1489-'90, twelve years later than the date usually assigned for his birth, so that he was only eighty-eight years old instead of ninety-nine at the time of his death. The only source of the idea that he was born in 1477 is a begging letter written by him to Philip II of Spain in 1571, in which he says he is ninety-five years old. The explanation is that this was an exaggeration to heighten the appeal to the royal pity.

One of the best works of Perugino, a triptych, has lately been found concealed behind an indifferent canvas of the seventeenth century in the Church of Santa Maria Assunta, in the village of Castelnovo di Porto, Italy. The principal figure, that of the Saviour, with the right hand raised in the act of blessing and the left holding the book of the Gospels, a work of extraordinary beauty, is by the hand of Perugino himself. The Virgin, St. Sebastian, St. John Baptist, and a fourth unknown saint, painted on the shutters, are the work of one of his pupils, probably of Berto di Giovanni. The triptych was

executed in 1501 as a commission from the four brothers Degli Effetti, a distinguished local family. The tradition concerning this picture had never died out, but its whereabouts was unknown previous to this discovery.

Sir Thomas Lawrence's portrait of John Philip Curran, which Williams, in his *Life of Lawrence*, calls "the most extraordinary likeness of the most extraordinary face within the memory of man," has been presented by Lord Iveagh to the National Gallery of Ireland. It was in the Royal Academy in 1800, and was bought for 850 guineas at the sale of the Peel heirlooms in 1900.

A recent "find" in Egypt seems to throw new light on *The Dance of Death* in art, hitherto regarded as a peculiarity of the Renaissance period. A richly painted earthen drinking-cup exhumed near Alexandria is ornamented with seven dancing and grinning skeletons, each of whom is whirling with drunken joviality a bacchic thyrsus. The figures seem to be saying to the drinkers who used the cup: "Eat, drink, and be merry, for to-morrow you will be one of us." This, the true Alexandrian philosophy of life, is of great interest from the point of art. The cup has been acquired by the Louvre.

FLORIDA. (See under UNITED STATES.)

FRANCE, a republic in western Europe, proclaimed Sept. 4, 1870, after the surrender of the Emperor Napoleon III to the Germans at Sedan. The legislative power is vested in the Senate and the Chamber of Deputies, the executive power in the President of the republic and the Council of Ministers. The Chamber and Senate, meeting in joint session, form the National Assembly, which elects the President for seven years and has power to revise the Constitution. The Senate has 300 members, elected for nine years by electoral bodies in the departments composed of the members of the departmental councils, delegates from the communal councils, and the Senators and Deputies of the department. The Chamber of Deputies in 1901 had 581 members, elected for four years, one member for each *arrondissement* when the population is below, and two members when it is above 100,000. Every Frenchman of the age of twenty-one years or over, not a soldier in active service, is entitled to vote, if a resident of his district for six months, and any Frenchman who has fulfilled his military duties may become a candidate for either House unless he holds an office under the state. The ministers are responsible severally and collectively to the Chamber, and either resign or dissolve the Chamber when defeated on a Cabinet question. When a Cabinet resigns the President of the republic selects a new Prime Minister who is able to command a majority, and the latter, in consultation with the President, selects his colleagues. The President of the republic for the term ending Feb. 18, 1906, is Émile Loubet, born Dec. 31, 1838, who was elected to succeed Félix Faure in 1899. The ministry, constituted on June 22, 1899, was composed in the beginning of 1902 as follows: President of the Council and Minister of the Interior and of Public Worship, M. Waldeck-Rousseau; Minister of Finance, M. Caillaux; Minister of Justice, M. Monis; Minister of Foreign Affairs, M. Delcassé; Minister of War, Gen. André; Minister of Marine, M. de Lanessan; Minister of Public Instruction, Georges Leygues; Minister of Public Works, Pierre Baudin; Minister of Agriculture, Jean Dupuy; Minister of Commerce, Industry, Posts, and Telegraphs, M. Millerand; Minister of the Colonies, Albert Decrais.

Area and Population.—The area and the population of the 87 departments of France at the

census of March 24, 1901, compared with the population on March 29, 1896, are shown in the following table:

DEPARTMENTS.	Square miles.	POPULATION.	
		1896.	1901.
Ain.....	2,239	349,420	349,205
Aisne.....	2,839	539,312	534,204

The French soldiers in China and French sailors abroad being added to the population present in France raises the total to 38,641,333, which shows an increase of 412,364 since 1896. Although the death-rate is generally low in France, the increase in population is slower than in neighboring countries. This is because of the exceedingly low birth-rate. The number of births per marriage declined in ten years from 3 in 1881 to 2.1 in 1891, and has not since increased.

The legal population of France in 1901 was 38,961,945, compared with 38,517,332 in 1896. The increase was 441,613, compared with 175,027 in the previous five years. The number of foreigners residing in France in 1901 was 1,037,778, compared with 1,027,491 in 1896. The number of marriages in 1900 was 299,084; of births, 827,297; of deaths, 853,285; excess of deaths, 25,988. It was the fifth year in which there was an excess of deaths, births having declined and deaths increased since the previous year, in which births exceeded deaths by 31,394. The number of divorces in 1900 was 7,157, making a total of 94,426 since divorce was made legal in 1884. The annual rate of increase in the population has declined in seventy-five years from 61.4 per thousand to less than 21.4, although the death-rate has been lowered from 25.3 to 21.1 per thousand.

Finances.—The estimates adopted for 1901 make the revenue 3,554,602,862 francs, of which 483,069,335 francs are direct contributions, 39,527,279 francs taxes assimilated to direct contributions, 553,244,978 francs from registration, 173,563,400 francs from stamps, 6,883,500 francs from the tax on bourse operations, 74,707,666 francs the tax on income from personal property, 438,374,800 francs from customs, 649,022,550 francs indirect contributions, 199,800,000 francs from the sugar tax, 413,261,000 francs from the tobacco monopoly, 43,200,000 francs from matches and gunpowder, 255,278,400 francs from the post-office, telegraphs, and telephones, 17,261,930 francs from railroads, mint, etc., 55,485,300 francs from domains and forests, 71,893,808 francs from various sources, 77,829,108 francs *recettes d'ordre*, and 2,199,808 francs revenue collected in Algeria. The total from direct contributions and taxes assimilated to direct contributions was 522,596,614 francs; from indirect taxes, 2,095,596,894 francs; from monopolies, 729,001,330 francs. The total authorized expenditure for 1901 was 3,554,354,212 francs, of which 1,245,644,464 francs were for the public debt, 13,287,100 francs for the President, the Chamber, and the Senate, 19,593,880 francs for general service, 209,409,966 francs for collection of taxes and *régie*, 32,313,000 francs for repayments, 35,253,133 francs for justice, 16,382,710 francs for foreign affairs, 79,092,225 francs for the interior, 42,922,553 francs for worship, 632,400,171 francs for French troops, 60,708,150 francs for extraordinary military expenses, 327,692,530 francs for the navy, 206,966,483 francs for public instruction, 14,901,240 francs for fine arts, 36,663,891 francs for commerce and industry, 2,432,989 francs for the general service of posts and telegraphs, 196,977,439 francs for working expenses of posts and telegraphs, 6,467,000 francs for repayments in the postal and telegraph service, 111,866,511 francs for the colonies, 44,797,262 francs for agriculture, and 218,581,515 francs for public works. The budget for 1902 made the total general revenue 3,597,164,082 francs and the expenditure 3,597,072,199 francs. An amended estimate made the revenue 3,604,561,268 francs and the expenditure 3,604,415,197 francs. The revenue from direct taxation was estimated at 533,500,000 francs; from registration, 577,799,000 francs; from stamps, 171,246,

900 francs; from the bourse tax, 6,809,000 francs; from the personalty income tax, 79,493,000 francs; from customs, 470,266,000 francs, 25,000,000 francs having been added by the new duty on grain; from indirect taxes, 612,000,000 francs; from sugar, 175,622,000 francs; from tobacco, 414,598,000 francs; from matches and gunpowder, 44,066,000 francs; from posts and telegraphs, 269,438,000 francs; from railroads and mint, 18,106,000 francs; from domains and forests, 55,283,200 francs; from various sources, 56,784,000 francs; *recettes d'ordre*, 71,499,550 francs; revenue of Algeria, 1,846,390 francs; raised on short bonds, 40,000,000 francs. The increase in estimated expenditure was caused by the payment of 18,000,000 francs additional interest to guaranteed railroads and an addition of 2,578,722 francs to the army budget, offset by reductions in various departments, so that the net increase in the estimates was 7,342,993 francs. The capital of the French national debt on Jan. 1, 1901, amounted to 30,096,632,622 francs, consisting of 22,001,445,642 francs of 3- and $3\frac{1}{2}$ -per-cent. *rentes*, 3,811,918,500 francs of 3-per-cent. *rentes* repayable by annuities, 179,454,766 francs of the Morgan annuity loan, 2,085,724,767 francs of railroad annuities and guarantees, 536,442,132 francs of debts for roads and school-buildings, 151,020,000 francs of short-date treasury bonds, 184,960,215 francs of miscellaneous debts, and the floating debt of 1,145,666,600 francs. The budget for 1902 gives the sum to be paid on the perpetual debt as 675,643,059 francs; interest and amortization of redeemable debt, 324,387,377 francs; on floating debt, 243,395,310 francs; total debt charge, 1,243,425,746 francs. To meet the cost of the China expedition and pay indemnities to French victims of the Boxer outbreak the Government, in December, 1901, raised 265,000,000 francs on 3-per-cent. bonds.

The revenues of the departments in 1897 amounted to 285,879,062 francs, and expenditures to 288,703,089 francs; the ordinary revenues of communes for 1900 to 794,120,672 francs, and expenditures to 761,164,105 francs; the debts of communes to 3,881,352,204 francs; the estimated revenue and expenditure of the city of Paris for 1901 to 348,338,216 francs, 166,000,000 francs being obtained from *octrois* and 113,000,000 francs of the expenditure being the charge of the debt, which amounted to 2,387,216,295 francs.

The Army.—All young men who are not exempt are liable to serve in the active army for three years from the age of twenty, but after one year with the colors those who have learned their duties and are able to read and write may go on unlimited leave of absence. The peace strength of the army in 1902, including soldiers on furlough, was 510,305, including 26,762 officers, in France; 58,979, including 2,335 officers, in Algeria; and 20,160, including 745 officers, in Tunis; total, 589,444 men, of whom 29,842 were officers, with 142,847 horses. There were 4,421 in France, of whom 3,719 were officers, on the general staff; 385, of whom 291 were officers, in Algeria; and 115, of whom 90 were officers, in Tunis. In military schools there were 3,673, of whom 391 were officers. Unclassed among the troops were 1,995, of whom 1,745 were officers, in France; 728, of whom 540 were officers, in Algeria; and 152, of whom 117 were officers, in Tunis. The army corps comprised 316,947 infantry, including 12,149 officers, in France; 40,946 infantry, including 1,015 officers, in Algeria; 14,428 infantry, including 377 officers, in Tunis, 10,027 administrative troops in France, 3,537 in Algeria, and 616 in Tunis; 59,988 cavalry, including 3,461 officers, in France; 7,677 cavalry,

including 367 officers, in Algeria; and 1,849 cavalry, including 86 officers, in Tunis; 69,497 artillery, including 3,725 officers in France; 2,529, including 61 officers, in Algeria; 1,710 artillery, including 50 officers, in Tunis; 11,693 engineers, including 504 officers, in France; 1,076 engineers, including 22 officers, in Algeria; 435 engineers, including 8 officers, in Tunis; 7,469 train, including 360 officers, in France; 2,101 train, including 39 officers, in Algeria; 712 train, including 13 officers, in Tunis. The strength of the army corps was 475,621 men, of whom 20,199 were officers, in France; 57,866, of whom 1,504 were officers, in Algeria; and 19,750, of whom 534 were officers, in Tunis; total, 553,237 men, of whom 22,237 were officers. The total strength of the active army was 564,706 men, of whom 29,130 were officers; 485,710, including 26,064 officers, in France 58,979, including 2,335 officers, in Algeria; and 20,017, including 741 officers, in Tunis. The gendarmerie in France numbered 21,602 men, of whom 625 were officers; and 143, of whom 4 were officers, in Tunis; total, 21,745, of whom 629 were officers, the Algerian gendarmerie being provided for in the Algerian budget. The Garde Républicaine numbered 2,993, of whom 83 were officers. The effective strength of the active army, deducting sick and absent, was 520,280; that of the gendarmerie and Garde Républicaine was 24,487. The total number of men between twenty and thirty-three years of age who are liable for service in the active army and its reserve is estimated at 2,350,000; the number between the ages of thirty-three and thirty-nine who are inscribed in the territorial army is about 900,000; and in the territorial army reserve, composed of those between thirty-nine and forty-five years of age, 1,100,000 are enrolled, making a total war strength of 4,350,000 men, of whom about 2,500,000 are counted upon as efficient.

The Navy.—The French navy, including vessels not yet ready for service, consisted in the beginning of 1902 of 5 first-class, 7 second-class, and 13 third-class battle-ships, 17 armored cruisers, 18 coast-defense ironclads, 1 old battle-ship, 40 protected cruisers, 15 protected cruisers, 15 destroyers, 40 first-class and 122 smaller torpedo-boats, and 14 submarine boats. There were in process of construction 2 first-class battle-ships, 4 armored cruisers, 15 destroyers, 8 first-class and 10 smaller torpedo-boats, and 20 submarine boats. Nearly every vessel on the list is efficient, as it is the practise to destroy all that become obsolete and are not worth rebuilding and fitting out with modern equipment. In 1900 the Chambers voted for the construction of 6 battle-ships of an aggregate displacement of 148,650 tons, 5 armored cruisers of 12,600 tons each, 28 destroyers of 350 tons each, and a number, not determined, of submarine torpedo-boats. Submarine boats have been made the special feature of the French navy, both the type which navigates freely below water and the submersible boat which steams on the surface except when it dives for an attack. In 1902 the Chambers voted to begin the building of 1 battle-ship and 2 ironclad cruisers, and 3 battle-ships in 1903. The *Patrie*, begun in 1901, will be ready in 1905. The *République* was laid down in 1900. Of the cruisers of the new program the *Léon Gambetta* and *Jules Ferry* were begun in 1900 and the *Victor Hugo* in 1901. The navy estimates for 1902 also provided for the construction of 13 submarine vessels.

In the newest development of the French battle-ship, exemplified in the *République* and *Patrie*, the gun emplacements and all parts below them are fully protected. This type was adopted in the

Suffren, of 12,052 tons, launched in 1899, which has 13½-inch annealed armor over the vital parts, a speed of 18 knots with engines of 15,500 horsepower, and an armament of 4 12-inch guns coupled in barbette turrets fore and aft and a quick-firing battery, placed high, of 8 6.4-inch, 8 3.9-inch, and 34 small guns. The Jena, launched in 1898, is identical in design and armament, but the quick-firing battery is unprotected underneath, as is the case with the Charlemagne, Saint Louis, and Gaulois, of 11,097 tons, launched in 1895 and 1896. In the Charles Martel, Jauréguiberry, Carnot, Masséna, and Bouvet, built between 1893 and 1896, there are 2 12-inch and 2 10.8-inch guns placed singly in lozenge disposition, while 8 5.5-inch quick-firing guns are mounted in small turrets and they have from 26 to 34 smaller quick-firers. The Brennus, launched in 1891, of 11,215 tons, has 3 13.4-inch guns in fore and aft turrets, and a heavy quick-firing battery of 10 6.5-inch and 31 smaller guns well protected amidships. The Bouvines, Valmy, Jemmapes, and Trehouart, third-class battle-ships of about 6,500 tons, carry 12-inch guns singly in barbette turrets and have 4-inch and smaller quick-firers amidships without protective armor. The earlier type of French battle-ship, of which the Marceau and Magenta, of 10,680 tons, are the latest examples, has a high freeboard, a complete belt of armor at the waterline, and 4 large guns disposed in a lozenge arrangement, with a very strong quick-firing armament. These two vessels, launched in 1887 and 1890, carry 4 13.4-inch guns in their barbettes, and the quick-firing battery consists of 17 5.5-inch and 25 smaller guns in the Marceau and 16 5.5-inch and 34 others in the Magenta. The République and Patrie, having a displacement of 15,000 tons, are designed to steam 18½ knots, and their armament will consist of 4 12-inch breech-loaders and 18 6.4-inch and numerous smaller quick-firing guns. The French armored cruisers are long and narrow, with 7.6-inch guns mounted singly in turrets so as to obtain a free command and quick adjustment, with less regard to protection. The Montcalm, launched in 1899, and Dupetit-Thouars and Gueydon, launched in 1900, of 9,517 tons, and the Gloire and Conde, launched in 1901, of 10,000 tons, and the newer Sully carry besides the 7.6-inch guns 8 6.4-inch, 4 4-inch, and 24 smaller quick-firers. The Marseillaise, of 10,014 tons, has 6 4-inch quick-firers. The Desaix, Kléber, and Duplex, of 7,700 tons, are armed with quick-firers only, 10 6.4-inch and 16 small ones. The Jurien de la Gravière, launched in 1900, has deck protection only, a displacement of 5,500 tons, and an armament of 8 6.4-inch and 12 1.8-inch quick-firers. The latest type of armored cruiser, represented by the Léon Gambetta, Jules Ferry, and Victor Hugo, of 12,416 tons, have 4 7.6-inch quick-firers coupled in turrets, with better protection for their bases, and a secondary armament of 16 6.4-inch quick-firers. These vessels, with engines of 24,000 horse-power, are intended to make 21 knots—the speed of the 10,000-ton and 9,517-ton cruisers, with engines of 20,000 horse-power. The Jurien de la Gravière, with engines of 17,000 horse-power, has a nominal speed of 23 knots, and so have the Guichen, of 8,277 tons, and the Chateaurenault, of 8,018 tons, launched in 1897 and 1898, with engines of 24,000 horse-power and 23,000 horse-power, carrying 2 6.4-inch, 6 5.5-inch, and 10 small quick-firing guns; and also the armored cruiser Jeanne d'Arc, launched in 1899, which has engines of 28,000 horse-power, with 2 7.6-inch guns in turrets and a quick-firing armament of 12 5.5-inch and 26 small guns.

The French navy is under the direction of the

Minister of Marine, but since 1898 naval matters proper, the technical and military responsibilities pertaining to construction, maintenance, commissioning, mobilization, and every preparation for war, are confided to the chief of staff, an officer of the highest rank, Vice-Admiral Bienaimé in 1902. The navy is manned partly by conscription and partly by voluntary enlistment. The entire seafaring population between the ages of eighteen and fifty have been since the time of Colbert registered in the Inscription Maritime, and such serve in the navy instead of the army. Since 1872 it has been open to a limited number of conscripts called for service in the active army to choose the naval service instead, if they are fit for its duties. Of about 114,000 men in the Inscription Maritime, 25,500 are in active service in the navy, and the rest form a reserve which would provide a surplus of 50,000 men or more over the number required to man the whole fleet in case of mobilization. The personnel of the navy in 1901 consisted of 15 vice-admirals, 30 rear-admirals, 125 captains, 215 commandants, 754 lieutenants, 502 ensigns, 146 aspirants of the first and 78 of the second class, 1,426 mechanics, engineers, hydrographers, paymasters, surgeons, instructors, etc., 50,496 petty officers and seamen, and in the reserve 15 vice-admirals, 15 rear-admirals, 202 other officers, 345 commissaries, surgeons, and other superior employees, and 5,471 petty officers and seamen; total effective, 59,835 officers and men.

Commerce and Production.—The yield of wheat in 1900 was 114,710,880 hectoliters, from 6,864,070 hectares; of barley, 14,394,320 hectoliters, from 757,193 hectares; of oats, 88,309,920 hectoliters, from 3,941,420 hectares; of rye, 20,889,000 hectoliters, from 1,419,780 hectares; of buckwheat, 8,163,627 hectoliters, from 602,581 hectares; of corn, 7,834,660 hectoliters, from 541,191 hectares; of mixed grain, 3,212,150 hectoliters, from 200,560 hectares; of potatoes, 122,541,230 hectoliters, from 1,509,898 hectares; of sugar-beets, 85,861,510 quintals, from 329,617 hectares; of other beets, 110,288,160 quintals, from 492,013 hectares; of colza, 425,310 quintals, from 38,715 hectares; of flax, 88,988 quintals of fiber and 194,155 quintals of seed, from 21,260 hectares; of hemp, 185,125 quintals, from 26,790 hectares; of wine, 68,514,906 hectoliters, from 1,609,353 hectares; of tobacco, 227,598 quintals, from 17,673 hectares; of clover, 35,016,275 quintals, from 1,022,422 hectares; of hay and grass, 160,743,459 quintals, from 5,566,258 hectares. The area of vineyards in 1901 was 1,735,345 hectares, producing 57,964,000 hectoliters of wine. The exportation of wine was 1,654,000 hectoliters, and the importation 3,149,000 hectoliters. The production of cider in 1901 was 12,734,000 hectoliters. The crops of walnuts, chestnuts, olives, cider-apples, prunes, and mulberry-leaves in 1900 was valued at 229,475,369 francs; the orange and lemon crops, at 1,092,435 francs. The numbers of domestic animals in France on Dec. 31, 1900, were 2,903,063 horses, 205,002 mules, 356,239 asses, 14,520,832 cattle, 20,179,561 sheep, 6,740,405 hogs, and 1,557,925 goats. The production of alcohol in 1900 was 2,656,268 hectoliters. The silk-growing industry, which is encouraged by premiums from the Government, amounting for the year to 5,569,187 francs, employed 136,214 persons in 1900, who raised 9,180,404 kilograms of cocoons, from which 4,086,630 kilograms of raw silk, valued at 139,523,661 francs, were produced, 107,098 kilograms of cocoons, valued at 1,167,357 francs, being exported. The number of mines in operation in 1899 was 529, employing 156,504 persons. The product

of minerals was 39,884,702 tons, valued at 460,366,671 francs. The production of coal and lignite was 32,862,712 tons; of iron ore, 4,985,702 tons; of pig iron, 2,578,000 tons; of manufactured iron, 834,000 tons; of steel, 1,240,000 tons; of steel rails, 1,253,700 tons; of gold, 270 kilograms; of silver, 82,105 kilograms; of lead, 15,981 tons; of zinc, 39,274 tons; of antimony and regulus, 1,499 tons; of salt, 1,193,532 tons; of building-stone, slate, cement, phosphates, and other quarry products, the value of 243,428,986 francs. There were 334 sugar factories in 1901, employing 48,097 persons regularly and 8,370 occasionally. The production in 1901 was 1,040,294 tons of refined sugar. The value of codfish landed in 1898 was 15,075,368 francs; of the catch of the home fisheries, 87,116,546 francs. The catch of herring in 1900 was 376,316 quintals; of cod, 639,010 quintals; exports of dried codfish, 225,774 quintals. The Government gave 5,538,929 francs in premiums for the catch and exportation of fish.

The foreign commerce of France has been gradually increasing for several years. The total value of the special commerce was 7,893,000,000 francs in 1898, 8,671,000,000 francs in 1899, 8,807,000,000 francs in 1900, and 8,880,000,000 francs in 1901. The increase in imports in this period has been 242,000,000 francs; in exports, 756,000,000 francs. The total value of the general imports in 1900 was 5,988,600,000 francs, and of the general exports 5,521,600,000 francs; that of the special imports was 4,697,800,000 francs, and of the special exports 4,108,700,000 francs. In 1901 the special imports amounted to 4,714,500,000 francs and the special exports to 4,166,200,000 francs. The imports of food substances in 1901 were 802,000,000 francs in value, and the exports 778,000,000 francs; the imports of raw materials were 3,124,000,000 francs, and the exports 1,091,000,000 francs; the imports of manufactured goods were 789,000,000 francs, and the exports 2,297,000,000 francs. The special imports of wool in 1900 were 426,400,000 francs in value; of coal and coke, 406,900,000 francs; of raw silk, 248,000,000 francs; of raw cotton, 248,000,000 francs; of oil-seed, 188,600,000 francs; of lumber and wood, 177,000,000 francs; of hides and furs, 161,000,000 francs; of wine, 155,300,000 francs; of cereals, 127,300,000 francs; of coffee, 91,800,000 francs; of flax, 82,600,000 francs; of ores 80,500,000 francs; of silk manufactures, 62,000,000 francs; of cotton manufactures, 48,400,000 francs; of woolen manufactures, 42,000,000 francs; of colonial sugar, 28,000,000 francs; of cattle, 26,400,000 francs. The exports of silk manufactures were 258,100,000 francs in value; of wine, 227,900,000 francs; of woolen manufactures, 227,200,000 francs; of woolen yarn and raw wool, 201,700,000 francs; of articles of Paris, 185,000,000 francs; of cotton manufactures, 174,400,000 francs; of linen goods and garments, 136,100,000 francs; of raw silk and silk yarn, 135,700,000 francs; of skins and furs, 109,700,000 francs; of chemical products, 88,300,000 francs; of hardware and tools, 87,200,000 francs; of cheese and butter, 73,800,000 francs; of leather goods, 70,800,000 francs; of refined sugar, 57,700,000 francs; of spirits, 52,800,000 francs. Of the total imports 4,078,000,000 francs came by sea, 1,673,000,000 francs of this value in French and 2,405,000,000 francs in foreign vessels, and by land the value of 1,911,000,000 francs was imported. Of the exports 3,631,000,000 francs in value were shipped by sea, 1,822,000,000 francs of this value in French and 1,809,000,000 in foreign ships, and 1,890,000,000 francs went in land vehicles. The transit trade in 1900 amounted to 958,000,000 francs. The imports of gold coin and bullion

in 1900 amounted to 459,110,799 francs, and exports to 125,567,614 francs; imports of silver coin and bullion were 145,839,396 francs; and exports 206,785,529 francs; imports of bronze coins were 62,460 francs in amount, and exports 334,780 francs; total imports of specie, 605,012,655 francs; total exports of specie, 332,687,923 francs. The values in francs of merchandise imported from and exported to the principal countries in the special commerce of 1900 are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain	675,000,000	1,228,000,000
Belgium	422,000,000	598,000,000
Germany	427,000,000	465,000,000
United States	510,000,000	255,000,000
Spain	220,000,000	135,000,000
Argentine Republic	285,000,000	50,000,000
Italy	149,000,000	156,000,000
Algeria	166,000,000	259,000,000

The value of 231,000,000 francs was imported from Russia and 154,000,000 francs from British India; and of the exports of domestic produce and manufacture 211,000,000 francs went to Switzerland and 38,000,000 francs to Brazil. The value of merchandise imports and exports that passed through Marseilles in the general commerce of 1900 was 2,072,000,000 francs; while Havre had a trade of 1,978,000,000 francs; Paris, 876,000,000 francs; Dunkirk, 773,000,000 francs; Bordeaux, 672,000,000 francs; Boulogne, 430,000,000 francs; Dieppe, 371,000,000 francs; Rouen, 261,000,000 francs; Calais, 247,000,000 francs; Belfort, 221,000,000 francs; Jeumont, 219,000,000 francs; Tourcoing, 204,000,000 francs.

Railroads, Posts, and Telegraphs.—The railroads in 1900 had a total length of 23,760 miles, exclusive of 2,970 miles of local railroads. The Government owned 1,700 miles and has the reversion of the main lines operated by the 6 guaranteed companies. The guarantees of 4 of these expire in 1914, and those of the others in 1934 and 1935. The cost of construction of 23,453 miles completed in 1899 was 16,214,000,000 francs. The gross earnings in 1899 were 14,213,750 francs, and in 1900 they were 15,025,500 francs. The length of street-railroads on Jan. 1, 1901, was 2,319 miles.

The number of letters that passed through the post-office in France and Algeria in 1899 was 846,561,000 in the internal and 167,190,000 in international and transit traffic; registered letters, 48,518,000 internal and 2,806,000 international and transit; postal cards, 55,149,000 internal and 7,545,000 international and transit; newspapers, circulars, samples, etc., 1,218,893,000 internal and 183,213,000 international; receipts in 1899 were 256,943,270 francs in France and 4,988,426 francs in Algeria.

The length of telegraph-lines on Jan. 1, 1900, was 90,170 miles, with 330,100 miles of wire. The number of despatches in 1899 was 48,144,151, of which 39,071,518 were internal, 6,379,182 international, 1,122,180 in transit, and 1,571,271 official. There were 959 telephone systems in 1899, with 10,410 miles of line and 150,510 miles of wire. The number of conversations in 1899 was 164,912,842, and on long-distance lines, having a length of 15,384 miles, with 44,034 miles of wire, the number was 4,774,824 in 1899 and 5,953,543 in 1900.

Last Session before Elections.—The ministry that triumphed over the Nationalist sedition in 1899, obliterated the Dreyfus scandal, suppressed political intrigues in the army, and restored confidence in the republic, was strong

enough to carry through the Chambers important measures, such as the new succession duties, the revised spirit duties, the bill establishing a colonial army, and, as the logical chastisement for the reactionary parties, the associations bill. The army and navy, the colonial empire, and the international position of France waxed under the care of the democratic ministry in a way to rebuke and humiliate Caesarism. The defenses of the French coasts, the gradual transformation of the navy, the development of submarine torpedo-boats, the construction of the naval port of Biserta, the fortification of Diego Suarez, the occupation of new territories in the Sahara and central Africa, were accompanied by a more energetic defense of French interests in the East and elsewhere. The Russian alliance was not weakened, while a *rapprochement* with Italy removed a source of weakness and danger. When the Chamber met in January, 1902, the Government proved to working men the value to them of ministers like M. Millerand and M. Baudin, which the Guesdist Socialists denied, by adopting the bill of M. Basby, the representative of the miners, fixing eight hours as the maximum day's work in French mines. To enable the companies to double the number of pits, broaden the galleries, and make other preparations, nine hours will be a day for two years, then for two years eight hours and a half, and after that eight hours. A bill decreeing that workmen and workwomen, whether in public or private service, including employees in shops, restaurants, and hotels, shall not be employed more than six complete days in the week, but must have one whole day or two half-days of rest, was opposed by only 10 Deputies. A Socialist motion to amnesty strikers was carried on March 21, in spite of the opposition of the Government, by 368 votes to 62. The Guesdist Socialists and some anarchist agitators led a demonstration of the unemployed at the Labor Exchange and a conflict with the police on March 3. Even the Parliamentary Socialists who have defended M. Millerand considered it inexpedient for a Socialist again to enter a French Cabinet for some time.

A new law on shipping bounties is intended to indemnify ship owners who purchase vessels built abroad for the extra expenses entailed by the restrictions placed upon them by the French shipping laws, though its opponents described it as a bill to give 40,000,000 francs a year in premiums to British ship-builders. Its purpose is to enable the steam mercantile marine of France to keep pace with that of other countries. The act of 1881 allows half the navigation premium to vessels of foreign construction sailing under the French flag. The act of 1893 restricted bounties to French-built vessels. The present act grants an outfit indemnity equivalent to less than a third of the navigation premium to foreign-built steamers registered in France. The navigation bounties for French-built vessels are at the same time increased, except for large sailing vessels, which were so favored by the act of 1893 that they have been built in excess. Notwithstanding the protection given by the law of 1893, French owners have continued to buy over two-thirds of the new steam tonnage abroad. A part of the increased bounty is reserved as a superannuation and accident insurance fund for mariners and fishermen. The construction bounty remains 65 francs per ton and 15 francs on every 100 kilograms of engines and boilers. The French builder of a steam-vessel receives also 70 per cent. of the navigation bounty. French vessels in colonial waters may hereafter have foreign

crews under French officers, it having been found that the law requiring three-quarters of all French crews to be Frenchmen was detrimental to the coasting-trade under the French flag in tropical seas. The act of 1893, under which bounties will continue to be paid out until 1913, will have cost the taxpayers 221,000,000 francs. The cost of the new statute, which was passed for ten years, with payment of bounties for twelve years longer, is limited to 200,000,000 francs. The Chamber sanctioned by a practically unanimous vote a vast project of canalization that has been long studied, involving the expenditure of 665,000,000 francs, of which 443,500,000 francs will be spent on new canals, 60,000,000 francs on widening and deepening existing canals, and 162,000,000 francs on improving Dunkirk, Havre, Nantes, St.-Nazaire, Bordeaux, and other harbors. Of the new canals, one to connect the Pas de Calais with Lorraine, giving a cheaper and more certain supply of coal and of iron ore to a great manufacturing district, will cost 130,000,000 francs. The projected northern canal will cost 60,000,000 francs. The canal from the Loire to the lower Rhone, estimated to cost 123,000,000 francs, will link the extensive canal system of which Paris is the center with the southeastern parts of France. The canal from Marseilles to the Rhone will cost 91,500,000 francs, and in connection with this the navigable channel of the Rhone will be improved, and also the Cette Canal. For works of minor importance and local value the districts interested are expected to pay half the cost; for works of national importance the local contribution will be less; for military ports the whole cost falls on the national treasury. The question of shortening the term of military service was not decided. Under the present law about 50,000 of the annual recruits serve only one year, after which they are called out for four or two weeks annually; 15,000 serve two years; and 160,000 are compelled to serve three years. Young men of the wealthier classes, on the ground that they are needed for the support of their families or have a certain amount of instruction, are released, while the poor have to serve for the full term. The Government proposed to make the period of obligatory service two years for all if a sufficient number of suitable men can be induced to remain with the colors voluntarily from one to five years longer. A bill before the Senate offered to those who would enlist for the additional terms not only higher pay, but future employment in certain Government and communal offices and in societies receiving state aid to be reserved for soldiers who have served three years in the national or the colonial army. Sons who support widowed mothers or younger children would also have to serve two years, during which the Government would provide for the support of the bereft families. The Government favored this plan and was desirous of suppressing all exemptions and inequalities, but not until the preliminary measures were taken to insure the efficiency of the military organization when the short term is introduced. As the matter could not be brought to a conclusion before the dissolution of the Chamber, the Deputies, by 533 votes to 2, declared their adhesion to the principle of two years' service to be effected by the suppression of all exemptions and by reenlistments, with compensation for families deprived of their normal support. Military service has weighed very heavily in France because the annual number of available conscripts has declined since 1871 from 293,000 to 225,000, half the num-

ber there are now in Germany, where they have increased in that time 120,000 and reductions are made in the annual drawings, whereas in France there are not enough to fill the battalions. The bill proposed to enroll in the army all those who, physically incapable of marching and fighting, could perform administrative or clerical duties or assist in the ambulance corps or the commissariat. For students postponement of service would be allowed. There are 6,000 men employed as orderlies and as shoemakers, tailors, etc., who would be incorporated in the army. At present 58 per cent. of the infantry and a part of the cavalry really serve only ten months. The available effective is reduced by exemptions and dispensations by a third. The abolition of these is expected to yield 489,000 conscripts serving two years. The reduction of the limit of stature and the reenlistment of more non-commissioned officers and of 7,000 privates, with the addition of the Algerian contingent, would supply the deficiency of 50,000 men that the change from three to two years would entail, so that the army would be kept up to its required strength of 539,000 men. The cost of the change in bounties for reenlistment and relief to families deprived of breadwinners was estimated at 70,000,000 francs a year. The total strain on the people would be greater, but it would be equal, and the classes now called upon to pay the main part of the blood tax would be relieved of a part of their burden. The military training of the army as a whole would be improved, since the three years' system does not secure two years' training for a great part of the military population, including the most intelligent classes. The duration of military service under the bill is two years in the active army, eleven years in its reserve, six years in the territorial army, and six years in its reserve, making twenty-five years altogether.

The final session of the Chamber elected in 1898 ended on March 30. The Senate refused to make the duration of the next Chamber six instead of four years, postponing the question for riper consideration in the new Parliament. The Government supported the measure, on the ground that the first session of every Chamber is devoted to preliminary discussions and the last is agitated by electoral considerations, leaving but two sessions for practical work, and in spite of the opposition of the Socialists under M. Viviani and of M. Rouvier and M. Pelletan the bill passed the Chamber by 298 votes to 237. The Prime Minister defended the measure in the Senate because it would give the Government opportunities to dissolve the Chamber, a power that has never been used except in consequence of Marshal MacMahon's *coup d'état* in May, 1877. Of various new regulations against fraud in elections the Senate adopted only one, invalidating elections to the Chamber procured by falsification. The issue of short-term bonds for 70,000,000 francs to meet the deficit the Chamber tried to cut down, believing the budget could be balanced with 44,000,000 francs. When the Chamber voted 10,000,000 francs to give the soldiers better meat and wine rations the Senate allowed only 1,000,000 francs, but the training of the territorial army for two weeks which the Chamber deemed useless the Senate insisted on continuing for nine days at least every year.

The Elections.—The new Chamber consisted of 591 instead of 581 members. In the reapportionment of seats on the basis of the last census 3 arrondissements lost a Deputy each and 13 gained one. The Radical Republicans in their

electoral manifesto called for reform of the direct taxes, an income tax, two years' military service, insurance against labor accidents, a working men's superannuation fund, and agricultural credit societies. Like other sections of the Republican party, they denounced the Nationalists and the Congregations on the one hand and Collectivism on the other. The Catholic bishops generally warned the clergy against endeavoring to influence votes. The *Patrie Française* League and other organizations of Nationalists electioneered energetically and vituperated the ministers. The Legitimists, Orleanists, and Bonapartists of other days were merged in one Conservative party, ready to accept any monarchical form of government, and this party was feeble in numbers and energy compared with the Nationalists, now the chief Opposition party, willing to advocate any change, reactionary or even revolutionary, by which they could come into power. They are a combination of former royalists and Bonapartists still looking for a revival of their cause, others ready to accept any cause that would open a career for them, Clericals anxious to revive the political influence of the Church, Rallied Republicans who had already given up monarchism as a lost cause, Anti-Semites, and adventurous, ambitious, and eccentric deserters of the Republican, Radical, and Socialist parties. The Plebiscitarians did not openly reject the republic, but would attach themselves to the fortunes of any dictator who would destroy it amid the acclamations of the multitude. The Progressives, led by M. Méline and M. Ribot, would purge the republic of Socialists and Socialist Radicals, hoping to reconcile Clericals and Conservatives to a republican Government ruled by moderation and respect for property. The Radical Republicans, the aggressive and dominant section of the Ministerial party, are the men who since Gambetta led them have carried out the principal reforms that have marked French legislation for twenty years, and who of late have had a majority in the Senate as well as in the Chamber. The Socialist Radicals would proceed more precipitately in social legislation than the Radicals. The Parliamentary Socialists, represented by M. Millerand in the Cabinet and by M. Jaurès and M. Viviani in the Chamber, adhere theoretically to Collectivist ideals, but will cooperate with other parties in effecting social reforms and labor legislation gradually. The anti-Parliamentary Socialists, led by Jules Guesde, reprobate alliances with capitalistic parties. The Revolutionary Socialists, like the anarchists, generally refrain from voting and political activity and would sweep away the existing Government by revolution and terrorism. The Nationalists, who had already won the municipality of Paris from the Socialists, made a great struggle to gain the constituencies in the capital, and with a profuse use of money opposed Ministerialist candidates in all parts of France. The women of the aristocracy, angered by the antiassociations law, took a public part in electioneering, as women in France had never done before. There were about 2,500 candidates, an average of more than 4 for every seat, 6 in Paris. The Duke of Orleans instructed the remaining adherents of the Bourbon monarchy to set up Royalist candidates where they had a chance of success, and where not to vote for some other anti-Republican candidate, or, if there was none likely to win, to vote with any party opposed to the Government. In many departments the clergy did actively intervene in the elections, drawing from M. Waldeck-Rousseau when the elections were past a threat

to punish all who had abused their ecclesiastical functions.

The elections took place on April 27. The Nationalists, for all their violent campaign, gained but a few seats in Paris and polled only two-fifths of the total vote of the metropolis, whereas Gen. Boulanger in 1889 received three-quarters of the Parisian suffrages. Out of 412 elected on the first ballot 88 were Ministerial Republicans, 95 Radicals, 41 Socialist Radicals, and 22 Socialists, making 246 supporters of the Government, against 32 Nationalists, 66 Conservatives, 66 Anti-Ministerial Republicans, and 2 Anti-Ministerial Socialists, a total of 166 Opposition Deputies. Second ballots were necessary for 179 seats. The Government made a net gain of 11 seats in the elections decided in the first ballot. Of 8,863,000 votes polled out of 11,216,000 on the register, 5,198,000 were cast for the Government. Of 3,352,000 Anti-Ministerial votes, Guesdist Socialists cast 144,000, Progressive Republicans 1,103,000, Nationalists 1,160,000, and Reactionaries 943,000. Of the Ministerial voters, 717,000 were Socialists, 715,000 Socialist Radicals, 1,734,000 Radicals, and 2,029,000 Ministerial Republicans. Although the Progressists in many places combined with Nationalists to displace Ministerialists, the second ballots on May 11 were as favorable to the Government as the first. The new Chamber consisted of 111 Ministerial Republicans, 128 Radicals, 94 Socialist Radicals, 53 Socialists, 6 Guesdist Socialists, 115 Progressist Republicans, 43 Nationalists, and 41 Conservatives. This gave the ministry a majority of over 100 against any hostile combination, the Republicans a majority of 400 against the foes of the existing republic. The Socialists, having been 57 in the Chamber of 1898, were losers, though not to such an extent as the Conservatives, and the Progressists lost 35 seats, while the Radicals increased from 104 in the last Chamber and the Socialist Radicals from 74. Of the Conservatives elected only 10 were Legitimists, the rest Bonapartists. There were 20 Anti-Semites and 8 Plebiscitarians.

Change of Ministry.—The ministry formed on June 22, 1899, for the defense of the republic and the reestablishment of order, having achieved its task, deserted though it was at the outset by stanch Republicans of the stamp of M. Ribot and M. Poincaré, M. Waldeck-Rousseau on May 28 announced his resignation. The new Chamber met on June 1 and elected Léon Bourgeois provisional president over Paul Deschanel. After the credentials of members were confirmed, M. Bourgeois was definitively elected president. M. Loubet was at this time in St. Petersburg, returning the visit made by the Czar in September, 1901. The Emperor Nicholas invited the President of the French Republic to visit him so as to note the proofs of the warm and sincere sentiments uniting Russia and friendly and allied France. In asking a credit of 500,000 francs for the presidential journey the Government, in consequence of the recent Franco-Russian note, instead of speaking of a fresh consolidation of the alliance according to the old formula, described the visit as a demonstration of the growing strength of the bonds uniting France and Russia for the development of their prosperity and the maintenance of the peace of the world. M. Loubet, on his return to France, received a letter in which M. Waldeck-Rousseau offered the resignation of the Cabinet. The President sent for Henri Brisson, and when this eminent Radical declined, commissioned M. Combes to form a ministry. Whether a progressive income tax

should be placed before exclusive state education, two years' service, superannuation allowances to workmen, or judicial reforms, and whether *scrutin de liste* should be reintroduced, were questions that divided Radicals who were asked to join the Cabinet, which was finally constituted on June 6 as follows: Prime Minister, Minister of the Interior, and Minister of Public Worship, M. Combes; Minister of Justice, M. Vallé; Minister of Foreign Affairs, M. Delcassé; Minister of Finance, Maurice Rouvier; Minister of War, Gen. André; Minister of Marine, Camille Pelletan; Minister of Education, M. Chaumié; Minister of Commerce, M. Trouillot; Minister of Public Works, M. Maruéjouls; Minister of Agriculture, M. Mougeot; Minister of the Colonies, M. Doumergue; Minister of Posts and Telegraphs, M. Bérard. The selection of M. Combes, reporter of the associations bill in the Senate and Minister of Education in the Bourgeois Cabinet of 1895, to be the head of the new Radical ministry indicated a purpose to apply that law with vigor. The first legislative proposal in the ministerial program was the abrogation of the Falloux education law of 1850, which placed on an equal footing secular education given by Church institutions and the university and school education of the state. Rigid economy and an intelligible and sincere budget were the financial principles set forth, and the extrication of the Government from graver financial difficulties fifteen years before was recalled to prove that similar efforts would restore the balance between normal receipts and expenditures. A general income tax, which by taxing each person according to his powers would introduce greater equity and a fuller democratic spirit into the fiscal system, was given a foremost place in the promised legislation, and next the reduction of military service to two years without compromising the solidity of the army, a consummation to be effected by the bill already before the Senate. The disciplinary corps and penal establishments of the army were to be brought into harmony with the principles of modern justice, as the proceedings before military tribunals already had been. The transfer of railroads to the state was to be studied and a beginning made in their acquisition and management by the Government, as had been resolved by the last Chamber. The workmen's superannuation bill, which the late Cabinet had left, was to be pushed forward. All details of the administration would be governed by secular liberty and Republican principles, and the associations law would be enforced in its letter and its spirit. The Chamber, after hearing the ministerial declaration, passed by 329 votes to 124 an order of the day expressing confidence in the Government and its purpose to apply a vigorous policy of unsectarianism, of fiscal reform, and of social solidarity. The deficit for the year was estimated at 170,000,000 francs. The Progressist Jules Roche proposed to debar private Deputies from proposing any measure entailing expenditure of money, as is the English constitutional practise. M. Rouvier carried a bill for the conversion of 34-per-cent. French rentes into 3 per cents., affecting nearly one-third of the funded debt and saving the treasury 32,000,000 francs a year, the period during which the conversion was forbidden by the law of 1894 having expired. The holders of the old and the new 3 per cents., amounting to 21,450,000,000 francs, are guaranteed against any further conversion for eight years. The holders of the 34 per cents. who exchange their bonds receive 1 per cent. bonus in the shape of new bonds of 101

per cent. of the face value of the old ones or in cash. The conversion was expected by the holders, since the price of the $3\frac{1}{2}$ per cents. has receded from nearly 109 almost down to par, and the impending operation depressed the price of the perpetual 3 per cents. The bonus represents an interest of $3\frac{1}{2}$ per cent. for the first four years. After 1910 a conversion of French rentes into $2\frac{1}{2}$ - or $2\frac{1}{2}$ -per-cent. stock at par may be possible, but at present these rates are not sufficiently acclimatized in France. The conversion bill contains a clause allowing treasury bonds to reach a limit of 500,000,000 francs, 100,000,000 francs above the existing legal maximum. The session ended on July 12.

Enforcement of the Associations Law.—Before the close of the session M. Combes first ordered 135 Roman Catholic schools closed, some of them conducted by 130 newly constituted religious associations which unsoundly contended that the associations law did not require new schools or societies to apply for authorization, others by members of unauthorized communities who claimed exemption as salaried teachers employed by lay school proprietors. Since the associations law of July 1, 1901, went into force 64 male and 685 female communities had applied for authorization. Authorization has been required by law since 1825, but before the new act was passed many establishments were founded that neglected to conform to the law. The Premier's speech defending the forcible closing of schools and declaring that the first act would be followed by others, since Republican France had elected a majority of representatives resolved on securing the victory of lay society over monastic disobedience, was by 309 votes to 218 ordered to be placarded throughout the country. There were 3,000 schools, mostly for girls and conducted by nuns, which still defied the law. Three days before the close of the session a decree was issued ordering all these to close on a week's notice, otherwise they would be closed by the police. If they obeyed they could apply for authorization and be reopened as new establishments. Asylums and hospitals were left undisturbed until accommodation could be found for their inmates. M. Combes was denounced in the Chamber as a proscriber, and Deputies of the Right threatened the President and nearly came to blows with friends of the Government. After the close of the session 450 religious communities applied for authorization. On July 16 notices were served on 76 schools in Paris, and some of the schools in the provinces received their warning. The schools were those of the unauthorized religious communities, taught by the same teachers and occupying the same buildings, the only change having been that the property was now in the name of laymen. This device was regarded by its authors as sufficient to get around the law. The Government, however, was resolved to treat the pretext that these alleged proprietors and employers of the teachers had opened new schools, when they were in all respects the same conventual schools as before, as a quibble not worthy of consideration. The Council of State decided on Jan. 23, 1902, that the law did apply to the conventual schools, old and new. There were two months in which the schools could be either converted into secular schools or legalized as religious schools of authorized orders before the compulsory education law would require the parents to send their children to school; but they could not be legalized without a new act of the Legislature, which would not meet before Oct. 15, and in case these

schools were not reopened before the new school year there would not be room for so many children in the public schools; most of the parents, moreover, would endure penalties rather than let their children attend the secular schools. After secular education was enacted in 1882 and monastic teachers were excluded from the common schools, Catholics throughout the country contributed and sent their children to the schools founded by the monastic orders in which religious instruction was continued. There were 160,000 children in these Church schools in Paris; in the provinces they were more numerous attended. Thousands of teachers were trained in the convents. To provide education for the pupils of these schools would add greatly to the public expenses. The bishops declared that they would defend the liberty of Christian families to determine how their children should be educated, and nearly all of them sent protests against the decrees, although they have had constant difficulties with these teaching orders in exercising their hierarchical authority. The circular of M. Combes came as a surprise because it was now too late for the orders to apply for authorization. The law gave them only three months, which expired on Oct. 1, 1901. M. Waldeck-Rousseau decreed an extension till Jan. 15, 1902, and when he said that elementary schools came under the education law of 1886 it was assumed or argued by some of the Clericals that his language exempted the Church schools. It was contended, moreover, that since he threatened to close them after a final summons his successor was bound to allow an opportunity to obtain authorization. The Progressives and Moderate Republicans condemned the policy of suppressing the sisters' schools, and Protestants as well as Clericals and Reactionaries called it an attack on liberty and a manifestation of hatred and intolerance. Even Radicals, like ex-Premier Goblet, deprecated violence in combating clericalism, though others called for the total suppression of the recalcitrant orders or advocated the denunciation of the concordat. When the police began to carry out the decree, first in the departments of the Seine and the Rhône, the Clerical politicians and the clergy led demonstrations. In Paris the Nationalists sought conflicts with the police, and some of the agitators were arrested. In provincial towns and villages, where the action of the Government produced real hardship and profoundly exasperated the people, serious conflicts occurred, notwithstanding the endeavors of the authorities to avoid encounters. Many of the officials carried out the expulsions with extreme repugnance; some would not enforce the decree; none treated the sisters with harshness. Departmental and municipal councils in Catholic sections passed resolutions condemning the Government, and the municipal councils of the industrial cities retorted with resolutions of commendation. Clerical leaders appealed to M. Loubet, who forwarded their communications to the ministers. Ladies of society sought the intercession of Mme. Loubet, but propriety forbade her to receive them. Leaving a message that women's blood would be shed in the streets if the women of the poor were denied the privilege of giving a Christian education to their children, some days later, at the head of a demonstration of mothers of France, they attempted to present a petition to the Prime Minister, but found the avenues leading to the ministry blocked by the police. Some of the notifications in the provinces were withdrawn for the reason that the establishments affected were virtually authorized by having been allowed to

buy lands and buildings or to receive legacies. It was decided to leave orphanages and charity schools undisturbed. In 48 of the departments the schools that received notices closed voluntarily; in 5 there were no religious schools; in 34 decrees were enforced. In many cases where there was resistance or a show of resistance, the heads of the order commanded the nuns to leave, and the nuns desired to leave, but were restrained by the lay managers and by Clerical partizans. There were 6,000 monastic educational establishments that had not applied for authorization. About half of these the ministers decided to leave unmolested because they had acted in good faith, believing that no application was necessary. The number of schools thus exonerated was about 1,100. Of the others, over 1,500 closed voluntarily. Decrees were enforced against 26 schools in Paris and 61 in the Rhône department, and on Aug. 1 decrees of closure were issued against 237 establishments in 32 other departments. There were 12,000 applications for authorization, which the Council of State would pass upon as expeditiously as possible. The 324 recusant schools must secure lay teachers if they desired to reopen in October. When the gendarmes went to close them they found the doors locked, and some of them surrounded by defenders—peasants who stood guard with pitchforks or youths who stoned them as they approached. In many villages the inhabitants mounted guard or the mayors summoned them by sounding the tocsin, and in some the gendarmes were compelled to retire. In various towns citizens of the two parties fought in the streets. The political leaders of the demonstrations counseled only legal resistance, not violence. Some of them suggested and inaugurated a general refusal to pay taxes. The boycotting of Republicans was begun in many places, and in some a run on the savings-banks was started. The agitation was more intense and general in Brittany than in any other part of France, and there the decrees were carried out last. There the doors of the schools had to be opened by locksmiths or breaches had to be made in the walls. Women knelt or lay down at the entrances to prevent the passage of the police. Prominent Clericals braved a criminal charge by breaking the official seals placed on the buildings. Priests sometimes headed the resistance. In one instance the nuns armed themselves with scythes to fight the police. Wherever the people were so excited that the schools could not be closed without a serious conflict the execution of the decrees was delayed, while the ecclesiastical authorities counseled submission. The superior of the largest order twice directed the Breton nuns to submit, but the lay owners of the schools and the inhabitants prevented their departure. Royalism as well as Catholic sentiment inspired a revolt which only the military could deal with in this old province, now almost the only part of France that elects royalist Deputies. Court proceedings against the legality of the decrees were instituted in very many places, the course generally recommended by the Church dignitaries and their political friends. One of the bishops advocated the separation of Church and state, since the majority of Frenchmen preferred apparently an atheistic republic. In some of the more troubled districts detachments of soldiers were sent to protect the civil officials in their task. In the department of Morbihan Lieut.-Col. Gaudin de Saint-Rémy, when ordered to send a squadron to aid in closing a school at Lanouen, refused to obey his general's orders, saying that as a Christian

he would not share in an act contrary to his faith and religious feelings. He was immediately relieved of his command and ordered to a fortress. It was only by means of military operations that the decrees could be executed in Brittany. The peasants and fishermen were united in their resistance in the districts where loyalty to the Bourbon kings and feudal attachment to the nobility were still a part of their religion. Barricades, earthworks, and ditches closed the roads. When the soldiers broke through or turned the barriers and reached the school-buildings, where they had to batter down the doors, they were greeted with cheers for the army, but the commissaries were assaulted, and sometimes the priests had to rescue their lives. Intrenchments and obstacles protected the buildings, and these were filled with people who threw filth and burning oil-soaked sticks into the faces of the gendarmes who attempted to enter. When an entrance was at length effected, the nuns marched arm in arm with the aristocratic ladies of the neighborhood to the church, preceded by trumpets and flags and cheered by the populace, who strewed their path with flowers. Some of the local courts upheld the lay owners, or nominal owners, of the edifices where, after the sisters had left, they removed the seals from the doors and resumed possession. In the departments where the public sentiment sustained the Government, though many persons were arrested, priests and nuns among them, and ladies of the old aristocracy, the sentences inflicted were the lightest, and these were remitted under the law allowing first offenses to go unpunished. The strength of the Clerical and Reactionary movement which made Paris Nationalist and revived royalism and imperialism in the provinces, contrary to the admonitions of the Pope, was not derived from the dwindling and impoverished ancient aristocracy, but from the commercial, manufacturing, and professional classes. The *bourgeoisie* that accomplished the French Revolution had become enamored of the *ancien régime*. The spirit was strong in the army and navy and among the official classes, and when officials refrained from insubordinate acts, which invariably led to dismissal, the women of their families flaunted their anti-Republican sentiments in the view of the public. The Government, representative of a new social stratum, of the working classes and the bulk of the peasantry, attributed this to the monopoly of middle-class education by the clergy. Hence the ministers, who found themselves in the awkward position of waging war on women, persisted in enforcing the associations law, in appearance at least, to betoken their determination to introduce secular education and bring up the youth of France as Republicans. The Government was sustained by 65 departmental councils on its policy of closing the schools, and censured by 3, while 15 recommended authorization and restitution of the schools. The belated execution of the decrees in Brittany was finally carried out by Aug. 20, in Finisterre last of all, where Abbé Gayraud, the Deputy, could not dissuade the peasants, who left their harvest fields to champion the nuns, from fighting the police and soldiers. The orders after the struggle was over applied for authorization. Since the act of 1886 lay teachers had been substituted for nuns in 4,500 religious schools and 6,000 were still taught by sisters. For most of the closed schools lay teachers, often volunteers, were found, although there was a scarcity of available teachers possessing the necessary certificates. The laicization of communal schools was obligatory

and was carried out wherever they were still taught by nuns. When Col. de Saint-Rémy was tried the military court virtually upheld his conduct by sentencing him to one day's imprisonment. Gen. André, the first Minister of War chosen from the army who had made political speeches tinged with Radicalism, in accordance with a decision of the Cabinet, placed Col. de Saint-Rémy, whose previous military career was unimpeachable, on the retired list. The Socialists and Radicals called for the abolition of courts-martial, although in this case the offending officer had clearly acted from conscientious motives after a mental struggle and with no political or self-seeking object, and was technically not insubordinate toward his superior officer, but had only failed to act on the requisition of the prefect transmitted irregularly by the general, whose subsequent personal order was legally void. The soldier had merely disobeyed the civil power, a minor military offense, and the civil power asserted its authority over the army by retiring him from active service. The Pope sent a message of condolence with French Catholics in a brief to the Archbishop of Paris, which contained no suggestion of a controversy. When the Chambers reassembled in October a Socialist Deputy proposed the abolition of the concordat, the pact made by Napoleon I with the Vatican which makes the hierarchy and secular clergy of the Roman Catholic Church officials of the state, recipients at present of annual stipends and subventions amounting to 40,000,000 francs. The question was indefinitely postponed by being referred, with the approval of the Government, to a committee by 294 votes to 254.

Dependencies.—The colonies and dependencies of France have an aggregate area of over 5,000,000 square miles and over 50,000,000 inhabitants. The Minister of the Colonies directs the administration of the colonies, all of which enjoy a large measure of self-government. *Algeria* is not treated as a colony, but its departments are assimilated to the departments of France and the Governor-General receives instructions from the ministers of the French Cabinet, except the Minister of the Colonies and the Ministers of Finance, Justice, and Public Instruction and Worship, having advisers of his own for these matters. The Chambers make special laws for Algeria, and political and administrative questions not covered by legislation are decided by the President and Council of Ministers. *Tunis* is under the control of the Minister of Foreign Affairs. The Minister of the Colonies is advised by the Superior Colonial Council, composed of the Senators and Deputies of the colonies which have representation in the French Chambers, delegates from the others, and individuals appointed by the Government on account of their official relations or special knowledge of colonial affairs. The Chambers vote large sums every year to supplement the revenues collected in the colonies. The total amount of colonial expenditure for 1902 was set down in the budget as 120,598,455 francs, while 15,212,947 francs were returned to the French treasury, 10,941,794 francs of this sum being a reimbursement of military expenses from Indo-China. Of the estimated expenditure 3,166,750 francs were the expenses of the Ministry of the Colonies, 8,999,000 francs were subventions to cover colonial deficits, 99,541,905 francs were for military expenses, and 8,890,800 francs were for the maintenance of penal settlements. The services of the French army and navy in the colonies are defrayed, not from the colonial budget, but from the budgets of the Ministries of War and

Marine. In 1901 free passages were given to 361 men, 154 women, and 114 children, who emigrated to the colonies, taking out a combined capital of 721,000 francs.

The republic of *Andorra* in the Pyrenees, having an area of only 175 square miles and 6,000 inhabitants, bears a feudal relation to France and to the Bishop of Urgel in Spain, each nominating the judicial magistrates in turn. Otherwise it is self-governing.

Algeria is divided into the departments of Algiers, Oran, and Constantine, each of which sends a Senator and two Deputies to the French Chambers. Paul Revoil was appointed Governor-General in 1901. The colonial budget is voted by a Superior Council consisting of delegates of the general councils of the departments. The military territory consists of a part of the Algerian Sahara, which is governed by the military authorities, but they are controlled by the Governor-General. The area and population of the departments, according to the census of March 24, 1901, are given in the following table:

DEPARTMENTS.	Square miles.	POPULATION.		
		Civil territory.	Military territory.	Total.
Algiers.....	65,929	1,413,508	217,968	1,631,476
Oran.....	44,616	955,537	147,571	1,103,108
Constantine....	73,929	1,818,127	221,331	2,039,458
Total.....	184,474	4,186,172	586,870	4,774,042

The total population in 1896 was 4,429,421, including 318,137 French and 446,343 foreigners. Of the native population, about 75 per cent. are Kabyles, or Berbers, 15 per cent. Arabs, and 10 per cent. Moors, Jews, Turks, negroes, etc. The number of marriages registered in 1899 was 42,816; of births, 132,676; of deaths, 90,557. These figures are very imperfect, as the native Mohammedans generally avoid making reports.

The estimated revenue for 1902 was 56,470,947 francs, of which 13,066,907 francs came from direct taxation, 8,396,200 francs from registration and stamps, 14,627,180 francs from customs, 5,179,300 francs from monopolies, 3,723,820 francs from domains and forests, 8,273,905 francs from various sources, and 3,203,635 francs were *recettes d'ordre*. The total estimated expenditure was 54,384,662 francs, of which 7,200,134 francs were for administrative expenses, 8,282,664 francs for finance, 2,728,850 francs for justice, 8,451,913 francs for instruction and worship, 8,450,750 francs for public works, 4,813,774 francs for agriculture and forests, 6,528,025 francs for commerce and the post-office, and 7,928,552 francs for colonization and charities. The appropriations for religious worship in 1900 were 829,700 francs for Catholics, 307,430 francs for Mussulmans, 97,600 francs for Protestants, and 28,970 francs for Jews; total, 1,263,700 francs. The combined revenues of Algerian communes, of which there are 352, were 26,567,267 francs, their expenditures 23,210,977 francs, their debts 69,811,978 francs. The military force in Algeria, the Nineteenth Corps of the French army, numbered 57,292 men, of whom 2,255 were officers, in 1901, with 13,434 horses.

The agricultural population in 1897 numbered 3,644,614, of whom 207,310 were Europeans, to whom the greater part of the public lands have been sold or granted. The native tribes hold a large proportion of the soil in common. The agricultural area is about 20,000,000 hectares. The production of hard wheat in 1900, from 2,767,630 acres, was 734,943 tons; of soft wheat,

from 525,920 acres, 163,777 tons; of barley, from 3,635,995 acres, 1,189,557 tons; of beans, from 80,180 acres, 16,534 tons; of oats, from 231,800 acres, 97,836 tons; of dari, from 70,335 acres, 20,190 tons. There are about 30,000 wine-growers, 17,000 of whom are Europeans. Wine-growing is the largest industry, but the abnormal yield of France in 1900 and 1901 depressed prices so that exports were unprofitable and fell from 1,000,000 gallons in 1899 to 500,000 gallons in 1900. The vineyards, covering 151,877 hectares, produced 5,563,032 hectoliters of wine in 1901. The crop of tobacco, covering about 7,000 hectares, was 49,207 quintals. There are 6,500,000 olive-trees. Ramie, colza, and other oil-seeds, alfalfa, dates, flax, and vegetables are grown. Alfalfa covers 12,000,000 acres, producing 4 quintals per acre of dried hay. The quantity of cocoons produced in 1899 was 116,500 quintals. There was 90,000 hundredweight of cork cut in 1900 from the state cork forests, which have an area of 281,400 hectares. The total forest area is 3,247,692 hectares, of which about 75 per cent. is utilized, 1,759,495 hectares belonging to the Government, 76,919 hectares to communes, and 468,395 hectares to individuals. There were 23 mines in operation in 1899, producing 173,749 metric tons of iron ore, valued at 1,287,069 francs, besides 377,192 tons not included in concessions, value 3,374,562 francs; 389 tons of silver-lead ore, valued at 52,412 francs; 42,970 tons of zinc ore, valued at 2,512,895 francs; 200 tons of antimony ore, valued at 52,000 francs. The production of rock salt was 17,378 tons, value 336,500 francs. The production of phosphate of lime was 281,816 tons, mainly from Tebessa. Many other beds have been found in various parts of the country. Petroleum, coal, onyx, copper, and mercury are other mineral products of Algeria. Pottery, tanning, weaving, and the manufacture of esparto are native industries. The total value of the general imports in 1900 was 323,818,000 francs, of which 259,355,000 francs came from France and 64,463,000 francs from foreign countries and French colonies; general exports were valued at 242,317,000 francs, of which 173,467,000 francs went to France and 68,850,000 francs to foreign countries and French colonies. The value of the special imports was 313,330,000 francs, of which 53,975,336 francs came from foreign countries and French colonies; the value of special exports was 229,364,000 francs, of which 55,896,653 francs went to foreign countries and French colonies. The special trade was distributed among the chief countries as follows, values being given in francs:

COUNTRIES.	Imports.	Exports.
France	259,355,000	173,467,000
Great Britain	10,221,263	12,279,465
Morocco	11,370,576	242,076
Tunis	4,888,956	4,556,328
Belgium	721,814	7,819,097
Spain	4,435,224	3,209,454
Germany	1,142,398	6,082,666
Italy	2,271,300	4,298,229
United States	4,088,476	1,160,575
Brazil	5,332,282	
Austria-Hungary	2,337,363	1,205,949
Russia	1,288,926	2,151,791

There were imported from foreign countries cattle for 10,088,651 francs, coal for 6,169,497 francs, coffee for 5,417,373 francs, lumber for 4,792,396 francs, tobacco for 2,029,329 francs, machinery for 1,753,355 francs, ships and boats for 1,709,500 francs, and hides for 1,622,540 francs, and exported to foreign countries alfalfa for 7,049,536 francs, tobacco for 6,825,031 francs, iron ore

for 4,702,042 francs, hides for 4,926,920 francs, cork for 3,786,227 francs, vegetable fibers for 2,360,992 francs, and cereals for 1,780,367 francs. The value of wine imported from Algeria into France was 50,433,000 francs; of cereals, 37,844,000 francs; of sheep, 19,194,000 francs; of wool, 11,486,000 francs. France exported to Algeria textile fabrics of the value of 35,467,000 francs, skins and furs of the value of 17,281,000 francs, clothing of the value of 16,600,000 francs, and machinery of the value of 9,663,000 francs.

There were entered at Algerian ports during 1900 from French and foreign ports 3,480 vessels, of 2,544,340 tons, of which 2,095, of 1,579,433 tons, were French; cleared, 3,485, of 2,553,139 tons, of which 2,056, of 1,542,420 tons, were French. There were entered and cleared coast-wise 9,635, of 1,782,531 tons, in 1899. The length of railroads in operation in 1901 was 1,818 miles, not including an extension of 325 miles in Tunis. The telegraphs had a length of 6,840 miles, with 16,840 miles of wire; number of messages, 2,145,990.

A new railroad is being built into the recently annexed parts of the Sahara along the frontier of Morocco with the consent of the Moorish Sultan. Though the inhabitants of Figig still commit hostile acts against the French on their border, since the boundary has been defined no political question arises from such occasional incidents. The Tuaregs of the desert render the caravan routes unsafe, and troops are constantly employed in punishing the freebooting tribes, which send out parties of 200 or 300 well-armed robbers mounted on dromedaries.

The regency of *Tunis*, though nominally under the suzerainty of Turkey and under the rule of a Mohammedan dynasty, has been a French protectorate since 1882, governed practically by a French Minister Resident General under instructions from the French Minister of Foreign Affairs. The Bey of Tunis, whose authority is now confined to religious matters, at the beginning of 1902 was Sidi Ali, born Oct. 5, 1817. The heir apparent was his son Mohammed, born June 24, 1855. The Resident General in the beginning of 1902 was S. Pichon. The army of occupation numbered 19,460 men, of whom 691 were officers, the cost of which is paid by France. The Bey has a guard of 600 native troops. The area of Tunis is about 51,000 square miles, with a population of about 1,906,000. The French population, exclusive of the army, was 23,692, in the beginning of 1901. The foreigners on Jan. 1, 1901, numbered 82,667, of whom 67,420 were Italians, 12,056 Maltese, and 3,191 of other nationalities. In the capital city of Tunis, which has a population of 170,000, were 12,490 French and about 27,000 other Europeans. The revenue for 1902 was estimated at 54,113,963 francs, of which 7,881,400 francs came from direct taxation, 9,323,300 francs from customs, 7,768,300 francs from monopolies, 1,147,200 francs from domains, 1,035,200 francs from various sources, 2,018,157 from arrears of 1901, 14,500,000 francs from a railroad loan, and 10,440,406 francs from other exceptional sources. The total expenditure for 1902 was estimated at 54,026,154 francs, of which 1,680,000 francs were for the civil list, 12,365,243 francs for finance and debt, 1,452,805 francs for the post-office and telegraphs, 3,734,565 francs for administration, 1,058,940 francs for agriculture and forests, 1,069,911 francs for public instruction, 4,743,500 francs for public works, 962,626 francs for the army, etc., 2,018,157 francs were arrears, and 24,940,407 francs were exceptional expenditures. The debt was consolidated in 1884

into a perpetual 3-per-cent. *rente* of 6,307,520 francs a year, representing a capital of 157,688,000 francs. The population is mainly engaged in agriculture. In 1900 there were 429,238 hectares under wheat, 430,171 under barley, 15,322 under oats, 15,252 under corn, and 11,522 under beans. There were about 800,000 quintals of wheat, 450,000 quintals of barley, 80,000 quintals of oats, 30,000 quintals of beans, and 25,000 quintals of corn sent to Marseilles in 1901. There are 200,000 hectares of olive-groves in central Tunis, yielding 339,983 hectoliters of oil in 1901. In the south are 1,350,000 date-palm trees, and the annual export of dried dates is valued at 800,000 francs. The area planted to vines in 1900 was 11,374 hectares, 9,708 hectares belonging to Europeans, and the production of wine was 225,000 hectoliters. There were 9,930 quintals of cork bark cut in 1900 and 11,882 quintals in 1901. Oranges, lemons, pistachio-nuts, almonds, and henna are other products of the country, and alfalfa is exported. The mines in 1899 produced lead and zinc ores of the value of 2,141,000 francs, and the product of quarries was valued at 1,700,000 francs. The phosphate-mines at Gafsa yielded 150,000 tons in 1900. The fisheries, which are exploited by Italians almost entirely, in 1900 produced 134,350 kilograms of sardines, 28,450 kilograms of anchovies and 1,435,990 kilograms of other fish, the whole valued at 759,832 francs, and 85,826 kilograms of sponges, valued at 59,809 francs. The total value of imports in 1900, including precious metals, was 61,514,242 francs; exports, 42,560,191 francs. The imports in 1899 were 55,778,241 francs in value, of which the principal ones were grain and pulse for 11,972,482 francs, textile fabrics for 8,222,587 francs, colonial produce for 4,564,628 francs, metal manufactures for 4,454,023 francs, animal products for 2,776,211 francs, pottery and stone for 2,621,067 francs, leather and paper manufactures for 2,197,374 francs, lumber for 1,913,220 francs, and beverages for 1,883,584 francs. The total value of exports in 1899 was 49,433,460 francs, the leading ones being olive and other vegetable oils for 14,698,887 francs, grain and pulse for 11,307,024 francs, ores and metals for 4,353,693 francs, animals and animal products for 3,624,997 francs, beverages for 1,813,660 francs, sponges, etc., for 1,791,323 francs, fish for 1,686,004 francs, alfalfa for 1,414,305 francs, and fruits and seeds for 1,225,978 francs. The imports of precious metals were 9,223,500 francs; exports, 8,018,000 francs. The values in francs of the trade in 1899 with various countries are given in the following table:

COUNTRIES.	Imports.	Exports.
France.....	34,263,933	26,714,110
Italy.....	4,505,064	9,386,418
Great Britain.....	5,756,835	3,095,939
Algeria.....	1,850,758	4,245,394
Belgium.....	1,365,795	1,369,662
Russia.....	2,530,356	40,965
Malta.....	294,767	1,842,809

The number of vessels entered at Tunisian ports during 1900 was 11,751, of 2,520,435 tons, of which 1,955, of 1,320,377 tons, were French. The length of railroads in 1901 was 588 miles, of which 417 miles belonged to the Government. The length of telegraph-lines was 2,390 miles, with 5,330 miles of wire. There were 9 telephone systems, with 130 miles of line and 143 miles of wire, and 448 miles of long-distance lines, with 528 miles of wire. The number of conversations in 1899 was 309,000. The number of telegraph

messages in 1899 was 701,690; the number of letters handled in the post-office, 5,656,932 internal and 11,172,752 external. Loans for the construction of four railroads of the total amount of 40,000,000 francs were authorized on May 1, 1902, and the first one for 5,000,000 francs, bearing 3 per cent. interest, was issued at 95 on July 29. Ali Bey died on June 11, 1902, and Prince Mohammed was invested as Bey. He agreed that his civil list and private estates should be placed under a French manager, without whose consent no payments or debts can be made.

The boundaries of Algeria and Tunis are undefined on the south, and beyond them are territories conceded in conventions made with Great Britain to be a French sphere of influence which extend to the French protectorates on the Niger and the Congo (see WEST AFRICA), and will give France the greatest colonial empire in Africa when they shall be under the dominion of the republic. On the other side of Africa France has a new colony with a fine port giving commercial access to the interior of Abyssinia (see EAST AFRICA). Some of the islands off the southeast coast of Africa have been French possessions for centuries. By the conquest of Madagascar the second largest island in the world was definitely added to the colonial dominions of France (see MADAGASCAR). The island of *Réunion*, 420 miles east of Madagascar, has long been the home of French creole planters, who with negro and coolie labor raise sugar-cane, vanilla, cacao, coffee, and spices. The Governor, P. Samary in 1902, is assisted by a Privy Council having 3 official and 4 nominated members and by an elective General Council. The colony sends a Senator and 2 Deputies to the French Chambers. The area of the island is 965 square miles, and its population in 1897 was 173,192, including 15,219 East Indians, 9,848 Africans, 4,496 natives of Madagascar, and 836 Chinese. The town of St. Denis has 32,850 inhabitants; St. Pierre, 27,900; St. Paul, 20,000; St. Louis, 13,300. There is a French garrison of about 800 soldiers. The export of sugar in 1900 was 33,669 tons. The total value of imports in 1900 was 22,025,000 francs, and of exports 17,450,000 francs. The value of sugar exported was 10,125,000 francs; of vanilla, 3,275,000 francs. The imports from France and French colonies were 16,450,000 francs in value, and of exports to France and French colonies 15,836,000 francs. There were 138 vessels, of 189,625 tons, entered in 1900. A railroad, 83 miles in length, runs from Pointe-de-Galets to St. Pierre. It became the property of the Government in 1887. The local revenue in 1901 was 5,033,700 francs, balancing the expenditure, but France in 1902 contributed 4,661,851 francs, of which 2,452,000 francs were for the railroad and harbor. The petty islands of *St. Paul* and *Amsterdam* in the Pacific and the uninhabited isle of *Kerguelen* belong to France. *Mayotte* has an area of 140 square miles. The population in 1898 was 11,640. Sugar is grown for export and for the distillation of rum. Vanilla is being more extensively cultivated. The raising of coffee, cacao, tea, and rubber is in the experimental stage. The value of imports in 1900 was 561,620 francs, of which 292,967 francs came from France and French colonies. The value of exports was 1,309,932 francs. The value of sugar exported was 1,008,296 francs; of vanilla, 155,670 francs. The local revenue in 1900 was 293,807 francs. The expenditure of France in 1902 was 20,000 francs. The debt consists of an advance of 500,000 francs from the French treasury made to repair the damages of the cyclone of 1898 and repayable in twenty years without interest. The

Glorieuse Islands, which have only 14 inhabitants, are attached to Mayotte. The *Comoro Islands*, in the Madagascar Channel, have an area of 620 square miles, with a population of about 47,000, mostly Mohammedans, who cultivate sugar and vanilla and have planted more recently coffee and cloves. The budgets of the different islands amounted in 1900 to 259,711 francs. Grande Comore has a debt of 950,000 francs. There is a large French coal depot there. The resident at the head of the local administration of Grande Comore is appointed by the Governor of Réunion, who appoints another resident for Anjouan and Mohéli, the islands having been placed under his direction in 1896.

French India consists of the towns of Pondichéry, Shandernagar, Karikal, Mahé, and Yanam and adjacent districts on the Coromandel coast. The total area is 196 square miles, and the population in 1901 was estimated at 273,185. The Governor, residing at Pondichéry, is P. F. Rodier. There is an elective General Council, and the colony is represented in the French Chambers by a Senator and a Deputy. The local revenue in 1901 was estimated at 1,255,000 francs. The expenditure of France in 1902 was 473,000 francs. The debt consists of a *rente* of 48,955 rupees a year. Cotton and jute are manufactured and oil is expressed from earthnuts at Pondichéry, which exports oil-seeds to France. The value of the imports at this port and Karikal in 1900 was 4,037,937 francs, and of the exports 10,722,234 francs. The number of vessels entered was 373, of 478,846 tons; cleared, 351, of 478,554 tons.

French Indo-China includes the colony of Cochinchina and the protectorates of Cambodia, Annam, Tonquin, with the Laos territory, and the territory of Kwang-Chi-Wan, leased from China in 1898. The Governor-General of Indo-China at the beginning of 1902 was Paul Doumer, residing at Saigon. He returned to France, and was succeeded in October by J. B. P. Beau, French minister to China at the time of his appointment. The military forces consist of 8,860 French troops and 14,935 native soldiers under French officers and non-commissioned officers. The general budget for 1901 makes the revenue \$22,998,000 in silver, of which \$5,940,000 were derived from customs, \$3,700,000 from the spirit monopoly, \$6,400,000 from the opium monopoly, \$2,400,000 from the salt monopoly, \$807,000 from registration, stamps, and domains, and \$3,751,000 from various sources. The expenditures were estimated at \$22,982,000, of which \$4,677,000 were for military expenses, \$4,572,000 for administration of the customs and monopolies, \$1,478,000 for posts and telegraphs, \$3,866,000 for public works, \$3,482,823 for the public debt, and \$4,906,177 for various expenses. There have been heavy deficits, which now are said to have ceased. The taxes which bear heavily on the natives are to be lightened. Obstacles to trade in the customs service will be removed. The completion of the railroad system and its extension into Kwangtung, Kwangsi, and Yunnan are important Government enterprises, and projected irrigation canals for the benefit of the native agricultural interests present another financial problem. The equilibrium of the budget was disturbed once more in 1902 by bad harvests. The revenue for 1902 was estimated at \$27,142,000 in silver, and the expenditure at \$27,128,000. The expenditure of France was 33,574,923 francs. Free passages were given to 238 French emigrants to Indo-China in 1900 and to 237 in 1901. The railroad from Saigon to Mytho, 51 miles, has been in operation many years. A line

in Tonquin from Phulang-Thuong to Langson, 64 miles, was completed in 1894. Loans were authorized in 1898 by the French Chambers for the construction of a system of railroads throughout Indo-China. Contracts were made in 1900 for lines from Hanoi to Vietry, to Haiphong, to Ninh-Binh, and to Vinh. The line was extended from Langson to the Chinese frontier in that year and southward to Gialam, on the opposite bank of the Red river, from Hanoi. The railroads from Hanoi to Vietry, 98 miles, and from Hanoi to Ninh-Binh, 73 miles, were completed in 1902. Lines from Vietry to Laokai, 140 miles, from Ninh-Binh to Vinh, 133 miles, and from Tourane to Hue, 65 miles, were projected; one from Saigon to Tanlinh, 82 miles, was building; and lines from Panlinh to Lang-Biang and Khanhhoa, 290 miles, from Hue to Kwangtri, 53 miles, and from Laokai to Yunnansen, 285 miles, were being studied. The imports and exports of Indo-China have grown from 215,000,000 francs in 1896 to 534,000,000 francs in 1902. Special imports have risen from 81,000,000 francs to 202,000,000 francs, and special exports from 88,000,000 francs to 160,000,000 francs. The largest share in this increased trade has gone to France, whose imports into Cochinchina increased from 30,000,000 francs to 100,000,000 francs, while exports to France increased from 10,000,000 francs to 39,000,000 francs.

Cochinchina is represented by a Deputy in the French Chamber. The area is 23,160 square miles; the estimated population, 2,323,499, of whom 4,451 are Europeans; 73,234 of the natives are Roman Catholics and 1,688,270 are Buddhists. The native military force numbered 2,405 in 1902. About one-fifth of the area of the country is cultivated, the principal crop being rice, which covered 2,910,033 acres in 1900. There have been 153,600 acres acquired by 355 Europeans. The production of rice was 607,800 tons in 1900. The exports of rice were 607,800 tons, valued at 89,225,000 francs. Exports of fish were 8,975,000 francs in value; of colonial products, 5,700,000 francs. Other exports are cardamom-seed, copra, silk, cotton, pepper, and hides. Coffee is being planted, mostly by Europeans. The total value of imports in 1900 was 121,675,000 francs; of exports, 107,350,000 francs, of which 25,450,000 francs went to France and French colonies. There were 573 vessels, of 770,422 tons, entered and cleared at the port of Saigon during 1900. The length of telegraph-lines is 2,276 miles, with 3,840 miles of wire. The local revenue and expenditure in 1901 was estimated at \$4,204,244 in silver.

Cambodia became a French protectorate in 1862. The area is 37,400 square miles. The population consists of about 1,200,000 natives of various races, 250,000 Chinese and Annamites, 40,000 Malays, and 350 Europeans. The native ruler is King Norodom. Pnom-Penh, the capital, has about 50,000 inhabitants. The production of pepper in 1900 was 750,000 kilograms. Rice is also an important crop. Other products are cotton, salt fish, tobacco, betel, indigo, cinnamon, and coffee. The local revenue in 1901 was estimated at \$1,951,487 in silver, out of which the King and royal family receive \$525,000 for the maintenance of the court.

The French protectorate over Annam was established in 1886 and Thanh-Thai was made King in 1889. Hue, the capital, with 30,000 inhabitants, is garrisoned with French troops, and the Government is carried on by native officials under French supervision. The area is 52,100 square miles, with a population estimated at

6,390,000 Annamites and Mois, 4,000 Chinese, and 250 Europeans. Of the natives, about 420,000 are Roman Catholics. The products are sugar, cinnamon, rice, silk, corn, and other cereals, arecanuts, tobacco, sugar, betel, manioc, bamboo, caoutchouc, cardamom-seed, coffee, timber, dyes, and medicinal plants. Of about 300,000 kilograms of raw silk produced annually 200,000 kilograms are woven by the natives and the rest is exported. The natives work copper, iron, zinc, and gold, which are mined in the province of Quangnam. At Tourane coal-mines have been opened. Cotton yarn and cloth, tea, petroleum, paper manufactures, and tobacco are the principal imports. The local revenue and expenditure for 1901 was estimated at \$2,081,416 in silver.

Tonquin was definitely annexed in 1884 after a protracted war and Laos was added in 1893. The area of Tonquin is 119,600 square miles. The population is estimated at 12,000,000. A French resident, M. Fourès, directs the administration, the Annamese Viceroy having been withdrawn in 1897. Hanoi, the capital, has about 150,000 inhabitants. Rice is raised in great quantities and shipped to Hong-Kong. The production of silk is about 500,000 kilograms, of which 300,000 kilograms are woven by the natives. Cotton is grown and cotton-mills have been established at Haiphong and Hanoi. Sugar, pepper, oils, cardamom-seeds, coffee, fruits, and tobacco are produced. The quantity of coal raised at the Hongay mines in 1899 was 168,600 tons. Copper and iron are mined. Textile yarns and tissues, tools, hardware, machinery, and beverages are the principal imports. The total value of imports in 1900 was 63,800,000 francs, of which 28,750,000 francs came from France and French colonies; value of exports, 40,025,000 francs, of which 4,225,000 francs went to France and French colonies. The estimated local revenue and expenditure in 1901 was \$4,197,950.

The Laos territories have an estimated area of 98,000 square miles, and their population is estimated at 1,500,000. Luang-Prabang, the capital, has about 40,000 inhabitants. The cultivated products are rice, cotton, indigo, tobacco, and fruits. There are large teak forests from which logs are floated down the Mekong to Saigon. Concessions have been obtained by French companies to mine for gold, lead, tin, and precious stones. Steamboats have been placed on the Mekong above the rapids. The budget of revenue and expenditure for 1901 was \$758,660. Cochin-China pays six-thirteenths, Tonquin and Annam five-thirteenths, and Cambodia two-thirteenths of the cost of government.

The most important of French possessions in the Pacific is *New Caledonia*. The Governor is P. Feillet. There is a General Council of 20 members. The area is 7,700 square miles. The population in 1898 consisted of 19,053 Europeans, 1,829 Asiatics, and 31,874 natives; total, 52,756. In 1902, exclusive of the military, there were over 54,000 inhabitants. Imported European and Asiatic laborers have increased the population. French laborers get a free passage. There were in 1900 in the penal settlement 3,522 convicts undergoing sentences of hard labor, and the exiles numbered 2,570, the deported 10, the discharged convicts 4,585. In 1900 there were 238 French emigrants who went out to New Caledonia, the Government furnishing transportation. The local revenue and expenditure for 1901 was estimated at 4,414,727 francs. The expenditure of France in 1902 was 5,792,957 francs, including 3,003,870 francs for the penal settlement. There are about 1,600 square miles of cultivated lands,

1,600 square miles of grazing lands, and 500 square miles of forest. The rest of the surface is mountainous. The penal establishments have a domain of 400 square miles. The natives have their own reservations. Other tracts of available lands form the state domains, out of which free grants are offered to settlers. The deportation of convicts to New Caledonia has ceased and the convict population is decreasing. Japanese laborers are no longer imported on contract, but the Japanese continue to arrive for agricultural labor and domestic service. About 800 Tonquinese and Indians from Pondichéry have recently been imported. Dalmatians who went first to New Zealand to dig kauri-gum migrated to New Caledonia, where they found more profitable work in the mines, and many of their countrymen have gone over from Europe to join them. Fewer laborers are being recruited in the New Hebrides.

The principal agricultural products are coffee, corn, tobacco, sugar, and manioc. The only land laborers till recently were convicts, Kanakas, and natives of the New Hebrides. Grapes and pineapples are grown, and experiments are being made in the raising of silkworms and the cultivation of wheat and of rubber. The most valuable products are mineral. The nickel ore mined in 1899 amounted to 74,614 tons, valued at 3,950,000 francs; cobalt ore, 3,294 tons, valued at 355,000 francs; chromate of iron, 12,634 tons, valued at 644,000 francs; copper ore, 6,349 tons, valued at 488,000 francs. In 1900 there were 100,000 tons of nickel ore exported, and in 1901 there were 133,000 tons. Companies have built works to treat the ore on the spot. The value of the nickel, cobalt, and chrome exported in 1901 reached 8,916,000 francs. The total value of imports in 1899 was 10,958,198 francs, of which 6,645,199 francs came from France and French colonies; exports, 8,913,197 francs, of which 3,481,140 francs went to France and French colonies. The importation of cereals and flour were 1,543,923 francs; of beverages, 2,223,114 francs. The most important exports were minerals for 7,081,093 francs and 801,579 francs' worth of canned meat for the French army. There were 127 vessels, of 177,657 tons, entered and 120, of 154,483 tons, cleared at the port of Noumea in 1899. A railroad, 90 miles long, is being built from Noumea to Bourail, and the harbor of Noumea is being improved. A line of steamers from San Francisco will carry American flour, wheat, and provisions and other products to New Caledonia. The tariff regulations restricting the people to French implements have been removed. The new Australian tariff has diminished trade with Australia. Trade with France is increasing.

The *Isle of Pines*, 58 square miles in extent, with a population of 600, close to New Caledonia, has an establishment for habitual criminals. The *Wallis Archipelago*, having an area of 40 square miles and 4,500 inhabitants, over which a French protectorate was established in 1887, is administered by a resident under the Governor of New Caledonia. *Futuna* and *Alaï*, south of these islands, have 1,500 inhabitants. The *Loyalty Islands*, which have an area of 800 square miles and 14,800 inhabitants, are administered from Noumea. Sandalwood is exported, and there are plantations of bananas. The *Huon Islands* have only a few inhabitants. The *New Hebrides* are the field of operation for French trading and mining companies, but by a convention concluded with Great Britain on Oct. 29, 1887, they were placed for the protection of life and property under the authority of an Anglo-French commission composed of naval officers

serving in the Pacific. The recruiting of women and traffic in firearms and intoxicants are forbidden by regulations adopted by the British and French naval commission.

The *French Establishments in Oceania* consist of scattered groups and islands in the western Pacific united under the authority of a Governor residing at Tahiti, G. P. T. Gallet in 1902. They have a total area of 1,520 square miles and about 20,000 inhabitants. The island of Tahiti, inhabited by a Polynesian race, has an area of 600 square miles and a population in 1900 of 10,750. Papeete, the capital, had 4,282 inhabitants, of whom 2,490 were French. The revenue of Tahiti for 1900 was 1,237,456 francs. The expenditure of France in 1902 was 798,352 francs. On the lowlands near the coast coconuts, bananas, oranges, sugar, and vanilla are grown. The imports in 1900 were valued at 3,521,526 francs; exports, 3,597,358 francs. Articles of food and cotton cloth are the principal imports. The largest exports in 1900 were copra for 1,221,480 francs, mother-of-pearl for 1,108,058 francs, and vanilla for 811,338 francs. Of the total value of imports 1,651,736 francs came from the United States, 664,482 francs from New Zealand, 578,576 francs from France and French colonies, and 317,080 francs from Great Britain. Of the total value of exports 1,525,667 francs went to the United States, 832,789 francs to Great Britain, 534,222 francs to France and French colonies, and 341,117 francs to New Zealand. There were entered at Papeete during 1900 only 40 vessels, of 29,343 tons; cleared, 42 vessels, of 28,436 tons. The island of Moorea has an area of 50 square miles with 1,596 inhabitants; Raiatea and Tahaa have 2,300 inhabitants; Huahine has 1,300; Bora Bora, 800. The Tubuai and Ravavae Islands have an area of 100 square miles and 1,700 inhabitants. Rapa has 15 square miles with 192 inhabitants. The Tuamotu Islands have about 5,000 population. The Gambier Islands, with an area of 6 square miles, have 580 inhabitants. The area of the Marquesas Islands is 480 square miles, with a population of 4,280; their products are oranges, copra, and mother-of-pearl. The total area of the islands belonging to the establishments in Oceania is 1,520 square miles, and their total population about 31,000.

In America France has the islands of Guadeloupe and Martinique and their dependencies (see WEST INDIES), French Guiana, and the little groups of St. Pierre and Miquelon near the southern coast of Newfoundland. *French Guiana* has a General Council of 16 members and is represented by one Deputy in the French Chamber. The acting Governor in 1902 was Joseph P. Francois. The area is estimated at 30,500 square miles, and the population at 30,300, of whom 4,360 are convicts undergoing the punishment of hard labor, 80 are discharged convicts, and 2,650 are exiles. The number of Indians is about 1,500. The military force consists of 371 French soldiers. Only 8,800 acres are cultivated, though rice, corn, manioc, cacao, coffee, sugar, indigo, and tobacco are grown. The export of gold in 1899 was 81,715 ounces. The most valuable gold-fields were disputed by Brazil and have been awarded to France by the Swiss arbitrators to whom the question was referred. Phosphates, silver, and iron ore are exported, and of the agricultural produce cacao, coffee, and rum. There is a trade, too, in woods, of which valuable kinds abound, and in other forest products. In 1900 the value of gold exported was 6,000,000 francs; of marble and stone, 185,000 francs; of rosewood essence, 50,000 francs; of gum, 15,000 francs. The total

value of imports was 9,725,000 francs, and of exports 6,350,000 francs. Of the imports 7,050,000 francs came from, and of the exports 6,100,000 francs went to France and French colonies. The number of vessels entered and cleared at the port of Cayenne during 1899 was 180, of 38,872 tons. A railroad from Cayenne to the Aratafe creek, 60 miles, has been authorized, which will later be carried 190 miles farther to where the boundaries of Brazil and Dutch Guiana meet. The local revenue and expenditure in 1901 was estimated at 2,692,818 francs. The expenditure of France for 1902 was 7,086,000 francs, of which 5,887,930 francs were for the penal establishment.

St. Pierre and Miquelon have an area respectively of 10 and 83 square miles, with 5,700 inhabitants in the former, which is the rendezvous of the French cod-fishing fleet, and 550 in the latter. There is a General Council elected by the people. The Governor in 1902 was E. Julien. There were 196 fishing-boats, of 9,662 tons, belonging to the islands in 1900. The value of imports in 1900 was 9,326,037 francs, of which 4,381,469 francs came from France; exports, 13,467,453 francs, of which 12,253,997 francs were products of the islands, consisting of dried and fresh codfish, cod-liver oil, etc. The revenue collected in the colony in 1901 was estimated at 691,011 francs. The expenditure of France in 1902 was 251,988 francs.

FRIENDS. The following are the comparative statistics of the Society of Friends (Orthodox) in America, by yearly meetings, for 1900 and 1901:

YEARLY MEETINGS.	1900.	1901.
Philadelphia (estimated).....	4,468	4,400
New York.....	3,756	3,606
New England.....	4,508	4,532
California.....	1,510	1,567
Oregon.....	1,553	1,607
Canada.....	1,090	1,059
North Carolina.....	5,456	5,483
Wilmington.....	6,089	6,299
Ohio.....	5,773	5,885
Iowa.....	10,805	10,814
Western.....	15,868	15,915
Indiana.....	20,544	20,224
Kansas.....	10,854	11,802
Baltimore.....	1,214	1,217
Total.....	93,498	93,904
Net loss for the year.....	294

The New England, New York, Philadelphia, Baltimore, and North Carolina Yearly Meetings were organized before the beginning of the nineteenth century. Ohio Yearly Meeting was set off from the Baltimore Yearly Meeting in 1812. Indiana Yearly Meeting was established in 1812, and though 4 large yearly meetings—Western, Iowa, Kansas, and Wilmington (Ohio)—have been set off from it, it is still the largest yearly meeting in the world. Western Yearly Meeting, Indiana, which was set off from Indiana Yearly Meeting in 1857, is the second largest yearly meeting in the United States. Iowa Yearly Meeting was set off in 1863, and represents in its membership emigrations from nearly all the yearly meetings. Canada Yearly Meeting was set off from the New York Meeting in 1867. Kansas Yearly Meeting was set off from Indiana Meeting in 1872, and has members in Kansas, western Missouri, northwestern Arkansas, and the Indian Territory.

The 14 yearly meetings in the United States and Canada represent about 130 quarterly meetings and 350 monthly meetings.

The Five Years' Meeting.—A national organization of the Friends of the Orthodox branch in the United States was effected at Indianapolis,

Ind., Oct. 22-27, at the first regular meeting of the Five Years' Meeting as a permanent body to represent the yearly meetings on the basis of the new constitution and uniform discipline (see Annual Cyclopædia, 1899, p. 307, and 1900, p. 246). Eleven of the 13 yearly meetings in the United States had adopted the new constitution and uniform discipline and were duly represented in the meeting, leaving only those of Philadelphia and Ohio without accredited delegates. The opening of the Five Years' Meeting was preceded, Oct. 21, by the final meeting of the Quinquennial Conference, out of which the Five Years' Meeting has been developed, which after hearing the report of the committee appointed to prepare the uniform discipline and the report of the treasurer adjourned *sine die*.

At the opening of the Five Years' Meeting, Oct. 22, fraternal delegates attended from Ohio and Canada Yearly Meetings, and members of London and Philadelphia Yearly Meetings were received as fraternal delegates. Nearly 200 delegates were present. Edmund Stanley, of Kansas, was chosen clerk, or presiding officer. The earlier sessions were occupied with the discussion of subjects connected with the prospective functions, enterprises, and agencies of the organization, on which action was taken later. These subjects included The Scope and Work of the Evangelistic and Church Extension Board of the Five Years' Meeting; The Scope and Work of the Committee on Legislation; The Present Condition of the Indians and the Work to be done for them; Present Condition of the Negroes and the Work to be done for them; The Present Condition of the Foreign Missionary Work of American Friends; The Scope and Work of the Board of Foreign Missions of the Five Years' Meeting; The Scope and Work of the Committee on Education; The Finances of the Five Years' Meeting; Plan for United Action for the Suppression of the Liquor Traffic; Methods of Practical Work among Rural and Urban Communities; Practical Aspects of the Present Trend of Religious Thought; How can an Efficient Ministry be Developed? Our Present Duty in the Cause of Peace and Arbitration; Our Church Literature; The Place and Functions of the Five Years' Meeting in our Church Organization; and The Theory and Practise of Public Worship. A paper was read on the place of woman in the Church and the need for care that her full place should be given her. The matter of incorporating the Five Years' Meeting was referred to the Committee on Legislation, with authority to act and sign an application for incorporation. It was decided that the business of the meeting be transacted according to the rules of parliamentary usage. Of propositions for amendment of the constitution and discipline, besides a provision for the correction of casual errors, the only one adopted was a rule making new provisions submitted by one yearly meeting and approved by the Five Years' Meeting operative when adopted by four-fifths of the yearly meetings constituting the Five Years' Meeting. An Evangelistic and Church Extension Board was organized. A board on the condition and welfare of the negroes was appointed to take into consideration the best means of elevating them, with power to carry the same into effect. Resolutions were passed against lynching and lawlessness, and commending the work done by several of the yearly meetings in behalf of the negro. The work of the associated Executive Committee of Friends on Indian Affairs was commended, its present organization was accepted, and it was appointed the official representative of the meeting in that field. The

Board of Education, having completed its organization, made a report, which was adopted, commending the work of the colleges and approving efforts to provide greater endowments for them; authorizing the establishment and conduct of a lectureship on the history and interpretation of Christian truth as held by Friends; advising co-operation of Friends in the support of the existing course of Bible study in the colleges; commending efforts by means of Biblical institutes to furnish a high character of Biblical instruction to members and suggesting the establishment of a course in one of the existing colleges; and constituting a financial educational board to receive and hold gifts and bequests for educational purposes. The work of the Peace Association, it being a well-organized and incorporated body, was approved, and the association was invited to represent the meeting and report to it regularly, while the yearly meetings were asked to support it. The American Friends' Board of Foreign Missions presented a review of its work, and the meeting, defining its functions and its relations to the other boards and the yearly meetings, declared its duty to be to represent American Friends in matters pertaining to the interdenominational aspects of foreign mission work. Each yearly meeting represented in the board, while continuing its own separate work, as heretofore, is expected to realize that this work forms a constituent part of the foreign mission work of Friends in America, of which the American Friends' Board has a general advisory oversight; "but it must not be interpreted that such advice carries with it any controlling authority." Resolutions were adopted calling for a proper observance of the Christian Sabbath, and declaring "true, living, and reverent prayer" essential for the spiritual power of the meetings, and for the entire Church work in the world. A call was adopted to be sent to the governing bodies of the various denominations of Christians in the United States, inviting them to send delegates to a Temperance Congress to be held in the city of Washington on the second Wednesday of March, 1906, to consider in what way Christians can exert a united influence in the cause of temperance, and by what means they may work together. Five delegates at large and one additional delegate from each of the 11 annual meetings were appointed the committee of the present meeting on the subject.

Missions of American Friends.—The missionary work of American Friends began in Indiana Yearly Meeting in 1873, when Samuel A. Purdie went to Mexico as a missionary. It was prosecuted through the press, the schools, and the Church. Iowa Yearly Meeting began in 1883 to labor among the colored population and the coolies in Jamaica. The Woman's Foreign Missionary Association of Friends entered the mission field at Tokio, Japan, in 1885. Kansas Yearly Meeting established a mission among the Indians on Douglas Island, Alaska, in 1887. New England Meeting was associated with English Friends in Palestine till 1885 when it took separate charge at Ramallah. Western Yearly Meeting took the work at Matahuala, Mexico, from Indiana Meeting in 1889, and has also a mission in South Africa. Ohio Yearly Meeting began a mission in China in 1890, and afterward in India. Oregon Yearly Meeting began at Kake Island, Alaska, in 1894, and California Meeting on Kotzebue Sound, Alaska, in 1897. The other yearly meetings have no special missions of their own, but cooperate with the yearly meetings already named in the work they have undertaken. The American Friends' Board of Missions, which is incorporated in In-

diana, was formed in 1894 as a bureau of information, and engaged in mission work in Cuba in 1900. The South African Industrial Mission Board was incorporated in Ohio in 1902. The report of the American Friends' Board for 1900-'01 (published in December, 1901) gives accounts of the missions carried on by the societies and the yearly meetings separately or in cooperation in China, Japan, India, Syria, Armenia, Palestine, Africa, Mexico, Cuba, and Alaska, and returns 64 missionaries (21 men and 43 women), 17 recorded ministers, 5 physicians, 135 native helpers, 6 of whom were recorded ministers, 28 unrecorded preachers, 46 teachers, and 14 Bible women; 22 organized churches with 1,810 members and 5,591 adherents; and 53 Bible schools, with 2,435 members. The native churches had contributed \$1,354 for education and \$1,719 for the Church. The total home contributions to the mission work were \$49,697.

Friends' Peace Conference.—A Peace Conference of American Friends was held in Philadelphia, Dec. 12 to 14, 1901, and was attended by about 300 delegates from all parts of the United States. All the yearly meetings and all the branches of the society were represented, either on the program or by persons in attendance; and the fact was remarked that "for the only time since the days of the lamentable separation, Friends of the three names united in a harmonious effort for a common end." The program of discussions comprised papers on the New Testament Grounds for Peace and the Elements of Peace Doctrine in the Old Testament; The Failure of the Christian Church in regard to Peace Principles; The Early Friends' Conception of Peace and War; The Growing Iniquity and the Inherent Immorality of War; Early Christianity and War; Attitude of Christians as to War and Peace, and the Christian Idea of War; Importance of teaching Peace Principles in Bible Schools; The Principal Influences making for Peace, and how they may be strengthened; The Duty of the Christian Church at the present time in the movement to abolish War; Internationalism; Peace Principles in Political Life and Institutions; To what Extent are Peace Principles practicable? The Present Position of the International Peace Movement; Present Encouragement for Friends of Peace; Mistakes and Failures of Friends in their Peace Work; The Makers of Peace; What Constitutes the True Peace Spirit; Remedies for Prevailing Militarism; Peace as involved in the Christian Method; War inconsistent with the Genius of Quakerism; The Influence of Quaker Peace Ideals on our National Life; Woman's Responsibility and Opportunity for promoting Peace Principles; and The Work of Quaker Women for Peace. A declaration was adopted, expressing the conviction that lapse of time has not made necessary any change in the position which Friends have always taken on the subject of war, but has rather strengthened it; and that war is irreconcilable with the precepts, example, and spirit of Christ, and is likewise out of harmony with the common principles of reason and morality, and is the antithesis of Christianity, and the negative, for the time being, of the moral order of the world. The progress that has been made toward peace in recent generations was gratefully recognized in the resolutions, and the establishment of the International Court of Arbitration was mentioned as one of the greatest events in the history of human society, and in line with the policy always advocated by Friends. Further, the resolutions deplored the present wars of nations making high profession of Christian civilization with less civilized and en-

lightened peoples, and called for the adjustment of matters at issue by Christian methods.

Friends' Christian Endeavor.—The International Christian Endeavor Convention of Friends was held at Richmond, Ind., Aug. 8 to 10, and was attended by representatives from every yearly meeting in America, except those of North Carolina and Canada. An epistle was received from the Christian Endeavor Union of London Yearly Meeting. The Friends' Christian Endeavor movement was begun about 1892, in New York city. A general meeting was held in London in 1900. A special feature of the past year's work had been the institution of visiting meetings for the purpose of organizing new societies and encouraging those already organized. The results had been very satisfactory. Special remark was made concerning the interest taken by the societies in home and foreign missions. A number of classes in Church history had been organized, with special reference to the history of the Friends. The 489 societies represented in the convention returned 13,786 members, of whom 1,806 had joined during the year; 158 accessions to the Church from the societies; and total contributions of \$9,476, including \$1,105 for foreign and \$5,710 for home missions. The total contributions were \$1,253 more than in the previous year.

English Friends.—The statistical reports made to the London Yearly Meeting in May showed that while a few new organizations had been formed within its jurisdiction, others had lapsed, and the number that remained, 369, was 4 less than a year before. The number of recorded ministers was also 369, but they were not evenly distributed so as to give each congregation a minister; for some congregations had no minister, while others had several. The number of members in Great Britain had increased by 128, and was now 17,470; while the number of "attenders and associates" had declined by 150 to 7,647.

In the London Meeting on Ministry and Oversight the sentiment was expressed that the meetings of that name ought to take definite measures for encouraging and helping ministers and those likely to take vocal part in meetings, by the loan of books for study, by classes on Biblical subjects, and in other ways, and there might be a standing committee to plan out courses of study. A recommendation in accordance with these views was drawn up to be sent to meetings on ministry and oversight throughout the country, with the request that they report next year what they were doing to help the ministry. In a discussion on the subject of the Propagation of the Gospel it was pointed out that no adequate efforts were being made by the meetings on Ministry and Oversight to carry the Gospel in any practical way into the communities where Friends live; and it was suggested that the local meetings should become pastoral committees and should initiate positive work for the propagation of the Gospel about them. A comprehensive minute was drawn up, commending this subject to the consideration of the subordinate meetings. The yearly meeting met May 21. The attention of the Woman's Meeting on the State of Society was given largely to the subject of maintaining a healthy home life and of a good understanding between parents and children. In the Men's Meeting on the subject various questions were brought up, among them the difficulty of maintaining an active Church life in face of the modern pressure of business; the need of developing religious work among the growing population of the towns as well as in the country districts; greater spirituality and power in preaching; the importance of a better

understanding by ministers of the intellectual difficulties and perplexities of their hearers; Christian service in grappling with the causes of physical and moral degradation; and the choice of such newspapers for reading as took a high moral standard and presented a Christian view of life. It was decided to present the thoughts that had been expressed in an epistle to the notice of the society. In connection with the hearing of the reports of members returned from the war districts of South Africa, a committee was appointed to visit the quarterly meetings with a view of presenting freshly to members their responsibility for upholding the standard of the peaceful nature of Christ's kingdom. The subject of the use of the meeting-houses on Sunday evenings was considered in view of the question whether the Sunday evening services should have the character of quiet "meetings for worship" or should be of the

nature of mission meetings, with practical addresses of a teaching sort. It was found that different methods succeeded in different places, according to the character of the constituency. A report on the subject was sent down to the congregations, which were left to dispose of the matter for themselves. The district meetings were advised, if the education bill should be pressed forward, to urge amendments in the direction of religious liberty and popular control. Measures were considered having in view the greater efficiency of the Central Education Board. The subject of the Reform of the Procedure of the Yearly Meetings, which had been referred to a committee in the previous year, was adjourned, for further consideration by it. The formation of a general meeting in Australia was approved of, and a deputation was decided upon to attend its opening.

G

GEOGRAPHICAL PROGRESS. Arctic

Regions.—No explorer has as yet reached the pole, though some noteworthy results have been achieved by expeditions that returned in 1902. The most successful of these appears to have been that under Capt. Otto Sverdrup, who went out in June, 1898, in Dr. Nansen's ship, the *Fram*, and returning, reached Stavanger, Norway, Sept. 19, 1902. He discovered what is believed to be the farthest land lying between the American continent and the north pole west of Greenland. A great island was found north of the Parry Islands, extending to about 80° north latitude; all north and west of this was an unbroken sea of ice.

In an article on Arctic Problems, in the *Geographical Journal*, Sir Clements R. Markham says: "After his [Nansen's] voyage there is no longer any geographical object in going to the north pole, except for the sake of deep-sea soundings, for it is merely a point in the polar ocean, the economy of which has been made known by Nansen. The really useful work that remained so as to connect the whole western side of the arctic regions is (1) the discovery of the region between the Asiatic coast and Prince Patrick island; (2) the examination of the space from Prince Patrick island to the farthest point reached by Admiral Aldrich during the expedition of 1875; and (3) the completion of the tracing of the north coast of Greenland.

"The first piece of work is the most difficult, and it may well be that the region in question contains no land and is merely part of the polar ocean. The third would be a great and important achievement. Capt. Sverdrup intended to attempt it by wintering in a hut on the north coast of Greenland and sending the *Fram* round to meet him at Cape Bismarck. This is the only way it could be done; but two ships would be safer. Prevented by the unfavorable season in 1899, Capt. Sverdrup fortunately turned his attention to Jones Sound, which led to the completion of the most important remaining arctic work of all, namely, the discovery of what was hitherto unknown in the wide gap between Prince Patrick island and Aldrich's farthest.

"The whole of the northern coasts of the Parry Islands was discovered by the naval officers employed on the Franklin searches, from Jones Sound to Prince Patrick island. But, except at the western extreme of these discoveries, the ice

pressure was not very great, and it was supposed that there must be land farther north. Indeed, at the eastern end Sir E. Belcher sighted land far to the north, which he named North Cornwall; and from Bathurst island land was sighted to the north and named Findlay. Aldrich's farthest is some 250 miles to the north of Belcher's discoveries. The great arctic work to be done, by way of Jones Sound, was to decide these questions, to discover the western side of Ellesmere Land, and to discover the land, if it existed, to the north of the Parry Islands. In this way our knowledge of the long line of coasts facing the frozen ocean on the west side of the arctic regions would be made complete.

"This great work has been done by Capt. Sverdrup and his gallant companions during four traveling seasons, entailing four arctic winters, and it has been done thoroughly. They have discovered the western side of Ellesmere island and its intricate system of fiords, as well as 3 large islands west of Ellesmere island; they have explored the northern coast of North Devon; they have connected Belcher's work with the coasts of Jones Sound; they have reached a point within 60 miles of Aldrich's farthest; and they have discovered that land north of the Parry Islands the existence of which was conjectured as far west as the longitude of the eastern coast of Melville island. This includes the discovery of the northern sides of North Cornwall and Findlay island. In addition to the main arctic problem which is thus solved, it is likely that the region discovered will be of exceptional interest, from the winds and currents, the varying character of the ice, the existence of coal-beds, and the abundance of animal life. A systematic survey has been made of these important discoveries, checked by astronomical observations."

Capt. Sverdrup's and Lieut. Isaachsen's expeditions together occupied three hundred and seventy-two days of actual travel, during which they covered a distance of 3,000 miles and traversed 1,500 miles of newly discovered land. Besides these expeditions, other important journeys were undertaken. The expedition consisted of 16 men, 6 of whom were men of scientific training, geology, botany, and zoology being all represented by specialists. Astronomical, magnetic, and other physical observations were provided for, while an officer was to attend to cartographical work. The surgeon was to take charge of meteorology. The principal members of the expedition, besides

Capt. Sverdrup, were Lieut. Isaachsen; Mr. Bay, zoologist; Mr. Simmons, botanist; Mr. Schei, geologist; Mr. Svendsen, surgeon. All on board were prepared to put their hands to work of all kinds. A good supply of dogs was taken on board, and every preparation was made for sledge expeditions. The Greenland settlements were reached about the end of July, and an attempt was made to push the Fram northward through Robeson's channel, but she was caught in the ice at Cape Sabine, off Ellesmere Land, about 79° north latitude.

The following is taken from Capt. Sverdrup's account:

"On Aug. 17, 1898, we were stopped a little north of Cape Sabine by masses of ice, which we could not penetrate. The cold immediately set in and the new ice rapidly increased. We were therefore compelled to take up our winter quarters at Rice strait. In the course of the autumn we made a sledge journey on the inland ice of Ellesmere Land. Exploring and mapping the innermost part of the fiord at Hayes Sound was commenced. In addition thereto we made hunting expeditions, chiefly to procure food for the dogs. We shot about 25 walruses and 11 musk-oxen. With such a large increase in the dogs' food I saw no objection to wintering at this place. Here was a good and large field of work. In the course of the winter a hut was built, which we intended to put up on Robeson's channel or farther north.

"In the spring of 1899 two sledge journeys were made across Ellesmere Land to the west coast, the one across the glacier district, the other farther north, across country free from ice. The mapping at Hayes Sound was completed. Scientific investigations were carried on until we left our winter quarters. The summer of 1899 turned out unfavorable. I therefore decided to go to Jones Sound, in consequence of which we left Smith's Sound Aug. 22, 1899. On the way we caught such a number of walruses that we had food for the dogs to last through the winter. We took up winter quarters on the south side of Ellesmere Land, in latitude 76° 29' north, and longitude 84° 24' west. Shortly afterward I made a boating excursion with 3 men to explore and lay down a depot. We were, however, shut up by the ice and were compelled to remain one month near the boat before we were able to go on board. On the ice on the return journey we met Baumann and 3 men, who had gone out in search of us. We learned from them the sad news that Braskerud had died. He had caught cold while out hunting. After the arrival on board we made preparations for mapping and for laying down depots. Oct. 22 we were stopped by open water, 68 miles from the vessel; the fog was lying so heavy and thick westward that we could form no decided opinion as to the extent of the open water. The portion of the coast which we had passed ran in a true westerly direction, which we could see was the case farther on. According to Inglefield's map, the country ought to have curved northward. From our winter quarters we laid down the depot, and then entered a large fiord east of the depot, where we shot 26 musk-oxen.

"On Feb. 23, 1900, Isaachsen, Schei, Stoltz, and Bay proceeded with four packs of dogs to the depot. They returned on March 3 with the information that there had been some heavy ice scrapings at Jones Sound, which impeded the advance of the vessel. The depot was also destroyed by bears, and almost all the dogs' food eaten up. On March 7 Bay, Fosheim, and I again

set out on fresh explorations. Bay was left behind at the depot on watch, while Fosheim and I proceeded westward. The same day we left Björneborg, which was the name we gave the depot, we met with open water, where large floes of ice were drifting backward and forward in the rapid current in the sound between North Kent and Ellesmere Land. The advance along the sound proved very difficult. We returned and came on board March 14. The main expedition started in two parties with 9 men and dogs on March 17 and 20. From Björneborg all proceeded on the 23d, reaching the sound the following day. The passage along the sound proved very difficult on the rugged ice. In many places there were pressure ridges right up to the side of the mountain. These pressure ridges at several places had to be worked through with pickaxes and spades. At other places the ice would be quite smooth, so that we, at steep inclines, ran the risk of losing both loads and dogs in the sea. After traveling three days, we passed the sound, which is 20 miles broad, without other mishap than losing a load in the sea. The rope connecting the dog with the sledge parted, so that the dog was saved. Northward we met with fairly smooth ice. The 31st of March, 175 miles from the vessel, the returning party, consisting of Baumann, Raanäs, Schei, Stoltz, and Henriksen, turned back to Björneborg. At that period we experienced a temperature of 42.5° of frost, and great difficulty in advancing. Two sledge parties proceeded farther northward for exploring the unknown west coast of Ellesmere Land, each with provisions for fifty days. The one party consisted of Isaachsen and Hassel, and the other of Fosheim and me. North of the sound, between Ellesmere and North Kent, a large bay extends eastward about 100 miles broad. On the northern side of the same some large complicated fiords are situated. The land extends about 50 miles westward from these, after which it runs in a north and northwesterly direction. In latitude 79° Isaachsen and I parted, Isaachsen receiving instructions to explore some new land which we sighted west of us. The land which Fosheim and I traveled through is very hilly and intersected by large fiords, of which several are from 15 to 20 miles broad at the mouth. On May 4 we reached latitude 81° north. From here the land extends in a northerly direction. We returned to Björneborg on June 2.

"During the whole time we experienced uncommonly severe weather, and what especially impeded the work was fog and thick weather. Bay, after our departure, had an encounter with a ferocious bear, which he at last killed. Fosheim and I came on board on June 4, after an absence of seventy-six days. During the whole journey we experienced almost daily snowstorms, accompanied with severe cold, when the snow and ice rendered it most difficult to proceed. Isaachsen and Hassel came on board on June 19. After reaching the new land in longitude 98° west, they turned back, according to agreement, to the place where they separated, whereupon they traveled southward and afterward eastward to about longitude 89° west. Here they discovered a large system of fiords, proceeding up some of them. The blubber of bear formed a substitute for fuel as the paraffin became exhausted.

"A third party, consisting of Schei and Henriksen, with provisions for forty days, chiefly on geological investigations, came on board June 1. They had traversed two islands north of the sound and been some distance into that fiord where Isaachsen and Hassel were. On the return

journey they traveled across a large peninsula southeast of the fiord. Baumann was in command of the returning party. After they left us they experienced very stormy and cold weather, and several were frostbitten in the face and on the hands on their arrival at Björneborg. From there they had accompanied Schei to the north point of North Kent, after which they went on board. In May Baumann with his party made some investigations to find a passage overland, whereby the sound might be avoided. We knew, of course, that it would be impossible to pass on our return. He deposited information at the agreed place north of the sound. On my return to the Fram I learned that the vessel was nearly destroyed by fire on one of the last days of May. The awning had been ignited by a spark from the funnel and was soon enveloped in flames. The kayaks stored under it, as well as other inflammable things, burned violently. The main rigging and the mast caught fire. Fortunately, it occurred in the middle of the day, while there were plenty of people on the deck. Along the side of the vessel we had water enough for extinguishing the fire, and we succeeded in subduing it.

"The summer work began with scrapings, at first through cracks in the ice, afterward at various places. Gradually the ice broke up. Aug. 9 we steamed out from our winter quarters, steering westward along Jones Sound. On the 16th we got fast in the ice north of Grinnell Island. A heavy northerly breeze kept the ice tightly together. We remained here till Sept. 16, when the southerly gales dispersed the ice. We then proceeded down through Cardigan strait and took up our winter quarters in the fiord next to the sound, latitude $76^{\circ} 48'$ north, and longitude 89° west of Greenwich. We shot this autumn 28 musk-oxen, and, as last autumn, a number of hares. The passage we now used to the coast northward went across a neck of land about 600 feet high. The place where we got down to the sea we called Nordstrand. After the autumn hunting was completed Olsen and I were to proceed up to the large fiords north. Olsen, on the way, fell and got his arm out of joint at the shoulder. As the wind was too strong for a traveling tent to be pitched, we had to go back to Nordstrand. I placed Olsen in a tent, but my attempts to set the arm right were in vain. The storm lasted three days. Two of my best dogs were choked by the snow, and one I lost on the hunting expedition last autumn. The fourth day we went on board and put Olsen's arm right. In the winter we were much visited by wolves, and we had enjoyable wolf hunts in the silent hours of the night. We captured a few alive. On March 12, 1901, two parties went out, each consisting of four men, to lay down depots. The mean temperature was *minus* 45° C.; some days it was even below *minus* 50° . April 8 all parties set out, Isaachsen and Hassel westward, Fosheim, Raanäs, Schei, and I northward, Baumann and Henriksen accompanying us a little distance north of the depot. Thereupon we proceeded farther northward, but found ourselves at the bottom of this system of fiords. When we could find no reasonable land passages we turned back and entered a fiord immediately north of this system. On April 26 we reached the bottom of this fiord. Here we found a fairly good passage northward, where we got down to the sea on April 29. This was that system of fiords which had been traversed by two parties last year. On May 1 we saw from latitude 79° north, in very clear weather, that there was still some sea ice

outside the sound. We continued northward. On May 4 I despatched Fosheim and Raanäs across to follow the eastern land, whereas Schei and I continued along the western. At latitude $80^{\circ} 30'$ the land turned westward; on the west side of the sound we followed the latter, but found ourselves very soon in rough polar ice. As the weather now became very stormy and foggy, we had to turn, sacrificing the rest of the season, to the piece traversed and southward, from where not a few fiords are running into the land. On May 17 we were roused at night by an awful howling of the dogs. When we came on deck we found 12 wolves, which were on the point of carrying away one dog of my pack. When we fired at them—and some of the wolves were killed—the rest ran away rapidly. The dogs were quite helpless, as they had muzzles on. On June 18 we arrived at the Fram. Isaachsen and Haslund found, in about latitude 78° north, a sound separating North Cornwall from the track of land to the north. We traveled through this sound, following the south coast of the land, north of North Cornwall westward and then northward. Then we continued along the land in a northwesterly direction, latitude $79^{\circ} 30'$ north, and longitude 106° west, when the land turned eastward and southward. On the west coast no land could be seen westward, and on the northern coast nothing to the north either, only rough polar ice. These tracts of land are rather low, the highest not reaching over 1,000 feet. Bears were shot on the south coast; reindeer could be seen, and appeared to be plentiful. Isaachsen then went southward and eastward. These islands were explored all round, after which Isaachsen traveled down on Graham Islands, and across to Ellesmere Land; he came on board on June 7.

"Baumann and Stoltz left the Fram on April 24 to investigate more closely the system of fiords, into which I first entered this spring. It was proved on this trip that the neighborhood of these fiords is probably the part of Ellesmere Land most abounding in game. Musk-oxen, reindeer, and wolves are very plentiful. Fosheim and Raanäs had explored a fiord about 70 miles long, which runs in from Greely fiord in a southeasterly direction.

"The whole of this summer appeared very unfavorable for getting out of the ice. We tried blasting, etc., but to no purpose. Then we tried to force a passage along the land at every high-water, as the ice there would always be somewhat slack. In this way we succeeded in advancing 9 miles southward, but after touching the ground several times we did not get out. We now had to procure food for the dogs during the winter. Two hunting parties in Jones Sound got about 20 walruses, which proved sufficient. Bay remained on guard at the meat until the ice became thick enough for it to be conveyed on board. On a very dark night in October he was surprised by a bear. He tried to get out, but his sweater caught something in the door, so he could not move. However, he fired his rifle. At dawn he crept out and found the bear lying dead not far away. After the walrus hunting, two parties were despatched northward to procure fresh meat for the winter. They shot about 18 musk-oxen, which were transported on board; then the walruses were brought on board, and the excursions were at an end—Nov. 4, 1901.

"Isaachsen and Bay explored the north coast of North Devon from April 23 to May 22, whereupon Isaachsen and Simmons made a twenty-four days' sledge excursion in order to fetch

fossils from a fiord in the north, where they had formerly discovered considerable beds of coal. We arrived at Godhavn, Greenland, on Aug. 18. We left there on Aug. 22, passed Cape Farewell on Aug. 28."

Lieut. Robert E. Peary returned from his four years' sojourn in arctic regions on the relief steamer *Windward*, reaching Sydney, Cape Breton island, Sept. 18. He did not reach the pole; his highest point was $84^{\circ} 17'$. The party of the *Duke of the Abruzzi* reached $86^{\circ} 33'$ in 1900. Lieut. Peary announced that important scientific discoveries had been made by the expedition. The following passages are from his report of the operations from August, 1901:

"Left Erik harbor, on the Ellesmere coast, Aug. 29. The party reached Payer harbor Sept. 16, crossing Roose Bay partly by sledge and partly by boat, then walking across Bedford Pim Sound. About a week later my Eskimos began to fall sick, not one escaping. By Nov. 19 6 adults and one child were dead, nearly all the others very weak, but out of danger.

"Early in January Eskimos came across from Anvilik, bringing news of the ravages of a fatal epidemic through the tribe. Word was sent back by the scouts for as many of the survivors as could to come to me, and by the end of the month they began arriving. In February a large depot of dog food was established near Cape Louis Napoleon, 60 miles north of Sabine. On March 3 my advance party of 6 sledges, in charge of Hensen, left for Conger. March 3 started with the main party of 18 sledges. Conger was reached in 12 marches, arriving within an hour or two of the advance party. My supporting party of Eskimos, returning from Conger, brought down the instruments, chronometers, and arctic library. Eight marches more took us to Cape Hecla.

"The north end of Robeson channel was all open across to the Greenland coast. Lakes of water, extending northward, could be seen from Black Cape and Cape Ransome. From Hecla another supporting party returned. April 1 started northward over the polar sea with Hensen, 4 Eskimos, and 6 sledges. Old floes, covered with snow and intersected with rubble ridges and lanes of young ice, were encountered from the moment we left the ice foot.

"After 6 marches, open leads, floes in motion were encountered. Two natives were sent back. As we advanced, the floes became smaller, the pressure ridges on a grander scale, and the open leads more frequent. Each day's march was more perilous, and our general course deflected west by the character of the ice. Finally, at 84.17° north latitude, northwest of Hecla, the polar pack became impracticable, and further efforts to advance were given up. New leads and pressure ridges with foggy weather made our return in some respects more trying than the advance. Hecla was regained April 29, and Conger May 3. Cape Sabine was reached on the 15th. A few days later went north as far as Cape Louis Napoleon to complete the survey of Bobbit Bay, returning June 1.

"The ice broke up earlier than in 1901, and Payer harbor was blockaded almost continuously. The *Windward* bored her way through the ice and entered the harbor the morning of Aug. 5, and got out again the same afternoon with scarcely fifteen minutes to spare before the harbor was closed by the ice. Forcing our way across Smith Sound, my Eskimos, with their belongings, were landed in Inglefield Gulf. Several days were devoted to hunting walrus, then

the *Windward* started south, reaching and leaving Cape York the afternoon of Aug. 28.

"Equipment and personnel were satisfactory, and farther advance was vetoed by insuperable natural conditions. The *Windward* has on board the instruments, chronometers, and arctic library abandoned by the Greely expedition, and numerous specimens of natural history, musk-ox, reindeer, and walrus skins. The skeleton of a two-horned narwhal—a rare arctic specimen—living specimens of musk-ox, walrus, arctic hare, and Eskimo dog are also on board."

Lieut. Peary said he had made a close study of the most northerly people in the world, the Eskimos living on Whale Sound. They are a small tribe, completely isolated, not exceeding 200, and are being rapidly destroyed by an unknown disease, apparently a malignant slow fever. Lieut. Peary taught them to work, employed them, and paid them with weapons and utensils, by which their ability to procure food is materially increased. He believes that the pole can be reached on sledges by any expedition adequately equipped which makes its winter quarters at latitude 83° . It is no more difficult to travel between latitudes 70° and 80° than between 60° and 70° , and he believes not more difficult between 80° and 90° than between 70° and 80° . He thinks there is no open ocean in the extreme north, nor is there a constantly frozen sea, though the waters are practically covered always with ice. The shore of Greenland he believes the most northerly land on the earth.

The expedition sent out in 1901 by William Ziegler under command of Evelyn B. Baldwin, returning, arrived at Honningsvaag, Norway, Aug. 1. A supply ship, the *Frithjof*, had left Tromsøe July 1 to carry coal and bring back news of the expedition. The result of the undertaking is regarded as a failure, in that the explorers did not reach the pole, which achievement was declared to be the specific purpose of the expedition—"to plant the American flag at the north pole"—for which it was more fully equipped than any previous expedition has been. In explanation Mr. Baldwin said: "In the course of nearly a year and a half's incessant work we have accomplished more than the unfavorable conditions which surrounded us really warranted, and have, in addition, brought back data which ought materially to assist subsequent explorers. For the first time in the history of north polar exploration a photographic record has been secured of the ice and snow conditions of the arctic and of the animal life of those regions so complete as to be practically exhaustive. In this respect the kinematograph has played a most important part—the first time it has ever been successfully employed in the far north—and we now have over 1,000 perfect photographic representations of our work. In addition, we have over 200 drawings and paintings."

The character of the ice in the Franz-Josef Land archipelago, all the channels of which were blocked in the autumn of 1901, prevented the America from going far enough north to allow of establishing headquarters favorable for sledge work in the winter and spring, so that winter quarters had to be made at Camp Ziegler, the station founded on the explorer's first arrival in $80^{\circ} 23'$ north, instead of at the higher point they had hoped to reach. In addition to this disadvantage, more than half the dogs died of disease. Mr. Baldwin said further:

"Briefly, my scheme was to establish ourselves as strongly as possible upon the northernmost land of the archipelago before attempting

any dash to the pole. After spending our first winter in this depot, I intended, before the return of the sun, to throw out advance parties northward from Rudolf Land to about the eighty-third parallel, so as to begin the real polar dash from that point. In evidence of our sincerity in carrying out the primary object of the expedition, we have now the satisfaction of pointing to the establishment of our depots, from which it will now be possible to despatch parties from Rudolf Land without its being necessary to endanger a ship at a higher latitude than Camp Ziegler. Altogether, we have formed four large stations, for the transport of which an ordinary arctic vessel would be required. In the establishment of these depots we were obliged to travel over the same ground at least ten times. This severe work naturally led to the wearing out of our sledges, many of which, in the intense cold, became exceedingly brittle and went to pieces like glass, especially when traversing the heavy screw ice. I despatched 15 balloons with 300 messages, and in June I obtained the first moving pictures of arctic life. I also discovered Nansen's hut, recovering original documents and securing paintings of the hut. Marine collections for the National Museum, including new charts, etc., were obtained. In the field-work, 30 men, 13 ponies, 60 sledges, and 170 dogs were employed from Jan. 21 to May 21. To each of the balloons was attached a string of buoys, which by means of automatic contrivances were released as they touched ice, land, or water. As northeasterly winds prevailed, it is likely that these balloons were driven upon the great field of ice which this year blocks the entire eastern coast of Spitzbergen; when they are released by the movement of the ice they will, it is expected, furnish data concerning air and sea currents."

A story was sent from Winnipeg in the summer regarding the fate of the explorer Andr  e and his companions. It lacks verification, but seems to have some evidence in its favor. As Andr  e set out in 1897, there must be an error about the time at least, since, according to the story, he would not have come down till three years later—that is, in 1900. Following is the despatch:

"Rev. Dr. Ferlies arrived from York, Northwest British Territory, brings authentic information of the fate of explorer Andr  e and his companions. Two years ago, 1,700 miles north of York, a party of Eskimos, under the leadership of 'Old Huskie,' saw the Andr  e balloon alight on a plane of snow in that vicinity, which is about 30 miles north of Fort Churchill. Three men emerged from the balloon, and some of 'Huskie's' people approached them out of curiosity. As they did so, one of Andr  e's companions fired a gun. This is a signal to uncivilized natives for battle. It was regarded as a challenge, and almost instantly the natives fell upon the three explorers and massacred them. Everything pertaining to their outfit was carried to the homes of the natives on the border of the arctic region. 'Old Huskie' himself gave this information to Ralph Alstine, agent for the Hudson Bay Company, and the story, after being investigated by Dr. Ferlies, was told by him. He says that there is little room for doubt, as frequent reports have since come of the strange implements which the north natives have in their possession, the telescope being particularly described."

Antarctic Regions.—The Scottish National Antarctic Expedition sailed from the Clyde, Nov. 3, with William S. Bruce as leader. The Norwegian

whaler Hekla was bought, renamed the *Scotia*, and reconstructed for the expedition. The *Scotia* is a bark-rigged auxiliary screw steamer, of about 400 tons register, measuring 140 feet in length, 29 feet in breadth, and having a depth of 15½ feet. The ship is being especially fitted out to carry on oceanographical research. Two great drums, each containing 6,000 fathoms of cable for trawling and trapping in what is supposed to be the deepest part of the Antarctic Ocean, were taken, for Mr. Bruce intends to follow the track of Weddell, who sailed from Leith in 1823 and attained a latitude of 74° 15' south. Eastward of this track Ross obtained a sounding of 4,000 fathoms and no bottom.

A steam-yacht, the *Morning*, has been sent out by the Royal Geographical Society to the Discovery, which carried the National Antarctic Expedition (British) to antarctic waters in 1901. Besides carrying supplies and acting as tender to the Discovery, the *Morning* will supplement its work, being well supplied for taking observations.

In a letter from the steamship *Antarctica* in February, Dr. Otto Nordenskj  ld, leader of the Swedish antarctic expedition, says:

"Our expedition had its last contact with civilization at Staaten island, a few miles north of Cape Horn, where the Argentine Government has erected a magnetic observatory to cooperate with the antarctic expeditions in 1902. Jan. 6 we left the island. On the morning of the 11th all on board could know that we were in a new world. The air was cold and the water at the freezing-point, but the land itself was hidden by fog. Suddenly at noon the fog lifted and unveiled to our view in its unsurpassed grandeur the first of the antarctic lands to be seen. It was King George island, in the chain of South Shetlands. The island is very mountainous, and some of its peaks attain a height of 2,000 or 3,000 feet. Between these peaks are broad valleys, and anywhere else in the world this island would show all the contrasts of a varying nature. But up to the highest summits everything is covered with snow and ice. The valleys are filled by immense glaciers, connecting over the ridges with their neighbors, climbing the summits, and far more luxuriant than the vegetation of tropical forests. To the east or to the west there seems nowhere to be an outcrop of bare rock, and only at a few places at the edge of the sea are there bold promontories of steep cliffs. But all along the coast are rocky islets, often low but always of the boldest shape, and, in contrast with the main island, those islands are almost always completely free from snow. The whole scenery presents a type of a glaciated country such as our own was at a remote period, a good deal different from Greenland. Even in the farthest north there does not exist a land so overwhelmed by the snow as this island. Only at the extreme west of the island was there a strip of lowland. We did not stop there, but proceeded to another island, Nelson island, where the name on the chart, Harmony cove, seemed to intimate that we would find a favorable landing-place. And it was, in fact, a nice little place, far more inviting than one could ever expect after the first view of the land. The bare space was not very large and the snow was creeping down on all sides. But on all spots possible grew a not too poor vegetation of mosses, lichens, and algae of many different species. On the knolls of moss there was a rich life of small insects, and even a little beetle, the first ever found in the antarctic, rewarded the work of the entomologist.

"But, with all this, no land in the arctic can be compared with this in poverty. On the other hand, on suitable places there is life enough, so rich even that it seems impossible it could ever be surpassed. But this life almost all depends upon the sea. The dredge and the net have unveiled to us a fauna so rich in numbers, so wonderfully varied in its forms, that I do not believe it is paralleled in the arctic, and even the specialists often stand wondering before this new and unexpected life. Not only is the surface of the sea crowded by shrimps and other lower forms, but there also exists a richness of fish some of which would probably in other parts of the world give rise to a great industry. Nowhere else are the swarms of whales, some of them among the largest of their kind, nearly so numerous as here. Even the seals are crowded along every coast, and everywhere in the ice-pack. On the shore where we landed they were counted in hundreds, and they were so tame that they allowed themselves to be scratched on the neck and the back.

"When approaching the shore you will be met by swarms of an animal that would hardly be recognized by any one who did not know it before. Necessarily you will think of the flying-fish when you see a long line of black spool-shaped beings, with two fin-like appendices, throwing themselves high out of the water, only to come down again and continue their flight below its surface. Thousands of penguins breed on Nelson island, but that is not one of the best places to study their life.

"After Jan. 11 followed a week of the most interesting discoveries. At the western end of his Louis Philippe Land, Dumont d'Urville had seen in 1838 a deep cut into the land, which he named Orleans inlet, and here at first we steered our course. The land and the channel trended unceasingly to the west without interruption, and, after twenty hours on a virgin sea and amid the grandest scenery, we found ourselves in the regions examined by the Belgian expedition and in the channel called by them after their steamer, Belgica. Louis Philippe Land is only a part of the great continental mass called on the maps Graham Land. We had to turn back to get into the Atlantic. Here we followed the coast, stopping a short time at Cape Seymour, one of the most interesting points in the whole antarctic by reason of its being the only place where fossil remains have until now been discovered."

America.—A hitherto unknown region between Great Slave lake and Hudson Bay was surveyed in 1900 by J. W. Tyrrell and C. C. Fairchild. It lies west of the Doobaunt river. The route began from the lake, the most easterly bay of which was named Charlton harbor. It is about 16 miles long, and is connected with McLeod Bay by a deep channel less than a mile wide. Lockhart river, which flows into Charlton harbor, was surveyed. The Parry falls were found to be beautiful, but on a smaller scale than as described by Back, a former traveler. Artillery lake lies at an elevation of 1,188 feet, which is 668 feet higher than Great Slave lake. The height of land was found to be 7 miles away, and on its eastern side was a new lake, Lake Douglas, with outlet toward the north or east. The main route led north by the Kasba river and lake to Lake Clinton Colden. Thence the height of land was crossed by short portages, and a string of lakes was followed to Hanbury river. This river runs through a wild chasm, Dickson cañon, beginning with a fall of 50 feet. Below, the country assumed a more verdant appearance,

with trees and flowering plants more abundant, affording feeding-grounds for musk-oxen. The Hanbury flows into Theron river, a large stream with a volume of 50,000 cubic feet at the junction. It is navigable for river steamers 550 miles from Hudson Bay. The district seems not well adapted for farming, but the timber supply and the herds of musk-oxen should be of considerable value.

An account of an exploration on the eastern coast of Labrador by a party of 10 under the lead of Willard Glazier says they set out from the Moravian mission station of Nain in latitude about 56.5 north. Following up the bay on which the station stands, they discovered a fine river about 135 miles long. It flows through 7 lakes, the largest 40 miles long and surrounded by precipitous mountains rising 1,000 to 2,000 feet above it. From these many cascades fall into the lake. The lakes are connected by rapids. Returning to Nain, the explorers went north to Okak Bay, the site of another mission station, and ascended North river. The interior of the country was found to be bleak and desolate and destitute of inhabitants. The only vegetation was a few spruce and larch trees and some alders and wild grasses. There are caribou in abundance, and in the bays and rivers seals and fish. The commonest minerals are iron ore, copper, mica, and Labradorite.

An exploration in British Honduras was recently made by Mr. T. Fenwick, of Belize. A region supposed never to have been visited by white men, southwest of the Cockscorn mountains, was named King Edward's Land; and beyond this another range of mountains was reached. Continuing to the south, the explorers found still another range, extending west and south, which they named Queen Alexandra's mountains. The peaks of the Cockscorn mountains which the party ascended were named, one for Joseph Chamberlain and the other for Lady Wilson, wife of the Governor.

Asia.—Dr. Sven Hedin contributes to the *Geographical Journal* a summary of the results of his latest journey in Central Asia, 1899-1902. The *Annual Cyclopædia* for 1901 gives an account of his experiences and discoveries in 1899 and 1900. After summarizing these, Dr. Hedin's narrative proceeds:

"My second expedition started from the same base [Mandarlik, beside Gas-nor]. Its object was to complete the mapping of northern Tibet, especially of the mountains to the north of Kum-kull. This lake also was sounded. These Tibetan lakes are dangerous to navigate in a small open sailing-boat; to do so is always attended with a considerable amount of peril. But my principal and longest journey through Tibet began at Charlik on May 17, 1901. The route I selected went first up the valley of the Charlik-su, then on to Kum-kull, and over the Arkatagh. After that I struck a line between the route followed by Littledale and that followed by Prince Henri and Bonvalot, and penetrated southward as far as 33° 45' south latitude. There the caravan encamped, while, accompanied by two attendants and in disguise, I made a perilous journey as far as the vicinity of Tengri-nor. There we were closely examined, and compelled to return to the caravan, though the Dalai-Lama's emissaries treated us with the greatest respect and politeness. A second attempt to penetrate south from the same camping-place was frustrated at Sellisytso by a force of 500 horsemen. After that I directed my course westward to Leh, avoiding both Nain-Singh's and Littledale's routes. This jour-

ney cost me the lives of two men and of almost all my animals. The baggage animals were yaks, which were everywhere placed at my service by command of the Dalai-Lama. The results of this last journey in Tibet are recorded on a map of 370 sheets.

"In April I broke up from Leh, and crossing the Karakorum pass, went down to Yarkand; thence traveling via Kashgar and the Caspian Sea, I returned to Stockholm, where I arrived on June 27, 1902. The successful issue of this journey, which lasted altogether three years and three days, was in great part owing to the circumstance that his Majesty the Emperor of Russia most graciously appointed an escort of four Cossacks to attend upon me throughout. Than these I have never had more honest, more capable, or braver men in my service.

"My first journey of 1893-'97 has been regarded as marking an advance in the knowledge of the geography of central Asia. The last journey of 1899-1902 has yielded results three times as rich as those of the former journey, and in the course of it I have been enabled to lift the veil which for a thousand years had hidden vast stretches of the mountainous and desert regions of the heart of Asia.

"My cartographical material extends to 1,149 sheets, and if these were arranged end to end in a long row they would stretch over a distance of 1,000 feet. A complete meteorological journal was kept without interruption throughout, in part during my expeditions, in part also and simultaneously in my principal fixed camps, where a barograph and a thermograph were in constant operation. The abundant materials thus gathered in are now being worked up by Dr. Nils Ekholm. I took also over 2,000 photographs, using for this purpose an English camera and English-made plates, and the results leave nothing to be desired. Anatomical collections of the higher animals were made, including aquatic animals in spirits, and a herbarium was brought together. The geological profiles of Tibet will be illustrated by some 700 rock specimens collected in that region. I have also brought home a number of archeological treasures from the ruins we discovered in the desert, among them several objects of extraordinary interest, and I made further a great quantity of sketches, diagrams, and drawings to illustrate various features appertaining to the provinces of physical geography."

Dr. W. H. Workman and Mrs. Workman, on a third expedition among the higher Karakoram mountains, devoted their attention chiefly to the Chogo Lungma glacier; they examined also three large tributary terminal glaciers. The upper part of the Chogo Lungma glacier has not heretofore been explored, and the map was found to be wholly incorrect. The glacier takes its rise in a steep snow wall, or coll, about 20,000 feet in altitude, which connects two lofty peaks, one of which is fixed by the Indian survey at 24,486 feet. The other seemed to be little lower. Several other peaks nearly as high send down large glaciers to help form the Chogo Lungma. One of the tributary glaciers brought the explorers under the northern flank of Mount Haramosh, which is 24,285 feet high, to a broad snow pass, at a height of 17,500 feet, from which another glacier plunges sharply down to the west into a deep valley, whence, by crossing a lower ridge at 15,000 feet, Gilgit can be reached. The surface of the great glacier is irregular, and it is in many places seamed by crevasses. The tributary glaciers are nearly all broken at different places in their course by impassable ice-falls. At the entrance

of the Haramosh arm a deep depression in the surface is occupied by a large lake.

In a paper on explorations in Chinese Turkestan, read before the Royal Geographical Society, Dr. M. A. Stein said that the idea of explorations about Khotan was suggested by the discoveries of M. de Rhins, the French explorer, and Dr. Sven Hedin's march of 1895, which was first made known in 1898. With the help of the Indian Government Dr. Stein was enabled to set out in April 1900, and reached the capital of the Hunza chief in June. In that city the carved woodwork exhibited the features of old Indian decoration, while in the Mir's residence the furniture and fittings were Chinese in type. Arriving at Tashkurgan, Dr. Stein was enabled to prove the identity of the territory of Kir-p'an-to with the modern Sarikol. A fresh start was made from Kashgar in September, and Khotan was reached in October. From this point a survey was made of the Yurung-kash flowing between ranges of lofty peaks 23,000 feet high and connected with certain recognized peaks in the Indian triangulation. After beginning excavations in December the first find of importance was some leaves of manuscript in Sanskrit, which might be assigned to the sixth century. In addition, there were documents in non-Indian characters which represented the indigenous tongue of Khotan. The discovery of Chinese writings dated 778-787, as well as coins of about 720, seem to show that Dandan Uiliq was abandoned at the end of the eighth century. The district was probably irrigated by canals bringing the hill water to the desert, and no adequate cause could be assigned for its desertion. An older town was discovered in the desert north of Iman Jafar, where tablets were unearthed bearing the ancient Indian script Kharoshthi. The area over which ruins are scattered is about 11 miles by 4, and the buildings were constructed in a massive style of beams of wood and plaster, which has served to keep the tablets in a high state of preservation. There were also pieces of pottery of great antiquarian interest and notes in various writings. The clay seals with which the tablets were fastened show the influence of Western art and include figures of Pallas Athene, Eros, and portraits with classical modeling and barbarian features. The discoveries corroborate the evidence of early Chinese explorers that these lands were colonized by immigrants from the Punjab about 200 B. C. This district must have been deserted before the fourth century, as there were no signs of writing on paper, which became common in Turkestan at that date."

In the autumn of 1899 Mr. Douglas W. Freshfield with several companions made a journey to the Himalayas to examine the glaciers of Kangchenjunga. The journey occupied in all seven weeks, during which the party ascended and descended 75,000 feet, or 14 miles up and 14 miles down. They were twenty-four days between Lachen and Khunza without meeting inhabitants, twenty days without seeing trees, and they were wholly dependent on the provisions they carried with them, except for a few contributions from their sportsmen. Following is a report of his description of the glaciers: "He reminded his audience that Kangchenjunga was a mountain 28,156 feet high. It was therefore the third highest measured mountain on the face of the globe, and was nearly 400 miles north of Calcutta. It formed the culminating point of a group which rose on the confines of Tibet, Nepal, and Sikkim. The Kangchenjunga group was completely cut off by the Khosi valley on

the west from the mountains of Nepal, and by the Teesta valley on the east from the mountains of Bhotan. By crossing the spur which united it to the Tibetan highlands, it was just possible to get round the mountain without trenching on any territory which was officially recognized as Tibetan. Mr. Freshfield said his object was to make the high-level tour of Kangchenjunga, and to pass as near the great mountain as possible. That had never been accomplished by Europeans.

"Taking into account secondary glaciers, the area covered by snow and ice in the group, accepting the 24,000 peak north of the Jonsong La as its northern limit, might be estimated at 180 square miles. As to the most notable peculiarities of Sikkim glaciers, the transformation of snow into something like glacier ice took place within a few hundred feet of the final ridge of Kangchenjunga. Such *névé* was found there as in similar positions on the Jungfrau in the Swiss Alps. In the upper ice-falls the ice was apt to assume a strange conformation. He described it by comparing it to the earth pillars found in certain friable soils. The glacier was converted, not into Alpine *séracs*, towers, and ridges severed from one another by profound clefts, but into clusters of ice-cones, repeating the same form monotonously."

Africa.—From an article by Rev. George Grenfell on The Upper Congo as a Waterway it is learned that there are more than 100 steamers plying there. The river affords a whole available waterway of more than 6,000 miles. Leopoldville and Brazzaville are important places, though smaller than Boma, the capital; twenty-five years ago they were unknown native villages. They are starting-points for the fleet of the more than 100 steamers that have been carried in plates and sections beyond the cataracts and reconstructed there. They are of all sizes, from small open launches to crafts carrying 200 to 300 tons.

GEORGIA. (See under UNITED STATES.)

GERMAN EVANGELICAL CHURCH.

The German Evangelical Synod of North America was formed in Missouri in 1840 by 6 ministers who were performing missionary work among the German settlers, and who had been attached in their native land to the Evangelical, the state Church of Prussia. Other religious bodies which had originated under similar circumstances in Ohio, the East, and the Northwest were united with it in 1850, 1860, and 1872. It had in 1901, according to the reports made to the General Synod which met in St. Louis, Mo., in that year, in 17 district synods, 922 ministers, 1,153 congregations, with 203,574 communicant members, 10,144 teachers, and 100,177 children in Sunday-schools, and 486 parochial schools; and the aggregate of contributions for the propagation of the Gospel was returned at \$95,660. The lists of pastors and congregations published in the *Evangelischer Kalender* for 1903 give the names of 27 pastors and 26 congregations additional to those given in the *Kalender* for the previous year. Recognizing the Holy Scriptures as the only authoritative standard of faith and practise, this Church accepts the Lutheran standards and the Heidelberg Confession as interpretations of them so far as those declarations agree, and where they differ leaves the Bible passages to be interpreted by the conscience of the believer. The home mission work of the Church was placed by the General Synod of 1901 under the care of a separate board. During the three years that had passed since the previous meeting of the General Synod 63 mission parishes had been as-

sisted, 29 of which had become self-supporting. Between \$10,000 and \$12,000 were contributed for these missions yearly. The grants for 1902, reported to the meeting of the board in August, amounted to \$26,500. The foreign mission in India, under the care of the foreign mission board, returned 7 missionaries and 5 women, with native teachers, catechists, etc., making a total missionary force of 79 persons. The mission included 4 principal stations, with 2,092 communicants and 5,291 members in all. The contributions of the last three years to this work had been more liberal than those of any previous term. The amount contributed for 1901 had been \$15,980, which, with a surplus of \$12,226 at the beginning of the year, had given \$28,206 to be at the disposal of the board; while the expenditure had been \$19,943. At the beginning of 1902 the surplus had been reduced to \$8,262. An immigrant mission was maintained in Baltimore, Md., and cooperated with the German emigrant mission in Bremen. The principal educational institutions of the Church are the proseminary at Elmhurst, Ill., and Eden College and Theological Seminary, St. Louis, Mo. Other benevolent institutions are a deaconess house in St. Louis, 2 orphan houses, and a hospital in St. Louis. Eden Publishing House, St. Louis, Mo., supplies literature for the Church in the German and English languages. Formerly the German language was very largely predominant in the work of the Church, but the membership has become so largely Anglicized that the General Synod a few years ago made provisions for the publication of literature for Sunday-schools and church services in English as well; and the English department has become a considerable and growing branch of the work of the publishing house. A Young People's Society was organized at a meeting held for that purpose in Cleveland, Ohio, Sept. 17 and 18, 1902, at which 13 of the 17 district synods were represented by delegates. The Rev. J. Pister, president of the General Synod, presided. Constitutions were adopted for the general and for local societies.

GERMANY, an empire in central Europe, composed of the federated German states, which, in the terms of the Constitution of April 16, 1871, form an eternal union for the protection of the realm and the care of the welfare of the German people. The King of Prussia as German Emperor has supreme direction of the military and political affairs of the empire. There are 2 legislative bodies with concurrent powers—the Bundesrath, composed of representatives of the federated states, and the Reichstag, representing the German people. Acts on which they agree become law on receiving the assent of the Emperor, countersigned by the Chancellor of the Empire. The Bundesrath has 58 members, appointed by the governments of the federated states. The Reichstag has 397 members, 1 to 131,604 of population, elected by universal manhood suffrage and by secret ballot for the term of five years. Members of the Bundesrath are appointed anew for each legislative session. The Kingdom of Prussia is represented in the Bundesrath by 17 members and in the Reichstag by 236, the Kingdom of Bavaria by 6 and 48 respectively, the Kingdom of Saxony by 4 and 23, the Kingdom of Württemberg by 4 and 17, the Grand Duchy of Baden by 3 and 14, the Grand Duchy of Hesse by 3 and 9, the Grand Duchy of Mecklenburg-Schwerin by 2 and 6, the Grand Duchy of Saxe-Weimar by 1 and 3, the Grand Duchy of Mecklenburg-Strelitz by 1 and 1, the Grand Duchy of Oldenburg by 1 and 3, the Duchy of Brunswick by 2 and 3, the Duchy

of Saxe-Meiningen by 1 and 2, the Duchy of Saxe-Altenburg by 1 and 1, the Duchy of Saxe-Coburg-Gotha by 1 and 2, the Duchy of Anhalt by 1 and 2, the Principality of Schwarzburg-Sondershausen by 1 and 1, the Principality of Schwarzburg-Rudolstadt by 1 and 1, the Principality of Waldeck by 1 and 1, the Principality of Reuss-Greiz, or Reuss of the elder line, by 1 and 1, the Principality of Reuss-Schleiz, or Reuss of the younger line, by 1 and 1, the Principality of Schaumburg-Lippe by 1 and 1, the Principality of Lippe by 1 and 1, the free city of Lübeck by 1 and 1, the free city of Bremen by 1 and 1, the free city of Hamburg by 1 and 3, the Reichsland of Alsace-Lorraine by 4 commissioners of the Statthalter in the Bundesrath who have no votes and 15 Deputies in the Reichstag. The Bundesrath and the Reichstag are called together annually by the Emperor, who with the concurrence of the Bundesrath can prorogue the Reichstag, but not without its consent for longer than thirty days, or dissolve it, in which case new elections must take place within sixty days and a new session must begin within ninety days. The imperial ministers act independently of each other, but under the control of the Imperial Chancellor.

The reigning Emperor is Wilhelm II, born Jan. 27, 1859, eldest son of Friedrich III of Prussia and Friedrich I of Germany, eldest son and successor of Wilhelm I, the first German Emperor. Wilhelm II succeeded his father on March 9, 1888. The heir apparent is Prince Friedrich Wilhelm, Crown Prince of the German Empire and of Prussia, born May 6, 1882, eldest son of the Emperor and the Queen-Empress Victoria, who was a princess of Schleswig-Holstein-Sonderburg-Augustenburg. The Chancellor of the Empire was Graf von Bülow in the beginning of 1902, who succeeded Prince Hohenlohe-Schillingfürst on Oct. 17, 1900. The following were the secretaries of state at the head of the several departments: Minister of Foreign Affairs, Baron von Richthofen; Minister of the Interior and Representative of the Chancellor, Graf von Posadowsky-Wehner; Secretary of State for the Imperial Marine, Vice-Admiral von Tirpitz; Minister of Justice, Dr. A. Nieberding; President of the Imperial Railroad Office, Dr. Schulz; President of the Court of Accounts, Herr Magdeburg; President of the Invalid Fund Administration, Dr. Rösing; Secretary of State for the Post-Office, Herr Krätke; Secretary of State for the Imperial Treasury, Baron von Thielmann; President of the Imperial Bank, Dr. Koch. The Emperor can not veto laws passed by both the Bundesrath and the Reichstag. By the Prussian Constitution no bill can become law unless approved by the King. The King nominates the ministers, and they hold office during his pleasure. The legislative bodies in Prussia are the Herrenhaus, or House of Lords, and the Abgeordnetenhaus, or House of Deputies. To the Herrenhaus belong the princes of the house of Hohenzollern, 16 heads of mediatised princely houses, 50 territorial nobles, life peers chosen by the King from great landowners and manufacturers and men appointed for their national celebrity, 8 representative nobles elected by landowners of the old Prussian provinces, representatives of universities, heads of chapters, burgomasters of towns of over 50,000 inhabitants, and an unlimited number of peers nominated by the King for life or for a term of years. The Abgeordnetenhaus contains 433 members, elected for five years by electors, one-third of them chosen by the wealthiest, one-third by the intermediate, and one-third by the poorest class of direct taxpayers, each of which contributes one-

third of the total amount of direct taxes. The ministry of state at the beginning of 1902 was composed as follows: President of the Council of Ministers, the Imperial Chancellor, Graf von Bülow; Minister of Finance, Baron von Rheinbaben; Minister of Public Works, Herr von Thielen; Minister of Worship, Instruction, and Medical Affairs, Dr. Studdt; Minister of Agriculture, Domains, and Forests, Herr von Podbielski; Minister of Justice, Dr. Schönstedt; Minister of the Interior, Baron von Hammerstein; Minister of Commerce, Herr Möller; Minister of War, Gen. von Gossler.

Area and Population.—The area of the German Empire is 208,830, and the population, according to the census of Dec. 1, 1900, was 56,367,178, compared with 52,279,901 on Dec. 2, 1895. The area and population of the provinces of Prussia are given in the following table:

PROVINCES.	Square miles.	POPULATION.	
		1895.	1900.
East Prussia.....	14,282	2,006,689	1,996,626
West Prussia.....	9,854	1,494,385	1,563,658
Berlin.....	25	1,677,304	1,888,818
Brandenburg.....	15,381	2,821,695	3,108,554
Pomerania.....	11,628	1,574,147	1,634,832
Posen.....	11,184	1,828,633	1,887,275
Silesia.....	15,566	4,415,309	4,668,857
Saxony.....	9,750	2,698,549	2,832,616
Schleswig-Holstein.....	7,337	1,286,416	1,387,968
Hanover.....	14,869	2,422,020	2,590,939
Westphalia.....	7,803	2,701,420	3,187,777
Hesse-Nassau.....	6,060	1,756,802	1,897,981
Rhine Province.....	10,423	5,106,002	5,759,798
Hohenzollern.....	441	65,752	66,780
Total.....	134,603	31,855,123	34,472,509

The Prussian population was divided into 16,971,456 males and 17,501,084 females, 103.12 females to every 100 males. The town population, 14,844,221, showed an increase of 2.29 per cent. in five years; the country population, 19,624,086, showed an increase of 1.08 per cent. The number of marriages in Prussia during 1899 was 287,408; of births, 1,265,923; of deaths, 761,050; excess of births, 504,873. During 1900 the emigration over sea from Prussia was 12,471. In 1899 the total was 13,747, of whom 1,548 emigrated from Brandenburg and Berlin, 2,293 from Posen, 1,784 from Hanover, 1,449 from West Prussia, 990 from Schleswig-Holstein, 853 from the Rhine Province, 836 from Pomerania, 605 from Hesse-Nassau, 557 from Westphalia, 585 from Silesia, 494 from East Prussia, 463 from Saxony, and 14 from Hohenzollern. Berlin had 1,901,567 inhabitants on Dec. 31, 1901.

Bavaria, with an area of 29,286 square miles, had a population in 1900 of 6,175,153, compared with 5,818,544 in 1895. The population in 1900 comprised 3,027,093 males and 3,148,060 females. The number of marriages in 1899 was 50,783; of births, 230,969; of deaths, 154,165; excess of births, 76,804. The emigration over sea in 1900 was 2,074, compared with 2,140 in 1899.

The Kingdom of Saxony, with an area of 5,787 square miles, had 4,199,758 inhabitants on Dec. 1, 1900, compared with 3,787,618 in 1895. There were 2,042,437 males and 2,157,321 females in 1900, a ratio of 105.6 females to 100 males. Of the population in 1900, the proportion living in towns was 50.01 per cent. The number of marriages in 1899 was 38,980; of births, 164,164; of deaths, 99,609; excess of births, 64,555. The emigration over sea in 1900 was 876, compared with 1,057 in 1899.

Württemberg has an area of 7,503 square miles, and had on Dec. 1, 1900, a population of 2,169,-

434, it having increased from 2,081,151 in 1895, an average of 0.81 per cent. per annum. The number of marriages in 1900 was 17,102; of births, 76,637; of deaths, 49,119; excess of births, 26,318. The emigration in 1900 was 1,160, compared with 1,250 in 1899.

The area of Baden is 5,823 square miles. The population in 1900 was 1,866,584, against 1,725,464 in 1895, which shows an increase of 1.585 per cent. per annum. There were 925,670 males and 940,914 females in 1900, being 101.65 females to 100 males. The number of marriages in 1900 was 15,491; of births, 65,261; of deaths, 43,277; excess of births, 21,984.

The Grand Duchy of Hesse in 1900, with an area of 2,966 square miles, had 1,119,893 inhabitants, 558,240 males and 561,653 females, the increase over 1,039,020 in 1895 having been at the rate of 1.56 per cent. per annum. There were 19,671 marriages, 36,848 births, and 22,100 deaths in 1900; excess of births, 14,748.

The Grand Duchy of Mecklenburg-Schwerin has an area of 5,135 square miles. The population in 1900 was 607,835, against 597,436 in 1895. There were 300,419 males and 307,416 females, 102.3 females to 100 males. The number of emigrants over the ocean in 1900 was 168, against 231 in 1899.

The Grand Duchy of Saxe-Weimar has an area of 1,388 square miles. The population in 1900 was 362,018, composed of 176,650 males and 185,368 females. In 1895 the total population was 339,217. The number of marriages in 1900 was 3,051; of births, 12,322; of deaths, 6,969; excess of births, 5,353; emigration, 86, against 20 in 1899.

The Grand Duchy of Mecklenburg-Strelitz, having an area of 1,131 square miles, had in 1900 a population of 102,628, composed of 50,080 males and 51,758 females. The population in 1895 was 101,540. The number of marriages in 1899 was 898; of births, 3,103; of deaths, 2,324; excess of births, 779; emigration, 12 in 1900, against 21 in 1899.

Oldenburg, including the principalities of Lüneburg and Birkenfeld, with an area of 2,479 square miles, had in 1900 a population of 399,183, divided into 198,307 males and 200,876 females, against a total of 373,739 in 1895. The number of marriages in 1900 was 3,422; of births, 14,312; of deaths, 8,281; excess of births, 6,031; emigration, 269 in 1899 and 255 in 1900.

Brunswick, which has an area of 1,424 square miles, increased in population at a rate per annum of 1.39 per cent. from 434,213 in 1895 to 464,333 in 1900, divided into 230,288 males and 234,045 females. There were 4,066 marriages, 15,642 births, and 9,295 deaths in 1900; excess of births, 5,848; emigration over sea, 112 in 1899 and 68 in 1900.

The Duchy of Saxe-Meiningen, with an area of 953 square miles, had 234,005 inhabitants in 1895 and 250,683 in 1900, divided into 123,027 males and 127,656 females. The number of marriages in 1899 was 2,185; of births, 8,772; of deaths, 4,339; excess of births, 3,833; emigration, 56 in 1899 and 49 in 1900.

The Duchy of Saxe-Altenburg, having an area of 511 square miles, had 180,313 inhabitants in 1895 and 194,914 in 1900, the latter number composed of 95,796 males and 99,118 females. There were 1,744 marriages, 7,720 births, and 4,831 deaths in 1899; excess of births, 2,889; emigration, 31 in 1899 and 17 in 1900.

The area of the Duchy of Saxe-Coburg and Gotha is 755 square miles. The population in 1895 was 216,613 and in 1900 it had increased

to 229,550, divided into 110,923 males and 118,627 females. There were 1,998 marriages, 7,938 births, and 4,729 deaths in 1899; excess of births, 3,209; emigration, 42 in 1899 and 46 in 1900.

Anhalt, having an area of 906 square miles, had 293,298 inhabitants in 1895 and 316,027 in 1900, composed of 155,162 males and 160,865 females. There were 2,790 marriages, 10,813 births, and 6,292 deaths in 1900; excess of births, 4,521; emigration, 43 in 1899 and 33 in 1900.

Schwarzburg-Sondershausen, which has an area of 333 square miles, had 78,074 inhabitants in 1895 and 80,898 in 1900, divided into 39,508 males and 41,390 females. There were 691 marriages, 2,645 births, and 1,674 deaths in 1899; excess of births, 971; emigration, 21 in 1899 and 14 in 1900.

The area of Schwarzburg-Rudolstadt is 363 square miles and its population in 1900 was 93,059, composed of 45,259 males and 47,800 females, compared with a total in 1895 of 88,685. There were 831 marriages, 3,212 births, and 1,831 deaths in 1899; excess of births, 1,381; emigration, 22 in 1899 and 18 in 1900.

Waldeck has an area of 433 square miles and had 57,766 inhabitants in 1895 and 57,918 in 1900, divided into 27,935 males and 29,983 females. There were 418 marriages, 1,783 births, and 1,156 deaths in 1899; excess of births, 627; emigration, 24 in 1899 and 19 in 1900.

Reuss-Greiz has an area of 122 square miles and had in 1900 a population of 68,396, of whom 32,521 were males and 35,875 females, compared with 67,468 in 1895. There were 550 marriages, 2,673 births, and 1,604 deaths in 1899; excess of births, 1,069; emigration, 52 in 1899 and 103 in 1900.

Reuss-Schleiz, with an area of 319 square miles, had 138,993 inhabitants in 1900, consisting of 66,554 males and 72,439 females, against a total of 132,130 in 1895. There were 1,215 marriages, 5,671 births, and 3,434 deaths in 1899; excess of births, 2,237; emigration, 73 in 1899 and 112 in 1899.

The Principality of Schaumburg-Lippe has an area of 131 square miles, and in 1900 had a population of 43,132, of whom 21,449 were males and 21,683 females, compared with 41,224 population in 1895. There were 352 marriages, 1,204 births, and 689 deaths in 1899; excess of births, 575; emigration over sea, 11 in 1899 and 6 in 1900.

Lippe, which has an area of 469 square miles, had a population of 134,854 in 1895 and 139,238 in 1900, divided into 67,113 males and 72,125 females. The number of marriages in 1900 was 1,249; of births, 4,968; of deaths, 2,515; excess of deaths, 2,453; emigrants, 8 in 1899 and 3 in 1900.

The Hanseatic town Lübeck, possessing a territory 115 square miles in extent, had a population in 1900 of 96,775, composed of 47,784 males and 48,991 females, against a total of 83,324 in 1895. The number of marriages in 1900 was 828; of births, 3,070; of deaths, 1,831; excess of births, 1,239; emigrants, 87 in 1899 and 35 in 1900.

The free city of Bremen, which possesses 99 square miles of territory, increased in population from 196,404 in 1895 to 224,882 in 1900, divided into 111,014 males and 113,868 females. The number of marriages in 1900 was 2,086; of births, 7,046; of deaths, 4,015; excess of births, 3,031; emigration, 371 in 1899 and 317 in 1900.

The Hanseatic free city Hamburg, embracing a territory of 158 square miles, had in 1900 a population of 705,738 in the city and 62,611 in the country; total, 768,349, consisting of 375,811 males and 392,528 females, compared with 681,632

in 1895. The population in 1900 included 14,509 foreigners, of whom 3,595 were Austrians, 2,099 Swedes and Norwegians, 2,424 Danes, 1,520 British, 3,240 from other countries of Europe, 1,631 from other parts of the world, and 288 unknown. There were 6,442 marriages, 22,980 births, and 13,989 deaths in 1900; excess of births, 8,991.

The Reichsland Alsace-Lorraine has an area of 14,513 square miles. The population in 1900 was 1,719,470, compared with 1,640,986 in 1899. It consisted of 880,437 males and 839,033 females. The number of marriages in 1900 was 13,034; of births, 53,338; of deaths, 38,184; excess of births, 15,154. The number of emigrants over the ocean was 255 in 1900, compared with 171 in 1899.

The increase of population for the whole empire between 1895 and 1900 was 4,087,277. The total number of marriages in 1899 was 471,519; of births, 2,045,286; of deaths, 1,250,179; excess of births, 795,107. The total emigration in 1900 was 22,309, of whom 1,388 were bound for England, 19,703 for the United States, 364 for Brazil, 474 for other American countries, 183 for Africa, 1 for Asia, and 196 for Australia. Of the German emigrants who embarked at German, Belgian, and Dutch ports, 11,114 were males and 9,257 females. There were 2,440 families, comprising 8,387 individuals. The total number of emigrants who embarked at German ports during 1900 was 176,819, of whom 16,690 were Germans and 160,129 were of other nationalities. The number of Protestants in the empire in 1900 was 35,231,104, having increased from 31,026,810 in 1890, or 13.6 per cent.; the number of Roman Catholics increased in the decade from 17,674,921 to 20,327,913, or 15 per cent.; the Jews increased from 567,884 to 586,948, only 3.4 per cent. The number of Protestants per 1,000 is 625; of Catholics, 361; of Jews, 10; of members of other creeds or unreported, 4.

Finances.—The ordinary revenue for the year ending March 31, 1902, was estimated at 2,105,326,000 marks, and extraordinary revenue at 206,654,000 marks; total revenue, 2,311,923,000 marks. The ordinary expenditure was estimated in the budget at 1,914,923,000 marks, and extraordinary expenditure at 429,663,000 marks; total, 2,344,586,000 marks. Of the ordinary revenue customs and excise receipts were estimated at 810,331,000 marks and stamp-duties at 114,020,000 marks, together 924,351,000 marks; receipts of the post-office and telegraphs were estimated at 420,163,000 marks; from the printing-office, 7,777,000 marks; from railroads, 93,676,000 marks; from the Bank of the Empire, 14,714,000 marks; receipts of various departments, 26,465,000 marks; interest of the invalid fund, 30,449,000 marks; various receipts, 390,000 marks; matricular contributions of the states, 570,933,000 marks; other contributions, 16,408,000 marks. Of the matricular contributions, Prussia was required to pay 349,735,000 marks; Bavaria, 61,935,000 marks; Saxony, 42,672,000 marks; Württemberg, 21,851,000 marks; Baden, 18,944,000 marks; Hesse, 11,368,000 marks; Mecklenburg-Schwerin, 6,146,000 marks; Saxe-Weimar, 3,671,000 marks; Mecklenburg-Strelitz, 1,037,000 marks; Oldenburg, 4,041,000 marks; Brunswick, 4,708,000 marks; Saxe-Meiningen, 2,543,000 marks; Saxe-Altenburg, 1,971,000 marks; Saxe-Coburg-Gotha, 2,327,000 marks; Anhalt, 3,206,000 marks; Schwarzburg-Sondershausen, 816,000 marks; Schwarzburg-Rudolstadt, 938,000 marks; Waldeck, 585,000 marks; Reuss of the senior line, 690,000 marks; Reuss of the junior line, 1,408,000 marks; Schaumburg-Lippe, 437,000 marks; Lippe, 1,409,000 marks; Lübeck, 986,000 marks; Bremen,

2,287,000 marks; Hamburg, 7,815,000 marks; Alsace-Lorraine, 17,407,000 marks. The matricular contributions are assessed on the states in proportion to their population; the rate per capita is fixed in each annual budget. Of the ordinary, or recurring, expenditure, 756,000 marks were for the Reichstag, 233,000 marks for the Imperial Chancellery, 13,311,000 marks for the Ministry of Foreign Affairs, 54,575,000 marks for the Ministry of the Interior, 559,628,000 marks for the army, 79,896,000 marks for the navy, 2,133,000 marks for the Ministry of Justice, 578,196,000 marks for the imperial treasury, 394,000 marks for railroads, 88,543,000 marks for the debt of the empire, 915,000 marks for the auditing office, 70,995,000 marks for the pension fund, 30,450,000 marks for the invalid fund, 364,269,000 marks for posts and telegraphs, 5,614,000 marks for the printing-office, and 65,015,000 marks for railroads. The surplus of the customs, tobacco, stamp, and spirit duties returned to the states was 570,933,000 marks. The total expenditure on the army, ordinary and extraordinary, amounted to 673,656,000 marks; on the navy, 207,484,000 marks. For the year ending March 31, 1903, the matricular contributions were increased 24,000,000 marks and a loan of 35,000,000 marks was proposed to balance the estimated total expenditure, recurring and non-recurring, of 2,349,742,456 marks.

The funded debt of the empire on March 31, 1900, amounted to 2,298,500,000 marks, of which 1,240,000,000 marks consisted of $3\frac{1}{2}$ per-cent. loans, and 1,058,500,000 marks were later loans paying 3 per cent. which had increased 116,253,000 marks since March 31, 1898. There were 120,000,000 marks of treasury bills outstanding and 120,000,000 marks of paper money. The invalid fund on March 31, 1899, amounted to 390,967,654 marks, and the Government held a war fund of 120,000,000 marks, hoarded in gold.

The amount of gold coin minted since the beginning of the empire was 3,701,171,400 marks, of which 39,198,800 marks had been withdrawn before the end of 1900, leaving 3,661,972,600 marks in circulation. The amount of silver coined up to the close of 1902 was 565,176,900 marks, of which 28,747,100 marks had been withdrawn, leaving 536,429,800 marks in circulation. The amount of nickel coins issued and not recalled was 68,549,700 marks, and that of copper coins was 15,403,600 marks, making a total coinage of 4,282,355,700 marks outstanding. The amount of bank-notes in circulation was 1,313,855,000 marks, protected by 899,630,000 marks of coin and bullion.

The budgets and debts of the individual states for 1902, or in some cases for 1901, are given in marks in the table on page 282.

The budgets include the contributions of the states to the common expenditure of the empire. In Alsace-Lorraine there was also an extraordinary revenue of 4,452,464 marks, and an expenditure of 4,969,350 marks. More than half the revenue comes from customs and excise, and there is a large expenditure for education. The expenditure of Anhalt for the empire was 28,530,300 marks. The state property was valued at 9,211,839 francs. The whole debt of Baden was incurred for railroads, and three-quarters of the Bavarian debt. The debt of Bremen was incurred for railroads and harbor works. The budget of Brunswick does not include the civil list of the duke, which is 1,125,000 marks, nor the fund for schools, arts, and sciences, out of which there was an expenditure of 2,670,000 marks. The statement of the debt, which was raised for railroads,

STATES.	Revenue.	Expenditure.	Debt.
Alsace-Lorraine.....	62,214,913	62,244,913	23,545,300

does not include an annual payment of 1,219,740 marks on a premium loan which will be extinguished in 1924. The property of the state in domains and forests and in funds is valued at 40,900,000 marks, not including an annuity of 2,625,000 marks to be paid till 1932 for the railroads, which were turned over to the German Government. The debt of Hamburg, contracted for public works, required the payment of 15,805,600 marks in 1901, and for education 10,361,944 marks were spent. To meet these heavy charges an income tax is levied that amounts to 30 marks per capita.

The debt of Hesse, contracted for railroads which return a profit, is no burden, and taxation is light in this grand duchy, which possesses valuable domains. In Lübeck half the revenue is derived from direct taxation, and the rest mainly from interest, domains, and railroads. In Mecklenburg-Schwerin, apart from the budget of common expenses of the Grand Duke and the states, the Grand Duke has a separate income of 22,625,000 marks, which is largely devoted to public purposes. The state railroads and interest on invested funds more than defray the debt charge. The accounts of Mecklenburg-Strelitz are not published. The estimates of the Prussian revenue for the year ending March 31, 1902, were 99,135,424 marks from domains, 213,166,300 marks from direct taxes, 87,604,000 marks from indirect taxes, 88,262,500 marks from the lottery, 1,743,900 marks from the Marine Bank, 554,500 marks from the mint, 192,316,080 marks from mines, furnaces, and salt-works, 1,442,025,359 marks from railroads, 391,039,565 marks from the finance administration, and 134,166,978 marks from the state administration. The expenditures were estimated at 46,653,470 marks for agriculture, domains, and forests, 131,609,300 marks for finance, 158,522,050 marks for the administration of mines, furnaces, and salt-works, 875,678,380 marks for the administration of railroads, 8,000,000 marks for addition to the Crown dotation, 232,045,947 marks for interest on the public debt, including railroad debt, 39,616,814 marks for the sinking-fund of the debt, 1,423,230 marks for annuities, etc., 213,915 marks for the Herrenhaus, 1,675,515 marks for the Chamber of Deputies, 348,368,038 marks for matricular contribution to imperial expenditure, 68,822,136 marks for appanages, indemnities, and annuities, 10,441,403 marks for the Ministry of State, 553,800 marks

for the Ministry of Foreign Affairs, 104,794,968 marks for the Ministry of Finance, 31,852,958 marks for the Ministry of Public Works, 13,334,541 marks for the Ministry of Commerce and Industry, 115,060,358 marks for the Ministry of Justice, 72,060,358 marks for the Ministry of the Interior, 24,220,282 marks for the Ministry of Agriculture, Domains, and Forests, 145,152,437 marks for the Ministry of Public Worship and Instruction, 139,058 marks for the Ministry of War, and 217,531,804 marks for extraordinary expenditure. The public debt of Prussia consists of 5,500,430,900 marks of consolidated debt paying 3½ per cent. interest, 977,397,400 marks paying 3 per cent., 119,845,259 marks of railroad debt, and 5,128,907 marks of debts assumed on the annexation of provinces. Saxe-Altenburg had in 1901 funds amounting to 5,002,686 marks, and two-thirds of its revenue was derived from domains. Saxe-Coburg and Gotha have separate legislative chambers and separate budgets. The domain revenue of Coburg in 1902 was 444,875 marks, and expenditure 260,885 marks; the state revenue of Coburg was 1,094,100 marks, and expenditure the same; the domain revenue of Gotha was 1,933,900 marks, and expenditure 1,179,100 marks; the state revenue and expenditure of Gotha was 2,329,980 marks; the common revenue of the two duchies was 3,097,420 marks, and expenditure 3,757,620 marks. The debt of Coburg was 2,569,000 marks; that of Gotha was 2,146,558 marks. A third of the revenue of Saxe-Meiningen is derived from domains, and most of the debt has been incurred for profitable public works. Domains and investments exceed the debt of Saxe-Weimar. The revenue and expenditure of Saxony as stated does not include an extraordinary revenue of 112,783,186 marks, which was expended on public works. The whole debt of this kingdom was incurred for railroads, telegraphs, and other public works, the Government having invested 967,206,084 marks in railroads alone. From the railroads and from domains and forests is derived more than half of the state revenue. In Württemberg a third of the revenue is derived from forests, farms, mines, furnaces, and salt-works, and the railroads, posts, and telegraphs. The debt was incurred mainly from railroads, the net income from which amounts to 92 per cent. of the interest of the whole debt.

The sum of annual revenues of all the German states is estimated at 4,292,000,000 marks, including 138,000,000 marks of extraordinary revenue. Their combined expenditure is estimated at 4,316,000,000 marks, including 165,000,000 marks of extraordinary expenditure. The empire and the federated states together raise an annual revenue of 6,762,000,000 marks, including 344,000,000 marks from extraordinary sources, and their combined expenditure amounts to 6,786,000,000 marks, including 381,000,000 marks for extraordinary purposes. The indebtedness of the federated states amounts to 10,987,000,000 marks. Including the debt of the empire, the German public debts amount to 13,383,000,000 marks, of which 13,119,000,000 marks are consolidated debt. The total debt is 237 marks per capita, and the annual cost for interest, amortization, and administration is 9.57 marks per capita.

The Army.—The peace strength of the German army in 1901 was as follows: 216 regiments of infantry, numbering 12,073 officers and 367,478 men; 18 battalions of rifles, numbering 388 officers and 11,182 men; 5 machine-gun divisions, numbering 15 officers and 335 men, with 215 horses; 293 district commands, numbering 917 officers and 5,782 men; 2,565 surgeons and pay-

masters; 93 regiments of cavalry, numbering 2,433 officers and 66,849 men, with 65,789 horses; 825 cavalrymen in special services; 94 regiments of field-artillery, numbering 3,060 officers and 65,260 men, with 33,383 horses, forming 494 field-batteries, of which 47 are mounted, each of 4 guns, except the batteries attached to infantry divisions, which have the war complement of 6 guns; 996 artillery in special services; 18 regiments of foot-artillery, numbering 895 officers and 22,977 men, with 43 horses; 137 foot-artillery in special services; 26 battalions of pioneers, numbering 595 officers and 15,419 men; 103 pioneers in special services; 3 railroad regiments, 1 railroad battalion, 2 balloon detachments, and 2 railroad companies, numbering altogether 251 officers and 6,417 men; 49 railroad troops in special services; 23 battalions of train, numbering 331 officers and 8,238 men, with 5,655 horses; 74 men in special train services; 558 officers and 4,957 men in special formations; and 2,629 non-regimental officers, with 380 men; total, 24,145 officers and 580,023 men, with 104,485 horses. There are besides about 8,000 volunteers for one year, who serve at their own expense. The infantry battalion, which contains 544 men in time of peace, is increased to 1,002 in war time by calling out the reserves. The Prussian guards and the regiments garrisoned in Alsace-Lorraine have 686 men in each battalion on the peace footing. In time of peace 3 battalions form a regiment, 2 regiments a brigade, 2 brigades a division, to which are attached 4 squadrons of cavalry, 4 batteries, and 1 battalion of rifles or of pioneers; and 2 infantry divisions, with 1 division of 4 regiments of cavalry, to which 2 batteries of horse-artillery are attached, and 6 field-batteries and 1 mounted battery of artillery form an army corps. There are 23 army corps, each of which is organized and equipped so as to be able to take the field as an independent army.

The Navy.—The German navy in the beginning of 1902 comprised 10 first-class battle-ships, 5 of the second class, 2 armored cruisers, 8 old battle-ships, 19 coast-defense ironclads, 16 protected cruisers, 7 torpedo-gunboats, 27 destroyers, and 47 first-class and 96 second-class torpedo-boats. There were building 2 battle-ships, 1 armored cruiser, 1 coast-defense vessel, 2 armored cruisers, and 16 destroyers. The Wittelsbach, Mecklenburg, Zähringen, Wettin, and Schwaben, of 12,000 tons, are the newest and largest battle-ships; yet they have no large guns, but only quick-firers, 4 9.4-inch, 18 6-inch, 12 3.4-inch, and numerous smaller ones. Their engines of 13,000 horse-power can make 18 knots. Their hulls are protected with 10-inch Krupp armor, and most of their guns are placed in armored batteries amidships. Two new ships that have been ordered will carry 4 11-inch and 18 6.7-inch guns. The armored cruiser Prinz Heinrich, launched in 1900, having a displacement of 8,868 tons, is protected on the sides with 6-inch armor, carries 2 9.4-inch guns and 10 6-inch quick-firers, the latter placed amidships and protected with 4.6-inch Krupp armor, and is engaged for 20 knots with 15,000 horse-power. A sister ship under construction will have 8-inch quick-firers in the main battery. The Kaiser Wilhelm der Grosse, Kaiser Barbarossa, and Kaiser Karl der Grosse, launched in 1899 and 1900, of 11,180 tons, have 11½-inch armor at the water-line, an armament of 4 9.4-inch Krupp breech-loaders and 12 6-inch, 10 3.4-inch, and 18 small quick-firers, and has engines of 13,000 horse-power capable of making 18 knots. The Freya, Hertha, Victoria Luise, Vineta, and Hansa are protected cruisers of 5,650 tons, with

4-inch deck armor, a speed of 18½ knots with engines of 10,000 horse-power, and an armament of 2 8.2-inch, 8 6-inch, and 10 3.4 inch quick-firers. The Gazelle, Niobe, Nympe, Ariadne, Amazone, Medusa, and Thetis, of 2,650 tons, have 2-inch armor decks and carry 10 4-inch quick-firers. The first three, with engines of 6,000 horse-power, can steam 19½ knots; the others, with engines of 7,000 horse-power, are able to make 21 knots. Others of this class are to be built strong enough, with 2,715 tons displacement, to hold engines that can make 24 knots. In German vessels guns are mounted in every available spot, and the aim is to concentrate the heaviest possible fire on the enemy. In the later vessels more attention is paid to gun protection, which is secured by armored casemates. The newer ships carry in their secondary batteries 6.7-inch quick-firing guns of the model adopted in 1901. Concerted action of the torpedo fleet has been studied more than in any other navy and very difficult maneuvers are practised. The Government subsidizes 7 fast liners of the Hamburg-American and North German Lloyd companies in order that they shall be held in readiness to act as auxiliary cruisers in case of war. The maritime population of the German seaboard is exempt from service in the army, but owes service in the navy. Inducements are held out to capable and experienced sailors to volunteer; and the navy does not lack recruits of such material. Besides 48,000 German sailors employed in the merchant fleet and 6,000 in the merchant service of other countries, there are 26,000 fishermen and others available for the navy.

The naval program of 1900, to be completed by 1920, contemplated a fleet of 2 double squadrons, each composed of 16 battle-ships, 8 large cruisers, and 24 small cruisers, for service in home waters, in addition to which there should be 8 large and 15 small cruisers for service in foreign waters, and a reserve of 4 battle-ships and 4 large and 6 small cruisers; but owing to the opposition of the Center the number of vessels for foreign service was reduced to 3 large and 10 small cruisers, and the reserve to 4 battle-ships and 3 large and 4 small cruisers. The bill provided that 2 battle-ships and 1 large and 3 small cruisers should be begun every year till 1905. In 1902 an addition to the law of 1900 was announced, to be laid before the Reichstag in 1904, which will allow for the construction of a greater number of vessels for foreign service and for larger recurrent expenditure in order to put the new ships into commission.

Commerce and Production.—The production of wheat in 1901 from 2,049,160 hectares was 3,841,165 metric tons; of rye from 5,954,973 hectares, 8,550,659 tons; of barley from 1,670,033 hectares, 3,002,182 tons; of oats from 4,122,818 hectares, 7,091,930 tons; of potatoes from 3,218,777 hectares, 40,585,317 tons; of hay from 5,912,122 hectares, 23,116,276 tons. Vineyards covered 119,249 hectares. The area under hops was 37,191 hectares. The number of agricultural holdings in 1895 was 5,558,317, covering 43,284,742 hectares, supporting 18,068,663 persons, the number of workers being 8,156,045. The number of horses in Germany on Dec. 1, 1900, was 4,184,099; of cattle, 19,001,106; of sheep, 9,672,143; of hogs, 16,758,436. In Prussia there were 2,913,003 horses, 10,865,296 cattle, 6,989,430 sheep, and 10,954,002 hogs; in Bavaria, 384,869 horses, 3,550,089 cattle, 748,470 sheep, and 1,736,761 hogs; in Saxony, 166,713 horses, 687,587 cattle, 74,518 sheep, and 576,825 hogs; in Alsace-Lorraine, 142,787 horses, 501,804 cattle, 83,085 sheep, and 440,936 hogs; in Württemberg, 112,129

horses, 1,017,683 cattle, 315,965 sheep, and 512,485 hogs; in Baden, 75,395 horses, 651,664 cattle, 67,828 sheep, and 497,917 hogs; in other German states, 389,203 horses, 1,726,983 cattle, 67,828 sheep, and 497,917 hogs.

The forests cover 34,473,000 acres, over 25 per cent. of the total area of Germany. The chief mining districts of Germany are the coal and iron fields of Westphalia, the Rhine Province, and Silesia in Prussia and those of Lorraine. In Saxony there are coal, iron, and silver mines. Silver and copper are mined in the Harz mountains, and Silesia has zinc-mines. The total production of coal in 1900 was 109,271,700 tons; of brown coal, 40,279,300 tons; of iron ore, 18,964,400 tons; of zinc ore, 639,200 tons; of lead ore, 148,200 tons; of copper ore, 747,800 tons; of rock salt, 927,800 tons; of salts of potash, 3,052,900 tons; of other minerals, 401,800 tons; total value of minerals produced in Germany and Luxembourg, 1,262,000,000 marks. The quantity of pig iron smelted in 1899 was 8,143,132 metric tons; of zinc, 153,155 tons; of lead, 129,225 tons; of copper, 34,634 tons; of silver, 468 tons; of tin, 1,481 tons; production of sulfur and sulfuric acid, 334,329 tons. The value of pig iron was 455,875,000 marks; of zinc, 72,951,000 marks; of lead, 37,260,000 marks; of copper, 50,076,000 marks; of silver, 37,832,000 marks; of tin, 3,483,000 marks; of sulfur and sulfuric acid, 23,092,000 marks. There were 2,605 kilograms of gold extracted, value 7,259,000 marks. The production of nickel, bismuth, and vitriol and chemical manufactures was 37,900 tons, valued at 13,215,000 marks. The total value of foundry products was 701,043,000 marks. The production of manufactured iron in 1899 was 9,309,402 tons, value 1,355,995,000 marks. There were 286,597 men employed in the manufacture of iron and steel and 423,320 in the coal-mines. The imports of iron and iron manufactures in 1901 were 582,455 tons less, and those of machinery, tools, and vehicles 37,961 tons less than in 1900, whereas exports increased respectively 798,683 and 6,188 tons. The number of boats engaged in the North Sea fisheries in 1901 was 541, of 35,951 tons, with 3,847 men in the crews. The exports of fresh fish in 1900 were 4,250,000 marks in value, while 25,867,000 marks' worth of fresh fish, 38,016,000 marks' worth of salt herrings, and 8,476,000 marks' worth of other salted, dried, and canned fish were imported. There were 399 sugar factories in 1899, which consumed 12,439,301 metric tons of beet-roots, producing 1,691,258 tons of raw sugar and 307,133 tons of molasses. The production of refined sugar in 1900 was 1,215,205 tons. In 26 starch factories were produced 8,681 tons of dry sugar, 35,905 tons of sirup, and 4,976 tons of color. The production of beer in 1899 was 69,299,000 hectoliters, of which 49,209,000 hectoliters were brewed in the imperial excise district, 17,739,000 hectoliters in Bavaria, 4,128,000 hectoliters in Württemberg, 3,095,000 hectoliters in Baden, and 1,128,000 hectoliters in Alsace-Lorraine. There were 59,024 distilleries in 1900, which produced 3,667,820 hectoliters of alcohol.

The total value of special imports in 1901 was 5,967,017,000 marks, and of special exports 4,759,407,000 marks. In 1900 the value of imports in the special trade was 6,042,992,000 marks, and that of exports 4,752,601,000 marks. The imports of live animals in 1900 were 178,443,000 marks in value, and exports 21,114,000 marks; imports of animal products were 211,063,000 marks, and exports 41,547,000 marks; imports of articles of consumption were 1,584,429,000 marks, and exports 496,467,000 marks; imports

of seeds and plants were 66,925,000 marks, and exports 43,268,000 marks; imports of fuel were 222,157,000 marks, and exports 286,216,000 marks; imports of fats and oils were 359,958,000 marks, and exports 36,630,000 marks; imports of chemicals, drugs, and colors were 331,365,000 marks, and exports 397,617,000 marks; imports of stone, clay, and glass were 90,715,000 marks, and exports 201,635,000 marks; imports of metals and metal goods were 768,216,000 marks, and exports 783,282,000 marks; imports of wood and wood manufactures were 337,275,000 marks, and exports 169,582,000 marks; imports of paper and paper manufactures were 31,290,000 marks, and exports 131,350,000 marks; imports of textile materials and manufactures were 1,273,311,000 marks, and exports 1,098,750,000 marks; imports of leather and leather manufactures were 281,544,000 marks, and exports 266,293,000 marks; imports of rubber and rubber goods were 86,368,000 marks, and exports 64,775,000 marks; imports of railroad materials and rolling-stock were 9,615,000 marks, exports 37,885,000 marks; imports of hardware, etc., were 27,713,000 marks, and exports 163,305,000 marks; imports of books and works of art were 44,292,000 marks, and exports 157,875,000 marks; miscellaneous exports were 10,746,000 marks in value. The total value of dutiable imports was 2,961,207,000 marks, paying in duties 521,113,000 marks, an average rate of 17.6 per cent.; value of imports free of duty, 3,081,785,000 marks. The imports of horses were 77,556,000 marks in value; of hogs, 5,088,000 marks; of wheat the value of 171,117,000 marks was imported; of rye, 96,049,000 marks; of barley, 92,484,000 marks. Imports of coffee were 155,828,000 marks. The value of petroleum imports was 77,240,000 marks. The imports of hides and skins amounted to 163,932,000 marks. The imports of raw cotton were in value 340,735,000 marks; of raw wool, 261,645,000 marks; of woolen yarn, 110,575,000 marks; of raw silk, 108,244,000 marks. The value exported of cotton cloth was 88,715,000 marks, not including fine goods; of mixed silk and cotton cloth, 110,410,000 marks; of woolen cloth, 166,389,000 marks; of hosiery, 97,238,000 marks; of trimmings, etc., 131,668,000 marks. Exports of leather goods were 72,793,000 marks in value; of paper, 74,128,000 marks. Wood manufactures were exported to the amount of 84,677,000 marks. The export of aniline dyes was 77,289,000 marks. The value of sugar exports was 216,338,000 marks; exports of hops, 25,286,000 marks. Coal and coke were exported to the amount of 272,707,000 marks. The imports from and exports to various countries in the special trade of 1900 were valued in marks as given in the table on page 285.

The imports of gold and silver coin and bullion in 1900 amounted to 257,962,000 marks, and exports to 140,718,000 marks, against 280,984,000 marks of imports and 160,621,000 marks of exports for 1899. The quantity of merchandise imports in 1901 was 44,304,857 metric tons, against 44,911,799 tons in 1900, and that of exports was 2,909,648 tons, against 2,638,407 tons. The values of imports showed a decrease of 75,975,000 marks, or 1.255 per cent., while the exports increased 6,806,000 marks, or 0.144 per cent., in value.

Navigation.—The number of vessels in both foreign and coasting trades entered at German ports in 1899 was 88,646, of 17,990,051 tons, of which 77,414, of 16,786,697 tons, had cargoes and 11,232, of 1,203,354 tons, were in ballast; the number cleared was 89,329, of 18,026,371 tons, of which 65,839, of 12,323,746 tons, carried cargoes

and 23,490, of 5,702,625 tons, sailed in ballast. Of the total number entered with cargoes 58,899, of 9,457,549 tons, were German and 18,515, of 7,329,148 tons, were foreign, including 5,034 British, of 4,197,777 tons, 4,142 Swedish, of 910,678 tons, 4,810 Danish, of 843,529 tons, 1,462 Norwegian, of 661,639 tons, 2,241 Dutch, of 281,718 tons, and 616 Russian, of 220,101 tons. Of the number entered in ballast, 8,905, of 796,915 tons, were German and 2,327, of 406,439 tons, were foreign, including 189 British, of 155,500 tons, 1,225 Danish, of 81,591 tons, 97 Norwegian, of 48,912 tons, 216 Swedish, of 47,852 tons, 549 Dutch, of 32,847 tons, and 35 Russian, of 17,399 tons. Of the total number cleared with cargoes, 52,561, of 8,148,081 tons, were German and 13,278, of 4,175,665 tons, were foreign, including 2,995 British, of 1,991,666 tons, 2,812 Swedish, of 679,065 tons, 4,363 Danish, of 669,480 tons, 814 Norwegian, of 316,556 tons, 1,747 Dutch, of 230,174 tons, and 398 Russian, of 155,565 tons. Of those cleared in ballast, 15,984, of 2,160,679 tons, were German and 7,506, of 3,541,946 tons, were foreign, of which latter, 2,212, of 2,332,852 tons, were British, 725, of 385,745 tons, were Norwegian, 1,536, of 281,957 tons, were Swedish, 1,679, of 258,267 tons, were Danish, 253, of 87,979 tons, were Russian, and 1,016, of 84,018 tons, were Dutch.

The merchant navy on Jan. 1, 1901, consisted of 391 sailing vessels, of 31,454 tons, and 452 steamers, of 192,315 tons, in the Baltic, and 2,102 sailing vessels, of 562,316 tons, and 938 steamers, of 1,155,560 tons, belonging to North Sea ports; total, 2,493 sailing vessels, of 593,770 tons, and 1,390 steamers, of 1,347,875 tons, counting only vessels above 17.65 tons. Of the sailing vessels 673 and of the steamers 1,381 were made of iron or steel. There were 22,564 vessels engaged in the coasting-trade and inland navigation in 1898.

Railroads, Posts, and Telegraphs.—The railroad network of the German Empire in 1899 had a total length of 31,492 miles, all the property of either the imperial or state governments excepting 3,060 miles. There were 1,064 miles of narrow-gage railroads, of which the Government owned 483 miles. The capital cost of the railroads was 12,497,138,000 marks; receipts, 1,954,963,000 marks in 1899; expenses, 1,202,642,000 marks. In April, 1901, there were 32,205 miles of completed railroad, including narrow gage. The freight traffic in 1899 amounted to 322,544,620 metric tons, which paid 1,221,313,738 marks; the number of passengers was 812,535,769, who paid 513,088,652 marks, besides 171,412 soldiers.

The imperial post-office in 1900 carried 1,608,666,862 letters, 926,544,518 postal cards, 855,972,346 pieces of printed matter, 4,765,862 business papers, 56,298,366 samples, and 1,161,782,015 newspapers, and the amount of money remittances was 25,633,627,933 marks; receipts, 394,542,596 marks; expenses, 382,760,515 marks. The Bavarian post-office traffic was 173,754,930 letters, 59,969,440 postal cards, 72,827,286 printed enclosures, 199,320 business papers, 4,800,480 samples, 213,480,659 newspapers, and 2,625,235,945 marks of money sent; receipts, 36,277,340 marks; expenses, 32,181,410 marks. The Württemberg post-office handled 64,622,168 letters, 33,825,402 postal cards, 40,694,888 printed enclosures, 118,248 business papers, 1,524,224 samples, 56,443,415 newspapers, and 1,117,623,098 marks of money remittances; receipts amounted to 16,221,888 marks and expenses to 14,212,148 marks. The total postal traffic of Germany was 1,847,043,960 letters, 1,020,339,360 postal cards, 969,494,520 printed enclosures, 5,083,430 business papers, 62,623,070 samples, 1,431,706,089 newspapers, and 29,376,486,976 marks of money sent; the combined receipts of the three postal services were 447,041,824 marks, and expenses 429,154,073 marks.

The length of the imperial telegraph-lines in 1900 was 106,723 kilometers, with 414,992 kilometers of wires, over which 29,801,309 internal and 11,460,473 foreign telegraphs were sent in that year; the length of the Bavarian lines was 16,624 kilometers, with 45,923 kilometers of wires, over which 2,589,877 internal and 688,864 foreign messages were transmitted; the lines of Württemberg had a length of 4,968 kilometers, with 11,592 kilometers of wires, over which 1,237,333 internal and 230,939 foreign messages were sent; total length of telegraph-lines in the empire, 128,315 kilometers, with 472,867 kilometers of wire; total number of despatches, 33,628,519 internal and 12,380,276 foreign. There were in the empire 15,533 towns with telephone communications, having 289,647 exchanges, with 49,295 miles of line and 517,350 miles of wire; the number of conversations in 1900 was 597,423,041. There were 2,797 long-distance circuits, having 19,920 miles of line and 137,690 miles of wire; number of conversations, 93,533,314.

Politics and Legislation.—The principal task of the Reichstag in the section of the continued session which began on Nov. 26, 1901, was to frame a new tariff as a basis for new commercial treaties. The session of the Reichstag began in 1900 and was continued by adjournment. The legislative business was left in such an unfinished state in May, 1901, that the expedient of adjourning instead of closing the session had to be adopted, and on June 11, 1902, the session was again adjourned till Oct. 14. The bills and motions that accumulated retained their precedence, so that there was no opportunity to raise fresh questions, while in some cases the circumstances in which the bills were drafted were altered. The bill to guarantee interest on the cost of a railroad in East Africa from Dar-es-Salam to Mrogoro would be ineffective because the project of raising the money through a financial syndicate had been abandoned owing to the state of the money market. There were 49 motions of private members not yet disposed of. The prolonged session must come to an end with the legislative period of five years, which expires in June, 1903, when a general election takes place. The German spirits bill, a measure favorable to the Agrarians, introduced in 1901, was finally passed before the adjournment. The saccharin bill was another legacy from the previous year and another conces-

sion to the Agrarians, intended as a slight compensation for the abolition of sugar bounties. A more substantial compensation was the lowering of the internal duty on sugar, designed to extend the domestic consumption of sugar by materially lowering its price, and therefore acceptable to Socialists and Radicals as well as to Agrarian Conservatives, who would find in the home market opened to them an outlet for their sugar if the competition of cane-sugar drove it out of the English market. The Government in signing the Brussels convention had no fear that Germany, the greatest sugar-producing country in the world and the most advanced in its methods of production, could not still compete successfully in the world's market; but it did fear that, if it refused to accept the terms that Great Britain offered at Brussels, German sugar would be shut out of England by countervailing duties. Nevertheless, the extreme section of the Agrarians struggled to prevent the ratification of the Brussels convention by the Reichstag. Nearly all the sugar manufacturers were opposed to the treaty. The convention was finally approved on June 11 by 209 votes to 103. The minority consisted of the greater part of the Conservatives and a large section of the Clericals, while the Social Democrats and the Radicals gave 110 votes for the convention, which the ordinary supporters of the Government would otherwise have rejected. The sugar bill reduces the internal-revenue tax on sugar from 20 marks per 100 kilograms to 16 marks and abolishes the bounties on exports. The sugar cartel has raised the price about 14 marks to consumers in order to secure an extra profit of 3 to 4 marks for its members. The domestic demand has declined in consequence, but the abolition of bounties will curtail the power of the trust.

The saccharin bill prohibits the production or importation of saccharin except by permission of the Federal Council, which is empowered to license one or more manufacturers or importers subject to constant official inspection and the revocation at any time of their licenses; and the product can not be sold except by specially licensed apothecaries for medical or scientific purposes only. The existing factories receive compensation at the rate of 6 times their average annual profit, reckoned at 4 marks per kilogram. The Imperial Chancellor is empowered to fix the maximum quantity of saccharin that each licensed factory may produce. The use of saccharin as a cheap substitute for sugar is stopped altogether by this law, but not its use on the prescription of a physician by persons suffering from a disease that is aggravated by the use of sugar. The bill appropriating money for the construction of a railroad in German East Africa was postponed on account of the unfavorable condition of the imperial estimates. A bill to secure liberty of worship to all subjects of the empire was rendered effective by legislative acts in the states where Catholic disabilities and restrictions on worship still existed, as in Mecklenburg and Brunswick.

The Government tariff bill was introduced in the Reichstag on Dec. 2, 1901, referred to a committee of 28 members on Dec. 12, and read in the house on Feb. 26, 1902, after which the committee went to work on the 946 clauses. High protection has been the fiscal policy of the German Government since 1879, and under it the country has made a wonderful advance in industry, though this was greatest and emigration smallest in the period of commercial treaties concluded by Count von Caprivi. Agriculture has not been
